The case of alienatio in fraudem creditorum facta.¹ When a man was insolvent (*non solvendo*), and alienated his property for the purpose of injuring his creditors, the prætor's edict gave the creditors a remedy. If, for instance, a debt was paid *post bona possessa*, it was absolutely void, for the effect of the *bonorum possessio* in the case of insolvency was to put all the creditors on the same footing. If any alienation was made before the *bonorum possessio*, it was valid in some cases. A debtor might reject anything which was for his advantage, for the prætor's edict related only to the diminution of his property, and not to its increase. If the act was such as to diminish his property (*fraudationis causa*), the creditors, as a general rule, were entitled to have the act undone. A creditor who exacted his just debt was entitled to retain it. The actio by which the creditors destroyed the effect of an illegal alienation was called *Pauliana*, which was brought by the curator *bonorum* in the name of the creditors, for the restoration of the thing which had been improperly alienated, and all its fruits. The creditors were also entitled to an *interdictum fraudatorium* in order to get possession of the thing that had been improperly alienated.²

In the imperial times, *restitutio* was also applied to the remission of a punishment,³ which could only be done by the imperial grace.⁴

RESTITUTORIA ACTIO. (*Vid. INTERCESSIO*, p. 542.)

RETIA'RII. (*Vid. GLADIATORES*, p. 476.)

RETICULUM. (*Vid. CALANTICA*.)

RETIS and RETE, *dim. RETICULUM* (*δίκρυον*), a Net. Nets were made most commonly of flax from Egypt, Colchis, the vicinity of the Cinypts in North Africa, and some other places. Occasionally they were of hemp.⁵ They are sometimes called *lima* (*λίνα*) on account of the material of which they consisted.⁶ The meshes (*maculae*,⁷ *βρόχοι*, *dim. βροχίδες*⁸) were great or small, according to the purposes intended, and these purposes were very various. But by far the most important application of network was to the three kindred arts of fowling, hunting, and fishing: and besides the general terms used alike in reference to all these employments, there are special terms to be explained under each of these heads.

I. In fowling, the use of nets was comparatively limited;⁹ nevertheless, thrushes were caught in them;¹⁰ and doves or pigeons, with their limbs tied up or fastened to the ground, or with their eyes covered or put out, were confined in a net, in order that their cries might allure others into the snare.¹¹ The ancient Egyptians, as we learn from the paintings in their tombs, caught birds in clap-nets.¹²

II. In hunting, it was usual to extend nets in a curved line of considerable length, so as in part to surround a space into which the beasts of chase, such as the hare, the boar, the deer, the lion, and the bear, were driven through the opening left on one side.¹³ This range of nets was flanked by cords, to which feathers dyed scarlet and of other bright colours were tied, so as to flare and flutter in the wind. The hunters then sallied forth with their dogs, dislodged the animals from their coverts, and by shouts and barking drove them first within the *formido*, as

the apparatus of string and feathers was called, and then, as they were scared with this appearance within the circuit of the nets. Splendid descriptions of this scene are given in some of the following passages, all of which allude to the spacious enclosure of network.¹ The accompanying woodcuts are taken from two bas-reliefs in the collection of ancient marbles at Ince-Blundell in Lancashire. In the uppermost figure, three servants with staves carry on their shoulders a large net, which is intend-

ed to be set up as already described.² The foremost servant holds by a leash a dog, which is eager to pursue the game. In the middle figure the net is set up. At each end of it stands a watchman hold-

ing a staff.³ Being intended to take such large quadrupeds as boars and deer (which are seen within it), the meshes are very wide (*retia varia*⁴). The net is supported by three stakes (*στάλκεις*,⁵ *ancones*,⁶ *vari*⁷). To dispose the nets in this manner was called *retia ponere*,⁸ or *retia tendere*.⁹ Comparing it with the stature of the attendants, we perceive the net to be between five and six feet high. The upper border of the net consists of a strong rope, which was called *σαρδών*.¹⁰ The figures in the following woodcut represent two men carrying the net

home after the chase; the stakes for supporting it, two of which they hold in their hands, are forked at the top, as is expressed by the terms for them already quoted, *ancones* and *vari*.

Besides the nets used to enclose woods and coverts, or other large tracts of country, two additional kinds are mentioned by those authors who treat on hunting. All the three are mentioned together by Xenophon (*δίκρυα, ἐνόδιον, ἄρκυς*, ii. 4), and by Nemesianus.¹¹

The two additional kinds were placed at intervals in the same circuit with the large hunting-net or haye. The road-net (*plaga, ἐνόδιον*) was much less than the others, and was placed across roads and narrow openings between bushes. The purse or tunnel net (*cassris, ἄρκυς*) was made with a bag (*κεκρύφαλος*¹²), intended to receive the animal when chased towards the extremity of the enclosure. Within this bag, if we may so call it, were placed branches of trees, to keep it expanded, and to decoy

1. (Dig. 42, tit. 8.)—2. (Dig. 36, tit. 1, s. 67.)—3. (Tac. Ann., xiv. 12.—Plin., Epist., x. 64, 65.—Dig. 48, tit. 19, s. 27.)—4. (Dig. 4, tit. 1-7; 44, tit. 4.—Paulus, S. R., i. 1, tit. 7-9.—Cod., ii. tit. 20-55.—Theod., ii. tit. 15, 16.—Mühlenbruch, Doct. Pandect.—Mackhley, Lehrbuch, &c.—Rein, Das Röm. Privatrecht.)—5. (Varro, De Re Rust., iii. 5.)—6. (Hor., Epod., ii. 33, 34.—II. 1.) (Aristoph., Av., 1083.)—12. (Wilkinson, Man and Cust., vol. iii. p. 35-38, 45.)—13. (Ælian, H. A., xii. 46.—Tibullus, iv. 3, 12.—Plin., H. N., xix. 2, § 2.)

the animals by making it invisible. The words *ἀρκυς* or *cassis* are used metaphorically to denote some certain method of destruction, and are more particularly applied, as well as *ὑψιβέλτρον*, which will be explained immediately, to the large shawl in which Clytemnestra enveloped her husband in order to murder him.¹

III. Fishing-nets (*ἀλευτικά δίκτυα*²) were of six different kinds, which are enumerated by Oppian³ as follows :

Τῶν τὰ μὲν ὑψιβέλτρα, τὰ δὲ γρίφοι καλέονται,
Γάγγαμα τ', ἥδ' ὑποχαί περιγῆεες, ἥδὲ σαγῆναι,
Ἄλλα δὲ κικλήσκουσι καλῶματα.

Of these, by far the most common were the *ὑψιβέλτρον*, or casting-net (*funda, jaculum, retiaculum*), and the *σαγῆνη*, i. e., the drag-net or sear (*tragum, tragus, verriculum*). Consequently, these two are the only kinds mentioned by Virgil⁴ and by Ovid.⁵ Of the *καλῶμα* we find nowhere any farther mention. We are also ignorant of the exact form and use of the *γρίφος*, although its comparative utility may be inferred from the mention of it in conjunction with the sear and casting-net by Artemidorus⁶ and Plutarch (*περὶ εὐθύν.*). The *γάγγαμον* was a small net for catching oysters.⁷ The *ὑποχή* was a landing-net, made with a hoop (*κύκλος*) fastened to a pole, and perhaps provided also with the means of closing the circular aperture at the top.⁸ The metaphorical use of the term *ὑψιβέλτρον* has been already mentioned. That it denoted a casting-net may be concluded both from its etymology and from the circumstances in which it is mentioned by various authors.⁹ More especially the casting-net, being always pear-shaped or conical, was suited to the use mentioned under the article *CONORUM*. Its Latin names are found in the passages of Virgil's Georgics, and of the Vulgate Bible above referred to, in Plautus,¹² and in Isidorus Hisp.¹³

The English term *sear* (which is also, in the south of England, pronounced and spelt *seine*, as in French) has been brought into our language by a corruption of the Greek *σαγῆνη*, through the Vulgate Bible (*sugena*) and the Anglo-Saxon.¹⁴ This net, which, as now used both by the Arabians and by our own fishermen in Cornwall, is sometimes half a mile long, was probably of equal dimensions among the ancients, for they speak of it as nearly taking in the compass of a whole bay.¹⁵ This circumstance well illustrates the application of the term to describe the besieging of a city : to encircle a city by an uninterrupted line of soldiers was called *σαγηνεῖν*.¹⁶ The use of corks (*φέλλατ, cortices suberini*¹⁷) to support the top, and of leads (*μολιβδίδες*) to keep down the bottom, is frequently mentioned by ancient writers,¹⁸ and is clearly exhibited in some of the paintings in Egyptian tombs. Leads, and pieces of wood serving as floats instead of corks, still remain on a sear which is preserved in the fine collection of Egyptian antiquities at Berlin.

REUS. (*Vid. Actor* ; OBLIGATIONES, p. 675.)

REX SACRIFICULUS, REX SACRIFICUS,

or REX SACRO'RUM. When the civil and military powers of the king were transferred to two prætors or consuls, upon the establishment of the republican government at Rome, these magistrates were not invested with that part of the royal dignity by virtue of which he had been the high-priest of his nation, and had conducted several of the *sacra publica*, but this priestly part of his office was transferred to a priest called *rex sacrificulus* or *rex sacrorum*.¹ The first *rex sacrorum* was designated, at the command of the consuls, by the college of pontiffs, and inaugurated by the augurs. He was always elected and inaugurated in the *comitia calata*, under the presidency of the pontiffs ;² and, as long as a *rex sacrificulus* was appointed at Rome, he was always a patrician, for as he had no influence upon the management of political affairs, the plebeians never coveted this dignity.³ But, for the same reason, the patricians, too, appear at last to have attributed little importance to the office, whence it sometimes occurs that for one, or even for two successive years, no *rex sacrorum* was appointed, and during the civil wars in the last period of the Republic, the office appears to have fallen altogether into disuse. Augustus, however, seems to have revived it, for we find frequent mention of it during the Empire, until it was probably abolished in the time of Theodosius.⁴

Considering that this priest was the religious representative of the kings, he ranked, indeed, higher than all other priests, and even higher than the *pontifex maximus*,⁵ but in power and influence he was far inferior to him (*Id sacerdotum pontificis subjecere*). He held his office for life,⁶ was not allowed to hold any civil or military dignity, and was, at the same time, exempted from all military and civil duties.⁷ His principal functions were : 1. To perform those *sacra publica* which had before been performed by the kings ; and his wife, who bore the title of *regina sacrorum*, had, like the queens of former days, also to perform certain priestly functions. These *sacra publica* he or his wife had to perform on all the calends, ides, and the nundines ; he to Jupiter, and she to Juno, in the regia.⁸ 2. On the days called *refugium* he had to offer a sacrifice in the comitum. (*Vid. REFUGIUM*.) 3. When extraordinary portents seemed to announce some general calamity, it was his duty to try to propitiate the anger of the gods.⁹ 4. On the nundines when the people assembled in the city, the *rex sacrorum* announced (*edicebat*) to them the succession of the festivals for the month. This part of his functions, however, must have ceased after the time of Cn. Flavius.¹¹ He lived in a domus publica on the Via Sacra, near the regia and the house of the vestal virgins.¹²

*RHA. (*Pā*). "It is now generally admitted," says Adams, "that the *ῥα* of Dioscorides is the species of *Rhubarb* called *Rheum raponticum*. Matthioli and Dodonæus thought that the *ῥῶν* of Paulus Ægineta was the common purgative *Rhubarb*; and Dr. Friend supposed that Paulus and Alexander were acquainted with the true *Rheum palmatum*. I am satisfied, however, that the plant treated of by Paulus and Alexander is the same as the *ῥα* of Dioscorides. Sprengel remarks that Isidorus is the first author who applied the name *Rheum barbarum* to the true *Rhubarb*. The name *Rha* is derived from the old appellation of the Wol-

ga, in the neighbourhood of which the plant was anciently found."¹

*RHAMNUS (ῥάμνος), a thorn-tree. "Of the three species briefly described by Dioscorides, the first is unquestionably the *Lycium Europæum*; the second (λευκότερα), the *Lycium Afrum*, as Sprengel thinks; and the third, the *Rhamnus poliiurus*. The last two species are those described by Theophrastus. The first is the species described by Galen and Paulus."²

*RHAPH'ANIS (ῥαφανίς), the Radish. "The first species of Theophrastus, to which the name is more especially applicable, is referred to the *Raphanus sativus*, or Garden Radish, by Stackhouse, Dierbach, and Sprengel. The other species of the same writer is probably the *Cochlearia Armoracia*, or Horseradish. The ῥαφανίς ὕψια of Dioscorides is held by Sprengel to be the *Raphanus maritimus*, Smith."³

*RHAPHANOS (ῥάφανος), the *Brassica oleracea*, or Sea Cabbage. (Vid. CRAMBE.) The species to which Theophrastus applies the epithet of οὐλόφυλλος, Stackhouse calls "Curled Savoy," and the λειόφυλλος, the "Smooth Cabbage." According to Bauhin, the "*Pompeiana*" of Pliny is the *Brassica cauliflora*, or Cauliflower.⁴

RHEDA or REDA was a travelling carriage with four wheels. Like the COVINUS and the ESSENUM, it was of Gallic origin,⁵ and may perhaps contain the same root as the German *reiten* and our *ride*. It was the common carriage used by the Romans for travelling, and was frequently made large enough not only to contain many persons, but also baggage and utensils of various kinds.⁶ The word *Eprhedum*, which was formed by the Romans from the Greek preposition ἐπὶ and the Gallic *rheda*,⁷ is explained by the scholiast on Juvenal⁸ as "*Ornamentum rhedarum aut pleistrum*."

RHETOR (ῥήτωρ). (Vid. PHTOPIKH ΓΡΑΦΗ.)

PHTOPIKH ΓΡΑΦΗ (ῥητορικὴ γραφή). The best interpretation of this expression is perhaps that given by Harpocration and Suidas,⁹ ἡ κατὰ ῥήτορος γενομένη, γράψαντός τι ἢ εἰπόντός ἢ πρῶσαντος παράνοον. There was not any particular class of persons called ῥήτορες invested with a legal character, or intrusted with political duties at Athens; for every citizen who did not labour under some special disability was entitled to address the people in assembly, make motions, propose laws, &c. The name of ῥήτορες, however, was given, in common parlance, to those orators and statesmen who more especially devoted themselves to the business of public speaking, while those who kept aloof from, or took no part in, the business of popular assemblies, were called ἰδιῶται. Hence ῥήτωρ is explained by Suidas,¹⁰ Ὁ δῆμῳ συμβουλευόν καὶ ὁ ἐν δῆμῳ ὑγορεύων. The ῥητορικὴ γραφή might be either the same as the παρανόμων γραφή, or a more special prosecution, attended with heavier penalties, against practised demagogues, who exerted their talents and influence to deceive the people and recommend bad measures. Others have conjectured this to be a proceeding similar to the ἐπαγγελία δοκιμασίας, directed against those persons who ventured to speak in public after having been guilty of some misdemeanour, which would render them liable to ὑπμία. Of this nature was the charge brought against Timarchus by Æschines, whose object was to pre-

vent the latter from appearing as prosecutor against him on the subject of the embassy to Philip.¹

RHETRA (ῥήτρα). (Vid. NOMOS.)

*RHINE (ῥίνη), the *Squalus squatina*, called in English the Monk or Angel Fish. Rondelet states that the monkfish will sometimes weigh 160 lbs. Pennant remarks that this fish connects the genera of the Rays and Sharks.²

*RHINOCEROS (ῥινόκερος), the Rhinoceros. Two species, or, as some make them to be, two varieties of the rhinoceros, are described by modern naturalists, namely, the *R. Asiaticus* (a native of India and Java), having but one horn, and the *R. Africus* (a native of Africa, and also of Sumatra), with two horns. The former of these is the Unicorn of Scripture.³

*RHODON (ῥόδον), the Rose. "It would be useless," remarks Adams, "to attempt to particularize all the species to which this term was applied, more especially as some of them are treated under other heads. I may mention, however, that Sprengel refers the ῥόδα of Dioscorides to the *Rosa lutea*, Dalech., and *R. arvensis*. Stackhouse marks the ῥόδον εικοσιφύλλον as the *Rosa cinnamomea*, and the ῥόδον ἑκατοντάφυλλον as the *Rosa centifolia*."⁴

*RHEA or RHOA (ῥοιῶ, ῥοῶ), the *Punica granatum*, or Pomegranate-tree. The flowers of the cultivated pomegranate are called κύνιοι, those of the wild βαλάνστια. The bark or rind of the fruit was called σίδιον by the Greeks, and *nalcorium* by the Romans.⁵

*RHOMBUS (ῥόμβος), a species of fish, the Brill or Pearl, *Pleuronectes Rhombus*, L. "But," as Adams remarks, "since the common turbot, or *Pleuronectes maximus*, is found in the Mediterranean, it is not improbable that the Greeks and Romans may have applied this name to it also."⁶

*RHUS (ῥύς), the *Rhus coriaria*, or elm-leaved Sumach. In Cyprus, according to Sibthorp, the *Rhus coriaria* retains its ancient name of ῥύς. The powdered fruit is sprinkled upon the meat as seasoning.⁷

*RHYTA (ῥύτη), the *Ruta graveolens*, or common Rue.⁸

RHYTON (ῥυτόν), a drinking-horn (κέρας), by which name it was originally called, is said by Athenæus⁹ to have been first made under Ptolemy Philadelphus; but it is even mentioned in Demosthenes,¹⁰ as Athenæus himself also remarks. The oldest and original form of this drinking-horn was probably the horn of the ox, but one end of it was afterward ornamented with the heads of various animals and birds. We frequently find representations of the ῥυτόν on ancient vases depicting symposia. (See woodcut, p. 326.) Several specimens of these drinking-horns have also been discovered at Pompeii:¹¹ two of these are given in the following cut.

The ῥυτόν had a small opening at the bottom, which the person who drank put into his mouth, and allowed the wine to run in; hence it derived its name (ἄνομασθαι τὸ ἀπὸ τῆς ῥύσεως¹²). We see persons using the ῥυτόν in this way in ancient

paintings.¹ Martial² speaks of it under the name of *Rhytium*.³

*RHYTROS (*ῥύτρος*), a plant, which many of the commentators on Theophrastus, &c., and Sprengel and Stackhouse among the rest, conclude to have been the *Echinops*, L. "But," as Schneider remarks, "it is better, with Bauhin, to admit our ignorance of it, than indulge in unfounded conjectures."⁴

RICA. (*Vid. FLAMEN*, p. 446.)

RICINIUM, RECINIUM, or RECINUS, an article of dress. The name was, according to Festus,⁵ applied to any dress consisting of a square piece of cloth. It occurs in a fragment of the Twelve Tables,⁶ and the ancient commentators, according to Festus, explained the word there as a toga for women (if the reading *ver. togam* be right instead of *virilem togam*), with a purple stripe in front. That it was an article of female dress, and more especially a small and short kind of pallium, is stated by Nonius,⁷ on the authority of Varro. It was worn in grief and mourning, and in such a manner that one half of it was thrown back,⁸ whence the ancient grammarians derive the word from *reji-cere*, although it is manifestly a derivative from *rica*, which was a covering of the head used by females.⁹ The grammarians appear themselves to have had no clear idea of the ricinium; but, after careful examination of the passages above referred to, it appears to have been a kind of mantle, with a sort of cowl attached to it, in order to cover the head. It was also worn by mimes upon the stage;¹⁰ and the mavortium, mavorte, or mavors of later times, was thought to be only another name for what had formerly been called ricinium.

RINGS (*δακτύλια, annuli*). Every freeman in Greece appears to have used a ring; and, at least in the earlier times, not as an ornament, but as an article for use, as the ring always served as a seal. How ancient the custom of wearing rings among the Greeks was cannot be ascertained, though it is certain, as even Pliny¹¹ observes, that in the Homeric poems there are no traces of it. In works of fiction, however, and those legends in which the customs of later ages are mixed up with those of the earliest times, we find the most ancient heroes described as wearing rings.¹² But it is highly probable that the custom of wearing rings was introduced into Greece from Asia, where it appears to have been almost universal.¹³ In the time of Solon, seal-rings (*σφραγίδες*), as well as the practice of counterfeiting them, appears to have been rather common, for Diogenes Laërtius¹⁴ speaks of a law of Solon which forbade the artists to keep the form of a seal (*σφραγίς*) which he had sold. (Instances of counterfeited seals are given in Becker's *Charikles*.)¹⁵ Whether, however, it was customary, as

early as the time of Solon, to wear rings with precious stones on which the figures were engraved, may justly be doubted; and it is much more probable that at that time the figures were cut in the metal of the ring itself, a custom which was never abandoned altogether. Rings without precious stones were called *ἄψφοι*, the name of the gem being *ψήφος* or *σφραγίς*.¹ In later times rings were worn more as ornaments than as articles for use, and persons now were no longer satisfied with one, but wore two, three, or even more rings; and instances are recorded of those who regularly loaded their hands with rings.² Greek women likewise used to wear rings, but not so frequently as men; the rings of women also appear to have been less costly than those of men, for some are mentioned which were made of amber, ivory, &c.³ Rings were mostly worn on the fourth finger (*παρμεσός*). The Lacedæmonians are said to have used iron rings at all times.⁴ With the exception, perhaps, of Sparta, the law does not appear to have ever attempted, in any Greek state, to counteract the great partiality for this luxury; and nowhere in Greece does the right of wearing a golden ring appear to have been confined to a particular order or class of citizens.

The custom of wearing rings was believed to have been introduced at Rome by the Sabines, who were described in the early legends as wearing golden rings with precious stones (*gemmati annuli*) of great beauty.⁶ Florus⁷ states that it was introduced from Etruria in the reign of Tarquinius Priscus, and Pliny⁸ derives it from Greece. The fact that among the statues of the Roman kings in the Capitol, two, Numa and Servius Tullius, were represented with rings, can scarcely be adduced as an argument for their early use, as later artists would naturally represent the kings with such ensigns as were customary for the highest magistrates in later times. But, at whatever time rings may have become customary at Rome, thus much is certain, that at first they were always of iron; that they were destined for the same purpose as in Greece, namely, to be used as seals; and that every free Roman had a right to use such a ring. This iron ring was used down to the last period of the Republic by such men as valued the simplicity of the good old times. Marius wore an iron ring in his triumph over Jugurtha, and several noble families adhered to the ancient custom, and never wore golden ones.⁹

When senators, in the early times of the Republic, were sent as ambassadors to a foreign state, they wore, during the time of their mission, golden rings, which they received from the state, and which were, perhaps, adorned with some symbolic representation of the Republic, and might serve as a state-seal. But ambassadors used their rings only in public; in private they used their iron ones.¹⁰ In the course of time it became customary for all the senators, chief magistrates, and at last for the equites also, to wear a golden seal-ring.¹¹ This right of wearing a golden ring, which was subsequently called the *jus annuli aurei*, or the *jus annulorum*, remained for several centuries at Rome the exclusive privilege of senators, magistrates, and equites, while all other persons continued to use iron ones.¹² Magistrates and governors of provinces seem to have had the right of conferring upon

inferior officers, or such persons as had distinguished themselves, the privilege of wearing a golden ring. Verres thus presented his secretary with a golden ring in the assembly at Syracuse.¹ During the Empire, the right of granting the annulus aureus belonged to the emperors, and some of them were not very scrupulous in conferring this privilege. Augustus gave it to Mena, a freedman, and to Antoninus Musa, a physician.² In A.D. 22 the Emperor Tiberius ordained that the golden ring should only be worn by those ingenui whose fathers and grandfathers had had a property of 400,000 sesteritia, and not by any freedman or slave.³ But this restriction was of little avail, and the ambition for the annulus aureus became greater than it had ever been before.⁴ The emperors Severus and Aurelian conferred the right of wearing golden rings upon all Roman soldiers;⁵ and Justinian at length allowed all the citizens of the Empire, whether ingenui or libertini, to wear such rings.

The status of a person who had received the jus annuli appears to have differed at different times. During the Republic and the early part of the Empire, the jus annuli seems to have made a person ingenuus (if he was a libertus), and to have raised him to the rank of eques, provided he had the requisite equestrian census,⁶ and it was probably never granted to any one who did not possess this census. Those who lost their property, or were found guilty of criminal offences, lost the jus annuli.⁷ Afterward, especially from the time of Hadrian, the privilege was bestowed upon a great many freedmen, and such persons as did not possess the equestrian census, who therefore, for this reason alone, could not become equites; nay, the jus annuli, at this late period, did not even raise a freedman to the station of ingenuus: he only became, as it were, a half ingenuus (*quasi ingenuus*), that is, he was entitled to hold a public office, and might at any future time be raised to the rank of eques.⁸ The lex Visellia⁹ punished those freedmen who sued for a public office without having the jus annuli aurei. In many cases a libertus might, through the jus annuli, become an eques if he had the requisite census, and the princeps allowed it; but the annulus itself no longer included this honour. This difference in the character of the annulus appears to be clear, also, from the fact that women received the jus annuli,¹⁰ and that Alexander Severus, though he allowed all his soldiers to wear the golden ring, yet did not admit any freedmen among the equites.¹¹ The condition of a libertus who had received the jus annuli was in the main as follows: Hadrian had laid down the general maxim that he should be regarded as an ingenuus *salvo jure patroni*.¹² The patronus had also to give his consent to his freedman accepting the jus annuli, and Commodus took the annulus away from those who had received it without this consent.¹³ Hence a libertus with the annulus might be tortured if, e. g., his patron died an unnatural death, as, in case of such a libertus dying, his patron might succeed to his property. The freedman had thus, during his lifetime, only an *imago libertatis*; he was a quasi ingenuus, but had not the status of an ingenuus,¹⁴ and he died quasi libertus. In the reign of Justinian these distinctions were done away with. Isidorus¹⁵ is probably allu-

ding to the period preceding the reign of Justinian when he says that freemen wore golden, freedmen silver, and slaves iron rings.

The practical purposes for which rings, or, rather, the figures engraved upon them, were used at all times, were the same as those for which we use our seals. Besides this, however, persons, when they left their houses, used to seal up such parts as contained stores or valuable things, in order to secure them from thieves, especially slaves.¹ The ring of a Roman emperor was a kind of state-seal, and the emperor sometimes allowed the use of it to such persons as he wished to be regarded as his representatives.² The keeping of the imperial seal-ring was intrusted to an especial officer (*cura annuli*).³ The signs engraved upon rings were very various, as we may judge from the specimens still extant: they were portraits of ancestors or friends, subjects connected with the mythology or the worship of the gods; and in many cases a person had engraved upon his seal symbolical allusions to the real or mythical history of his family.⁴ Sulla thus wore a ring with a gem, on which Jugurtha was represented at the moment he was made prisoner.⁵ Pompey used a ring on which three trophies were represented,⁶ and Augustus at first sealed with a sphinx, afterward with a portrait of Alexander the Great, and at last with his own portrait, which was subsequently done by several emperors.⁷ The principal value of a ring consisted in the gem framed in it, or, rather, in the workmanship of the engraver. The stone most frequently used was the onyx (*σάπωνος, σάπδονος*), on account of its various colours, of which the artists made the most skilful use. In the art of engraving figures upon gems, the ancients, in point of beauty and execution, far surpass everything in this department that modern times can boast of. The ring itself (*σφειδόνιον*), in which the gem was framed, was likewise, in many cases, of beautiful workmanship. The part of the ring which contained the gem was called *pala*. (*Vid. PALA*.) In Greece we find that some persons fond of show used to wear hollow rings, the inside of which was filled up with a less valuable substance.⁸

With the increasing love of luxury and show, the Romans, as well as the Greeks, covered their fingers with rings. Some persons also wore rings of immoderate size, and others used different rings for summer and winter.⁹

Much superstition appears to have been connected with rings in ancient as well as in more modern times; but this seems to have been the case in the East and in Greece more than at Rome. Some persons made it a lucrative trade to sell rings which were believed to possess magic powers, and to preserve those who wore them from external dangers. Such persons are Eudamus in Aristophanes,¹⁰ and Phertatus in Antiphanes.¹¹ These rings were for the most part worn by the lower classes, and then not of costly material, as may be inferred from the price (one drachma) in the two instances referred to. There are several celebrated rings with magic powers mentioned by the ancient writers, as that of Gyges, which he found in a grave,¹² that of Charicleia,¹³ and the iron ring of Eucrates.¹⁴

ROBIGA'LIA, a public festival in honour of the god Robigus, to preserve the fields from mildew, is said to have been instituted by Numa, and was celebrated *a. d. VII., Kal. Mai.* (April 25th).¹ The sacrifices offered on this occasion consisted of the entrails of a dog and a sheep, accompanied with frankincense and wine : a prayer was presented by a flamen in the grove of the ancient deity, whom Ovid and Columella make a goddess.² A god Robigus or a goddess Robigo is a mere invention from the name of this festival, for the Romans paid no divine honours to evil deities.³

*ROBUR, an epithet applied to the Oak. (*Vid. QUERCUS.*)

ROGA'TIO. (*Vid. Lex*, p. 580.)

ROGA'TIONES LICINIÆ. In the year B.C. 375, C. Licinius Stolo and L. Sextius, being elected two of the tribuni plebis, promulgated various rogationes, the object of which was to weaken the power of the patricians and for the benefit of the plebs. One rogatio related to the debts with which the plebs was encumbered ;⁴ and it provided that all the money which had been paid as interest should be deducted from the principal sum, and the remainder should be paid in three years by equal payments. The second related to the ager publicus, and enacted that no person should occupy (*possideret*) more than 500 jugera. The third was to the effect that no more tribuni militum should be elected, but that consuls should be elected, and one of them should be a plebeian. The patricians prevented these rogationes from being carried by inducing the other tribunes to oppose their intercessio. C. Licinius Stolo and L. Sextius retaliated in the same way, and would not allow any comitia to be held except those for the election of ædiles and tribuni plebis. They were also re-elected tribuni plebis, and they persevered for five years in preventing the election of any curule magistratus.

In the year 368, the two tribunes were still elected, for the eighth time, and they felt their power increasing with the diminution of the opposition of their colleagues, and by having the aid of one of the tribuni militum, M. Fabius, the father-in-law of C. Licinius Stolo. After violent agitation, a new rogatio was promulgated to the effect that, instead of duumviri sacris faciundis, decemviri should be elected, and that half of them should be plebeians. In the year B.C. 366, when Licinius and Sextius had been elected tribuni for the tenth time, the law was passed as to the decemviri, and five plebeians and five patricians were elected, a measure which prepared the way for the plebeians participating in the honours of the consulship. The rogationes of Licinius were finally carried, and in the year B.C. 365 L. Sextius was elected consul, being the first plebeian who attained that dignity. The patricians were compensated for their loss of the exclusive right to the consulship by the creation of the office of curule ædile and of prætor.

The law as to the settlement between debtor and creditor was, if Livy's text is to be literally understood, an invasion of the established rights of property. Niebuhr's explanation of this law is contained in his third volume, p. 23, &c.

Besides the limitation fixed by the second lex to the number of jugera which an individual might possess in the public land, it declared that no individual should have above 100 large and 500 smaller animals on the public pastures. Licinius was the first who fell under the penalties of his own law. The statement is that "he, together with his son,

possessed a thousand jugera of the ager (publicus) and, by emancipating his son, had acted in fraud of the law."¹ From this story it appears that the plebeians could now possess the public land, a right which they may have acquired by the law of Licinius ; but there is no evidence on this matter. The story is told also by Columella,² Pliny,³ and Valerius Maximus.⁴ The last writer, not understanding what he was recording, says that, in order to conceal his violation of the law, Licinius emancipated part of the land to his son. The facts, as stated by Livy, are not put in the clearest light. The son, when emancipated, would be as much entitled to possess 500 jugera as the father, and if he bona fide possessed that quantity of the ager publicus, there was no fraud on the law. From the expression of Pliny (*substituta filii persona*), the fraud appears to have consisted in the emancipation of his son being effected solely that he might in his own name possess 500 jugera, while his father had the actual enjoyment. But the details of this lex are too imperfectly known to enable us to give more than a probable solution of the matter. As the object of the lex was to diminish the possessions of the patricians, it may be assumed that the surplus land thus arising was distributed (*assignatus*) among the plebeians, who otherwise would have gained nothing by the change ; and such a distribution of land is stated to have been part of the lex of Licinius by Varro⁵ and Columella.⁶

According to Livy,⁷ the rogatio de decemviris sacrorum was carried first B.C. 366. The three other rogationes were included in one lex, which was a lex Satura.⁸

Besides the passages referred to, the reader may see Niebuhr, vol. iii., p. 1-36, for his view of the Licinian rogations ; and Götting, *Geschichte der Röm. Staatsverfassung*, p. 354, and the note on the corrupt passage of Varro (*De Re Rust.*, i., 2)

ROGA'TORES. (*Vid. DIRIBITORES.*)

ROGUS. (*Vid. FUNUS*, p. 460.)

ROMPHEA. (*Vid. HASTA*, p. 489.)

RORARI, a class of light-armed Roman soldiers. According to Niebuhr,⁹ rorarii must originally have been the name for slingers, who were taken from the fifth class of the Servian census. The grammarians, probably with justice, derive the word from *ros* and *rorare*, as their attacks upon the enemy with their slings and stones were regarded as a prelude to the real battle, in the same manner that *rores* or solitary drops of rain precede a heavy shower. The literal translation of rorarii, therefore, would be *drillers* or *sprinklers*.¹⁰ In later times, and even as early as the time of Plautus, the name was applied to the light-armed hastati ;¹¹ and as this latter name supplanted that of rorarii, who, according to the later constitution of the army, no longer existed in it in their original capacity, the rorarii are not mentioned in later times. (Compare ARMY, ROMAN, p. 104.)

*ROSA, the Rose. (*Vid. RHODON.*)

*ROSMARINUS. (*Vid. LIBANOTIS.*)

ROSTRA, or The Beaks, was the name applied to the stage (*suggestus*) in the Forum from which the orators addressed the people. This stage was originally called *templum*,¹² because it was consecrated by the augurs, but obtained its name of *rostra* at the conclusion of the great Latin war, when it was adorned with the beaks (*rostra*) of the ships of the Antiates.¹³ The Greeks also mutilated galleys in

1. (Plin., H. N., xviii., 29, s. 69.—Varro, *De Re Rust.*, i., i., p. 90, ed. Bip.—Lat. Ling., vi., 16, ed. Müller.—Festus, s. v.)—2. (Ovid, *Fast.*, iv., 907-942.—Colum., x., 342.)—3. (Hartung, *Die Religion der Römer*, ii., p. 148.)—4. (Liv., i., 34.)

1. (Liv., vii., 16.)—2. (i., 3.)—3. (H. N., xviii., 3.)—4. (viii., 5, § 3.)—5. (*De Re Rust.*, i., 2.)—6. (i., 3.)—7. (vi., 42.)—8. (Liv., vii., 39.—Dion Cass., *Frag.*, 33.)—9. (Hist. of Rome, iii., p. 117.)—10. (Varro, *De Ling. Lat.*, vi., p. 92, ed. Bip.—Festus, s. v. Rorarios.)—11. (Plant. in *Frivolaria* ap. Varr., l. c.—Liv. viii., 8, 9.)—12. (Liv., ii., 56.)—13. (Liv., viii., 14.—Flor., i., 11.—Plin., H. N., xxxiv., 5, s. 11.)

the same way for the purpose of trophies: this was called by them ἀκρωτηριάζειν. (Vid. ACROTIERIUM.)

The rostra lay between the comitium or place of meeting for the curies, and the Forum or place of meeting for the tribes, so that the speaker might turn either to the one or the other; but, down to the time of Caius Gracchus, even the tribunes, in speaking, used to front the comitium; he first turned his back to it, and spoke with his face towards the Forum.¹ The form of the rostra has been well described by Niebuhr² and Bunsen:³ the latter supposes "that it was a circular building, raised on arches, with a stand or platform on the top bordered by a parapet, the access to it being by two flights of steps, one on each side. It fronted towards the comitium, and the rostra were affixed to the front of it, just under the arches. Its form has been, in all the main points, preserved in the ambones, or circular pulpits of the most ancient churches, which also had two flights of steps leading up to them, one on the east side, by which the preacher ascended, and another on the west side for his descent. Specimens of these old churches are still to be seen at Rome in the churches of St. Clement and S. Lorenzo fuori le mure." The speaker was thus enabled to walk to and fro while addressing his audience.

The suggestus or rostra was transferred by Julius Cæsar to a corner of the Forum, but the spot where the ancient rostra had stood still continued to be called *Rostra Vetera*, while the other was called *Rostra Nova* or *Rostra Julia*.⁴ Both the rostra contained statues of illustrious men:⁵ the new rostra contained equestrian statues of Sulla, Pompey, J. Cæsar, and Augustus.⁶ Niebuhr⁷ discovered the new rostra in the long wall that runs in an angle towards the three columns, which have for a very long time borne the name of Jupiter Stator, but which belong to the Curia Julia. The substance of the new rostra consists of bricks and casting-work, but it was, of course, cased with marble: the old rostra Niebuhr supposes were constructed entirely of peperino.

The following cut contains representations of the rostra from Roman coins, but they give little idea of their form: the one on the left hand is from a denarius of the Lollia Gens, and is supposed to represent the old rostra, and the one on the right is from a denarius of the Sulpicia Gens, and supposed to represent the new rostra.⁸

ROSTRA TA CORONA (Vid. CORONA, p. 310.)

ROSTRUM. (Vid. SMITH.)

ROTA. (Vid. CURRUS, p. 331.)

*RUBE TA. (Vid. PAVNUS.)

RUBRIA LEX. (Vid. LEX, p. 585.)

*RUBRICA. (Vid. MILTOS.)

RUDENS (κάλος, dim. καλωδιον⁹), any rope used

to move or fix the mast or sail of a vessel,¹ more especially: I. The ropes used to elevate or depress the mast, and to keep it firm and steady when elevated, were called *rudentes*, in Greek προτάται.² These ropes extended from the higher part of the mast towards the prow in one direction, and the stern in the other. (Vid. woodcut, p. 62.) II. Those used to raise or lower the yard. (Vid. ANTENNA.)³ According to the ancient scholia, these ropes are the κάλαι mentioned in *Od.* v., 260. III. Those fastened to the bottom of the sail at its two corners, and therefore called πόδες.⁴ Before setting sail, these ropes, which our seamen call the *sheets*, would lie in a coil or bundle. In order, therefore, to depart, the first thing was to unroll or untie them (*excutere*), the next to adjust them according to the direction of the wind and the aim of the voyage.⁵ With a view to fill the sail and make it expose the largest surface, they were let out, which was called *immittere* or *lazare*.⁷ "*Lazare rudentes*" among the Romans⁸ was equivalent to "Ease the sheets" with us. IV. Those used in towing (πλούς υπό κάλω), as when the oars became useless in consequence of the proximity of the shore⁹ (παρόλκος).

In a more extended sense, the terms *rudens* and *κάλως* were applied to ropes of any description.¹⁰ In the comedy of *Plautus*¹¹ it is applied to the rope with which a fisherman drags his net.

RUDE RA TIO. (Vid. HOUSE, ROMAN, p. 519.)

RUDIA RII. (Vid. GLADIATOIRES, p. 476.)

RUDIS. (Vid. GLADIATOIRES, p. 476.)

RUNCINA (ρυκάνη), a Plane.¹²

The plane, which is delineated among joiners' tools (*Instrumen. Fabr. Tignar.*) in the woodcut at p. 664, showing the stock with two holes for the hands, and the iron (ξίφη¹³) very long, but inclined as in our planes, seems to be of that narrow kind which is adapted to make grooves, rebates, or beads. The square hole in the right side of the stock seems intended for the passage of the shavings (*ramenta*). It is certain that the shavings of firwood, produced by such a plane as that here exhibited, would precisely answer to Pliny's description of them, likening them to curls of human hair and to the tendrils of the vine.¹⁴ The Latin and Greek names for this instrument gave origin to the corresponding transitive verbs *runcino* and *ρυκάνω*, meaning to plane.¹⁵ They seem to be allied etymologically with *ρύχος*, referring to the operation of those beasts and birds which use their snout or beak to plough up the ground.

RUPILLE LEGES. (Vid. LEX, p. 585.)

RUTILIANA ACTIO was a prætorian actio introduced by the prætor Publius Rutilius, by virtue of which the bonorum emptor could sue in the name of the person whose goods he had bought, and claim the condemnatio to be made in his own favour and in his own name.¹⁶

RUTRUM, dim. RUTELLUM, a kind of hoe, which had the handle fixed perpendicularly into the middle of the blade, thus differing from the RASTER. It was used before sowing to level the ground, by breaking down any clods which adhered too long together.¹⁷ This operation is described by Virgil in the following terms, which also assign the derivation of the name: "*Cumulosque rust male pinguis are-*

*na.*¹ The same implement was used in mixing lime or clay with water and straw to make plaster for walls.²

The word *rutabulum* ought to be considered as another form of *rutrum*. It denoted a hue or rake of the same construction, which was used by the baker in stirring the hot ashes of his oven.³ A wooden rutabulum was employed to mix the contents of the vats in which wine was made.⁴

S.

*SACCHARUM (σάκχαρον). Sugar. "The ancient Sugar, called also 'the Honey of Reeds' and 'Indian Salt,' was a natural concretion, forming on certain reeds, but more especially on the bamboo cane (*Bambusa arundinacea*). It would appear that Moses Chorrenensis, in the fifth century, is the first author who distinctly mentions our sugar, that is to say, the sugar procured by boiling from the sugarcane. The first mention of the bamboo cane is made by Herodotus, and then by Ctesias."⁵

SACELLUM is a diminutive of sacer, and signifies a small place consecrated to a god, containing an altar, and sometimes, also, a statue of the god to whom it was dedicated.⁶ Festus⁷ completes the definition by stating that a sacellum never had a roof. It was, therefore, a sacred enclosure, surrounded by a fence or wall to separate it from the profane ground around it, and answers to the Greek περίβολος. The form of a sacellum was sometimes square and sometimes round. The ancient sacellum of Janus, which was said to have been built by Romulus, was of a square form, contained a statue of the god, and had two gates.⁸ Many Romans had private sacella on their own estates; but the city of Rome contained a great number of public sacella, such as that of Caca,⁹ of Hercules in the Forum Boarium,¹⁰ of the Lares,¹¹ of Nænia,¹² of Pudicitia,¹³ and others.

SACERDOS, SACERDOTIUM. Cicero¹⁴ distinguishes two kinds of sacerdotēs; those who had the superintendence of the forms of worship (*cœrimonie*) and of the sacra, and those who interpreted signs and what was uttered by seers and prophets. Another division is that into priests who were not devoted to the service of any particular deity, such as the pontiffs, augurs, fetiales, and those who were connected with the worship of a particular divinity, such as the flamines. The priests of the ancient world did not consist of men alone, for in Greece, as well as at Rome, certain deities were only attended by priestesses. At Rome the wives of particular priests were regarded as priestesses, and had to perform certain sacred functions, as the regina sacrorum and the flaminica. (*Vid. FLAMEN, REX SACRORUM.*) In other cases maidens were appointed priestesses, as the vestal virgins, or boys, with regard to whom it was always requisite that their fathers and mothers should be alive (*patrini et matrimi*). As all the different kinds of priests are treated of separately in this work, it is only necessary here to make some general remarks.

In comparison with the civil magistrates, all priests at Rome were regarded as *homines privati*,¹⁵ though all of them, as priests, were sacerdotēs pub-

lici, in as far as their office (*sacerdotium*) was connected with any worship recognised by the state. The appellation of *sacerdos publicus* was, however, given principally to the chief pontiff and the flamen dialis,¹ who were, at the same time, the only priests who were members of the senate by virtue of their office. All priestly offices or sacerdotia were held for life, without responsibility to any civil magistrate. A priest was generally allowed to hold any other civil or military office besides his priestly dignity;² some priests, however, formed an exception, for the duumviri, the rex sacrorum, and the flamen dialis were not allowed to hold any state office, and were also exempt from service in the armies.³ Their priestly character was, generally speaking, inseparable from their person as long as they lived;⁴ hence the augurs and fratres arvales retained their character even when sent into exile, or when they were taken prisoners.⁵ It also occurs that one and the same person held two or three priestly offices at a time. Thus we find the three dignities of pontifex maximus, augur, and decemvir sacrorum united in one individual.⁶ But two persons belonging to the same gens were not allowed to be members of the same college of priests. This regulation, however, was in later times often violated or evaded by adoptions.⁷ Bodily defects rendered, at Rome as among all ancient nations, a person unfit for holding any priestly office.⁸

All priests were originally patricians, but from the year B.C. 367 the plebeians also began to take part in the sacerdotia (*vid. PLEBES*, p. 784); and those priestly offices which, down to the latest times, remained in the hands of the patricians alone, such as that of the rex sacrorum, the flamines, salii, and others, had no influence upon the affairs of the state.

As regards the appointment of priests, the ancients unanimously state that at first they were appointed by the kings;⁹ but after the sacerdotia were once instituted, each college of priests—for nearly all priests constituted certain corporations called collegia—had the right of filling up the occurring vacancies by co-optatio. (*Vid. PONTIFEX*, page 790.) Other priests, on the contrary, such as the vestal virgins and the flamines, were appointed (*capiebantur*) by the pontifex maximus, a rule which appears to have been observed down to the latest times; others, again, such as the duumviri sacrorum, were elected by the people¹⁰ or by the curiæ, as the curiones. But, in whatever manner they were appointed, all priests, after their appointment, required to be inaugurated by the pontiffs and the augurs, or by the latter alone.¹¹ Those priests who formed colleges had originally, as we have already observed, the right of co-optatio; but in the course of time they were deprived of this right, or, at least, the co-optatio was reduced to a mere form, by several leges, called leges De Sacerdotiis, such as the lex Domitia, Cornelia, and Julia; their nature is described in the article PONTIFEX, page 790, &c.; and what is there said in regard to the appointment of pontiffs, applies equally to all the other colleges. The leges annales, which fixed the age at which persons became eligible to the different magistracies, had no reference to priestly offices; and, on the whole, it seems that the puberty was regarded as the time after which a person might be appointed to a sacerdotium.¹²

All priests had some external distinction, as the apex, tutulus, or galerus, the toga prætexta, as well as honorary seats in the theatres, circuses, and amphitheatres. They appear, however, to have been obliged to pay taxes, like all other citizens, but seem occasionally to have tried to obtain exemption. See the case related in Livy.¹

Two interesting questions yet remain to be answered: First, whether the priests at Rome were paid for their services, and, secondly, whether they instructed the young, or the people in general, in the principles of their religion. As regards the first question, we read that in the time of Romulus lands were assigned to each temple and college of priests;² and when Festus³ states that the Roman augurs had the enjoyment (*frui solebant*) of a district in the territory of Vei, we may infer that all priests had the usus of the sacred lands belonging to their respective colleges or divinities. This supposition is strengthened by the fact that such was actually the case in the Roman colonies, where, besides the lots assigned to the coloni, pieces of land are mentioned which belonged to the colleges of priests, who made use of them by letting them out in farm.⁴ It appears, however, that we must distinguish between such lands as were sacred to the gods themselves, and could not be taken from them except by exauguration, and such as were merely given to the priests as possessio, and formed part of the ager publicus. Of the latter, the state remained the owner, and might take them from the priests in any case of necessity.⁵ Besides the use of such sacred or public lands, some priests also had a regular annual salary (*stipendium*), which was paid to them from the public treasury. This is expressly stated in regard to the vestal virgins,⁶ the augurs,⁷ and the curiones,⁸ and may therefore be supposed to have been the case with other priests also. The pontifex maximus, the rex sacrorum, and the vestal virgins had, moreover, a domus publica as their place of residence. In the time of the emperors, the income of the priests, especially of the vestal virgins, was increased.⁹

As regards the second question, we do not hear, either in Greece or at Rome, of any class of priests on whom it was incumbent to instruct the people respecting the nature and in the principles of religion. Of preaching there is not the slightest trace. Religion, with the ancients, was a thing which was handed down by tradition from father to son, and consisted in the proper performance of certain rites and ceremonies. It was respecting these external forms of worship alone that the pontiffs were obliged to give instructions to those who consulted them. (*Vid. Pontifex*.)

SAURA. This word, in its widest sense, expresses what we call divine worship. In ancient times, the state, as well as all its subdivisions, had their own peculiar forms of worship, whence at Rome we find sacra of the whole Roman people, of the curies, gentes, families, and even of private individuals. All these sacra, however, were divided into two great classes, the public and private sacra (*sacra publica et privata*), that is, they were performed either on behalf of the whole nation and at the expense of the state, or on behalf of individuals, families, or gentes, which had also to defray their expenses.¹⁰ This division is ascribed to Numa. All sacra, publica as well as privata, were superintend-

ed and regulated by the pontiffs. We shall first speak of the sacra publica.

Sacra publica.—Among the sacra publica the Romans reckoned not only those which were performed on behalf of the whole Roman people, but also those performed on behalf of the great subdivisions of the people, viz., the tribes and the curiæ, which Festus¹ expresses, "*pro montanis, pagis, curiis, sacellis*."² The sacra pro montibus et pagis are undoubtedly the sacra montanalia and paganalia, which, although not sacra of the whole Roman people, were yet publica.³ The sacella in the expression of Festus, *sacra pro sacellis*, appear only to indicate the places where some sacra publica were performed. What was common to all sacra publica is, that they were performed at the expense of certain public funds, which had to provide the money for victims, libations, incense, and for the building and maintenance of those places where they were performed.⁴ The funds set apart for the sacra publica were in the keeping of the pontiffs, and the sacramentum formed a part of them. (*Vid. SACRAMENTUM*.) They were kept in the domus publica of the pontifex maximus, and were called *ærarium pontificum*.⁵ When these funds did not suffice, the state treasury supplied the deficiency.⁷ In the solemnization of the sacra publica, the senate and the whole people took part.⁸ This circumstance, however, is not what constitutes their character as sacra publica, for the sacra popularia,⁹ in which the whole people took part, might nevertheless be sacra privata, if the expenses were not defrayed out of the public funds, but by one or more individuals, or by magistrates. The pontiffs, in conducting the sacra publica, were assisted by the epulones. (*Vid. EPULONES*.)

Sacra privata embraced, as we have stated, those which were performed on behalf of a gens, a family, or an individual. The characteristic by which they were distinguished from the sacra publica is, that they were made at the expense of those persons or person on whose behalf they were performed. Respecting the sacra of a gens, called sacra gentilia, see GENS, p. 469. The sacra connected with certain families were, like those of a gens, performed regularly at fixed times, and descended as an inheritance from father to son. As they were always connected with expenses, and were also troublesome in other respects, such an inheritance was regarded as a burden rather than anything else.¹⁰ They may generally have consisted in sacrifices to the penates, but also to other divinities. They had usually been vowed by some ancestor of a family on some particular occasion, and then continued forever in that family, the welfare of which was thought to depend upon their regular and proper performance. Besides these periodical sacra of a family, there were others, the performance of which must have depended upon the discretion of the heads of families, such as those on the birthday or on the death of a member of the family. Savigny¹¹ denies the existence of sacra familiarum.

An individual might perform sacra at any time, and whenever he thought it necessary; but if he vowed such sacra before the pontiffs, and wished that they should be continued after his death, his heirs inherited with his property the obligation to perform them, and the pontiffs had to watch that they were performed duly and at their proper time.¹²

Such an obligation was in later times evaded in various ways.

Among the *sacra privata* were reckoned also the *sacra municipalia*, that is, such *sacra* as a community or town had been accustomed to perform before it had received the Roman franchise. After this event, the Roman pontiffs took care that they were continued in the same manner as before.¹ (Compare SACRIFICIUM.)

SACRAMENTUM. (Vid. VINDICLÆ.)

SACRARIUM was, according to the definition of Ulpian,² any place in which sacred things were deposited and kept, whether this place was a part of a temple or of a private house.³ A *sacrarium*, therefore, was that part of a house in which the images of the *penates* were kept. Respecting the *sacrarium* of the *lares*, see LARARIUM. Public *sacraria* at Rome were: one attached to the Temple of the Capitoline Jupiter, in which the *tensæ*, or chariots for public processions, were kept;⁴ the place of the *salii*, in which the *ancilla* and the *lituus* of Romulus were kept;⁵ and others. In the time of the emperors, the name *sacrarium* was sometimes applied to a place in which a statue of an emperor was erected.⁶ Livy⁷ uses it as a name for a sacred retired place in general.

SACRATÆ LEGES. (Vid. Lex, p. 585.)

SACRIFICIUM (*ἱερίον*). Sacrifices or offerings formed the chief part of the worship of the ancients. They were partly signs of gratitude, partly a means of propitiating the gods, and partly, also, intended to induce the deity to bestow some favour upon the sacrificer, or upon those on whose behalf the sacrifice was offered. Sacrifices in a wider sense would also embrace the *Donaria*; in a narrower sense, *sacrificia* were things offered to the gods, which merely afforded momentary gratification, which were burned upon their altars, or were believed to be consumed by the gods. We shall divide all sacrifices into two great divisions, bloody sacrifices and unbloody sacrifices, and, where it is necessary, consider Greek and Roman sacrifices separately.

Bloody sacrifices.—As regards sacrifices in the earliest times, the ancients themselves sometimes imagined that unbloody sacrifices, chiefly offerings of fruit, had been customary long before bloody sacrifices were introduced among them.⁸ It cannot, indeed, be denied, that sacrifices of fruit, cakes, libations, and the like, existed in very early times; but bloody sacrifices, and, more than this, human sacrifices, are very frequently mentioned in early story; in fact, the mythology of Greece is full of instances of human sacrifices being offered, and of their pleasing the gods. Wachsmuth⁹ has given a list of the most celebrated instances. It may be said that none of them has come down to us with any degree of historical evidence; but surely the spirit which gave origin to those legends is sufficient to prove that human sacrifices had nothing repulsive to the ancients, and must have existed to some extent. In the historical times of Greece, we find various customs in the worship of several gods, and in several parts of Greece, which can only be accounted for by supposing that they were introduced as substitutes for human sacrifices. In other cases, where civilization had shown less of its softening influences, human sacrifices remained customary through-

out the historical periods of Greece, and down to the time of the emperors. Thus, in the worship of Zeus Lycaeus in Arcadia, where human sacrifices were said to have been introduced by Lycaon,¹ they appear to have continued till the time of the Roman emperor.² In Leucas a person was every year, at the festival of Apollo, thrown from a rock into the sea;³ and Themistocles, before the battle of Salamis, is said to have sacrificed three Persians to Dionysus.⁴ Respecting an annual sacrifice of human beings at Athens, vid. THARGELIA. With these few exceptions, however, human sacrifices had ceased in the historical ages of Greece. Owing to the influences of civilization, in many cases animals were substituted for human beings, in others a few drops of human blood were thought sufficient to propitiate the gods.⁵ The custom of sacrificing human life to the gods arose undoubtedly from the belief, which, under different forms, has manifested itself at all times and in all nations, that the nobler the sacrifice, and the dearer to its possessor, the more pleasing it would be to the gods. Hence the frequent instances in Grecian story of persons sacrificing their own children, or of persons devoting themselves to the gods of the lower world. In later times, however, persons sacrificed to the gods were generally criminals who had been condemned to death, or such as had been taken prisoners in war.

That the Romans also believed human sacrifices to be pleasing to the gods might be inferred from the story of Curtius, and from the self-sacrifice of the Decii. The symbolic sacrifice of human figures made of rushes at the Lemuralia (vid. LEMURALIA) also shows that in the early history of Italy human sacrifices were not uncommon. For another proof of this practice, see the article VER SACRUM. One awful instance also is known, which belongs to the latest period of the Roman Republic. When the soldiers of J. Cæsar attempted an insurrection at Rome, two of them were sacrificed to Mars in the Campus Martius by the pontifices and the flamen Martialis, and their heads were stuck up at the regia.⁶

A second kind of bloody sacrifices were those of animals of various kinds, according to the nature and character of the divinity. The sacrifices of animals were the most common among the Greeks and Romans. The victim was called *ἱερίον*, and in Latin *hostia* or *victima*. In the early times it appears to have been the general custom to burn the whole victim (*ὅλοκαυστῆν*) upon the altars of the gods, and the same was in some cases, also, observed in later times,⁷ and more especially in sacrifices to the gods of the lower world, and such as were offered to atone for some crime that had been committed.⁸ But, as early as the time of Homer, it was the most general practice to burn only the legs (*μηροί, ὑπρία, μῆρα*) enclosed in fat, and certain parts of the intestines, while the remaining parts of the victim were consumed by men at a festive meal. The gods delighted chiefly in the smoke arising from the burning victims, and the greater the number of victims, the more pleasing was the sacrifice. Hence it was not uncommon to offer a sacrifice of one hundred bulls (*ἑκατόμβη*) at once, though it must not be supposed that a hecatomb always signifies a sacrifice of a hundred bulls, for the name was used in a general way to designate any great sacrifice. Such great sacrifices were not less pleasing to men than to the gods, for in regard to the former they were, in reality, a donation of meat. Hence, at Athens, the

partiality for such sacrifices rose to the highest degree.¹ Sparta, on the other hand, was less extravagant in sacrifices; and while in other Greek states it was necessary that a victim should be healthy, beautiful, and uninjured, the Spartans were not very scrupulous in this respect.² The animals which were sacrificed were mostly of the domestic kind, as bulls, cows, sheep, rams, lambs, goats, pigs, dogs, and horses; but fishes are also mentioned as pleasing to certain gods.³ Each god had his favourite animals, which he liked best as sacrifices; but it may be considered as a general rule, that those animals which were sacred to a god were not sacrificed to him, though horses were sacrificed to Poseidon notwithstanding this usage.⁴ The head of the victim, before it was killed, was in most cases strewed with roasted barley-meal (*οὐλόχυτα* or *οὐλόχυρα*) mixed with salt (*mola salsa*). The Athenians used for this purpose only barley grown in the Rharian plain.⁵ The persons who offered the sacrifice were generally garlands round their heads, and sometimes, also, carried them in their hands, and before they touched anything belonging to the sacrifice they washed their hands in water. The victim itself was likewise adorned with garlands, and its horns were sometimes gilt. Before the animal was killed, a bunch of hair was cut from its forehead and thrown into the fire as primitiae.⁶ In the heroic ages, the princes, as the high-priests of their people, killed the victim; in later times this was done by the priests themselves. When the sacrifice was to be offered to the Olympic gods, the head of the animal was drawn heavenward (see the woodcut in p. 157); when to the gods of the lower world, to heroes, or to the dead, it was drawn downward. While the flesh was burning upon the altar, wine and incense were thrown upon it,⁷ and prayers and music accompanied the solemnity.

The most common animal sacrifices at Rome were the *suovetaurilia* or *solivetaurilia*, consisting of a pig, a sheep, and an ox. They were performed in all cases of a lustration, and the victims were carried around the thing to be lustrated, whether it was a city, a people, or a piece of land. (*Vid. Lustratio*.) The Greek *τριττή*, which likewise consisted of an ox, a sheep, and a pig, was the same sacrifice as the Roman *suovetaurilia*.⁸ The customs observed before and during the sacrifice of an animal were, on the whole, the same as those observed in Greece.⁹ But the victim was in most cases not killed by the priests who conducted the sacrifice, but by a person called *poppa*, who struck the animal with a hammer before the knife was used.¹⁰ The better parts of the intestines (*exta*) were strewed with barley-meal, wine, and incense, and were burned upon the altar. Those parts of the animal which were burned were called *prosecta*, *proscicia*, or *ablegmina*. When a sacrifice was offered to gods of rivers or of the sea, these parts were not burned, but thrown into the water.¹¹ Respecting the use which the ancients made of sacrifices to learn the will of the gods, *vid. HARUSPEX* and *DIVINATIO*.

Unbloody sacrifices.—Among these we may first mention the libations (*libationes*, *λοιβαί* or *σπονδαί*). We have seen above that bloody sacrifices were usually accompanied by libations, as wine was poured upon them. Libations always accompanied a sacrifice which was offered in concluding a treaty

with a foreign nation; and that here they formed a prominent part of the solemnity, is clear from the fact that the treaty itself was called *σπονδή*. But libations were also made independent of any other sacrifice, as in solemn prayers,¹ and on many other occasions of public and private life, as before drinking at meals, and the like. Libations usually consisted of unmixed wine (*ἐνσπονδος*, *μεγυμ*), but sometimes also of milk, honey, and other fluids, either pure or diluted with water.² Incense was likewise an offering which usually accompanied bloody sacrifices, but it was also burned as an offering for itself. Real incense appears to have been used only in later times;³ but in the early times, and afterward also, various kinds of fragrant wood, such as cedar, fig, vine, and myrtle-wood, were burned upon the altars of the gods.⁴

A third class of unbloody sacrifices consisted of fruit and cakes. The former were mostly offered to the gods as primitiae or tithes of the harvest, and as a sign of gratitude. They were sometimes offered in their natural state, sometimes, also, adorned or prepared in various ways. Of this kind were the *εἰρσειώνη*, an olive-branch wound around with wool, and hung with various kinds of fruits; the *χῦτρα*, or pots filled with cooked beans (*vid. ΠΥΛΗΡΕΣΙΑ*); the *κέρνον* or *κέρνα*, or dishes with fruit; the *σχαί* or *σχα* (*vid. OSCHOPHORIA*). Other instances may be found in the accounts of the various festivals. Cakes (*πέλανοι*, *πέμματα*, *πόπανα*, *libum*) were peculiar to the worship of certain deities, as to that of Apollo. They were either simple cakes of flour, sometimes also of wax, or they were made in the shape of some animal, and were then offered as symbolical sacrifices in the place of real animals, either because they could not easily be procured, or were too expensive for the sacrificer.⁵ This appearance, instead of reality, in sacrifices was also manifest on other occasions, for we find that sheep were sacrificed instead of stags, and were then called stags; and in the Temple of Isis at Rome the priests used water of the river Tiber instead of Nile water, and called the former water of the Nile.⁶

SACRILEGIUM is the crime of stealing things consecrated to the gods, or things deposited in a consecrated place.⁷ A lex Julia, referred to in the Digest,⁸ appears to have placed the crime of sacrilegium on an equality with peculatus. (*Vid. PECULATUS*.) Several of the imperial constitutions made death the punishment of a sacrilegus, which consisted, according to circumstances, either in being given up to wild beasts, in being burned alive, or hanged.⁹ Paulus says, in general, that a sacrilegus was punished with death; but he distinguishes between such persons as robbed the *sacra publica* and such as robbed the *sacra privata*, and he is of opinion that the latter, though more than common thieves, yet deserve less punishment than the former. In a wider sense, sacrilegium was used by the Romans to designate any violation of religion,¹⁰ or of anything which should be treated with religious reverence.¹¹ Hence a law in the Codex¹² states that any person is guilty of sacrilegium who neglects or violates the sanctity of the divine law. Another law¹³ decreed that even a doubt as to whether a person appointed by an emperor to some office was worthy of this office, was to be regarded as a crime equal to sacrilegium.

SAURO' RUM DETESTA' TIO. (*Vid. GENS, p. 469.*)

SÆCULARES LUDI. (*Vid. LUDI SÆCULARES.*) SÆCULUM. A sæculum was of a twofold nature, that is, either civil or natural. The civil sæculum, according to the calculation of the Etruscans, which was adopted by the Romans, was a space of time containing 110 lunar years. The natural sæculum, upon the calculation of which the former was founded, expressed the longest term of human life, and its duration or length was ascertained, according to the ritual books of the Etruscans, in the following manner: the life of a person, which lasted the longest of all those who were born on the day of the foundation of a town, constituted the first sæculum of that town; and the longest liver of all who were born at the time when the second sæculum began, again determined the duration of the second sæculum, and so on.¹ In the same manner that the Etruscans thus called the longest life of a man a sæculum, so they called the longest existence of a state, or the space of 1100 years, a sæcular day; the longest existence of one human race, or the space of 8800 years, a secular week, &c.² It was believed that the return of a new sæculum was marked by various wonders and signs, which were recorded in the history of the Etruscans. The return of each sæculum at Rome was announced by the pontiffs, who also made the necessary intercalations in such a manner, that at the commencement of a new sæculum, the beginning of the ten months' year, of the twelve months' year, and of the solar year coincided. But in these arrangements the greatest arbitrariness and irregularity appear to have prevailed at Rome, as may be seen from the unequal intervals at which the ludi sæculares were celebrated. (*Vid. LUDI SÆCULARES.*) This also accounts for the various ways in which a sæculum was defined by the ancients: some believed that it contained thirty,³ and others that it contained a hundred years,⁴ the latter opinion appears to have been the most common in later times, so that sæculum answered to our century.⁵

*SAGAPENUM (*σαγαπνόν*). "All the ancient authorities describe this as the juice of a fern; hence Sprengel supposes it the *Ferula Persica*, Willd. Dioscorides describes it as being μετὰ τὸ ὄστρον, σιλφίου καὶ χαλδάνης, and in like manner it is said of it in the Edinburgh Dispensatory, that 'Sagapenum holds a kind of middle place between asafetida and galbanum.'"⁶

SAGITTA (*διστός, ῥός; Herod. τόξενμα*), an Arrow. The account of the arrows of Hercules⁷ enumerates and describes three parts, viz., the head or point, the shaft, and the feather.

I. The head was denominated ῥός, whence the instrument used to extract arrow-heads from the bodies of the wounded was called ῥόδιον. (*Vid. TORCERS.*) Great quantities of flint arrow-heads are found in Celtic barrows throughout the north of Europe, in form exactly resembling those which are still used by the Indians of North America.⁸ Nevertheless, the Scythians and Massagetae had them of bronze.⁹ Mr. Dodwell found flint arrow-heads on the plain of Marathon, and concludes that they had belonged to the Persian army.¹¹ Those used by the Greeks were commonly bronze, as is expressed by the epithet χαλκήρης, "fitted with bronze," which Homer applies to an arrow.¹² An-

other Homeric epithet, viz., "three-tongued" (*τρίγλωχιν*), is illustrated by the forms of the arrow-heads, all of bronze, which are represented in the annexed woodcut. That which lies horizontally

was found at Persepolis, and is drawn of the size of the original. The two smallest, one of which shows a rivet-hole at the side for fastening it to the shaft, are from the plain of Marathon.² The fourth specimen was also found in Attica.³

The use of barbed (*adunca, hamata*) and poisoned arrows (*venenata sagittæ*) is always represented by the Greek and Roman authors as the characteristic of barbarous nations. It is attributed to the Sauromatae and Getæ,⁴ to the Servii⁵ and Scythians,⁶ and to the Arabs⁷ and Moors.⁸ When Ulysses wishes to have recourse to this insidious practice, he is obliged to travel north to the country of the Thresprotians;⁹ and the classical authors who mention it do so in terms of condemnation.¹⁰ Some of the northern nations, who could not obtain iron, barbed their arrow-heads with bone.¹¹ The poison applied to tips of the arrows having been called *toxicum* (*τοξικόν*), on account of its connexion with the use of the bow,¹² the signification of this term was afterward extended to poisons in general.¹³

II. The excellence of the shaft consisted in being long, and at the same time straight, and, if it was of light wood, in being well polished.¹⁴ But it often consisted of a smooth cane or reed (*Arundo donax* or *phragmites*, Linn.), and on this account the whole arrow was called either *arundo* in the one case,¹⁵ or *calamus* in the other.¹⁶ In the Egyptian tombs reed-arrows have been found, varying from 34 to 22 inches in length. They show the slit (*γλῶφίς*¹⁷) cut in the reed for fixing it upon the string.¹⁸

III. The feathers are shown on ancient monuments of all kinds, and are indicated by the terms *ala*,¹⁹ *pennata sagitta*,²⁰ and *πεπρόντες διστοί*.²¹ The arrows of Hercules are said to have been feathered from the wings of a black eagle.²²

Besides the use of arrows in the ordinary way, they were sometimes employed to carry fire. Octavianus sending βέλγῃ πυρφόρα from the bows of his archers.²³ A headdress of small arrows is said to have

been worn by the Indians,¹ the Nubians and Egyptians, and other Oriental nations.²

In the Greek and Roman armies, the *sagittarii*, more anciently called *arquites*, i. e., archers or bowmen,³ formed an important part of the light-armed infantry.⁴ They belonged, for the most part, to the allies, and were principally Cretans.⁵ (*Vid.* ARCUS, CORYTUS, PHARETRA, TORMENTUM.)

SAGMINA were the same as the *Verbenæ*, namely, herbs torn up by their roots from within the enclosure of the Capitoline, which were always carried by the fetiales or ambassadors when they went to a foreign people to demand restitution for wrongs committed against the Romans, or to make a treaty. (*Vid.* FETIALES.) They served to mark the sacred character of the ambassadors, and answered the same purpose as the Greek *κνήμεια*.⁶ Pliny⁷ also says that *sagmina* were used in *remediis publicis*, by which we must understand expiations and lustrations. The word *Verbenæ* seems to have been applied to any kind of herbs, or to the boughs and leaves of any kind of tree, gathered from a pure or sacred place.⁸

According to Festus,⁹ the *verbenæ* were called *sagmina*, that is, pure herbs, because they were taken by the consul or the prætor from a sacred (*sancto*) place, to give to legati when setting out to make a treaty or declare war. He connects it with the words *sanctus* and *sancire*, and it is not at all impossible that it may contain the same root, which appears in a simpler form in *sacer* (*sag-men*, *sa(n)-tas*): Marcian,¹⁰ however, makes a ridiculous mistake when he derives *sanctus* from *sagmina*.

Müller¹¹ thinks that *samentum* is the same word as *sagmen*, although used respecting another thing by the Anagninenses.¹²

SAGUM was the cloak worn by the Roman soldiers and inferior officers, in contradistinction to the paludamentum of the general and superior officers. (*Vid.* PALUDAMENTUM.) It is used in opposition to the toga or garb of peace, and we accordingly find that, when there was a war in Italy, all citizens put on the sagum, even in the city, with the exception of those of consular rank (*saga sumere, ad saga ire, in sagis esse*¹³): hence, in the Italian war, the sagum was worn for two years.¹⁴

The sagum was open in the front, and usually fastened across the shoulders by a clasp, though not always:¹⁵ it resembled in form the paludamentum (see woodcuts, p. 721), as we see from the specimens of it on the column of Trajan and other ancient monuments. It was thick and made of wool,¹⁶ whence the name is sometimes given to the wool itself.¹⁷ The cloak worn by the general and superior officers is sometimes called sagum (*Punicum sagum*¹⁸), but the diminutive *sagulum* is more commonly used in such cases.¹⁹

The cloak worn by the northern nations of Europe is also called sagum: see woodcut, p. 171, where three Sarmatians are represented with saga, and compare PALLIUM, p. 719. The German sagum is mentioned by Tacitus:²⁰ that worn by the Gauls seems to have been a species of plaid (*versicolor sagulum*²¹).

The outer garment worn by slaves and poor persons is also sometimes called sagum.²²

*SALAMANDRA (*σαλαμάνδρα*), the Salamander, or *Lacerta Salamandra*, a batracian reptile, of the second family of its order, and constituting the type of a distinct genus. "To have some idea of its figure," says Buffon, "we may suppose the tail of a lizard applied to the body of a frog." For a full and accurate account, however, of this reptile and its peculiar structure, the reader is referred to Griffith's Cuvier. The popular belief that the salamander is proof against the action of fire (a belief to which Aristotle is guilty of giving some countenance) is now entirely exploded. According to Sprengel, the only foundation for this belief is the fact that the reptile emits a cold, viscid secretion from its body, which might be capable of extinguishing a small coal. Dioscorides states decidedly that it is not true that the salamander can live in fire. "The salamander," says Griffith, "takes up its abode in the humid earth, in the tufted woods of high mountains, in ditches and shady places, under stones and the roots of trees, in hedges, by the banks of streams, in subterraneous caverns, and ruined buildings. Though generally feared, it is by no means dangerous. The milky fluid which exudes from its skin, and which it sometimes shoots to the distance of several inches, though nauseous, acrid, and, according to Gesner, even depilatory, is fatal only to very small animals. This humour, however, was doubtless the cause of a general prescription of the salamander. According to Pliny, by infecting with its poison all the vegetables of a vast extent of territory, this reptile could produce death to entire nations! Other animals seem to have an instinctive horror of it. Its bite, however, is perfectly harmless, though Matthioli has declared it to be equally mortal with that of the viper—an atrocious absurdity."¹

SALAMINIA (*Σαλαμίνια*). The Athenians, from very early times, kept for public purposes two sacred or state vessels, the one of which was called Πάραλος, and the other Σαλαμίνια; the crew of the one bore the name of παραλίται or παράλοι, and that of the other σαλαμίνιοι.² In the former of these two articles Photius erroneously regards the two names as belonging to one and the same ship.³ The Salaminia was also called *Δηλία* or *Θεωρία*, because it was used to convey the *θεωροί* to Delos, on which occasion the ship was adorned with garlands by the priest of Apollo.⁴ Both these vessels were quick-sailing triremes, and were used for a variety of state purposes: they conveyed theories, despatches, &c., from Athens, carried treasures from subject countries to Athens, fetched state criminals from foreign parts to Athens, and the like.⁵ In battles they were frequently used as the ships in which the admirals sailed. These vessels and their crews were always kept in readiness to act, in case of any necessity arising; and the crew, although they could not, for the greater part of the year, be in actual service, received their regular pay of four oboli per day all the year round. This is expressly stated only of the Paralos,⁶ but may be safely said of the Salaminia also. The statement of the scholiast on Aristophanes,⁷ that the Salaminia was only used to convey criminals to Athens, and the Paralos for theories, is incorrect, at least if applied to the earlier times. When Athens had become a great maritime power, and when other ships were employed for purposes for which before either the Salaminia or the Paralos had been used, it is natural to suppose that these two vessels were chiefly

employed in matters connected with religion, as heories, and in extraordinary cases, such as when a state criminal like Alcibiades was to be solemnly conveyed to Athens. The names of the two ships seem to point to a very early period of the history of Attica, when there was no navigation except between Attica and Salamis, for which the Salaminia was used, and around the coast of Attica, for which purpose the Paralos was destined. In later times the names were retained, although the destination of the ships was principally to serve the purposes of religion, whence they are frequently called the sacred ships.¹

*SAL AMMONIACUM (ἄλς Ἀμμωνιακός), a *Fossil Salt*, procured from the district of Africa adjoining the Temple of Jupiter Ammon. It was totally different from the *Sal Ammoniac* of the moderns, which is *Hydrochlorus Ammoniac*. (*Vid. AMMONIACUM*.) "It has been thought," says Dr. Moore, that the ancients knew *Sal Ammoniac* under the name of *Nitrum*; and, although Beckmann maintains the opposite opinion, the grounds on which he rests his argument do not bear him out. He observes that 'there are two properties with which the ancients might have accidentally become acquainted, and which, in that case, would have been sufficient to make known or define to us this salt (*sal ammoniac*). In the first place, by an accidental mixture of quicklime, the strong smell or unpleasant vapour diffused by the volatile alkali separated from the acid might have been observed.' Now what Beckmann seems willing to admit as a criterion of *sal ammoniac* is mentioned by Pliny of *nitrum*, which, he says, 'sprinkled with lime, gives forth a powerful odour' (*calcis aspersum reddit odorem vehementiorem*). Beckmann appears to doubt what, he says, 'several writers have asserted, that *sal ammoniac* comes also from the East Indies.' But it certainly is brought thence at this day, and may have been manufactured there, and have found its way to Europe in the time of Pliny also; for we find that unchangeable country producing the same things then as now, indigo, Indian ink, fine steel, sugar, silks, &c. The manufacture of *sal ammoniac* in Egypt also may, for aught we know, have been more ancient than is thought. We are not justified in concluding that the ancients were ignorant of everything of which we discover no mention in their works. One of the chief reasons for supposing the ancients to have been ignorant of our *sal ammoniac* and nitre is, that we know of very few uses to which they might have been applied. But, though they may have had little inducement to manufacture them, even had they possessed the art, yet they could hardly have failed to observe them in a native state, since both these salts are found occurring thus in Southern Italy and elsewhere."²

SALARIIUM, a Salary. The ancients derive the word from *sal*, i. e., salt;³ the most necessary thing to support human life being thus mentioned as a representative for all others. Salarium therefore comprised all the provisions with which the Roman officers were supplied, as well as their pay in money. In the time of the Republic the name salarium does not appear to have been used; it was Augustus who, in order to place the governors of provinces and other military officers in a greater state of dependance, gave salaries to them or certain sums of money, to which afterward various supplies in kind were added.⁴ Before the time of Augustus, the provincial magistrates had been pro-

vided in their provinces with everything they wanted, through the medium of redemptores (πρόχοι), who undertook, for a certain sum paid by the state, to provide the governors with all that was necessary to them. During the Empire we find instances of the salarium being paid to a person who had obtained a province, but was nevertheless not allowed to govern it. In this case the salarium was a compensation for the honour and advantages which he might have derived from the actual government of a province, whence we can scarcely infer that the sum of 10,000 sesterces, which was offered on such an occasion,⁵ was the regular salarium for a consul.

Salaria were also given under the Empire to other officers, as to military tribunes,⁶ to assessores (*vid. Assessor*), to senators,⁷ to the comites of the princes on his expeditions,⁸ and others. Antoninus Pius fixed the salaries of all the rhetoricians and philosophers throughout the Empire;⁹ and when persons did not fulfil their duties, he punished them by deducting from their salaries.¹⁰ Alexander Severus instituted fixed salaries for rhetoricians, grammarians, physicians, haruspices, mathematicians, mechanicians, and architects;¹¹ but to how much these salaries amounted we are not informed. Respecting the pay which certain classes of priests received, *vid. SACERDOS*.

SALII were priests of Mars Gradivus, and are said to have been instituted by Numa. They were twelve in number, chosen from the patricians even in the latest times, and formed an ecclesiastical corporation (*lecta juvenctus patricia*).¹² They had the care of the twelve ancilia (*vid. ANCILE*), which were kept in the Temple of Mars on the Palatine Hill whence these priests were sometimes called Salii Palatini, to distinguish them from the other salii mentioned below. The distinguishing dress of the salii was an embroidered tunic bound with a brazen belt, the trahea, and the apex, also worn by the flamines. (*Vid. APEX*.) Each had a sword by his side, and in his right hand a spear or staff.¹³

The festival of Mars was celebrated by the salii on the 1st of March and for several successive days, on which occasion they were accustomed to go through the city in their official dress, carrying the ancilia in their left hands or suspended from their shoulders, and at the same time singing and dancing,¹⁴ whence Ovid, apparently with correctness, derives their name.¹⁵ The songs or hymns which they sang on this occasion (*saliaria carmina*)¹⁶ were called *asamenta*, *assamenta*, or *axamenta*, of which the etymology is uncertain. Götting¹⁷ thinks they were so called because they were sung without any musical accompaniment, *assa voce*; but this etymology is opposed to the express statement of Dionysius.¹⁸ Some idea of the subject of these songs may be obtained from a passage in Virgil,¹⁹ and a small fragment of them is preserved by Varro.²⁰ In later times they were scarcely understood, even by the priests themselves.²¹ The praises of Mamurius Veturius formed the principal subject of these songs, though who Mamurius Veturius was the ancients themselves were not agreed upon.²² He is generally said to be the armorer who made eleven ancilia like the one that was sent from heaven (*vid. ANCILE*),²³ but some modern writers suppose it to be

merely another name of Mars. Besides, however, the praises of Mamurius, the verses which the salii sang appear to have contained a kind of theogony, in which the praises of all the celestial deities were celebrated, with the exception of Venus.¹ The verses in honour of each god were called by the respective names of each, as Januli, Junonii, Minervii.² Divine honour was paid to some of the emperors by inserting their names in the songs of the salii. This honour was first bestowed upon Augustus,³ and afterward upon Germanicus;⁴ and when Verus died, his name was inserted in the song of the salii by command of M. Antoninus.⁵

At the conclusion of the festival, the salii were accustomed to partake of a splendid entertainment in the Temple of Mars, which was proverbial for its excellence.⁶ The members of the collegium were elected by co-optation. We read of the dignities of præsul, vates, and magister in the collegium.⁷

Tullus Hostilius established another collegium of salii in fulfilment of a vow which he made in a war with the Sabines. These salii were also twelve in number, chosen from the patricians, and appear to have been dedicated to the service of Quirinus. They were called the Salii Collini, Agonales or Agonenses.⁸ Niebuhr⁹ supposes that the oldest and most illustrious college, the Palatine Salii, were chosen originally from the oldest tribe, the Ramnes, and the one instituted by Tullus Hostilius, or the Quirinalian, from the Tities alone: a third college for the Luceres was never established.¹⁰

SALINÆ (ἀλαί, ἀλοπήγιον), a Saltwork.¹¹ Although the ancients were well acquainted with rock salt¹² (ἄλες ὀρυκτοί, i. e., fossil salt¹³), and although they obtained salt likewise from certain inland lakes,¹⁴ and from natural springs or brine pits,¹⁵ and found no small quantity on certain shores, where it was congealed by the heat of the sun without human labour (ἄλες αὐτόματοι¹⁶), yet they obtained by far the greatest quantity by the management of works constructed on the seashore, where it was naturally adapted for the purpose by being so low and flat as to be easily overflowed by the sea (*maritima aræa salinarum*¹⁷), or even to be a brackish marsh (ἀλνκίς) or a marine pool (λαμνοθάλαττα¹⁸). In order to aid the natural evaporation, shallow rectangular ponds (*multifidi lacus*) were dug, divided from one another by earthen walls. The seawater was admitted through canals, which were opened for the purpose, and closed again by sluices. (*Vid. CATARACTA*.) The water was more and more strongly impregnated with salt as it flowed from one pond to another.¹⁹ When reduced to brine (*coacto humore*), it was called by the Greeks ἄλμη, by the Latins *salsugo* or *salsilago*, and by the Spaniards *muria*.²⁰ In this state it was used by the Egyptians to pickle fish,²¹ and by the Romans to preserve olives, cheese, and flesh likewise.²² From *muria*, which seems to be a corruption of ἄλμυρός, "briny," the victuals cured in it were called *salsa muratica*.²³ As the brine which was left in the ponds crystallized, a man intrusted with the care of them, and therefore called *salinator* (ἀλοπηγής), raked out the salt, so that it lay

in heaps (*tumuli*) upon the ground to drain.¹ In Attica,² in Britain,³ and elsewhere, several places, in consequence of the works established in them, obtained the name of Ἀλαί or *Salina*.

Throughout the Roman Empire, the saltworks, having been first established by the early kings of Rome, were commonly public property, and were let by the government to the highest bidder. The publicans who farmed them, and often maintained upon them a great number of servants,⁴ were called *manicipes salinarum*. (*Vid. MANCIPES*.) Malefactors of both sexes were employed in them, as they were in the mines.⁵

SALINUM, *dim.* SALILLUM, a Saltcellar. Among the poor, a shell served for a saltcellar;⁶ but all who were raised above poverty had one of silver, which descended from father to son,⁷ and was accompanied by a silver plate, which was used together with the saltcellar, in the domestic sacrifices.⁸ (*Vid. PATERA*.) These two articles of silver were alone compatible with the simplicity of Roman manners in the early times of the Republic.⁹ The saltcellar was no doubt placed in the middle of the table, to which it communicated a sacred character, the meal partaking of the nature of a sacrifice.¹⁰ (*Vid. FOCUS, MENSA*.) These circumstances, together with the religious reverence paid to salt, and the habitual comparison of it to wit and vivacity, explain the metaphor by which the soul of a man is called his *salillum*.¹¹

*SALPE (σάλπηξ), the Stockfish, or *Sparus Salpa*, in French, *la Saupé*; in Italian, *Sarpa*.¹²

*SALPINCX (σάλπιγξ), a bird whose note resembled the sound of a trumpet (σάλπιγξ, "a trumpet"). Hesychius and Photius identify it with the *τροχίλος*, or golden-crested wren, "the notes of which," says Adams, "are certainly *piping*, but cannot well be compared to the sound of a trumpet!"¹³

*II. A kind of shellfish, called also σπράμβος.

SALTATIO (ὄρχησις, ὄρχηστικός), Dancing. The dancing of the Greeks, as well as of the Romans, had very little in common with the exercise which goes by that name in modern times. It may be divided into two kinds, gymnastic and mimetic; that is, it was intended either to represent bodily activity, or to express by gestures, movements, and attitudes, certain ideas or feelings, and also single events or a series of events, as in the modern ballet. All these movements, however, were accompanied by music; but the terms *ὄρχησις* and *saltatio* were used in so much wider a sense than our word dancing, that they were applied to designate gestures even when the body did not move at all¹⁴ (*saltare solis oculis*¹⁵).

We find dancing prevalent among the Greeks from the earliest times. It is frequently mentioned in the Homeric poems: the suitors of Penelope delight themselves with music and dancing;¹⁶ and Ulysses is entertained at the court of Alcinoüs with the exhibitions of very skilful dancers, the rapid movements of whose feet excite his admiration.¹⁷ Skilful dancers were at all times highly prized by the Greeks: we read of some who were presented with golden crowns, and had statues erected to their honour, and their memory celebrated by inscriptions.¹⁸

The lively imagination and mimetic powers of the Greeks found abundant subjects for various kinds of dances, and, accordingly, the names of no less than 200 different dances have come down to us.¹ It would be inconsistent with the nature of this work to give a description of all that are known: only the most important can be mentioned, and such as will give some idea of the dancing of the ancients.

Dancing was originally closely connected with religion: Plato² thought that all dancing should be based on religion, as it was, he says, among the Egyptians. It has been shown under *CHORUS*, that the chorus in the oldest times consisted of the whole population of a city, who met in a public place to offer up thanksgivings to the god of their country by singing hymns and performing dances. These dances, which, like all others, were accompanied by music, were therefore of a strictly religious nature; and in all the public festivals, which were so numerous among the Greeks, dancing formed a very prominent part. We find, from the earliest times, that the worship of Apollo was connected with a religious dance called *HYPOCHEMA*. All the religious dances, with the exception of the Bacchic and the Corybantic, were very simple, and consisted of gentle movements of the body, with various turnings and windings around the altar: such a dance was the *γέρανος*, which Theseus is said to have performed at Delos on his return from Crete.³ The Dionysiac or Bacchic and the Corybantic were of a very different nature. In the former, the life and adventures of the god were represented by mimetic dancing (*vid.* *DIONYSIA*): the dance called *Βακχική* by Lucian⁴ was a satyric dance, and chiefly prevalent in Ionia and Pontus; the most illustrious men in the state danced in it, representing Titans, Corybantics, satyrs, and husbandmen, and the spectators were so delighted with the exhibition that they remained sitting the whole day to witness it, forgetful of everything else. The Corybantic was of a very wild character: it was chiefly danced in Phrygia and in Crete: the dancers were armed, struck their swords against their shields, and displayed the most extravagant fury; it was accompanied chiefly by the flute.⁵ The following woodcut, from the Museo Pio-Clementino,⁶ is supposed to represent a Corybantic dance. Respecting the dances in the theatre, *vid.* *CHORUS*.

Dancing was applied to gymnastic purposes and to training for war, especially in the Doric states, and was believed to have contributed very much to the success of the Dorians in war, as it enabled them to perform their evolutions simultaneously and in order. Hence the poet Socrates⁷ says,

οἱ δὲ χοροὶς κάλλιστα θεοῦς τιμῶσιν, ἄριστοι
ἐν πολέμῳ.

There were various dances in early times which served as a preparation for war; hence Homer⁸ calls the hoplitæ *πυλῆες*, a war-dance having been called *πύλις* by the Cretans.⁹ Of such dances, the most celebrated was the Pyrrhic (*ἡ Πυρρική*), of

which the *πύλις* was probably only another name: this Plato¹ takes as the representative of all war dances. The invention of this dance is placed in the mythical age, and is usually assigned to one Pyrrhicos; but most of the accounts agree in assigning it a Cretan or Spartan origin, though others refer it to Pyrrhus or Neoptolemus, the son of Achilles, apparently misled by the name, for it was undoubtedly of Doric origin.² It was danced to the sound of the flute, and its time was very quick and light, as is shown by the name of the Pyrrhic foot (~~~~), which must be connected with this dance: and from the same source came also the Proceleusmatic (~~~~), or challenging foot.³ The Pyrrhic dance was performed in different ways at various times and in various countries, for it was by no means confined to the Doric states. Plato⁴ describes it as representing, by rapid movements of the body, the way in which missiles and blows from weapons were avoided, and also the mode in which the enemy were attacked. In the non-Doric states it was probably not practised as a training for war, but only as a mimetic dance: thus we read of its being danced by women to entertain a company.⁵ It was also performed at Athens at the greater and lesser Panathenæa by Ephebi, who were called Pyrrhichists (*Πυρρῆχισταί*), and were trained at the expense of the choragus.⁶ In the mountainous parts of Thessaly and Macedon, dances are performed at the present day by men armed with muskets and swords.⁷

The following woodcut, taken from Sir W. Hamilton's vases,⁸ represents three Pyrrhichists, two of whom, with sword and shield, are engaged in the dance, while the third is standing with a sword. Above them is a female balancing herself on the head of one, and apparently in the act of performing a somerset; she, no doubt, is taking part in the dance, and performing a very artistic kind of *κνέσις* or tumbling, for the Greek performances of this kind surpass anything we can imagine in modern times. Her danger is increased by the person below, who holds a sword pointing towards her. A female spectator, sitting, looks on astonished at the exhibition.

The Pyrrhic dance was introduced in the public games at Rome by Julius Cæsar, when it was danced by the children of the leading men in Asia and Bithynia.⁹ It seems to have been much liked by the Romans; it was exhibited both by Caligula and Nero,¹⁰ and also frequently by Hadrian.¹¹ Athenæus¹² says that the Pyrrhic dance was still practised in his time (the third century A.D.) at Sparta,

where it was danced by boys from the age of fifteen, but that in other places it had become a species of Dionysiac dance, in which the history of Dionysus was represented, and where the dancers, instead of arms carried the thyrsus and torches.

Another important gymnastic dance was performed at the festival of *γυμνοπαίδια* at Sparta, in commemoration of the battle at Thyrea, where the chief object, according to Müller,¹ was to represent gymnastic exercises and dancing in intimate union: respecting the dance at this festival, see *GYMNOPAIDIA*.

There were other dances besides the Pyrrhic in which the performers had arms, but these seem to have been entirely mimetic, and not practised with any view to training for war. Such was the *Kar-paia*, peculiar to the *Enianians* and *Magnetes*, which was performed by two armed men in the following manner: one lays down his arms, sows the ground, and ploughs with a yoke of oxen, frequently looking around as if afraid; then comes a robber, whom as soon as the other sees, he snatches up his arms, and fights with him for the oxen. All these movements are rhythmical, accompanied by the flute. At last the robber binds the man and drives away the oxen, but sometimes the husbandman conquers.² Similar dances by persons with arms are mentioned by Xenophon on the same occasion. These dances were frequently performed at banquets for the entertainment of the guests,³ where also the *κυβιστήρες* were often introduced, who in the course of their dance flung themselves on their head and alighted again upon their feet. See *CUBISTÈRES*, where the remarks which are made respecting the *κυβιστῶν εἰς μαχαίρας* are well illustrated by the following woodcut from the *Museo Borbonico*, vol. vii., tav. 58. We learn from Tacitus⁴ that the German youths also used to dance among swords and spears pointed at them.

Other kinds of dances were frequently performed at entertainments, in Rome as well as in Greece, by courtesans, many of which were of a very indecent and lascivious nature.⁵ The dancers seem to have frequently represented Bacchanals: many such dancers occur in the paintings found at Herculaneum and Pompeii, in a variety of graceful attitudes.⁶

Among the dances performed without arms, one of the most important was the *δρυμός*, which was danced at Sparta by youths and maidens together; the youth danced first some movements suited to his age, and of a military nature; the maiden followed in measured steps and with feminine gestures. Lucian⁷ says that it was similar to the dance performed at the *Gymnopædia*.⁸ Another common dance at Sparta was the *Bibasis*, which is described in a separate article.

In many of the Greek states, the art of dancing was carried to great perfection by females, who were frequently engaged to add to the pleasures and enjoyment of men at their symposia. These dancers always belonged to the *hetærae*. Xenophon¹ describes a mimetic dance which was represented at a symposium where Socrates was present. It was performed by a maiden and a youth belonging to a Syracusan, who is called the *ὀρχηστροδιδάσκαλος*, and represented the loves of Dionysus and Ariadne.

Respecting the dancers on the tight-rope, see *FUNAMBULUS*.

Dancing was common among the Romans in ancient times in connexion with religious festivals and rites, and was practised, according to Servius,² because the ancients thought that no part of the body should be free from the influence of religion. The dances of the *salii*, which were performed by men of patrician families, are described elsewhere. (*VID. ANCILE*.) Dionysius³ mentions a dance with arms at the *Ludi Magni*, which, according to his usual plan of referring all old Roman usages to a Greek origin, he calls the Pyrrhic. There was another old Roman dance of a military nature, called *Βελιχερα Saltatio*, which is said to have been instituted by Romulus after he had carried off the Sabine virgins, in order that a like misfortune might not befall his state.⁴ Dancing, however, was not performed by any Roman citizens except in connexion with religion; and it is only in reference to such dancing that we are to understand the statements, that the ancient Romans did not consider dancing disgraceful, and that not only freemen, but the sons of senators and noble matrons, practised it.⁵ In the later times of the Republic we know that it was considered highly disgraceful for a freeman to dance. Cicero reproaches Cato for calling Murena a dancer (*saltator*), and adds "*nemo fere saltat sobrius, nisi forte insanit*."⁶

The mimetic dances of the Romans, which were carried to such perfection under the Empire, are described under *PANTOMIMUS*.⁷

SALVIANUM INTERDICTUM. (*VID. INTERDICTUM*, p. 543.)

SALUTATORES was the name given in the later times of the Republic and under the Empire to a class of men who obtained their living by visiting the houses of the wealthy early in the morning to pay their respects to them (*salutare*), and to accompany them when they went abroad. This arose from the visits which the clients were accustomed to pay to their patrons, and degenerated in later times into the above-mentioned practice; and such persons seem to have obtained a good living among the great number of wealthy and vain persons at Rome, who were gratified by this attention.⁸ (*VID. SPURTULA*.)

SAMBUCA (*σαμβύκη* or *σαβύκη*), a Harp.

The preceding Latin and Greek names are with good reason represented by Bochart, Vossius, and other critics to be the same with the Hebrew סַבְבָּה (sabeca), which occurs in Daniel.¹⁰ The performances of *sambucistria* (*σαμβυκιστρία*) were only known to the early Romans as luxuries brought over from Asia.¹¹ The Athenians considered them as an exotic refinement;¹² and the Rhodian women who played on the harp at the marriage-feast of

1. (Dor., iv., 6, § 8.)—2. (Xen., Anab., vi., 1, § 7, 8.—Athen., i., p. 15, f., 10, a.—Maxim. Tyr., Diss., xxviii., 4.)—3. (Athen., iv., p. 155, b.)—4. (Germ., 24.)—5. Caranus in Macedonia, clothed in very thin tunics, were introduced with a view to give to the entertainment the highest degree of splendour. Some Greek authors expressly attributed the invention of this instrument to the Syrians or Phœnicians.¹ The opinion of those who ascribed it to the lyric poet Ibycus can only authorize the conclusion that he had the merit of inventing some modification of the instrument, as improved by him, being called *ἰβύκιον*.² Strabo, moreover, represents *σαμβύκη* as a "barbarous" name.³

The sambuca is several times mentioned in conjunction with the small triangular harp (*τρίγωνον*), which it resembled in the principles of its construction, though it was much larger and more complicated. The *triganum*, a representation of which from the Museum at Naples is given in the annexed woodcut, was held like the lyre in the hands of the

performer,⁴ whereas the harp was sometimes considerably higher than the stature of the performer, and was placed upon the ground. The harp of the Parthians and Troglodytæ had only four strings.⁵ Those which are painted on the walls of Egyptian tombs (see Denon, Wilkinson, &c.) have from four to thirty-eight. One of them, taken from Bruce's Travels, is here introduced. From the allusions to this instrument in Vitruvius,⁶ we find that the longest string was called the "*proslambanomenos*," the next "*hypate*," the shortest but one "*paranete*," and the shortest, which had, consequently, the highest tone, was called "*nete*." (*Vid. Music*, p. 646.) Under the Roman emperors the harp appears to have come into more general use,⁷ and was played by men (*σαμβυκιστῆς*) as well as women.⁸

Sambuca was also the name of a military engine, used to scale the walls and towers of besieged cities. It was called by this name on account of its general resemblance to the form of the harp. Accordingly, we may conceive an idea of its construction by turning to the woodcut, and supposing a mast or upright pole to be elevated in the place of the longest strings, and to have at its summit an apparatus of pulleys, from which ropes proceed in the direction of the top of the harp. We must suppose a strong ladder, 4 feet wide, and guarded at the sides with palisades, to occupy the place of the sounding-board, and to be capable of being lowered or raised at pleasure by means of the ropes and pulleys. At the siege of Syracuse Marcellus had engines of this description fixed upon vessels, which the rowers moved up to the walls so that the soldiers might enter the city by ascending the ladders.⁹

1. (Athen., iv., 175, d.)—2. (Athen., l. c. — Suidas, s. v. *ἰβύκιον*, *ἰβυκός*, *σαμβύκαι*.)—3. (x., 3, § 17.)—4. (Spon, Misc. Erud. Ant., p. 21.)—5. (Athen., xiv., 633, f.)—6. (vi., 1.)—7. (Pers., vi., 95.—Spart., Hadr., 26.)—8. (Athen., iv., 162, c.)—9. (Polyb., viii., 5.—Plut., Marc., p. 558, ed. Steph.—Athen., xiv., 634, b.—Onosand., Strab., 42.—Vitruv., x., 16, § 9.—Festus, s. v. *Sambuca*.—Athen., De Mach. ap. Math. Vet., p. 7.)

When an inland city was beleaguered, the sambuca was mounted upon wheels.¹

**SAMIA TERRA* (*Σαμία γῆ*). "The Samian Earth," says Sir John Hill, "was a dense, ponderous, unctuous clay, of a sub-astringent taste, and either white or ash-coloured. It was dug in the island of Samos, whence it had its name, and never was found in any other place that we know of." It consisted principally of alumine, according to Adams. The *ἀστὴρ* was merely a dense variety of it. "The Samian earth," observes Dr. Moore, "was obtained from a vein of considerable extent, but only two feet in height between the rocks which formed its roof and floor, so that one could not stand erect while digging it, but was obliged to lie upon his back or side. This vein contained four different qualities of earth, which became better in proportion as it was obtained from nearer the centre of the vein. The outer and inferior kind, called *ἀστὴρ* (*ἀστὴρ*), was chiefly or solely employed for cleansing garments."²

**SAMIUS LAPIS* (*Σάμιος λίθος*). According to Gesner and De Laet, the Samian Stone belonged to the same class of substances as the Samian earth, from which it differed only in hardness.³

SAMNITES (*Vid. GLADIATORES*, p. 477.)

**SAMPSYCHON* (*σάμψυχον*), a species of plant, the *Origanum marjorana*, or Marjoram. It was *Sampsychon* in Egypt, Cyprus, and Syria, and *Amaracus* in other places, such as Cyzicus, &c.⁴

SANDALIUM (*σανδάλιον* or *σάνδαλον*), a kind of shoe worn only by women. In the Homeric age, however, it was not confined to either sex, and consisted of a wooden sole fastened to the foot with thongs.⁵ In later times, the sandalium must be distinguished from the *ὑπόδημα*, which was a simple sole bound under the foot,⁶ whereas the sandalium, also called *θαύτια* or *βλαύτη*, was a sole with a piece of leather covering the toes, so that it formed the transition from the *ὑπόδημα* to real shoes. The piece of leather over the toes was called *ζυγός* or *ζυγόν*.⁷ The *σανδάλια ἄζυγα* in Strabo⁸ are, however, not sandalia without the *ζυγόν*, but, as Becker⁹ justly remarks, sandalia which did not belong to one another, or did not form a pair, and one of which was larger or higher than the other. The *ζυγόν* was frequently adorned with costly embroidery and gold,¹⁰ and appears to have been one of the most luxurious articles of female dress.¹¹ This small cover of the toes, however, was not sufficient to fasten the sandalium to the foot, wherefore thongs, likewise beautifully adorned, were attached to it.¹² Although sandalia, as we have stated, were in Greece, and subsequently at Rome also, worn by women only, yet there are traces that, at least in the East, they were also worn by men.¹³

The Roman ladies, to whom this ornament of the foot was introduced from Greece, wore sandalia which appear to have been no less beautiful and costly than those worn by the Greeks and the Oriental nations.¹⁴

SANDAPILA. (*Vid. FUNUS*, p. 459.)

**SANDARACHA* (*σανδαράχη*), a red pigment, called now *Realgar*, or red sulphuret of arsenic. According to the analysis of Thenard, it consists of

1. (Veget., iv., 21.—Bito ap. Math. Vet., p. 110, 111.)—2. (Dioscor., v., 171.—Hill ad Theophr., De Lapid., c. 108.—Moore's Anc. Mineral., p. 76.)—3. (Dioscor., v., 172.—Adams, Append., s. v.)—4. (Dioscor., iii., 41.—Geopon., xi., 27.—Adams, Append., s. v.)—5. (Hom., Hymn. in Merc., 79, 83, 139.)—6. (Pollux, Onom., viii., 84, with Kühn's emendation.)—7. (Aristoph., Lysistr., 390, with the schol.—Hesych., s. v. *Ζυγός*.—Pollux, Onom., vii., 81.—Phot., Lex., p. 54, ed. Dobr.)—8. (vi., 1, p. 13, Tauchn.)—9. (Charikles, ii., 367, &c.)—10. (Cephissod. ap. Poll., Onom., vii., 87.—Clem. Alex., Pedagog., ii., 11.)—11. (Elian, v. H. i., 18.)—12. (Pollux, Onom., vii., 92.)—13. (Herod., ii., 91.—St. Mark, vi., 9.)—14. (Tarpilius ap. Non., v. 24.—Terent., Eunuch., v., 7, 4.)

75 parts of arsenic and 25 of sulphur. It was freely used by the ancient physicians as a caustic and stimulant. "An adulterate kind of sandaracha," says Dr. Moore, "was made, according to Pliny, of calcined white lead; that is, the red lead he had just before described under the name of *usta* was substituted for *realgar*. But Vitruvius prefers to the native sandaracha this substitute, which he designates by no other name, simply saying that cerussa is by the heat of a furnace converted into sandaracha. Strabo speaks of a mine of sandaracha at Pompeiopolis, in Paphlagonia, in which, because of the dangerous exhalations from the mineral, none others were employed but slaves who had been sold on account of crime."¹

*SANDIX (σάνδιξ), a red or scarlet paint, formed of the mixture of sandaracha with rubrica in equal proportions. Servius, in his commentary on Virgil, erroneously takes it for an herb yielding a dye; and La Cerda, falling into a similar mistake, says that *sandix* is both an herb and a colour.²

*SANTALON (σάνταλον), the Sandal-tree and its wood. Arrian is supposed to refer to this kind of wood under the name of σαγάλινα ξύλα, where probably we ought to read σανδάλινα or σαντάλινα, or else σατάλινα.³

*SAPPHIRUS (σάπφειρος), the Sapphire. "The sapphire of the ancients," says Dr. Moore, "described by Theophrastus as sprinkled with gold (χρυσισπάρστος), and in which Pliny says gold sparkles (*scintillat*), is agreed by all to have been our lapis-lazuli. The name is Hebrew, and occurs repeatedly in the Old Testament, applied to the same substance. What the ancients took for gold was the iron pyrites often disseminated in this mineral, and forming a feature in its external character upon which, under their mistake, they were inclined to lay much stress. It is evident, however, that other minerals besides lapis-lazuli were included under the name sapphire. Pliny speaks of purple sapphires, of which the best, he says, are the Median."⁴

SARCOPHAGUS. (Vid. FŌNUS, p. 460.)

SARCULUM, a *sarriendo* (σκαλις, σκαλιστήριον), a Hoe, chiefly used in weeding gardens, cornfields, and vineyards.⁵ It was also sometimes used to cover the seed when sown,⁶ and in mountainous countries it served instead of a plough.⁷ Directions for using it to clear the surface of the ground (σκάλλειν, σκαλέειν¹⁰) are given by Palladius.¹¹

*SARDA or SARDUS (σάρδος), the Carnelian. Pliny says it was found first at Sardes, intending probably by this to suggest the origin of the name. Others, however, derive the term from the island of Sardinia, where, according to Kircher, very good ones are obtained. Epiphanius says it received its name from some resemblance which it bore to the fish called sardine (σαρδίη ἰχθύς τεταριχμένω). "The carnelian," says Sir John Hill, "is one of the semipellucid gems, and has its name *Carniolus*, *Carniolus*, or, as it is sometimes improperly written, *Corniolus*, from its colour, which resembles flesh (*caro*, *carnis*) with more or less of the blood in it." The best carnelians had been obtained from near Babylon, in working certain stone quarries, where it was found enveloped in the rock; but that locality, Pliny says, had failed. It was, however, a common gem, and occurred in many other places. "The car-

nelian," says Adams, "consists mostly of silex; but, according to Brückmann, the ancients used the name in a generic sense, comprehending under it all the finer species of hornstones or agates. The red were called carnelians, the white onyxes; and those compounded of both, sardonyles."¹

*SARDONYX (σαρδόνυξ), the Sardonyx, a precious stone. This variety, according to Cleaveland, differs from the carnelian (*vid. SARDA*) in its colour only, which is reddish yellow, or nearly orange, sometimes with a tinge of brown. "The sardonylex," says Dr. Moore, "mentioned by Pliny next after opal, as holding the next rank, was evidently the same stone with that now so called. But under the same denomination seem to have been comprehended other varieties of chalcedony, and especially that species of carnelian which Werner calls Sardonyx, whose colours are in alternate bands of red and white, and, when the stone is cut in certain directions, resemble the flesh seen through the finger nail. The first Roman who sealed with a sardonylex was the elder Scipio Africanus, from whose time this sort of gem was much used for that purpose, it being almost the only one which left a fair impression, and brought away with it no portion of the wax. This gem was most approved when it exhibited distinct colours and bands well defined. The localities mentioned by Pliny are India, Arabia, and Armenia."²

SARISSA. (Vid. HASTA, p. 489.)

SARRACUM, a kind of common cart or wagon, which was used by the country-people of Italy for conveying the produce of their fields, trees, and the like from one place to another.³ Its name, as well as the fact that it was used by several barbarous nations, show that it was introduced from them into Italy.⁴ That persons also sometimes rode in a sarracum, is clear from a passage of Cicero quoted by Quintilian,⁵ who even regards the word sarracum as low and vulgar. Capitolinus⁶ states that, during a plague, the mortality at Rome was so great, that it was found necessary to carry the dead bodies out of the city upon the common sarraca. Several of the barbarous nations with which the Romans came in contact used these wagons also in war, and placed them around their camps as a fortification;⁷ and the Scythians used them in their wanderings, and spent almost their whole lives upon them, with their wives and children, whence Ammianus compares such a caravan of sarraca, with all that was conveyed upon them, to a wandering city. The Romans appear to have used the word sarracum as synonymous with plaustrum, and Juvenal⁹ goes even so far as to apply it to the constellation of stars which was generally called plaustrum.⁹

SARTA'GO (τήγαγον) was a sort of pan, which was used in the Roman kitchens for a variety of purposes, such as roasting, melting fat or butter, cooking, &c.¹⁰ Frequently, also, dishes consisting of a variety of ingredients seem to have been prepared in such a sartago, as Persius¹¹ speaks of a *sartago loquendi*, that is, of a mixture of proper and improper expressions. Some commentators on this passage, and perhaps with more justice, understand the sartago loquendi as a mode of speaking in which hissing sounds are employed, similar to the noise produced when meat is fried in a pan.

SATISDA'TIO. (Vid. ACTIO, p. 19.)

SAT'URA, or, in the softened form, SATIRA, is the name of a species of poetry, which we call sat-

ne. In the history of Roman literature we have to distinguish two different kinds of satires, viz., the early *satura* and the later *satira*, which received its perfect development from the poet C. Lucilius (148–103 B.C.). Both species of poetry, however, are altogether peculiar to the Romans. The literal meaning of *satura*, the root of which is *sat*, comes nearest to what the French call *pot-pourri*, or to the Latin *farrago*, a mixture of all sorts of things. The name was accordingly applied by the Romans in many ways, but always to things consisting of various parts or ingredients, e. g., *lanx satura*, an offering consisting of various fruits, such as were offered at harvest festivals and to Ceres;¹ *lex per saturam lata*, a law which contained several distinct regulations at once.² It would appear from the etymology of the word, that the earliest Roman *satura*, of which we otherwise scarcely know anything, must have treated in one work on a variety of subjects just as they occurred to the writer, and perhaps, as was the case with the satires of Varro, half in prose and half in verse, or in verses of different metre. Another feature of the earliest *satura*, as we learn from the celebrated passage in Livy,³ is that it was scenic, that is, an improvisatory and irregular kind of dramatic performance, of the same class as the *versus Fescennini*. (Vid. FESCENNINA.) When Livius Andronicus introduced the regular drama at Rome, the people, on account of their fondness for such extempore jokes and raileries, still continued to keep up their former amusements, and it is not improbable that the *exodia* of later times were the old *saturæ* merely under another name. (Vid. EXODIA.)

Ennius and Pacuvius are mentioned as the first writers of satires, but we are entirely unable to judge whether their works were dramatic like the *satura* of old, or whether they resembled the satires of Lucilius and Horace. At any rate, however, neither Ennius nor Pacuvius can have made any great improvement in this species of poetry, as Quintilian⁴ does not mention either of them, and describes C. Lucilius as the first great writer of satires. It is Lucilius who is universally regarded by the ancients as the inventor of the new kind of *satira*, which resembled, on the whole, that species of poetry which is in modern times designated by the same name, and which was no longer scenic or dramatic. The character of this new *satira* was afterward emphatically called *character Lucilianus*.⁵ These new satires were written in hexameters, which metre was subsequently adopted by all the other satirists, as Horace, Persius, and Juvenal, who followed the path opened by Lucilius. Their character was essentially ethical or practical, and as the stage at Rome was not so free as at Athens, the satires of the former had a similar object to that of the ancient comedy at the latter. The poets, in their satires, attacked not only the follies and vices of mankind in general, but also of such living and distinguished individuals as had any influence upon their contemporaries. Such a species of poetry must necessarily be subject to great modifications, arising partly from the character of the time in which the poet lives, and partly from the personal character and temperament of the poet himself; and it is from these circumstances that we have to explain the differences between the satires of Lucilius, Horace, Persius, and Juvenal.

After Lucilius had already, by his own example, established the artistic principles of satires, Terentius Varro, in his youth, wrote a kind of satires which were neither like the old *satura* nor like the

satira of L. Juvius. They consisted of a mixture of verse and prose, and of verses of different metres, but were not scenic like the old *saturæ*. They were altogether of a peculiar character; they were therefore called *satiræ Varronianæ*, or *Menippeæ*, or *Cynicæ*, the latter because he was said to have imitated the works of the Cynic philosopher Menippus.¹

SATURA LEX. (Vid. LEX, p. 580.)

SATURNALIA, the festival of Saturnus, to whom the inhabitants of Latium attributed the introduction of agriculture and the arts of civilized life. Falling towards the end of December, at the season when the agricultural labours of the year were fully completed, it was celebrated in ancient times by the rustic population as a sort of joyous harvest-home, and in every age was viewed by all classes of the community as a period of absolute relaxation and unrestrained merriment. During its continuance no public business could be transacted, the law courts were closed, the schools kept holiday, to commence a war was impious, to punish a malefactor involved pollution.² Special indulgences were granted to the slaves of each domestic establishment: they were relieved from all ordinary toils; were permitted to wear the *pileus*, the badge of freedom; were granted full freedom of speech; and partook of a banquet attired in the clothes of their masters, and were waited upon by them at table.³

All ranks devoted themselves to feasting and mirth, presents were interchanged among friends, *cerei* or wax tapers being the common offering of the more humble to their superiors, and crowds thronged the streets, shouting *Io Saturnalia* (this was termed *clamare Saturnalia*), while sacrifices were offered with uncovered head, from a conviction that no ill-omened sight would interrupt the rites of such a happy day.⁴

Many of the peculiar customs exhibited a remarkable resemblance to the sports of our own Christmas and of the Italian Carnival. Thus, on the Saturnalia, public gaming was allowed by the *ædiles*,⁵ just as in the days of our ancestors the most rigid were wont to countenance card-playing on Christmas-eve; the whole population threw off the toga, wore a loose gown called *synthesis*, and walked about with the *pileus* on their heads,⁶ which reminds us of the dominoes, the peaked caps, and other disguises worn by masques and mummers; the *cerei* were probably employed as the *moccoli* now are on the last night of the Carnival; and, lastly, one of the amusements in private society was the election of a mock king,⁷ which at once calls to recollection the characteristic ceremony of Twelfth-night.

Saturnus being an ancient national god of Latium, the institution of the Saturnalia is lost in the most remote antiquity. In one legend it was ascribed to Janus, who, after the sudden disappearance of his guest and benefactor from the abodes of men, reared an altar to him, as a deity, in the Forum, and ordained annual sacrifices; in another as related by Varro, it was attributed to the wandering Pelasgi, upon their first settlement in Italy; and Hercules, on his return from Spain, was said to have reformed the worship, and abolished the practice of immolating human victims; while a third tradition represented certain followers of the last-named hero, whom he had left behind on his

return to Greece, as the authors of the *Saturnalia*.¹ Records approaching more nearly to history referred the erection of temples and altars, and the first celebration of the festival, to epochs comparatively recent, to the reign of Tattius,² of Tullus Hostilius,³ of Tarquinius Superbus,⁴ to the consulship of A. Semppronius and M. Minutius, B.C. 497, or to that of T. Lartius in the preceding year.⁵ These conflicting statements may be easily reconciled by supposing that the appointed ceremonies were in these rude ages neglected from time to time, or corrupted, and again at different periods revived, purified, extended, and performed with fresh splendour and greater regularity.⁶

During the Republic, although the whole month of December was considered as dedicated to Saturn,⁷ only one day, the xiv. Kal. Jan., was set apart for the sacred rites of the divinity: when the month was lengthened by the addition of two days upon the adoption of the Julian Calendar, the *Saturnalia* fell on the xvi. Kal. Jan., which gave rise to confusion and mistakes among the more ignorant portion of the people. To obviate this inconvenience, and allay all religious scruples, Augustus enacted that three whole days, the 17th, 18th, and 19th of December, should in all time coming be hallowed, thus embracing both the old and new style.⁸ A fourth day was added, we know not when or by whom, and a fifth, with the title *Juvenalis*, by Caligula,⁹ an arrangement which, after it had fallen into disuse for some years, was restored and confirmed by Claudius.¹⁰

But although, strictly speaking, one day only, during the Republic, was consecrated to religious observances, the festivities were spread over a much longer space. Thus, while Livy speaks of the first day of the *Saturnalia* (*Saturnalius primis*),¹¹ Cicero mentions the second and third (*secundis Saturnalius*,¹² *Saturnalius tertius*),¹³ and it would seem that the merry-making lasted during seven days, for Novius, the writer of Atellanæ, employed the expression *septem Saturnalia*, a phrase copied in later times by Memmius;¹⁴ and even Martial speaks of *Saturni septem dies*,¹⁵ although in many other passages he alludes to the five days observed in accordance with the edicts of Caligula and Claudius.¹⁶ In reality, under the Empire, three different festivals were celebrated during the period of seven days. First came the *Saturnalia* proper, commencing on xvi. Kal. Dec., followed by the *Opalia*, anciently coincident with the *Saturnalia*,¹⁷ on xiv. Kal. Jan.; these two together lasted for five days, and the sixth and seventh were occupied with the *Sigillaria*, so called from little earthenware figures (*sigilla*, *oscilla*) exposed for sale at this season, and given as toys to children.

*SATYRION (*σατυριον*), a plant, having the property of exciting salacity, whence the name. The *σατυριον τριφυλλον* of Dioscorides and Galen has given rise to many conjectures, as Adams remarks. Sprengel inclines to the *Tulipa Gesneriana*. The *σατυριον ερυθρόνιον* has been commonly held for the *Erythronium Dens Canis*, or Dog's-tooth; Sprengel, however, is not quite satisfied about it.¹⁸

*II. A four-footed amphibious animal. (*Vid. ENHYDORUS*.)

*SATYRUS. (*Vid. SIMIA*.)

*SAURUS and SAURA (*σαυρος, σαυρα*). "These terms are applied to several species of the genus

Lacerta; to the Salamander, the Stellio, and the Gecko. The *σαυρος χλωρος* noticed by Ælian must have been the *Lacerta viridis*, L. It is a very large species. Virgil mentions it in the following line:

"Nunc virides etiam occultant spineta lacertos."¹⁹

*II. A species of fish, about which great uncertainty prevails. "Some have referred it," says Adams, "to the *Salmo Saurus*, L., called at Rome *Tarantola*. Schweighæuser mentions that Camus supposed it the same as the *κίχλη*. Schneider, upon the whole, prefers some species of the *Diodon*, L. Coray inclines to the opinion that it was a species of mackerel, or *Scomber*, and that it is the fish called *δάκερδα* by the modern Greeks."²⁰

*SAXIFRAGIUM (*σαξίφραγον*), a plant, which Adams conjectures may have been the Burnet Saxifrage, or *Pimpinella Saxifraga*. Sprengel, however, has shown, as Adams remarks, that there is great uncertainty about it.²¹

SCALEÆ (*κλίμας*), a Ladder. The general construction and use of ladders was the same among the ancients as in modern times, and therefore requires no explanation, with the exception of those used in besieging a fortified place and in making an assault upon it. The ladders were erected against the walls (*admoerere, ponere, apponere, erigere scaleas*), and the besiegers ascended them under showers of darts and stones thrown upon them by the besieged.²² Some of these ladders were formed like our common ones; others consisted of several parts (*κλίμακες πικταί or διαλνται*), which might be put together so as to form one large ladder, and were taken to pieces when they were not used. Sometimes, also, they were made of ropes or leather, with large iron hooks at the top, by which they were fastened to the walls to be ascended. The ladders made wholly of leather consisted of tubes sowed up air-tight, and when they were wanted these tubes were filled with air.²³ Heron also mentions a ladder which was constructed in such a manner that it might be erected with a man standing on the top, whose object was to observe what was going on in the besieged town.²⁴ Others, again, were provided at the top with a small bridge, which might be let down upon the wall.²⁵ In ships, small ladders or steps were likewise used for the purpose of ascending into or descending from them.²⁶

In the houses of the Romans, the name *scalæ* was applied to the stairs or staircase leading from the lower to the upper parts of a house. The steps were either of wood or stone, and, as in modern times, fixed on one side in the wall.²⁷ It appears that the staircases in Roman houses were as dark as those of old houses in modern times, for it is very often mentioned that a person concealed himself in *scalis* or in *scalarum tenebris*,²⁸ and passages like these need not be interpreted, as some commentators have done, by the supposition that *in scalis* is the same as *sub scalis*. The Roman houses had two kinds of staircases: the one were the common *scalæ*, which were open on one side; the others were called *scalæ Græcæ* or *κλίμακες*, which were closed on both sides. Massurius Sabinus²⁹ states that the *flaminica* was not allowed to ascend higher than three steps on a common *scala*, but that she might make use of a *climax* like every

(ad Gall., i., 15, § 29.)

other person, as here she was concealed when going up.¹

SCALPTURA'TUM. (*Vid.* HOUSE, ROMAN, p. 519.)

*SCAMMO'NIA (σκαμμωνία), a plant, the *Convolutus Scammonia*. An extract, called Scammony, is obtained from the roots, having purgative properties. "Dioscorides describes another species, which Sibthorp and Sprengel take to be the *Convolutus farinosus*. Scammony is named δάκρυ κάμωνος by Nicander, and δακρύδιον by Alexander Trallianus."²

SCAMNUM, *dim.* SCABELLUM, a step which was placed before the beds of the ancients, in order to assist persons in getting into them, as some were very high; others, which were lower, required also lower steps, which were called *scabellā*.³ A scamnum was sometimes also used as a footstool.⁴ A scamnum extended in length becomes a bench, and in this sense the word is frequently used. The early Romans, before couches were introduced among them, used to sit upon benches (*scamna*) before the hearth when they took their meals.⁵ The benches in ships were also sometimes called scamna. In the technical language of the agrimensores, a scamnum was a field which was broader than it was long, and one that was longer than broad was called *striga*.⁶ In the language of the Roman peasantry, a scamnum was a large clod of earth which had not been broken by the plough.⁷

*SCANDIX (σκάνδις), a plant, the *Scandix Australis*, or Shepherd's Needle. Aristophanes makes it a matter of reproach to Euripides that his mother sold scandix instead of good potherbs. The scholiast on Aristophanes calls it *λάχανον ἄγριον εὐτελέες*, "a wild, cheap potherb." Hence, when Nicias, in the Knights, alludes to the name of Euripides, his fellow-slave replies, *μή μοι γε, μή μοι, μή διασκάνδικις*. "*Hec (scandix) est*," says Pliny, "*quam Aristophanes Euripidi poeta obijcit joculariter, matrem ejus ne olus quidem legitimum venditasse, sed scandicem*."

SCANTY'NIA LEX. (*Vid.* LEX, p. 585.)

SCAPHA, a skiff or boat, usually rowed by two oars (*biremis scapha*?), which was frequently taken with merchant vessels in case of shipwreck or other accidents.¹⁰

SCAPHEPHORIA (σκαφηφορία). (*Vid.* HYDRIPHORIA.)

*SCARUS (σκάρος), a species of fish, the *Scarus*. "There is considerable difficulty in deciding precisely what it was, owing to the general resemblance of the fishes contained in the Linnæan genera *Sparus*, *Scarus*, and *Labrus*. The ancient naturalists believed that it ruminates, and this opinion, although rejected by the author of the article *Ichthyology* in the *Encyclopædie Methodique*, has received the countenance of Rondelet and Linnæus." The roasted scarus was a favourite dish with the ancients, and the liver was particularly commended. The liver, according to Sibthorp, is still prized by the modern Greeks, and is celebrated in a Romanic couplet.¹¹

SCENA. (*Vid.* THEATRUM.)

*SCEPANOS (σκέπανος), a kind of flat fish, remarkable for swimming rapidly, gliding, as it were, like a shadow, whence the name (σκέπανος, "covered," "shaded"). It would seem to have been a species of tunny. Some, however, are in favour of the halibut.¹²

*SCEP'INOS (σκεπίνος), another name for the preceding, used by Athenians.¹

SCEPTRUM is a Latinized form of the Greek *σκήπτρον*, which originally denoted a simple staff or walking-stick.² (*Vid.* BACULUS.) The corresponding Latin term is *scipio*, springing from the same root and having the same signification, but of less frequent occurrence.

As the staff was used not merely to support the steps of the aged and infirm, but as a weapon of defence and assault, the privilege of habitually carrying it became emblematic of station and authority. The straight staves which are held by two of the four sitting figures in the woodcut at p. 61, while a third holds the curved staff, or *LITVUS*, indicate, no less than their attitude and position, that they are exercising judicial functions. In ancient authors the sceptre is represented as belonging more especially to kings, princes, and leaders of tribes;³ but it is also borne by judges,⁴ by heralds,⁵ and by priests and seers.⁶ It was more especially characteristic of Asiatic manners, so that, among the Persians, whole classes of those who held high rank and were invested with authority, including eunuchs, were distinguished as the sceptre-bearing classes (*οἱ σκηπτουχοί*). The sceptre descended from father to son,⁸ and might be committed to any one in order to express the transfer of authority.⁹ Those who bore the sceptre swore by it,¹⁰ solemnly taking it in the right hand and raising it towards heaven.¹¹

The original wooden staff, in consequence of its application to the uses now described, received a variety of ornaments or emblems. It early became a truncheon, pierced with golden or silver studs.¹² It was enriched with gems,¹³ and made of precious metals or of ivory.¹⁴ The annexed woodcut, taken from one of Sir Wm. Hamilton's fictile vases, and representing Æneas followed by Ascanius, and carrying off his father Anchises, who holds the sceptre in his right hand, shows its form as worn

by kings. The ivory sceptre (*eburneus scipio*)¹⁵ of the kings of Rome, which descended to the consuls, was surmounted by an eagle.¹⁶ (*Vid.* INSIGNE.) Jupiter and Juno, as sovereigns of the gods, were represented with a sceptre.¹⁷

SCEUOPHOROS (σκευόφορος). (*Vid.* HYPERE-TESTES.)

(Id., *Fast.*, vi., 38.)—15. (Val. Max., iv., 4, § 5.)—16. (Virg., *Æn.*, xi., 238.—Serv., ad loc.—*Iuv.*, x, 43.—Isid., *Orig.*, xviii., 2.)—17. (Ovid, II. cc.)

*SCHI'NOS (σχίνος), the *Pistachia lentiscus*, or the lentisk which produces mastich.¹

*SCHISTUS LAPIS (σχιστός λίθος). "The *Schistus lapis*," says Dr. Moore, "by burning which, we find from Dioscorides and Pliny, that hæmatite was sometimes counterfeited, was probably an uchrey stone of a slaty structure, whence its name (σχιστός, 'split', 'cloven'). The best was of a somewhat saffron colour, friable, fissile, and resembling in structure and in the cohesion of its layers the fossil salt called ammoniæ."²

*SCHÆNICLUS (σχοινίλος), a species of bird, which Schneider says has been referred to the *Emberiza Schœniclus*, or Reed Sparrow. This Adams considers a very doubtful reference, and suggests the *Motacilla arundinacea*, or Reed Wren.³

SCHENUS (ὁ, ἡ, σχήνους), an Egyptian and Persian measure, the length of which is stated by Herodotus⁴ at 60 stadia, or 2 parasangs; by Eratosthenes at 40 stadia, and by others at 32.⁵ Strabo and Pliny both state that the schœnus varied in different parts of Egypt and Persia.⁶ The schœnus was used especially for measuring land.⁷

*SCHÆNUS (σχήνους), a term applied to several species of *Rush*. "According to Sprengel, the ὄψοσχίνους is the *Juncus acutus*, and the ὀλοσχίνους the *Schœnus mariscus*, in which opinion he is supported by Stackhouse. Stephens gives nearly the same account of the *Schœni*. Sibthorp makes the σχήνους λεία of Dioscorides to be the *S. Holoschœnus*, L. The σχήνους ἄνθος is the most important of this tribe. Moses Charas says of it, 'The *Schœnanth* is Greek, and signifies the flower of a reed, which is the best part of that plant.' Dr. Hill also says of it, 'The *Schœnanth*, or *Juncus odoratus* of the shops, is a dried stalk of a plant brought to us from Arabia, sometimes bare and naked, sometimes with the leaves and flowers on it, or with more or less remains of them.' Sprengel gives a very interesting description of this reed (which he calls *Andropogon Schœnanthus*) from a specimen which he got from India."⁸

SCHOLA. (Vid. BATHS, p. 148.)

SCIADEION (σκιάδειον). (Vid. UMBRACULUM.)

SCIADEPHORIA (σκιαδήφορία). (Vid. HYDRIPHORIA.)

*SCIANA (σκίανα), a species of fish, the *Scizæa corrhosa*, L. It is also called σκινός and σκινόδριον. According to Belon, it is about four cubits long, and sometimes weighs 60 lbs. Rondelet says it is so like the *Coracinus* that the one is often sold for the other in Rome.⁹

*SCILLA (σκίλλα), a bulbous-rooted plant, the Sea Onion or Squill. "The *σκίλλα* of Dioscorides is without doubt," says Adams, "the *Scilla maritima*, or Squill. The *σκίλλα* Ἐπιμενιδεία of Theophrastus was most probably the *Scilla Italica*, as Stackhouse suggests." The *Scilla maritima*, according to Sibthorp, abounds in the island of Zante. It is an object of commerce, and is exported to Holland and England. A sequin for 1000 roots is paid for collecting them. It is called σκίλλα at Constantinople, and is made into paste with honey for the asthma, or applied in cataplasms to the joints affected with rheumatic pains.¹⁰

SCIOPTERICUM. (Vid. HOROLOGIUM, p. 509.)

SCIPTIO. (Vid. SCEPTRUM.)

*SCIURUS (σκίουρος), the Squirrel, or *Sciurus*

vulgaris. The Greek name is derived from the circumstance of the tail serving, as it were, to shade the body (σκιά and οὐρά).¹

*SCOLOPAX or SCOLOPAX σκολόπαξ ὁ σκολώπαξ, probably the *Scolopax rusticola*, L., or Woodcock. It is the *Beccasia* of the Italians. Martial calls it the "*Rustica perdix*."²

*SCOLOPENDRA (σκολοπένδρα), a species of venomous insect, the Centipede, *Scolopendra morsitans*, L., or some of the kindred species. The σκολοπένδρα χειροαία, according to Adams, is properly the *S. morsitans*, or Centipede; the σ. θαλασσία is the *Aphrodite aculeata*. "Nicander," says Adams, "calls the land Scolopendra ὑπόδικρη, from its appearing to have two heads. Dr. Clarke confirms its ancient character of being extremely venomous."³

*SCOLOPENDRION (σκολοπένδριον), a species of fern (otherwise called *πολυπόδιον*). It derives its name from the resemblance which it bears to the σκολοπένδρα.⁴

*SCOLOPIA (σκολοπία), a plant; according to Stackhouse, the *Scolopendra electrica*.⁵

SCOLOPS (σκόλψ). (Vid. CRUX.)

*SCOLYMUS (σκόλυμος), probably the *Scalymus Hispanicus*, or Spanish Cardoons.⁶

*SCOMBROS (σκόμβρος), the *Scomber scombrus*, or Mackerel. "The name of mackerel (*macarelis*) is found in Albertus Magnus, and in Arnaut de Villeneuve. Authors are not agreed concerning its etymology. Some derive it from *macularius* or *macularius*, in consequence of its spots; others from μακρίος, on account of its goodness. But there is no likelihood that a word used at all times in the remotest parts of the north should be derived from any southern language, more particularly as in most of the parts of the south this word is not known. Among the fish which the ancients were accustomed to salt, there were some small species, known by the name of *scomber*, *colias*, and *cordyla*, and which were comprised under the generic name of *Lacertus*. There is every reason to believe that these were the common mackerel and its approximating species. All that is said of them proves that they were common and of small size. '*Colias lacertorum minimi*,' says Pliny. *Lacertus* was therefore evidently a name common to many species."⁷

*SCOPS (σκόψ or κώψ). "It appears to be satisfactorily determined that this is the species of owl called *Strix Scops* by Linnæus."⁸

*SCORDIUM (σκόρδιον), the *Teucrium Scordium*, or Water Germander, an aquatic plant. It derives its name from σκόρδον or σκόρδον, on account of its strong odour of garlic.⁹

*SCORODON (σκόροδον), the *Allium sativum*, or manured Garlic. (Vid. ALLIUM.) Stackhouse, however, prefers the *Allium scorodoprasum*. Stephens suggests that the wild garlic should be called ὄροσκόροδον, and not ὄροσκόροδον.¹⁰

*SCORODOPRASON (σχοροδόπρασον). "Some of the botanical authorities," says Adams, "hold it to be the *Allium Scorodoprasum*, some the *A. ampeloprasum*, and others the *A. descendens*. I prefer the first, which gets the name of *Ail recambale* in French."¹¹

SCORPIO. (Vid. TORMENTUM.)

*II. (Σκοπίος), the Scorpion. Σκοπίος χειροαίος is the Land Scorpion, of which Nicander, Ælian,

1. (Theophr., II. P., ix., 1.—Dioscor., i., 181.—Adams, Append., s. v.)—2. (Diosc., v., 145.—Moore's Ancient Mineral., p. 131.—Adams, Append., s. v.)—3. (Aristot., H. A., viii., 5.—Adams, Append., s. v.)—4. (ii., 6. 9.)—5. (Plin., H. N., xii., 30; v., 10.)—6. (Strabo, p. 803.—Plin., H. N., vi., 30.—Compare Athen., iii., p. 122, A.)—7. (Herod., i., 66.)—8. (Theophr., i., 6; iv., 8.—Dioscor., i., 10; iv., 52.—Adams, Append., s. v.)—9. (Aristot., H. A., viii., 9.—Ælian, N. A., ix., 7.—Adams, Append., s. v.)—10. (Theophr., II. P., vii., 11.—Adams, Append., s. v.)—6. (Theophr., H. P., vi., 4.—Dioscor., iii., 16.—Adams, Append., s. v.)—7. (Aristot., H. A., vi., 17.—Ælian, N. A., xiv., 1.—Plin., H. N., ix., 15.—Adams, Append., s. v.)—8. (Griffith's Cuvier, vol. x., p. 333.)—9. (Adams, Append., s. v.)—10. (Dioscor., iii., 115.—Adams, Append., s. v.)—11. (Dioscor., vii., 4.—Dioscor., ii., 181.—Adams, Append., s. v.)—12. (Dioscor., ii., 182.—Adams, Append., s. v.)

and other ancient authors describe several species. Sprengel remarks that Nicander's division of scorpions had been adopted by modern naturalists. "The scorpion," says Wilkinson, "was among the Egyptians an emblem of the goddess Selk, though we should rather expect it to have been chosen as a type of the Evil Being. Ælian mentions scorpions of Coptos, which, though inflicting a deadly sting, and dreaded by the people, so far respected the goddess Isis, who was particularly worshipped in that city, that women, in going to express their grief before her, walked with bare feet, or lay upon the ground, without receiving any injury from them." "All the fables," says Griffith, "which superstition and ignorance have brought forth, during a series of ages, respecting this animal, are exhibited at length in the Natural History of Pliny. The ancients, however, did observe that it coupled, and was viviparous; that its sting was pierced, so as to give passage to the poison, and that this poison was white. They farther remarked that the females carried their young, but they supposed that there was but one to each mother; that this had escaped by stratagem from the general slaughter which she had made of her posterity, and that it finally avenged its brethren by devouring the author of its life. According to others, the mother became the prey of her own family; but, at all events, the voracity of these animals was fully recognised. It is probable that the winged scorpions, which excited astonishment from their size, such as those which Megasthenes informs us were to be found in India, are orthoptera of the genus *Phasma*, or spectrum or hemiptera of that of *Nepa* of Linnæus. Pliny informs us that the Psylli endeavoured to naturalize in Italy the scorpions of Africa, but that their attempts proved wholly unsuccessful. He distinguishes nine species, on the authority of Apollodorus. Nicander, who reckons one less, gives some particular details on the subject, but is guided by views purely medical."¹

*III. A species of fish, the *Scorpena porcus*, L., called in Italian *Scrofanello*; in modern Greek, *σκορπίδι*, according to Belon and Coray.²

*IV. A species of thorny plant, which Anguillara, Sprengel, and Schneider agree in regarding as the *Spartium Scorpium*. Stackhouse, however, finds objections to this opinion.³

*SCORPIOIDES (*σκορπιοειδής*), a species of plant, which Dodonæus and Sprengel agree in referring to the *Scorpiurus sulcatus*, L., or *Scorpioides*, Tournefort.⁴

SCRIBÆ. The scribæ at Rome were public notaries or clerks in the pay of the state. They were chiefly employed in making up the public accounts, copying out laws, and recording the proceedings of the different functionaries of the state. The phrase "*scriptum facere*"⁵ was used to denote their occupation. Being very numerous, they were divided into companies or classes (*decuria*), and were assigned by lot to different magistrates, whence they were named *quæstorii*, *ædiliici*, or *prætorii*, from the officers of state to whom they were attached.⁶ We also read of a *navalis scriba*, whose occupation was of a very inferior order.⁷ The appointment to the office of a "scriba" seems to have been either made on the nomination of a magistrate, or purchased. Thus Livy⁸ tells us that a scriba was appointed by a *quæstor*; and we meet with the phrase "*decuriam*

emere," to "purchase a company," i. e., to buy a clerk's place. Horace, for instance, bought for himself a "patent place as clerk in the treasury" (*scriptum quæstorium comparavit*). In Cicero's time, indeed, it seems that any one might become a scriba or public clerk by purchase,⁹ and, consequently, as freedmen and their sons were eligible, and constituted a great portion of the public clerks at Rome,¹⁰ the office was not highly esteemed, though frequently held by ingenui or freeborn citizens. Cicero,¹¹ however, informs us that the scribæ formed a respectable class of men, but he thinks it necessary to assign a reason for calling them such, as if he were conscious that he was combating a popular prejudice. Very few instances are recorded of the scribæ being raised to the higher dignities of the state. Cn. Flavius, the scribe of Appius Claudius, was raised to the office of curule ædile in gratitude for his making public the various forms of actions, which had previously been the exclusive property of the patricians (*vid. Acro*, p. 17), but the returning officer refused to acquiesce in his election till he had given up his books (*tabulas posuit*) and left his profession.¹² The private secretaries of individuals were called *LIBRARI*, and sometimes scribæ ab epistolis. In ancient times, as Festus¹³ informs us, scriba was used for a poet.¹⁴

SCRIBONIA LEX. (*vid. Lex*, p. 585.)

SCRINIUM. (*vid. CAPSA*.)

SCRIPULUM. (*vid. SCRUPULUM*.)

SCRIPTA DUODECIM. (*vid. LATRUNCULI*.)

SCRIPTURA was that part of the revenue of the Roman Republic which was derived from letting out those portions of the ager publicus which were not or could not be taken into cultivation as pasture-land.¹⁵ The name for such parts of the ager publicus was *pascua publica*, *saltus*, or *silva*. They were let by the censors to the publicani, like all other vectigalia; and the persons who let their cattle graze on such public pastures had to pay a certain tax or duty to the publicani, which, of course, varied according to the number and quality of the cattle which they kept upon them. To how much this duty amounted is nowhere stated, but the revenue which the state derived from it appears to have been very considerable. The publicani had to keep the lists of the persons who sent their cattle upon the public pastures, together with the number and quality of the cattle. From this registering (*scribere*) the duty itself was called *scriptura*, the public pasture-land ager *scripturarius*,¹⁶ and the publicani, or their agents who raised the tax, *scripturarii*. Cattle not registered by the publicani were called *pecudes inscriptæ*, and those who sent such cattle upon the public pasture were punished according to the *lex Censoria*,¹⁷ and the cattle were taken by the publicani and forfeited.¹⁸ The *lex Thoriana*¹⁹ did away with the *scriptura* in Italy, where the public pastures were very numerous and extensive, especially in Apulia,²⁰ and the lands themselves were now sold or distributed. In the provinces, where the public pastures were also let out in the same manner,²¹ the practice continued until the time of the Empire, but afterward the *scriptura* is no longer mentioned.²²

SCRUPULUM, or, more properly, SCRIPULUM or SCRIPULUM (*γρῦμμα*), the smallest denomination of weight among the Romans. It was the 24th part

1. (Sprengel, *Hist. de la Med.*—Adams, *Append.*, s. v.—Wilkinson's *Mann. and Customs*, &c., vol. v., p. 254.—Griffith's *Cuvier*, vol. xiii., p. 434, &c.)—2. (Aristot., *H. A.*, ii., 17.—Adams, *Append.*, s. v.)—3. (Theophr., *H. P.*, ix., 13, 18.—Adams, *Append.*, s. v.)—4. (Dioscor., *iv.*, 192.—Adams, *Append.*, s. v.)—5. (Liv., ix., 46.—Gell., vi., 9.)—6. (Cic., *c. of the UNCIÆ, or the 288th of the LIBRÆ, and therefore =18.06 grains English, which is about the average weight of the scrupular aurei still in existence. (Vid. AURUM.)

As a square measure, it was the smallest division of the jugerum, which contained 288 scrupula. (Vid. JUGERUM.) Pliny¹ uses the word to denote small divisions of a degree. It seems, in fact, to be applicable to any measure.

Though the scrupulum was the smallest weight in common use, we find divisions of it sometimes mentioned, as the *obolus* = $\frac{1}{2}$ of a scruple, the *semi-obolus* = $\frac{1}{4}$ of an obolus, and the *siliqua* = $\frac{1}{3}$ of an obolus, = $\frac{1}{8}$ th of a scruple, which is thus shown to have been originally the weight of a certain number of seeds.²

"Semioboli duplum est obolus, quem pondere duplo Gramma vocant, scriptum nostri dixere priores. Semina sex alii siliquis latitantia curvis Attribuent scriplo, lentissime grana bis octo, Aut totidem speltas numerant, tristissime lupinos Bis duo."

SCULPTURA (γλυφῆ) properly means the art of engraving figures upon metal, stone, wood, and similar materials, but is sometimes improperly applied by modern writers to the statuary art, which is explained in a separate article. (Vid. STATUARY.) There are two different forms of the word, both in Greek and Latin, viz., *scalpo*, *sculptura*, and *sculpo*, *sculptura* (in Greek γλύφω and γλύφω). The general opinion is, that both *scalpo* and *sculpo*, with their derivatives, signify the same thing, only different in degree of perfection, so that *sculptura* would signify a coarse or rude, *sculptura* an elaborate and perfect engraving. This opinion is chiefly based upon the following passages: Horat., *Sat.*, ii., 3, 22.—Ovid, *Met.*, x., 248.—Vitruv., iv., 6.³ Others, again, believe that *scalpo* (γλύφω) signifies to cut figures into the material (intaglio), and *sculpo* (γλύφω) to produce raised figures, as in cameos. But it is very doubtful whether the ancients themselves made or observed such a distinction.

It may be expedient, however, in accordance with this distinction, to divide *sculptura* into two departments: 1. The art of cutting figures into the material (intaglios), which was chiefly applied to producing seals and matrices for the mints; and, 2. The art of producing raised figures (cameos), which served for the most part as ornaments.

The former of these two branches was much more extensively practised among the ancients than in modern times, which arose chiefly from the general custom of every free man wearing a seal-ring. (Vid. RING.) The first engravings in metal or stone, which served as seals, were simple and rude signs without any meaning, sometimes merely consisting of a round or square hole.⁴ In the second stage of the art, certain symbolical or conventional forms, as in the worship of the gods, were introduced, until at last, about the age of Phidias and Praxiteles, this, like the other branches of the fine arts, had completed its free and unrestrained career of development, and was carried to such a degree of perfection, that, in the beauty of design as well as of execution, the works of the ancients remain unrivalled down to the present day. But few of the names of the artists who excelled in this art have come down to us. Some intaglios, as well as cameos, have a name engraved upon them, but it is in all cases more probable that such are the names of the owners rather than those of the artists. The first artist who is mentioned as an engraver of stones is Theo-

dorus, the son of Telecles, the Samian, who engraved the stone in the ring of Polycrates.¹ The most celebrated among them was Pyrgoteles, who engraved the seal-rings for Alexander the Great.² The art continued for a long time after Pyrgoteles in a very high state of perfection, and it appears to have been applied about this period to ornamental works; for several of the successors of Alexander and other wealthy persons adopted the custom, which was and is still very prevalent in the East, of adorning their gold and silver vessels, craters, candelabras, and the like, with precious stones, on which raised figures (cameos) were worked.³ Among the same class of ornamental works we may reckon such vessels and pateræ as consisted of one stone, upon which there was in many cases a whole series of raised figures of the most exquisite workmanship.⁴ Respecting the various precious and other stones which the ancient artists used in these works, see Müller.⁵

As regards the technical part of the art of working in precious stones, we only know the following particulars. The stone was first polished by the politor, and received either a plane or convex surface; the latter was especially preferred, when the stone was intended to serve as a seal. The sculptor himself used iron or steel instruments moistened with oil, and sometimes also a diamond framed in iron. These metal instruments were either sharp and pointed, or round.⁶ The stones which were destined to be framed in rings, as well as those which were to be inlaid in gold or silver vessels, then passed from the hands of the sculptor into those of the goldsmith (*annularius*, *compositor*).

Numerous specimens of intaglios and cameos are still preserved in the various museums of Europe, and are described in numerous works. For the literature of the subject, see Müller.⁷

ΣΚΥΡΙΑ ΔΙΚΗ (σκυρία δίκη) is thus explained by Pollux: Σκυρία δίκην ὀνομάζουσιν οἱ κομμοδοδιδάσκαλοι τὴν τραχείαν· οἱ γὰρ θυροδικαυτὲς ἐκκῆπτοντο εἰς Σκύρον ἢ εἰς Λήμνον ὑπόδημειν. By *τραχεία δίκη* is meant one beset with difficulties, in which the plaintiff had to encounter every sort of trickery and evasion on the part of the defendant. On the appointed day of trial both parties were required to be present in court, and if either of them did not appear, judgment was pronounced against him, unless he had some good excuse to offer, such as illness or inevitable absence abroad. Cause was shown by some friend on his behalf, supported by an affidavit called ὑπόμνησις, in answer to which the opponent was allowed to put in a counter-affidavit (ἀνθυπόμνησις), and the court decided whether the excuse was valid. It seems to have become a practice with persons who wished to put off or shirk a trial, to pretend that they had gone to some island in the Ægean Sea, either on business or on the public service; and the isles of Scyros (one of the Cyclades), Lemnos, and Imbrus were particularly selected for that purpose. Shammers of this kind were therefore nicknamed Lemnians and Imbrians.⁸

SCYTHÆ (σκύθαι). (Vid. DEMOSTOI.)

SCUTUM (θυρεός), the Roman shield worn by the heavy-armed infantry, instead of being round like the Greek CLYPEUS, was adapted to the form of the human body by being made either oval or of the shape of a door (θύρα), which it also resembled in being made of wood or wickerwork, and from which,

1. (Herod., iii., 41.)—2. (Winckelmann, vi., p. 107, &c.)—3. (Athen., xi., p. 781.—Cic., c. Verr., II., iv., 27, &c.)—4. (Appian., Mithr., 115.—Cic., l. c.—Plin., H. N., xxxvi., 3.)—5. (Archæol., § 313.)—6. (Plin., H. N., xxxvi., 76.—Müller, Arch., § 314, 2.)—7. (Archæol., § 315, &c.)—8. (Pollux, Onom., viii., 60, 81.—Kühn, ad loc.—Suidas, s. v. Σκυρίαν δίκην.—Hesych., s. v. ὑπόμνησις.—Steph., Thes., 8484, c. s. v. Σκύρος.—Demosath., c. Olympiod., 1174.—Meier, Att. Proc. 696

1. (H. N., ii., 7.)—2. (Rhem. Fann., De Pond., v., 8–13.)—3. (Compare the commentators on Suet., Galb., 10.)—4. (Meyer, Kunstgeschichte, i., 10.)

consequently its Greek name was derived. Two of its forms are shown in the woodcut at page 596. That which is here exhibited is also of fre-

quent occurrence, and is given on the same authority: in this case the shield is curved, so as in part to encircle the body. The terms *clipeus* and *scutum* are often confounded; but that they properly denoted different kinds of shields is manifest from the passages of Livy and other authors which are quoted in p. 102, 269. In like manner, Plutarch distinguishes the Roman *θυρεός* from the Greek *ἀσπίς* in his Life of Titus Flaminus.¹ In *Eph.*, vi., 16, St. Paul uses the term *θυρεός* rather than *ἀσπίς* or *σάκος*, because he is describing the equipment of a Roman soldier. (*Vid.* ARMA, p. 95.) These Roman shields are called *scuta longa*;² *θυρεοὺς ἐπιμήκεις*.⁴ Polybius⁵ says their dimensions were 4 feet by 2½. The shield was held on the left arm by means of a handle, and covered the left shoulder.

*SCYL'IUM (σκόλιον), a species of Shark, probably the *Squalus canicula*, or Bounce.⁶

SCYTALE (σκυτάλη), I. is the name applied to a secret mode of writing, by which the Spartan ephors communicated with their kings and generals when abroad.⁷ When a king or general left Sparta, the ephors gave to him a staff of a definite length and thickness, and retained for themselves another of precisely the same size. When they had any communication to make to him, they cut the material upon which they intended to write into the shape of a narrow riband, wound it round their staff, and then wrote upon it the message which they had to send to him. When the strip of writing material was taken from the staff, nothing but single letters appeared, and in this state the strip was sent to the general, who, after having wound it around his staff, was able to read the communication. This rude and imperfect mode of sending a secret message must have come down from early times, although no instance of it is recorded previous to the time of Pausanias.⁸ In later times, the Spartans used the scytale sometimes also as a medium through which they sent their commands to subject and allied towns.⁹

*II. (Σκυτάλη), the Blue-bellied Snake. "From Nicander's description of the scytale," says Adams, "it is clear that it nearly resembled the amphisbæna. In the Latin translation of Avicenna it is rendered *siscuculus*. Avicenna says it resembles the amphisbæna both in form and in the effects of its sting. Hence Sprengel refers the scytale to the

Anguis eriox, a serpent which differs in length only from the *Anguis fragilis*, or Blindworm."¹

SECTIO. "Those are called sectores who buy property public."² Property was said to be sold public (*venire publice*) when a man's property was sold by the state in consequence of a condemnatio, and for the purpose of repayment to the state of such sums of money as the condemned person had improperly appropriated, or in consequence of a proscription.³ Such a sale of all a man's property was a sectio;⁴ and sometimes the things sold were called sectio.⁵ The sale was effected by the prætor giving to the quæstors the bonorum possessio, in reference to which the phrase "*bona publice possideri*" is used. The property was sold sub hasta, and the sale transferred Quiritarian ownership, to which Gaius probably alludes in a mutilated passage.⁶ The sector was entitled to the interdictum sectorium for the purpose of obtaining possession of the property;⁷ but he took the property with all its liabilities. An hereditas that had fallen to the fiscus was sold in this way, and the sector acquired the hereditatis petitio.

SECTOR. (*Vid.* SECTIO.)

SECTORIUM INTERDICTUM. (*Vid.* INTERDICTUM, p. 543; SECTIO.)

SECURIS, *dim.* SECURICULA (ἀξίνη, πελέκυσ) an Axe or Hatchet. The axe was either made with a single edge, or with a blade or head on each side of the haft, the latter kind being denominated *bipennis* (πελέκυσ δισπύρος, or ἀμφισπύρος⁸). As the axe was not only an instrument of constant use in the hands of the carpenter and the husbandman, but was, moreover, one of the earliest weapons of attack,⁹ a constituent portion of the Roman fasces, and a part of the apparatus when animals were slain in sacrifice, we find it continually recurring under a great variety of forms upon coins, gems, and bas-reliefs. In the woodcut to the article SCYTRUM, the young Ascanius holds a battle-axe in his hand. Also real axe-heads, both of stone and metal, are to be seen in many collections of antiquities. Besides being made of bronze and iron, and more rarely of silver,¹⁰ axe-heads have from the earliest times and among all nations been made of stone. They are often found in sepulchral tumuli, and are arranged in our museums together with chisels, both of stone and of bronze, under the name of *celts*. (*Vid.* DOLABRA.)

The prevalent use of the axe on the field of battle was generally characteristic of the Asiatic nations,¹¹ whose troops are therefore called *securigera catervæ*.¹² As usual, we find the Asiatic custom propagating itself over the north of Europe. The bipennis and the spear were the chief weapons of the Franks.¹³

In preparing for a conflict, the metallic axe was sharpened with a whetstone (*subigunt in cote secu res*¹⁴).

SECUTORES. (*Vid.* GLADIATORES, p. 477.)

SEISA'CHTHEIA (σεισάχθεια), a disbanding ordinance, was the first and preliminary step in the legislation of Solon.¹⁵ The real nature of this measure was a subject of doubt even among the ancients themselves; for, while some state that Solon thereby cancelled all debts, others describe it as a mere reduction of the rate of interest. But from the various accounts in Plutarch and the grammarians, it

(Tacit., *Hist.*, i., 90.)—6. (iii., 80.—Compare Varro, *De Re Rust.*, ii., 10, s. 4.—Tacit., *Hist.*, i., 20.)—7. (Gaius, iv., 146.)—8. (Agathias, *Hist.*, ii., 5, p. 73, 74.)—9. (Hom., *Il.*, xv., 711.—Suet., *Galba*, 18.)—10. (Virg., *Æn.*, v., 307.—Wilkinson's *Man. and Cust. of Egypt*, i., p. 324.)—11. (Curt., i., 4.)—12. (Val. Flacc., *Argo.*, v. 138.)—13. (Agathias, l. c.)—14. (Virg., *Æn.*, vii., 627.)—15. (Plut., *Sol.*, 15.—Diog. Laert., i., 45.)

seems to be clear that the *σεισάχθεια* consisted of four distinct measures. The first of these was the reduction of the rate of interest; and if this was, as it appears, retrospective, it would naturally, in many cases, wipe off a considerable part of the debt. The second part of the measure consisted in lowering the standard of the silver coinage, that is, Solon made 73 old drachmas to be worth 100 new ones; so that the debtor, in paying off his debt, gained rather more than one fourth. Böckh¹ supposes that it was Solon's intention to lower the standard of the coinage only by one fourth, that is, to make 75 old drachmas equal to 100 new ones, but that the new coin proved to be lighter than he had expected. The third part consisted in the release of mortgaged lands from their encumbrances, and the restoration of them to their owners as full property. How this was effected is not clear. Lastly, Solon abolished the law which gave to the creditor a right to the person of his insolvent debtor, and he restored to their full liberty those who had been enslaved for debt.

This great measure, when carried into effect, gave general satisfaction, for it conferred the greatest benefits upon the poor without depriving the rich of too much, and the Athenians expressed their thankfulness by a public sacrifice, which they called *σεισάχθεια*, and by appointing Solon to legislate for them with unlimited power.²

*SELI'NON (σέλινον). "I agree with Sprengel," says Adams, "in thinking this the *Apium Petroselinon*, or Curled Parsley, although Stackhouse be doubtful. Ludovicus Nonnius correctly remarks that it ought not to be confounded with the *Petroselinon* of the ancients, or Macedonian Parsley."³

SELLA. The general term for a seat or chair of any description. The varieties most deserving of notice are :

I. SELLA CURULIS, the chair of state. *Curulis* is derived by the ancient writers from *currus*;⁴ but it more probably contains the same root as *curia*, which is also found in *Quirites*, *curiatus*, the Greek *κύριος*, *κόρυμβος*, &c. (Vid. COMITIA, p. 295.) The sella curulis is said to have been used at Rome from a very remote period as an emblem of kingly power (hence "*curuli regia sella adornavit*"⁵), having been imported, along with various other insignia of royalty, from Etruria,⁶ according to one account by Tullus Hostilius;⁷ according to another by the elder Tarquinius;⁸ while Silius names Vetulonii as the city from which it was immediately derived.⁹ Under the Republic, the right of sitting upon this chair belonged to the consuls, praetors, curule aediles, and censors;¹⁰ to the flamen dialis¹¹ (vid. FLAMEN); to the dictator, and to those whom he deputed to act under himself, as the *magister equitum*, since he might be said to comprehend all magistracies within himself.¹² After the downfall of the constitution, it was assigned to the emperors also, or to their statues in their absence;¹³ to the augustales,¹⁴ and perhaps to the *praefectus urbi*.¹⁶ It was displayed upon all great public occasions, especially in the circus and theatre,¹⁶ sometimes even after the death of the person to whom it belonged, a mark of special honour bestowed on Marcellus, German-

icus, and Pertinax;¹ and it was the seat of the praetor when he administered justice.² In the provinces it was assumed by inferior magistrates when they exercised proconsular or propraetorian authority, as we infer from its appearing along with fasces on a coin of the Gens Pupia, struck at Nicæa, in Bithynia, and bearing the name ΑΥΑΟC ΠΡΟΠΡΗΓΟC ΤΑΜΙΑC. We find it occasionally exhibited on the medals of foreign monarchs likewise, on those of Ariobarzanes II. of Cappadocia, for it was the practice of the Romans to present a curule chair, an ivory sceptre, a toga praetexta, and such like ornaments, as tokens of respect and confidence to those rulers whose friendship they desired to cultivate.³

The sella curulis appears from the first to have been ornamented with ivory, and this is commonly indicated by such expressions as *curule ebur*; *Nemida sculptile dentis opus*; and *ελεφαντίνος δίφρος*;⁴ at a later period it was overlaid with gold, and consequently we find *δίφρους επιχρυσούς*, *θρόνους καταχρυσούς*, *τὸν δίφρον τὸν κεχρυσωμένον*, recurring constantly in Dion Cassius, who frequently, however, employs the simple form *δίφροι ἄρχικοί*. In shape it long remained extremely plain, closely resembling a common folding (*plicatilis*) camp-stool with crooked legs. These last gave rise to the name *ἀγκυλόπους δίφρος*, found in Plutarch;⁵ they strongly remind us of elephant's teeth, which they may have been intended to imitate, and the Emperor Aurelian proposed to construct one in which each foot was to consist of an enormous tusk entire.⁶

The form of the sella curulis, as it is commonly represented upon the *denarii* of the Roman families, is given in p. 431. In the following cut are represented two pairs of bronze legs belonging to a sella curulis preserved in the Museum at Naples,⁷ and a sella curulis copied from the Vatican collection.

II. BISELLIUM. The word is found in no classical author except Varro,⁸ according to whom it means a seat large enough to contain two persons. We learn from various inscriptions that the right of using a seat of this kind upon public occasions was granted as a mark of honour to distinguished persons by the magistrates and people in provincial towns. There are examples of this in an inscription found at Pisa, which called forth the long, learned, rambling dissertation of Chimentelli,⁹ and in two others found at Pompeii.¹⁰ In another inscription we have BISELLIATUS HONOR;¹¹ in another,¹² containing the roll of an incorporation of carpenters, one of the office-bearers is styled COLLEG. I. BISELLEARIUS.¹³

1. (Stantsh., i. p. 17.)—2. (Plut., Sol., 16.—Compare Suidas, Hæsch., Etym. Mag., s. v.—Cic., De Republ., ii., 34.—Wachsmuth, Meil. Alt., i. p. 219.)—3. (Dioscor., i., 67.—Theophrast., ii. p., i., 2.—Adams, Append., s. v.)—4. (Aul. Gell., ii., 18.—Festus, s. v. Curules.—Servius ad Virg., Æn., xi., 334.—Isid., xx., 11, 11.)—5. (Liv., i., 20.)—6. (Liv., i., 8.)—7. (Macrobi., Sat., i., 6.)—8. (Flor., i., 5.)—9. (viii., 487.)—10. (Liv., ii., 64; vii., i.; ix., 46; x., 7; xl., 45.—Aul. Gell., vi., 9, &c.)—11. (Liv., i., 20; xxvii., 8.)—12. (Dion Cass., xliii., 49.—Liv., ii., 31.—Festus, s. v. Sella curulis.)—13. (Tacit., Ann., xv., 29.—Hist., ii., 59.—Servius, l. c.)—14. (Tacit., Ann., ii., 83.)—15. (Spanheim, De Præst. et Usu Numism., x., 3, § 1.)—16. (Liv., ii., 31.—Sueton., Octav., 43.—Dion Cass., lvi., 4.)

1. (Dion Cass., liii., 30; lxxiv., 4.—Tacit., Ann., ii., 83, and Comment. of Lips.—Spanheim, x., 2, § 1.)—2. (Cic. in Verr., ii., 11, 38.—Val. Max., iii., 5, 1.—Tacit., Ann., i., 75.—Mart., xi., 98, 18.)—3. (Liv., xxx., 11; xlii., 14.—Polyb., Exc. Legg., cxxi.—Cic. ad Fam., xv., 2.—Spanheim, lb., x., 4.)—4. (Hor., Ep., i., 6, 53.—Ovid, ex Pont., iv., 9, 27.)—5. (Marius, 5.)—6. (Vopisc., Firm., 3.)—7. (Mus. Borb., vol. vi., tav. 28.)—8. (Ling. Lat., v., 128, ed. Muller.)—9. (Græv., Thes. Antiq. Rom., vol. vii., p. 2030.)—10. (Orelli, Inscrip., n. 4048, 4044.)—11. (Orelli, 4043.)—12. (Orelli, 4055.)—13. (Compare Orelli, 4046, 4047.)

Two bronze bisellia were discovered at Pompeii, and thus all uncertainty with regard to the form of the seat has been removed. One of these is engraved above.¹

III. SELLA GESTATORIA² or FERTORIA,³ a sedan used both in town and country⁴ by men⁵ as well as by women⁶ (*muliebris sella*⁷). It is expressly distinguished from the LECTICA,⁸ a portable hed or sofa, in which the person carried lay in a recumbent position, while the *sella* was a portable chair in which the occupant sat upright; but they are sometimes confounded, as by Martial.⁹ It differed from the *cathedra* also, but in what the difference consisted it is not easy to determine. (*Vid. CATHEDRA*.) The *sella* was sometimes entirely open, as we infer from the account given by Tacitus of the death of Galba,¹⁰ but more frequently shut in.¹¹ Dion Cassius¹² pretends that Claudius first employed the covered *sella*, but in this he is contradicted by Suetonius¹³ and by himself.¹⁴ It appears, however, not to have been introduced until long after the lectica was common, since we scarcely, if ever, find any allusion to it until the period of the Empire. The *sella* were made sometimes of plain leather, and sometimes ornamented with bone, ivory, silver,¹⁵ or gold,¹⁶ according to the rank or fortune of the proprietor. They were furnished with a pillow to support the head and neck (*cervical*¹⁷); when made roomy, the epithet *laxa* was applied;¹⁸ when smaller than usual, they were termed *sellula*;¹⁹ the motion was so easy that one might study without inconvenience,²⁰ while, at the same time, it afforded healthful exercise.²¹

IV. SELLE of different kinds are mentioned incidentally in ancient writers, accompanied by epithets which serve to point out generally the purposes for which they were intended. Thus we read of *sella balnearia*, *sella tonsoria*, *sella obstetricia*, *sella familiaria* v. *pertusa*, and many others. Both Varro²² and Festus²³ have preserved the word *selicquastrum*. The former classes it along with *sedes*, *scabellum*, *sodium*, *sella*; the latter calls them "*sedilia antiqui generis*;" and Arnobius includes them among common articles of furniture. No hint, however,

is given by any of these authorities which could lead us to conjecture the shape, nor is any additional light thrown upon the question by Hyginus, who tells us, when describing the constellations, that Cassiopeia is seated "*in seliquastro*."

Of chairs in ordinary use for domestic purposes, a great variety, many displaying great taste, has been discovered in excavations, or are seen represented in ancient frescoes. The first cut annexed

represents a bronze one from the Museum at Naples:¹ the second, two chairs, of which the one on

the right hand is in the Vatican, and the other is taken from a painting at Pompeii.² A chair of a very beautiful form is given in the *Mus. Borb.*³

V. SELLE EQUESTRES. (*Vid. EPHIPPIMUM*.)

SEMATATA. (*Vid. FUNUS*, p. 457.)

SEMEIOTICA (τὸ Σημειωτικόν), one of the five parts into which, according to some authors, the ancients divided the whole science of medicine. (*Vid. MEDICINA*.) The more ancient name for this branch of medicine was *Diagnostica* (τὸ διαγνωστικόν), but in Galen's time the more common name appears to have been *Semeiotica*. Its particular province was the studying the symptoms of diseases, so as to be able to form a correct judgment as to their precise nature, and also to foretell with tolerable accuracy their probable termination. It was divided into three parts, comprehending, I. the knowledge of the past accidents and history of the disease; II. the inspection and study of the patient's actual condition; and, III. the prognosis of the event of his illness. As perhaps this branch of medicine depends less on the state of science, and more on observation and natural acuteness than any other, this is the part in which the ancients laboured under the fewest disadvantages, and approached most nearly to ourselves. They seem also to have paid particular attention to the study of it, and their writings on this subject are still well worth consulting. Its necessity is insisted on by Galen and Alexander Trallianus; and the author of the treatise *De Arte*, in the Hippocratic collection, seems to think the knowing the nature of a disease almost the same as curing it. There are so many anecdotes of the skill and acuteness of the ancients in diagnosis and prognosis, that it is difficult to select the most striking. That of Erasistratus is well known, who discovered that the secret disease of which Antiochus, the son of Seleucus Nicator, was dying, was in fact nothing but his love for his stepmother Stratonice.⁴

L.*, v., 128.—*Tuend.*, (s. v.))

Many instances are recorded of Galen's extraordinary penetration, inasmuch that he ventured to say that, by the assistance of the Deity, he had never been wrong in his prognosis.¹ Asclepiades is said to have gained a great reputation by discovering that a man who was supposed to be dead, and was on the point of being buried, was in fact alive;² and several similar instances are upon record. It must not, however, be supposed, that the natural acuteness of the ancients enabled them, in this branch of medicine, to overcome the force of vulgar prejudices, which so distinctly appear in other parts of their writings; on the contrary, on some subjects (as, for example, everything connected with generation) their prognosis was formed on the most ridiculous and superstitious grounds.

In the Hippocratic collection, the following works are found on this subject, of which, however, only the first is considered as undoubtedly genuine:³ 1. Προγνωστικόν, *Prænotiones*; 2. Κωικαὶ Προγνώσεις, *Prænotiones Coacæ*, supposed to be more ancient than Hippocrates; 3. Προβητικόν, *Prædictiones*, in two books, of which the former is probably anterior to Hippocrates, the second cannot be older than Aristotle and Praxagoras;⁴ 4. Περὶ Χυμῶν, *De Humoribus*; 5. Περὶ Κρίσεων, *De Judicationibus*; 6. Περὶ Κρίσιμων, *De Diebus Judicatoriis*. Aretæus has left four valuable books *Περὶ Αἰτιῶν καὶ Σημείων Ὁξέων καὶ Χρονίων Παθῶν, De Causis et Signis Acutorum et Diuturnorum Morborum*. Galen's six books, *Περὶ τῶν Περπορθῶν Τόπων, De Locis Affectis*, are not unfrequently quoted by the title of *Διαγνωστικῇ, Diagnostica*,⁵ and treat chiefly of this subject.⁶ We have also various other works by Galen on the same subject. Stephanus Atheniensis has written a Commentary on the *Prænotiones* of Hippocrates; and these (as far as the writer is aware) are all the works of the ancients that remain upon this subject.

SEMENTIVÆ FERIÆ. (*Vid. FERIA*, p. 436.)

SEMIS, SEMISSIS. (*Vid. AS*, p. 110.)

SEMPRONIÆ LEGES, the name of various laws proposed by Tiberius and Caius Sempronius Gracchus.

AGRARIA. In B.C. 133 the tribune Tib. Gracchus revived the Agrarian law of Licinius (*vid. ROGATIONES LICINIÆ*): he proposed that no one should possess more than 500 jugera of the public land (*ne quis ex publico agro plus quam quingenta jugera possideret*?), and that the surplus land should be divided among the poor citizens, who were not to have the power of alienating it:⁷ he also proposed, as a compensation to the possessors deprived of the land on which they had frequently made improvements, that the former possessors should have the full ownership of 500 jugera, and each of their sons, if they had any, half that quantity:⁸ finally, that three commissioners (*triumviri*) should be appointed every year to carry the law into effect.¹⁰ This law naturally met with the greatest opposition, but was eventually passed in the year in which it was proposed, and Tib. Gracchus, C. Gracchus, and Appius Claudius were the three commissioners appointed under it. It was, however, never carried fully into effect, in consequence of the murder of Tib. Gracchus. The other measures contemplated by Tib. Gracchus¹¹ do not require to be mentioned here, as they were never brought for-

ward.¹ In consequence of the difficulties which were experienced in carrying his brother's agrarian law into effect, it was again brought forward by C. Gracchus B.C. 123.²

DE CAPITÆ CIVIUM ROMANORUM, proposed by C. Gracchus B.C. 123, enacted that the people only should decide respecting the caput or civil condition of a citizen (*ne de capite civium Romanorum injussu vestro judicaretur*?). This law continued in force till the latest times of the Republic.

FRUMENTARIA, proposed by C. Gracchus B.C. 123, enacted that corn should be sold by the state to the people once a month at $\frac{2}{3}$ ths of an as for each modius (*ut semisse et triente frumentum plebi daretur*?): Livy says *semissis et triens*, that is 6 oz. and 4 oz. = 10 oz., because there was no coin to represent the *dextans*. (*Vid. AS*, p. 110.) Respecting this law, see also Appian, *Bell. Civ.*, i., 21.—Plut., *C. Gracchus*, 5.—Vell. Pat., ii., 6.—Cic., *Tusc.*, iii., 20; *Pro Sext.*, 48.—Schol. Bob., *Pro Sext.*, i., 300, 303, ed. Orrelli.

JUDICIARIA. (*Vid. JUDEX*, p. 553.)

MILITARIS, proposed by C. Gracchus B.C. 123, enacted that the soldiers should receive their clothing gratis, and that no one should be enrolled as a soldier under the age of seventeen.⁵ Previously a fixed sum was deducted from the pay for all clothes and arms issued to the soldiers.⁶

NE QVIS JUDICIO CIRCUMVENIRETUR, proposed by C. Gracchus B.C. 123, punished all who conspired to obtain the condemnation of a person in a judicium publicum. One of the provisions of the *lex Cornelia de Sicariis* was to the same effect.⁷ (*Vid. CORNELIA LEX*, p. 308.)

DE PROVINCIIS CONSULARIBUS, proposed by C. Gracchus B.C. 123, enacted that the senate should fix each year, before the comitia for electing the consuls were held, the two provinces which were to be allotted to the two new consuls.⁸

There was also a Sempronian law concerning the province of Asia, which probably did not form part of the *lex De Provinciis Consularibus*, which enacted that the taxes of this province should be let out to farm by the censors at Rome.⁹ This law was afterward repealed by J. Cæsar.¹⁰

SEMU'NCIA. (*Vid. UNCIA*.)

SEMU'NCIARIUM FUNUS (*Vid. INTEREST OF MONEY*, p. 547.)

SENATUS. In all the republics of antiquity, the government was divided between a senate and a popular assembly; and in cases where a king stood at the head of affairs, as at Sparta and in early Rome, the king had little more than the executive. A senate in the early times was always regarded as an assembly of elders, which is, in fact, the meaning of the Roman *senatus* as of the Spartan *γερουσία*, and its members were elected from among the nobles of the nation. The number of senators in the ancient republics always bore a distinct relation to the number of tribes of which the nation was composed. (*Vid. BOULE, GEROUSIA*, p. 473.) Hence, in the earliest times, when Rome consisted of only one tribe, its senate consisted of one hundred members (*senatores* or *patres*; compare *PATRICI*); and when the Sabine tribe, or the Tities, became united with the Latin tribe, or the Ramnes, the number of senators was increased to two hundred.¹¹ This number was again augmented by one

hundred when the third tribe, or the Luceres, became incorporated with the Roman state. Dionysius¹ and Livy² place this last event in the reign of Tarquinius Priscus; Cicero,³ who agrees with the two historians on this point, states that Tarquinius doubled the number of senators, according to which we are obliged to suppose that before Tarquinius the senate consisted only of 150 members. This difference, however, may be accounted for by the supposition, that at the time of Tarquinius Priscus a number of seats in the senate had become vacant, which he filled up at the same time that he added 100 Luceres to the senate, or else that Cicero regarded the Luceres, in opposition to the two other tribes, as a second or a new half of the nation, and thus incorrectly considered their senators likewise as the second or new half of that body. The new senators added by Tarquinius Priscus were distinguished from those belonging to the two older tribes by the appellation *patres minorum gentium*, as previously those who represented the Tities had been distinguished by the same name from those who represented the Ramnes.⁴ Servius Tullius did not make any change in the composition of the senate; but under Tarquinius Superbus the number of senators is said to have become very much diminished, as this tyrant put many to death, and sent others into exile. This account, however, appears to be greatly exaggerated, and it is a probable supposition of Niebuhr,⁵ that several vacancies in the senate arose from many of the senators accompanying the tyrant into his exile. The vacancies which had thus arisen were filled up immediately after the establishment of the Republic, by L. Junius Brutus, as some writers state,⁶ or, according to Dionysius,⁷ by Brutus and Valerius Publicola, and, according to Plutarch⁸ and Festus,⁹ by Valerius Publicola alone. All, however, agree that the persons who were on this occasion made senators were noble plebeians of equestrian rank. Dionysius states that the noblest of the plebeians were first raised to the rank of patricians, and that then the new senators were taken from among them. But this appears to be incompatible with the name by which they were designated. Had they been made patricians, they would have been *patres* like the others, whereas now the new senators are said to have been distinguished from the old ones by the name of *conscripti*.¹⁰ Hence the customary mode of addressing the whole senate *inveceft* always was *patres conscripti*, that is, *patres et conscripti*. There is a statement that the number of these new senators was 164,¹¹ but this, as Niebuhr has justly remarked, is a fabrication, perhaps of Valerius of Antium, which is contradicted by all subsequent history.

Henceforth the number of 300 senators appears to have remained unaltered for several centuries.¹² C. Sempronius Gracchus was the first who attempted to make a change, but in what this consisted is not certain. In the epitome of Livy it is expressly stated that he intended to add 600 equites to the number of 300 senators, which would have made a senate of 900 members, and would have given a great preponderance to the equites. This appears to be an absurdity.¹³ Plutarch¹⁴ states that Gracchus added to the senate 300 equites, whom he was allowed to select from the whole body of equites, and that he transferred the judicia to this new senate of 600. This account seems to be founded upon a confusion of the *lex Judiciaria* of

C. Gracchus with the later one of Livius Drusus,¹ and all the other writers who mention the *lex Judiciaria* of C. Gracchus do not allude to any change or increase in the number of senators, but merely state that he transferred the judicia from the senate to the equites, which remained in their possession till the tribuneship of Livius Drusus. The latter proposed that, as the senate consisted of 300, an equal number of equites should be elected (*ἀπὸ τῶνδ' ἑπ' ἑκάστην*) into the senate, and that in future the judicia should be taken from this senate of 600.² After the death of Livius Drusus, however, this law was abolished by the senate itself, on whose behalf it had been proposed, and the senate now again consisted of 300 members. During the civil war between Marius and Sulla, many vacancies must have occurred in the senate. Sulla, in his dictatorship, not only filled up these vacancies, but increased the number of senators. All we know of this increase with certainty is, that he caused about 300 of the most distinguished equites to be elected into the senate;³ but the real increase which he made to the number of senators is not mentioned anywhere. It appears, however, henceforth to have consisted of between five and six hundred.⁴ J. Cæsar augmented the number to 900, and raised to this dignity even common soldiers, freedmen, and peregrini.⁵ This arbitrariness in electing unworthy persons into the senate, and of extending its number at random, was imitated after the death of Cæsar, for on one occasion there were more than one thousand senators.⁶ Augustus cleared the senate of the unworthy members, who were contemptuously called by the people *Oricini senatores*, reduced its number to 600,⁷ and ordained that a list of the senators should always be exhibited to public inspection.⁸ During the first centuries of the Empire, this number appears, on the whole, to have remained the same; but, as everything depended upon the will of the emperor, we can scarcely expect to find a regular and fixed number of them.⁹ During the latter period of the Empire their number was again very much diminished.

With respect to the eligibility of persons for the senate, as well as to the manner in which they were elected, we must distinguish between the several periods of Roman history. It was formerly a common opinion, founded upon Livy¹⁰ and Festus,¹¹ which has in modern times found new supporters in Ilusckke and Rubino, that in the early period of Roman history the kings appointed the members of the senate at their own discretion. It has, however, been shown by Niebuhr and others, with incontrovertible arguments, that the *populus* of Rome was the real sovereign; that all the powers which the kings possessed were delegated to them by the *populus*; and that the senate was an assembly formed on the principle of representation: it represented the *populus*, and its members were elected by the *populus*. Dionysius¹² is therefore right in stating that the senators were elected by the *populus*, but the manner in which he describes the election is erroneous, for he believes that the three tribes were already united when the senate consisted of only one hundred members, and that the senators were elected by the *curies*. Niebuhr¹³ thinks that each *gens* sent its *decurio*, who was its alderman, to represent it in the senate; Götting,¹⁴ on the other hand, believes, with somewhat more

probability, that each decury (the *dekás* of Dionysius), which contained either a part of one or parts of several smaller gentes, had to appoint one old man by whom it was represented in the senate, and a younger one as eques. This supposition removes the difficulty respecting the decurio which has been pointed out by Walter;¹ for the decurio was the commander of a division of the army, and, as such, could not well have been of the age of a senator. As each decury or gens appointed one senator, each curia was represented by ten, each tribe by one hundred, and the whole populus by three hundred senators, all of whom held their dignity for life. The plebeians, as such, were not represented in the senate, for the instances in which plebeians are mentioned as being made senators, as in the reign of Tarquinius Priscus, and after the abolition of the kingly power, cannot be regarded in any other light than mere momentary measures, which the government was obliged to adopt for several reasons, and without any intention to appoint representatives of the plebes.² The numbers of such plebeian senators, at any rate, must have been much smaller than they are stated by our authorities, for there is no instance of any plebeian senator on record until the year 439 B.C., when Spurius Maelius is mentioned as senator. The senate itself appears to have had some influence upon the election of new members, inasmuch as it might raise objections against a person elected.³ The whole senate was divided into decuries, each of which corresponded to a curia. When the senate consisted of only one hundred members, there were, accordingly, only ten decuries of senators; and ten senators, one being taken from each decury, formed the *decem primi* who represented the ten tribes. When, subsequently, the representatives of the two other tribes were admitted into the senate, the *Ramnes*, with their *decem primi*, retained for a time their superiority over the two other tribes,⁴ and gave their votes first.⁵ The first among the *decem primi* was the *princeps senatus*, who was appointed by the king,⁶ and was, at the same time, *custos urbis*. (*Vid. PRÆFECTUS URBI*.) Respecting the age at which a person might be elected into the senate during the kingly period, we know no more than what is indicated by the name senator itself, that is, that they were persons of advanced age.

It can scarcely be imagined that, immediately after the establishment of the Republic, the election of senators should at once have passed from the decuries or gentes into the hands of the magistrates, and we must therefore suppose that, at least for a time, the senators were appointed by the gentes, decuries, or perhaps by the curies. Afterward, however, the right to appoint senators belonged to the consuls, consular tribunes, and subsequently to the censors.⁷ This fact has been alleged in support of the opinion that formerly the kings had the same privilege, especially as it is stated that the republican magistrates elected their personal friends to the senatorial dignity (*conjunctissimos sibi quisque patriciorum legebant*); but this statement is, as Niebuhr justly remarks, founded upon a total ignorance of the nature of the Roman senate. It should not be forgotten that the power of electing senators possessed by the republican magistrates was by no means an arbitrary power, for the senators were always taken from among those who were equites, or whom the people had previously

invested with a magistracy, so that, in reality, the people themselves always nominated the candidates for the senate, which on this account remained, as before, a representative assembly. From the year 487 B.C., the *princeps senatus* was no longer appointed for life, but became a magistrate appointed by the curies, and the *patres minorum gentium* were likewise eligible to this dignity.¹ It moreover appears that all the curule magistrates, and also the *quæstors*, had, by virtue of their office, a seat in the senate, which they retained after the year of their office was over, and it was from these ex-magistrates that the vacancies occurring in the senate were generally filled up.

After the institution of the censorship, the censors alone had the right to elect new members into the senate from among the ex-magistrates, and to exclude such as they deemed unworthy.² (*Vid. NOTA CENSORIA*.) The exclusion was effected by simply passing over the names and not entering them into the list of senators, whence such men were called *præteriti senatores*.³ On one extraordinary occasion the eldest among the ex-censors was invested with dictatorial power to elect new members into the senate.⁴ The censors were thus, on the one hand, confined in their elections to such persons as had already received the confidence of the people, and, on the other, they were expressly directed by the *lex Ovinia* to elect "*ex omni ordine optimum quemque curiatim*."⁵ This obscure *lex Ovinia* is referred by Niebuhr⁶ to the admission of the conscripti into the senate, but it evidently belongs to a much later period, and was meant to be a guidance to the censors, as he himself afterward acknowledged.⁷ The *ordo* mentioned in this *lex* is the *ordo senatorius*, i. e., men who were eligible to the senate from the office they had held.⁸ The expression *curiatim* is very difficult to explain; some believe that it refers to the fact that the new senators were only appointed with the sanction of the senate itself,⁹ and in the presence of the lictors, who represented the curies.

From the time that the curule magistrates had the right to take their seats in the senate, we must distinguish between two classes of senators, viz., real senators, or such as had been regularly raised to their dignity by the magistrates or the censors, and such as had, by virtue of the office which they held or had held, a right to take their seats in the senate and to speak (*sententiam dicere, jus sententiæ*), but not to vote.¹⁰ To this *ordo senatorius* also belonged the *pontifex maximus* and the *flamen dialis*. The whole of these senators had, as we have stated, no right to vote, but when the others had voted they might step over to join the one or the other party, whence they were called *senatores pedarii*, an appellation which had in former times been applied to those juniors who were not consulars.¹¹ A singular irregularity in electing members of the senate was committed by Appius Claudius Cæcus, who elected into the senate sons of freedmen;¹² but this conduct was declared illegal, and had no farther consequences.

When, at length, all the state offices had become equally accessible to the plebeians and the patricians, and when the majority of offices were held by the former, their number in the senate naturally increased in proportion. The senate had gradually become an assembly representing the people, as formerly it had represented the populus, and down

to the last century of the Republic the senatorial dignity was only regarded as one conferred by the people.¹ But, notwithstanding this apparently popular character of the senate, it was never a popular or democratic assembly, for now its members belonged to the nobles, who were as aristocratic as the patricians. (*Vid. Novi Homines*.) The office of princeps senatus, which had become independent of that of prætor urbanus, was now given by the censors, and at first always to the eldest among the ex-censors, but afterward to any other senator whom they thought most worthy, and, unless there was any charge to be made against him, he was re-elected at the next lustrum. This distinction, however, great as it was, afforded neither power nor advantages,² and did not even confer the privilege of presiding at the meetings of the senate, which only belonged to those magistrates who had the right to convoke the senate.³

It has been supposed by Niebuhr⁴ that a senatorial census existed at Rome at the commencement of the second Punic war, but the words of Livy⁵ on which this supposition is founded seem to be too vague to admit of such an inference. Götting⁷ infers from Cicero⁸ that Cæsar was the first who instituted a senatorial census, but the passage of Cicero is still more inconclusive than that of Livy, and we may safely take it for granted that during the whole of the republican period no such census existed,⁹ although senators naturally always belonged to the wealthiest classes. The institution of a census for senators belongs altogether to the time of the Empire. Augustus first fixed it at 400,000 sesterces, afterward increased it to double this sum, and at last even to 1,200,000 sesterces. Those senators whose property did not amount to this sum, received grants from the emperor to make it up.¹⁰ Subsequently it seems to have become customary to remove from the senate those who had lost their property through their own prodigality and vices, if they did not quit it of their own accord.¹¹ Augustus also, after having cleared the senate of unworthy members, introduced a new and reanimating element into it, by admitting men from the municipia, the colonies, and even from the provinces.¹² When an inhabitant of a province was honoured in this manner, the province was said to receive the *jus senatus*. Provincials who were made senators, of course, went to reside at Rome, and, with the exception of such as belonged to Sicily or to Gallia Narbonensis, they were not allowed to visit their native countries without a special permission of the emperor.¹³ In order to make Rome or Italy their new home, the provincial candidates for the senate were subsequently always expected to acquire landed property in Italy.¹⁴ On the whole, however, the equites remained during the first centuries of the Empire the seminarium senatus, which they had also been in the latter period of the Republic.

As regards the age at which a person might become a senator, we have no express statement for the time of the Republic, although it appears to have been fixed by some custom or law, as the ætas senatoria is frequently mentioned, especially during the latter period of the Republic. But we may by induction discover the probable age. We know that, according to the *lex annalis* of the tribune Villius, the age fixed for the quaestorship was

thirty-one.¹ Now as it might happen that a quaestor was made a senator immediately after the expiration of his office, we may presume that the earliest age at which a man could become a senator was thirty-two. Augustus at last fixed the senatorial age at twenty-five,² which appears to have remained unaltered throughout the time of the Empire.

No senator was allowed to carry on any mercantile business. About the commencement of the second Punic war, some senators appear to have violated this law or custom, and, in order to prevent its recurrence, a law was passed, with the vehement opposition of the senate, that none of its members should be permitted to possess a ship of more than 300 amphoræ in tonnage, as this was thought sufficiently large to convey to Rome the produce of their estates abroad.³ It is clear, however, from Cicero,⁴ that this law was frequently violated.

Regular meetings of the senate (*senatus legitimus*) took place during the Republic, and probably during the kingly period also, on the calends, nones, and ides of every month:⁵ extraordinary meetings (*senatus indictus*) might be convoked on any other day, with the exception of those which were atri, and those on which comitia were held.⁶ The right of convoking the senate during the kingly period belonged to the king, or to his vicergerent, the *custos urbis*.⁷ (*Vid. PRÆPECTUS URBI*.) This right was during the Republic transferred to the curule magistrates, and at last to the tribunes also. Under the Empire, the consuls, prætors, and tribunes continued to enjoy the same privilege,⁸ although the emperors had the same.⁹ If a senator did not appear on a day of meeting, he was liable to a fine, for which a pledge was taken (*pignoris captio*) until it was paid.¹⁰ Under the Empire, the penalty for not appearing without sufficient reason was increased.¹¹ Towards the end of the Republic it was decreed that, during the whole month of February, the senate should give audience to foreign ambassadors on all days on which the senate could lawfully meet, and that no other matters should be discussed until these affairs were settled.¹²

The places where the meetings of the senate were held (*curia, senacula*) were always inaugurated by the augurs. (*Vid. TEMPLUM*.) The most ancient place was the Curia Hostilia, in which alone, originally, a *senatus consultum* could be made. Afterward, however, several temples were used for this purpose, such as the Temple of Concordia, a place near the Temple of Bellona (*vid. LEGATUS*), and one near the Porta Capena.¹³ Under the emperors the senate also met in other places: under Cæsar, the Curia Julia, a building of immense splendour, was commenced; but subsequently meetings of the senate were not seldom held in the house of a consul.

When, in the earliest times, the king or the *custos urbis*, after consulting the pleasure of the gods by auspices, had convoked the senate (*senatum edicere, convocare*), he opened the session with the words "*Quod bonum, faustum, felix fortunatumque sit populo Romano Quiritibus*," and then laid before the assembly (*referre, relatio*) what he had to propose. The president then called upon the members to discuss the matter, and when the discussion was over,

every member gave his vote. The majority of votes always decided a question. The majority was ascertained either by *numeratio* or by *discessio*, that is, the president either counted the votes,¹ or the men who voted on the same side joined together, and thus separated from those who voted otherwise. This latter method of voting appears in later times to have been the usual one, and, according to Capito,² the only legitimate method. (*Vid. SENATUS CONSULTUM.*)

The subjects laid before the senate partly belonged to the internal affairs of the state, partly to legislation, and partly to the finance; and no measure could be brought before the *populus* without having previously been discussed and prepared by the senate. The senate was thus the medium through which all affairs of the whole government had to pass: it considered and discussed whatever measures the king thought proper to introduce, and had, on the other hand, a perfect control over the assembly of the *populus*, which could only accept or reject what the senate brought before it. When a king died, the royal dignity, until a successor was elected, was transferred to the *decem primi*,³ each of whom, in rotation, held this dignity for five days. The candidate for the royal power was first decided upon by the *interreges*, who then proposed him to the whole senate, and, if the senate agreed with the election, the *interrex* of the day, at the command of the senate, proposed the candidate to the *comitia*, and took their votes respecting him.⁴ The will of the gods was then consulted by the *augurs*, and when the gods too sanctioned the election,⁵ a second meeting of the *populus* was held, in which the *angurs* announced the sanction of the gods. Hereupon the king was invested with the powers belonging to his office.

Under the Republic, the right of convoking the senate was at first only possessed by the dictators, *prætors*, or consuls, *interreges*, and the *præfectus urbi*, who also, like the kings of former times, laid before the senate the subjects for deliberation. The power of the senate was at first the same as under the kings, if not greater: it had the general care of the public welfare, the superintendence of all matters of religion, the management of all affairs with foreign nations; it commanded the levies of troops, regulated the taxes and duties, and had, in short, the supreme control of all the revenue and expenditure. The order in which the senators spoke and voted was determined by their rank as belonging to the *maiores* or *minores*.⁶ This distinction of rank, however, appears to have ceased after the *decemvirate*, and even under the *decemvirate* we have instances of the senators speaking without any regular order.⁷ It is also probable that after the *decemvirate* vacancies in the senate were generally filled with *ex-magistrates*, which had now become more practicable, as the number of magistrates had been increased. The tribunes of the people likewise obtained access to the deliberations of the senate;⁸ but they had no seats in it yet, but sat before the opened doors of the *curia*.⁹ The senate had at first had the right to propose to the *comitia* the candidates for magistracies, but this right was now lost: the *comitia centuriata* had become quite free in regard to elections, and were no longer dependant upon the proposal of the senate. The *curies* only still possessed the right to sanction the election; but in the year B.C. 299 they were compelled to sanction any election of

magistrates which the *comitia* might make, before it took place,¹ and this soon after became law by the *lex Mænia*.² When, at last, the *curies* no longer assembled for this empty show of power, the senate stepped into their place, and henceforth in elections, and soon after, also, in matters of legislation, the senate had previously to sanction whatever the *comitia* might decide.³ After the *lex Hortensia*, a decree of the *comitia tributa* became law even without the sanction of the senate. The original state of things had thus gradually become reversed, and the senate had lost very important branches of its power, which had all been gained by the *comitia tributa*. (*Vid. TRIBUNUS PLERIS.*) In its relation to the *comitia centuriata*, however, the ancient rules were still in force, as laws, declarations of war, conclusions of peace, treaties, &c., were brought before them, and decided by them on the proposal of the senate.⁴

The powers of the senate, after both orders were placed upon a perfect equality, may be thus briefly summed up. The senate continued to have the supreme superintendence in all matters of religion;⁵ it determined upon the manner in which a war was to be conducted, what legions were to be placed at the disposal of a commander, and whether new ones were to be levied; it decreed into what provinces the consuls and *prætors* were to be sent (*vid. PROVINCIA*), and whose *imperium* was to be prolonged. The commissioners who were generally sent out to settle the administration of a newly-conquered country were always appointed by the senate.⁶ All embassies for the conclusion of peace or treaties with foreign states were sent out by the senate, and such ambassadors were generally senators themselves, and ten in number.⁷ The senate alone carried on the negotiations with foreign ambassadors,⁸ and received the complaints of subject or allied nations, who always regarded the senate as their common protector.⁹ By virtue of this office of protector, it also settled all disputes which might arise among the *municipia* and colonies of Italy,¹⁰ and punished all heavy crimes committed in Italy which might endanger the public peace and security.¹¹ Even in Rome itself, the *judices*, to whom the *prætor* referred important cases, both public and private, were taken from among the senators,¹² and in extraordinary cases the senate appointed special commissions to investigate them;¹³ but such a commission, if the case in question was a capital offence committed by a citizen, required the sanction of the people.¹⁴ When the Republic was in danger, the senate might confer unlimited power upon the magistrates by the formula "*videant consules, ne quid respublica decimenti capiat*,"¹⁵ which was equivalent to a declaration of martial law within the city. This general care for the internal and external welfare of the Republic included, as before, the right to dispose over the finances requisite for these purposes. Hence all the revenue and expenditure of the Republic were under the direct administration of the senate, and the censors and *questors* were only its ministers or agents. (*Vid. CENSOR, QUÆSTOR.*) All the expenses necessary for the maintenance of the armies required the sanction of the senate before anything could be done, and it might even prevent the triumph of a return-

ing general, by refusing to assign the money necessary for it.¹ There are, however, instances of a general triumphing without the consent of the senate.²

How many members were required to be present in order to constitute a full assembly is uncertain, though it appears that there existed some regulations on this point,³ and there is one instance on record in which at least one hundred senators were required to be present.⁴ The presiding magistrate opened the business, and as the senators sat in the following order, *princeps senatus*, *consulares*, *censorii*, *prætorii*, *ædilicii*, *tribunicii*, *quæstorii*, it is natural to suppose that they were asked their opinion and voted in the same manner (*suo loco sententiam dicere*).⁵ Towards the end of the Republic, the order in which the question was put to the senators appears to have depended upon the discretion of the presiding consul,⁶ who called upon each member by pronouncing his name (*nominatum*);⁷ but he usually began with the *princeps senatus*,⁸ or, if consules designati were present, with them.⁹ The consul generally observed all the year round the same order in which he had commenced on the first of January.¹⁰ A senator, when called upon to speak, might do so at full length, and even introduce subjects not directly connected with the point at issue.¹¹ It depended upon the president which of the opinions expressed he would put to the vote, and which he would pass over.¹² Those men who were not yet real senators, but had only a seat in the senate on account of the office they held or had held, had no right to vote, but merely stepped over to the party they wished to join, and they were now called *senatores pedarii*.¹³ When a *senatus consultum* was passed, the consuls ordered it to be written down by a clerk in the presence of some senators, especially of those who had been most interested in it or most active in bringing it about.¹⁴ (*Vid. SENATUS CONSULTUM*.) A senate was not allowed to be held before sunrise, or to be prolonged after sunset:¹⁵ on extraordinary emergencies, however, this regulation was set aside.¹⁶

During the latter part of the Republic the senate was degraded in various ways by Sulla, Cæsar, and others, and on many occasions it was only an instrument in the hands of the men in power. In this way it became prepared for the despotic government of the emperors, when it was altogether the creature and obedient instrument of the princes. The emperor himself was generally also *princeps senatus*,¹⁷ and had the power of convoking both ordinary and extraordinary meetings,¹⁸ although the consuls, prætors, and tribunes continued to have the same right.¹⁹ The ordinary meetings, according to a regulation of Augustus, were held twice in every month.²⁰ A full assembly required the presence of at least 400 members, but Augustus himself afterward modified this rule according to the difference and importance of the subjects which might be brought under discussion.²¹ At a later period we find that seventy, or even fewer, senators constituted an assembly.²² The regular president in the

assembly was a consul, or the emperor himself, if he was invested with the consulship.¹ At extraordinary meetings, he who convoked the senate was at the same time its president. The emperor, however, even when he did not preside, had, by virtue of his office of tribune, the right to introduce any subject for discussion, and to make the senate decide upon it.² At a later period this right was expressly and in proper form conferred upon the emperor, under the name of *jus relationis*; and, accordingly, as he obtained the right to introduce three or more subjects, the *jus* was called *jus tertiæ, quartæ, quintæ, &c., relationis*.³ The emperor introduced his proposals to the senate by writing (*oratio, libellus, epistola principis*), which was read in the senate by one of his quæstors.⁴ (*Vid. ORATIONES PRINCIPUM*.) The prætors, that they might not be inferior to the tribunes, likewise received the *jus relationis*.⁵ The mode of conducting the business, and the order in which the senators were called upon to vote, remained, on the whole, the same as under the Republic;⁶ but when magistrates were to be elected, the senate, as in former times the comitia, gave their votes in secret with little tablets.⁷ The transactions of the senate were, from the time of Cæsar, registered by clerks appointed for the purpose, under the superintendence of a senator.⁸ In cases which required secrecy (*senatus consultum tacitum*), the senators themselves officiated as clerks.⁹

As the Roman emperor concentrated in his own person all the powers which had formerly been possessed by the several magistrates, and without limitation or responsibility, it is clear that the senate, in its administrative powers, was dependant upon the emperor, who might avail himself of its counsels or not, just as he pleased. In the reign of Tiberius, the election of magistrates was transferred from the people to the senate,¹⁰ which, however, was enjoined to take especial notice of those candidates who were recommended to it by the emperor. This regulation remained, with a short interruption in the reign of Caligula, down to the third century, when we find that the *princeps* alone exercised the right of appointing magistrates.¹¹ At the demise of an emperor, the senate had the right to appoint his successor, in case no one had been nominated by the emperor himself; but the senate had in very rare cases an opportunity to exercise this right, as it was usurped by the soldiers. The *ærarium*, at first, still continued nominally to be under the control of the senate,¹² but the emperors gradually took it under their own exclusive management,¹³ and the senate retained nothing but the administration of the funds of the city (*arca publica*), which were distinct both from the *ærarium* and from the *fiscus*,¹⁴ and the right of giving its opinion upon cases connected with the fiscal law.¹⁵ Its right of coining money was limited by Augustus to copper coins, and ceased altogether in the reign of Gallienus.¹⁶ Augustus ordained that no accusations should any longer be brought before the comitia,¹⁷ and instead of them he raised the senate to a high court of justice, upon which he conferred the right of taking cognizance of capital offences committed

by senators,¹ of crimes against the state and the person of the emperors,² and of crimes committed by the provincial magistrates in the administration of their provinces. The senate might also receive appeals from other courts,³ whereas, at least from the time of Hadrian, there was no appeal from a sentence of the senate.⁴ The princeps sometimes referred cases which were not contained in the above categories, or which he might have decided himself, to the senate, or requested its co-operation.⁵ Respecting the provinces of the senate, see *PROVINCIA*.

When Constantinople was made the second capital of the Empire, Constantine instituted also a second senate in this city,⁶ upon which Julian conferred all the privileges of the senate of Rome.⁷ Both these senates were still sometimes consulted by the emperors in an oratio upon matters of legislation:⁸ the senate of Constantinople retained its share in legislation down to the ninth century.⁹ Each senate also continued to be a high court of justice, to which the emperor referred important criminal cases.¹⁰ Capital offences committed by senators, however, no longer came under their jurisdiction, but either under that of the governors of provinces, or of the prefects of the two cities.¹¹ Civil cases of senators likewise belonged to the forum of the *praefectus urbi*.¹² The senatorial dignity was now obtained by descent,¹³ and by having held certain offices at the court, or it was granted as an especial favour by the emperor on the proposal of the senate.¹⁴ To be made a senator was indeed one of the greatest honours that could be conferred, and was more valued than in the times of the Republic; but its burdens were very heavy, for not only had the senators to give public games,¹⁵ to make rich presents to the emperors,¹⁶ and, in times of need, extraordinary donations to the people,¹⁷ but, in addition, they had to pay a peculiar tax upon their landed property, which was called *folis* or *gleba*.¹⁸ A senator who had no landed property was taxed at two folles.¹⁹ It was, therefore, only the wealthiest persons of the Empire, no matter to what part of it they belonged, that could aspire to the dignity of senator. A list of them, together with an account of their property, was laid before the emperor every three months by the prefect of the city.²⁰ Down to the time of Justinian the consuls were the presidents of the senate, but from this time the *praefectus urbi* always presided.²¹

It now remains to mention some of the distinctions and privileges enjoyed by Roman senators: 1. The tunica with a broad purple stripe (*latus clavus*) in front, which was woven in it, and not, as is commonly believed, sewed upon it.²² 2. A kind of short boot, with the letter C on the front of the foot.²³ This C is generally supposed to mean *centum*, and to refer to the original number of 100 (*centum*) sen-

ators. 3. The right of sitting in the orchestra in the theatres and amphitheatres. This distinction was first procured for the senators by Scipio Africanus Major, 194 B.C.¹ The same honour was granted to the senators in the reign of Claudius at the games in the circus.² 4. On a certain day in the year a sacrifice was offered to Jupiter in the Capitol, and on this occasion the senators alone had a feast in the Capitol; the right was called the *jus publice epulandi*.³ 5. The *jus liberae legationis*. (*Vid. LEGATUS*, p. 576.)

SENATUS CONSULTUM. In his enumeration of the parts of the *jus civile*, Cicero includes *senatus consulta*,⁴ from which it appears that in his time there were *senatus consulta* which were laws. Numerous *leges*, properly so called, were enacted in the reign of Augustus, and *leges* properly so called were made even after his time. It was under Augustus, however, that the *senatus consulta* began to take the place of *leges* properly so called, a change which is also indicated by the fact that until his time the *senatus consulta* were not designated by the names of the consuls, or by any other personal name, so far as we have evidence. But from that time we find the *senatus consulta* designated either by the name of the consuls, as *Appianum*, *Silanianum*, or from the name of the Caesar, as *Claudianum*, *Neronianum*; or they are designated as made "auctore" or "ex auctoritate Hadriani," &c., or "ad orationem Hadriani," &c. The name of the *senatus consultum* Macedonianum is an exception, as will afterward appear.

Senatus consulta were enacted in the republican period, and some of them were laws in the proper sense of the term, though some modern writers have denied this position. But the opinion of those who deny the legislative power of the senate during the republican period is opposed by facts. An attempt has sometimes been made to support it by a passage of Tacitus ("tum primum e campo comitia ad patres translata sunt"), which only refers to the elections. It is difficult, however, to determine how far the legislative power of the senate extended. A recent writer⁵ observes "that the *senatus consulta* were an important source of law for matters which concerned administration, the maintenance of religion, the suspension or repeal of laws in the case of urgent public necessity, the rights of the *aerarium* and the publicani, the treatment of the Italians and the provincials." The following are instances of *senatus consulta* under the Republic: a *senatus consultum* "ne quis in urbe sepeliretur;" the *senatus consultum* De Bacchanalibus, hereafter more particularly mentioned; a *senatus consultum* De Libertinorum Tribu; a *senatus consultum* De Sunnitibus at the Megalenses ludi;⁶ a *senatus consultum* "ne homo immolaretur;"⁷ a *senatus consultum* De Provinciis Quaestoris; a *senatus consultum* made M. Tullio Cicerone referente to the effect, "ut legationum liberarum tempus annuum esset;" various *senatus consulta* De Collegiis Dissolvendis; an old *senatus consultum*, "*senatus consultum vetus ne liceret Africanas (bestias) in Italiam advehere*," which was so far repealed by a plebiscitum proposed by Cn. Aufidius, tribunus plebis, that the importation for the purpose of the Circenses was made legal;⁸ an old *senatus consultum* by which "quaestio (servorum) in caput domini prohibebatur;"⁹ a rule of law which Cicero¹⁰ refers to mores as its foundation. From these instances of *senatus consultum* made

(Pro Milon., 22.)

in the republican period, we may collect, in a general way, the kind of matters to which this form of legislation applied. The constitution of the senate was such as to gradually bring within the sphere of its legislation all matters that pertained to religion, police, administration, provincial matters, and all foreign relations. And it seems that the power of the senate had so far increased at the time of the accession of Augustus, that it was no great change to make it the only legislating body. Pomponius,¹ though his historical evidence must be received with caution, states the matter in a way which is generally consistent with what we otherwise know of the progress of senatorial legislation: "As the plebs found it difficult to assemble, &c., it was a matter of necessity that the administration of the state came to the senate: thus the senate began to act, and whatever the senate had determined (*constituisset*) was observed (*observabatur*), and the law so made is called *senatus consultum*."

The *senatus consultum* was so named because the consul (*qui retulit*) was said "*senatum consuleret*:" "*Marcivs L. F. S. Postvminvs L. F. Cos. Senatvm Consoluerunt*" (*Senatus consultum De Bacchanalibus*). In the *senatus consultum De Philosphis et De Rhetoribus*,² the prætor "*consuluit*." In the enacting part of a lex the populus were said "*jubere*," and in a plebiscitum, "*scire*:" in a *senatus consultum* the senate was said "*censere*:" "*De Bacchanalibus, &c., ita exdecidendum censere*" (*S. C. De Bacch*). In the *senatus consulta* of the time of Augustus cited by Frontinus,³ the phrase which follows "*censere*" is sometimes "*placere huic ordini*." In Tacitus the verb "*censere*" is also applied to the person who made the motion for a *senatus consultum*.⁴ Sometimes the term "*arbitrari*" is used;⁵ and Gaius,⁶ writing under the Antonines, applies to the senate the terms which originally denoted the legislative power of the populus: "*Senatus jubet atque constituit; idque legis vicem optinet, quamvis fuit questum*."

The mode in which the legislation of the senate was conducted in the imperial period is explained in the article *ORATIONES PRINCIPUM*.

Certain forms were observed in drawing up a *senatus consultum*, of which there is an example in Cicero: "*S. C. Auctoritates*" (for this is the right reading), "*Pridie Kal. Octob. in Ædæ Apollinis, scribendo adfuerunt L. Domitius Cn. Filius Ahenobarbus, &c. Quod M. Marcellus Consul V. F. (verba fecit) de prov. Cons. D. E. R. I. C. (de ea re ita censuerunt Uti, &c.)*." The preamble of the *senatus consultum De Bacchanalibus* is similar, but the names of the consuls come at the beginning, and the word is "*consoluerunt*:" the date and place are also given; and the names of those *qui scribendo adfuerunt* (*SC. ARF.* in the inscription). The names of the persons who were witnesses to the drawing up of the *senatus consultum* were called the "*auctoritates*," and these *auctoritates* were cited as evidence of the fact of the persons named in them having been present at the drawing up of the *S. C.* ("*id quod in auctoritatibus præscriptis extat*"⁷), from which passage, and from another⁸ ("*illud S. C. ea præscriptione est*"), in which Cicero refers to his name being found among the *auctoritates* of a *S. C.* as a proof of his friendship to the person whom the *S. C.* concerned, it is certain that "*præscribo*," in its various forms, is the proper reading in these *senatus consulta*. (Compare the similar use of *præscriptio* in Roman pleadings, *vid. PRÆSCRIPTIO*.) There can be no doubt that certain persons were required

to be present "*scribendo*," but others might assist if they chose, and a person in this way might testify his regard for another on behalf of whom, or with reference to whom, the *S. C.* was made ("*Cato autem et scribendo adfuit*," &c.¹). Besides the phrase "*scribendo adesse*," there are "*esse ad scribendum*"² and "*poni ad scribendum*" (as to which, see the curious passage in Cicero³). When a *S. C.* was made on the motion of a person, it was said to be made "*in sententiam ejus*." If the *S. C.* was carried, it was written on tablets and placed in the *ærarium*: the *S. C. De Bacchanalibus* provides that it shall be cut on a bronze tablet, but this was for the purpose of its being put up in a public place where it could be read (*vbi facilius gnosceri possit*).

A measure which was proposed as a *senatus consultum* might be stopped by the intercessio of the tribunes, and provision was sometimes made for farther proceeding in such case: "*si quis huic senatus consulto intercesserit senatus placere auctoritatem perscribi (præscribi) et de ea re ad senatum populumque referri*."⁴ This explains one meaning of *senatus auctoritas*, which is a *senatus consultum* which has been proposed and not carried, and of which record was kept with the "*auctoritates eorum qui scribendo adfuerunt*." In one passage Cicero calls⁵ a *S. C.* which had failed, owing to an intercessio, an *auctoritas*.⁶ One meaning of *auctoritas*, in fact, is a *S. C.* proposed, but not yet carried; and this agrees with Livy:⁷ "*Si quis intercedat sto, auctoritate se fore contentum*." If *senatus auctoritas* occasionally appears to be used as equivalent to *senatus consultum*, it is an improper use of the word, but one which presents no difficulty if we consider that the names which denote a thing in its two stages are apt to be confounded in popular language, as with us the words bill and act. In its general and original sense, *senatus auctoritas* is any measure to which a majority of the senate has assented. (See the note of P. Manutius on Cicero.⁸)

The proper enacting word in the *senatus consulta* is "*censeo*," but the word "*decerno*" was also used in ordinary language to express the enacting of a *senatus consultum*⁹ (*Senatus decrevit ut, &c.*). But a *senatus consultum*, which was a law in the proper sense of the term, is not called a decretum, which was a rule made by the senate as to some matter which was strictly within its competence. The words *decretum* and *senatus consultum* are often used indiscriminately, and with little precision.¹⁰ (*Vid. DECRETUM*.)

The forms of the *senatus consulta* are the best evidence of their character. The following are some of the principal *senatus consulta* which are preserved: the *senatus consultum De Tiburtibus*, printed by Gruter and others; the *senatus consultum De Bacchanalibus*; the *senatus consultum* in the letter of Cicero already referred to;¹¹ the six *senatus consulta* about the Roman aqueducts in the second book of Frontinus, *De Aquæductibus*; the *senatus consultum* about the Aphrodisienses;¹² the oration of Claudius;¹³ the various *senatus consulta* preserved in the Digest, which are mentioned in a subsequent part of this article. See also the *senatus consultum* printed in Sigonius, "*De Antiquo Jure Provinciarum*," i., 288.

The following list of *senatus consulta* contains perhaps all of them which are distinguished by the name of a consul or other distinctive name. Nu-

1. (Cic., Ep. ad Att., vii., 1.)—2. (Id. ib., i., 19.)—3. (ad Div., ix., 15.)—4. (Id. ib., viii., 8.)—5. (Id. ib., i., 7.)—6. (iv., 57.)—7. (Id. ib., v., 2.)—8. (Id. ib., viii., 8.)—9. (Id. ad Att., i., 19.)—10. (Gell., ii., 24.)—Vid. Ælius Gallus ap. Festum, s. v. *Senatus decretum*—11. (Cic., Philipp., v., 13.—Gell., xvi., 11.)—12. (Tacit., Ann., li., 62.)—Tacit., ed. Oberlin, ii., 835.—13. (Id. ib., xi., 24.—Tacit., ed. Oberlin, ii., 806.)

1. (Dig. i, tit. 2, s. 2.)—2. (Gell., xv., 11.)—3. (De Aquænet. Romæ, ii.)—4. (Ann., iv., 20.)—5. (Dig. 16, tit. 1, s. 2.)—6. (i., 4.)—7. (Ep. ad Div., viii., 8.)—8. (Cic. De Or. i., 2.)—9. (Cic., Ep. ad Div., v., 2.)

merous *senatus consulta* under the Empire are referred to in the Latin writers, for which we find no distinctive name, though it is probable that all of them had a title like the *leges*, but many of them being of little importance, were not much referred to or cited, and thus their names were forgotten. Tacitus, for instance, often speaks of S. C. without giving their names, and in some cases we are able to affix the titles from other authorities. Many of the imperial *senatus consulta* were merely amendments of *leges*, but they were laws in the proper sense of the word.

Some of the *senatus consulta* of the republican period were laws, as already observed, but others were only determinations of the senate, which became *leges* by being carried in the *comitia*. Such S. C. were really only *auctoritates*. One instance of this kind occurred on the occasion of the trial of Clodius for violating the mysteries of the Bona Dea. A *rogatio* on the subject of the trial was proposed to the *comitia ex senatus consulto*,¹ which is also spoken of as the *auctoritas* of the senate, and as "*quod ab senatu constitutum*" (the word of Gaius, i., 4).

APRONIANUM, probably enacted in the time of Hadrian, empowered all *civitates* which were within the Roman imperium to take a *fideicommissa hereditas*. This *senatus consultum* is cited by Ulpian² without the name; but it appears, from comparing Ulpian with the Digest,³ to be the *senatus consultum Apronianum*. A *senatus consultum* also allowed *civitates* or *municipia*, which were legally considered as *universitates*, to be appointed *heredes* by their *liberti* or *libertæ*. Ulpian speaks of this *senatus consultum* in the passage referred to, immediately before he speaks of that *senatus consultum* which we know to be the *Apronianum*, and it appears probable that the two *senatus consulta* were the same, for their objects were similar, and they are mentioned together without any indication of their being different. This last-mentioned provision is also mentioned in the Digest⁴ as being contained in a *senatus consultum* which was posterior to the *Trebellianum*, but the name is not given in the Digest. Under this provision a *municipium* could obtain the *bonorum possessio*. Bachius⁵ assigns the *senatus consultum* to the reign of Trajan; but it appears to belong to the time of Hadrian, and to be the same *senatus consultum* which allowed *civitates* to take a legacy.⁶

ARTICULEIANUM gave the *præses* of a province jurisdiction in the case of *fideicommissa libertas*, even when the *heres* did not belong to the province. The *heres* could be compelled to give the *libertas* which was the subject of the *fideicommissum*. (*Vid. MANUMISSIO*, p. 616.)

DE BACCHANALIUS. This *senatus consultum*, which is sometimes called *Marcianum*, was passed in the year B.C. 186. The terms of it are stated generally by Livy,⁷ and may be compared with the original *senatus consultum*, which is printed in the edition of Livy by Drakenborch, and in that by J. Clericus, Amsterdam, 1710. There is a dissertation on this *senatus consultum* by Bynkershoek,⁸ who has printed the *senatus consultum*, and commented upon it at some length. The provisions of this *senatus consultum* are stated generally under *DIONYSIA*, p. 366. There is no ancient authority, as it appears, for the name *Marcianum*, which has been given to it from the name of one of the *consuls* who proposed it, and in accordance with the usual titles of *senatus consultum* in the imperial period.

1. (Cic. ad Att., i., 14.)—2. (Frag., tit. 22.)—3. (36, tit. 1, s. 26.)—4. (38, tit. 3.)—5. (Historia Jurisprudentiæ Romanæ.)—6. (Ulp., Frag., tit. 24.)—7. (Dig. 40, tit. 5, s. 44, 51.)—8. (xxxix., 18.)—9. (De Cultu Religionis Peregrinæ apud Veteres Romanos, Op., i., 412.)

CALVITIANUM.¹ (*Vid. JULIA ET PAPIA POPPEA* Lex, p. 557.)

CLAUDIANUM, passed in the time of the Emperor Claudius, reduced a free woman to the condition of a slave (*ancilla*) if she cohabited with the slave of another person, after the master had given her notice that he would not permit it. But if a woman who was a Roman citizen cohabited with a slave with the consent of the slave's master, she might, by agreement with the master, remain free, and yet any child born from this cohabitation would be a slave; for the *senatus consultum* made valid any agreement between the free woman and the slave's master, and by such agreement the woman was relieved from the penalty of the *senatus consultum*. But Hadrian, being moved thereto by a consideration of the hardness of the case and the incongruity of this rule of law (*inelegantia juris*), restored the old rule of the *jus gentium*, according to which the woman continuing free, was the mother of a free child.

A difficulty arose on the interpretation of this *senatus consultum* for which the words of the law had not provided. If a woman who was a Roman citizen was with child, and became an *ancilla* pursuant to the *senatus consultum* in consequence of cohabiting with a slave contrary to the master's wish, the condition of the child was a disputed matter: some contended that if the woman had become pregnant in a legal marriage, the child was a Roman citizen; but if she had become pregnant by illicit cohabitation, the child was the property of the person who had become the master of the mother. (*Vid. SERVUS, ROMAN.*)

There is an apparent ambiguity in a passage of Gaius,² in which he says, "but that rule of the same *lex* is still in force, by which the issue of a free woman and another man's slave is a slave, if the mother knew that the man with whom she cohabited was a slave." The *lex* of which he speaks is the *lex Ælia Sentia*. The exception in the *senatus consultum* of Claudius applied to the case of a compact between a free woman and the master of the slave, which compact implies that the woman must know the condition of the slave, and therefore, according to the terms of the *lex*, the issue would be slaves. But Gaius says³ that under this *senatus consultum* the woman might, by agreement, continue free, and yet give birth to a slave; for the *senatus consultum* gave validity to the compact between the woman and the master of the slave. At first sight it appears as if the *senatus consultum* produced exactly the same effect as the *lex* with respect to the condition of the child. But this is explained by referring to the chief provision of the *senatus consultum*, which was, that cohabitation with a slave "*invito et denuntiante domino*" reduced the woman to a servile condition, and it was a legal consequence of this change of condition that the issue of her cohabitation must be a slave. The *lex Ælia Sentia* had already declared the condition of children born of the union of a free woman and a slave to be servile. The *senatus consultum* added to the penalty of the *lex* by making the mother a slave also, unless she cohabited with the consent of the master, and thus resulted that "*inelegantia juris*" by which a free mother could escape the penalty of the *senatus consultum* by her agreement, and yet her child must be a slave pursuant to the *lex*. Hadrian removed this *inelegantia* by declaring that if the mother, notwithstanding the cohabitation, escaped from the penalties of the *senatus consultum* by virtue of her compact, the child also should have the benefit of the agreement. The *senatus*

consultum only reduced the cohabiting woman to a servile state when she cohabited with a man's slave "*inuito et denuntiante domino*:" if she cohabited with him, knowing him to be a slave, without the knowledge of the master, there could be no denuntiatio; and this case, it appears, was not affected by the senatus consultum, for Gaius observes, as above stated,¹ that the lex had still effect, and the offspring of such cohabitation was a slave. The fact of this clause of the lex remaining in force after the enacting of the senatus consultum, appears to be an instance of the strict interpretation which the Roman jurists applied to positive enactments; for the senatus consultum of Hadrian, as stated by Gaius, only applied to the case of a contract between the master's slave and the woman, and therefore its terms did not comprehend a case of cohabitation when there was no compact. Besides this, if a free woman cohabited with a man's slave either without the knowledge of the master or with his knowledge, but without the "*denuntiatio*," it seems that this was considered as if the woman simply indulged in promiscuous intercourse (*vulgo concepti*), and the mother being free, the child also was free by the *jus gentium* till the lex attempted to restrain such intercourse by working on the parental affections of the mother, and the senatus consultum by a direct penalty on herself. There was a "*juris inegalantia*" in a free woman giving birth to a slave, but this was not regarded by Hadrian, who was struck by the inegalantia of a woman by compact being able to evade the penalty of the senatus consultum, while her child was still subject to the penalty of the lex.

This senatus consultum was passed A.D. 52, and is mentioned by Tacitus, but the terms in which he expresses himself do not contain the true meaning of the senatus consultum, and in one respect, "*sin consensisset dominus, pro libertis haberentur*," they differ materially from the text of Gaius, unless the reading "*libertis*" should be "*liberis*."² It appears, however, from a passage in Paulus,³ that a woman, in some cases which are not mentioned by him, was reduced to the condition of a liberta by the senatus consultum; a circumstance which confirms the accuracy of the text of Tacitus, but also shows how very imperfectly he has stated the senatus consultum. Suetonius⁴ attributes the senatus consultum to the reign of Vespasian, and expresses its effect in terms still more general and incorrect than those of Tacitus. Such instances show how little we can rely on the Roman historians for exact information as to legislation.

It appears from Paulus that the provisions of this senatus consultum are stated very imperfectly even by Gaius, and that they applied to a great number of cases of cohabitation between free women, whether *ingenue* or *libertine*, and slaves.

This senatus consultum was entirely repealed by a constitution of Justinian. Some writers refer the words "*ea lege*"⁵ to the senatus consultum Claudianum, and they must, consequently, refer the words "*ejusdem legis*"⁶ also to this senatus consultum; but the word "*lex*" in neither case appears to refer to the senatus consultum, but to the *lex Ælia Sentia*.⁷

There were several other senatus consulta Claudiana, of which there is a short notice in Jo. Augusti Bachii *Historia Jurisprudentiæ Romanæ*.

DABUMIANUM, passed in the reign of Trajan, related to *fideicommissa libertas*.⁸

HADRIANI SENATUS CONSULTA. Numerous sena-

tus consulta were passed in the reign of Hadrian but there does not appear to be any which is called Hadrianum. Many senatus consulta of this reign are referred to by Gaius as "*senatus consulta auctore Hadriano facta*,"¹¹ of which there is a list in the index to Gaius. The senatus consulta made in the reign of Hadrian are enumerated by Bachius, and some of them are noticed here under their proper designations.

JUNCIANUM, passed in the reign of Commodus, related to *fideicommissa libertas*.⁹ This senatus consultum is preserved in one of the passages of the Digest referred to.

JUNIANUM, passed in the time of Domitian, in the tenth consulship of Domitian, and in the consulship of Ap. Junius Sabinus, A.D. 84, had for its object to prevent collusion between a master and his slave, by which the slave should be made to appear to be as a free man. The person who discovered the collusion obtained the slave as his property.³

LARGIANUM, passed in the first year of the Emperor Claudius, A.D. 42, gave to the children of a manumissor, if they were not exheredated by name, a right to the bona of Latini in preference to extranei heredes.⁴ (*Vid. PATRONUS*, p. 746.)

LIBONIANUM, passed in the reign of Tiberius, in the consulship of T. Statilius Taurus and L. Scribonius Libo, A.D. 16, contained various provisions, one of which was to the effect that if a man wrote a will for another, everything which he wrote in his own favour was void: accordingly, he could not make himself a tutor,⁵ nor heres or legatarius.⁶ This senatus consultum contained other provisions, and it appears to have been an extension of the *lex Cornelia de Falsis*.⁷ (*Vid. FALSUM*.)

MACEDONIANUM, enacted A.D. 46, provided that any loan of money to a *filiusfamilias* could not be recovered, even after the death of the father. The senatus consultum took its name from Macedo, a notorious usurer, as appears from the terms of the senatus consultum, which is preserved.⁸ Theophilus⁹ states incorrectly that the senatus consultum took its name from a *filiusfamilias*. The provision of the senatus consultum is cited by Tacitus,¹⁰ but in such terms as might lead to ambiguity in the interpretation of the law. Suetonius¹¹ attributes this senatus consultum to the time of Vespasian, but he states its provisions in less ambiguous terms than Tacitus.

MEMMIANUM. This name is sometimes given to the senatus consultum passed in the time of Nero, the terms of which are preserved by Tacitus:¹² "*Ne simulata adoptio in ulla parte muneris publici jwaret, ac ne usurpandis quidem hereditatibus prodesset*." The object of this senatus consultum was to prevent the evasion of the *lex Julia et Papia Poppæa*. (*Vid. JULIA ET PAP. POP. LEX*.) It is sometimes referred to the consulship of C. Memmius Regulus and Virginius Rufus, A.D. 63, but it appears to belong to the preceding year.¹³

NERONIANUM de Legatis, the provisions of which are stated in the article *LEGATUS*.¹⁴

NERONIANUM, also called PISONIANUM, from being enacted in the consulship of Nero and L. Calpurnius Piso, A.D. 57. It contained various provisions: "*Ut si quis a suis servis interfectus esset, ii quoque, qui testamento manumissi sub eodem tecto mansissent, inter servos supplicia penderent*."¹⁵ "*Ut occisa uxore etiam de familia viri quæstio habeatur, idemque ut jux-*

a uxoris familiam observetur, si vir dicatur occisus" (Paulus,¹ who gives in substance, also, the provision mentioned by Tacitus, but adds, "*Sed et hi torquentur, qui cum occiso in itinere fuerint*"): "*Ut, si pœna obnoxius servus venisset, quandoque in cum animaduersum esset, venditor pretium præstaret.*"²

ORPHITIANUM enacted in the time of M. Aurelius³ that the legitima hereditas of a mother who had not been in manu might come to her sons, to the exclusion of the consanguinei and other agnati. The name Orphitianum is supplied by Paulus⁴ and the Digest;⁵ the enactment was made in the consulship of V. Rufus and C. Orphitus.⁶

Paulus⁷ speaks of rules relating to manumission being included in a senatus consultum Orphitianum. (*Vid. HERES.*) This senatus consultum was made in the joint reign of M. Aurelius and Commodus.⁸ (*Vid. ORATIONES PRINCIPUM.*)

PEGASIANUM was enacted in the reign of Vespasian, Pegasus and Pasio being consules (suffecti?) in the year of the enactment.⁹ The provisions of this senatus consultum are stated under FIDEICOMMISSA and LEGATUM. This senatus consultum, or another of the same name, modified a provision of the lex Ælia Sentia as to a Latinus becoming a Romanus.¹⁰

PERSICIANUM, which may be the correct form instead of Pernicianum, was enacted in the time of Tiberius, A.D. 34, and was an amendment of the lex Julia et Papia Poppæa.¹¹ (Compare JULIA ET PAP. POP. LEX.)

PISONIANUM. (*Vid. NERONIANUM.*)

PLANCIANUM, of uncertain date, is by some writers assigned to the time of Vespasian. The lex Julia Papia et Poppæa apparently contained a provision by which a fideicommissum was forfeited to the fiscus if a heres or legatarius engaged himself by a written instrument, or any other secret mode, to pay or give the fideicommissum to a person who was legally incapable of taking it.¹² Such a fideicommissum was called tacitum, and when made in the way described was said to be "*in fraudem legis*," designed to evade the law. If it was made openly (*palam*), this was no fraud; and though the fideicommissum might be invalid on account of the incapacity of the fideicommissarius to take, the penalty of the lex did not apply. It does not appear certain whether this provision as to the confiscation was contained in the original lex, or added by some subsequent senatus consultum. However this may be, the fiduciarius still retained his quarta. But a senatus consultum mentioned by Ulpian¹³ enacted that, if a man undertook to perform a tacitum fideicommissum, he lost the quadrans or quarta (*vid. FIDEICOMMISSUM*), nor could he claim what was caducum under the testamenta, which, as a general rule, he could claim if he had children. (*Vid. LEGATUM, BONA CADUCA.*) This senatus consultum, it appears from an extract in the Digest,¹⁴ was the Plancianum or Plantianum, for the reading is doubtful; and in this passage it is stated that the fourth, which the fiduciarius was not allowed to retain, was claimed for the fiscus by a rescript of Antoninus Pius. The penalty for the fraud only applied to that part of the property to which the fraud extended; and if the heres was heres in a larger share of the hereditas than the share to which the fraud extended, he had the benefit of the Falcidia for that part to which the fraud did not ex-

tend, which is thus expressed by Papinian:¹⁵ "*Sed major modus institutionis quam fraudis fuerit quod ad Falcidiam attingit, de superfluo quarta retinebitur.*" The history of legislation on the subject of tacita fideicommissa is not altogether free from some doubt.

PLAUTIANUM. (*Vid. PLANCIANUM.*)

RUBRIANUM, enacted in the time of Trajan, in the consulship of Rubrius Gallus and Q. Cælius Hispano, A.D. 101, related to fideicommissa libertas. Its terms are given in the Digest:¹⁶ "*Si hi a quibus libertatem præstari oportet evocati a prætore adesse noluerint, si causa cognita prætor pronuntiasset libertatem his deberi, eodem jure statum servari ac si directo manumissi essent.*" Compare Plin., *Ep.*, iv, 9, ad Ursinum, with the passage in the Digest.

SABINIANUM, of uncertain date, but apparently after the time of Antoninus Pius. It related to the rights of one of three brothers who had been adopted to a portion of the hereditas contra tabulas testamenti.¹⁷

SILANIANUM, passed in the time of Augustus, in the consulship of P. Cornelius Dolabella and C. Junius Silanus, A.D. 10, contained various enactments. It gave freedom to a slave who discovered the murderer of his master. If a master was murdered, all the slaves who were under the roof at the time, if the murder was committed under a roof, or who were with him in any place at the time of the murder, were put to the torture, and; if they had not done their best to defend him, were put to death. Tacitus¹⁸ refers to this provision of the senatus consultum, and he uses the phrase "*petere ex more.*" Lipsius (note on this passage) refers to Cicero.¹⁹ Servi impuberes were excepted from this provision of the senatus consultum.²⁰ The heres who took possession of the hereditas of a murdered person before the proper inquiry was made, forfeited the hereditas, which fell to the fiscus: the rule was the same whether, being heres ex testamento, he opened the will (*tabula testamenti*) before the inquiry was made, or whether, being heres ab intestato, he took possession of the hereditas (*adiit hereditatem*) or obtained the bonorum possessio; he was also subjected to a heavy pecuniary penalty. A senatus consultum, passed in the consulship of Taurus and Lepidus, A.D. 11, enacted that the penalty for opening the will of a murdered person could not be inflicted after five years, except it was a case of parricide, to which this temporis præscriptio did not apply.²¹

TERTULLIANUM is stated in the Institutes of Justinian²² to have been enacted in the time of Hadrian, in the consulship of Tertullus and Sacerdos; but some critics, notwithstanding this, would refer it to the time of Antoninus Pius. This senatus consultum empowered a mother, whether ingenua or libertina, to take the legitima hereditas of an intestate son; the ingenua, if she was or had been the mother of three children; the libertina, if she was or had been the mother of four children. They could also take, though they neither were nor had been mothers, if they had obtained the jus liberorum by imperial favour. Several persons, however, took precedence of the mother: the sui heredes of the son, those who were called to the bonorum possessio as sui heredes, the father, and the frater consanguineus. If there was a soror consanguinea, she shared with her mother. The senatus consultum Orphitianum gave the children a claim to the hereditas of the mother.²³

TREBELLIANUM, enacted in the time of Nero, in the consulship of L. Annæus Seneca and Trebellius Maximus, A.D. 62, related to fideicommissæ hereditates.¹ (*Vid. FIDEICOMMISSUM.*)

TURPILIANUM, enacted in the time of Nero, in the consulship of Cæsonius Pætus and Petronius Turpilianus, A.D. 61, was against prævaricatio or the collusive desisting from prosecuting a criminal charge. The occasion of this senatus consultum, and the terms of it, are stated by Tacitus.² "*Qui talem operam emptisset, vendidissetque, perinde pœna teneretur ac publico judicio calumniæ condemnaretur.*" The definition of a prævaricator is given in the Digest.³

VELLEIANUM rendered void all intercessiones by women, whether they were on behalf of males or females. This senatus consultum was enacted in the consulship of Marcus Silanus and Velleius Tutor, as appears from the preamble of the senatus consultum,⁴ and it appears most probably to have been passed in the reign of Claudius, from the words of Ulpian in his comment upon it. In the article INTERCESSIO, where this senatus consultum is mentioned, A.D. 10 seems to be a misprint for A.D. 19. The name of Velleius Tutor does not occur in the Fasti Consulares, and he may be a consul suffectus. The name of M. Silanus occurs as consul in the reign of Claudius, and the colleague of Valerius Asiaticus, A.D. 46.⁵ (*Vid. INTERCESSIO.*) In the year A.D. 19, according to the Fasti, a M. Silanus was also consul; his colleague, according to the Fasti, was L. Norbanus Balbus, and this agrees with Tacitus.⁶

VITRASIANUM is assigned to the reign of Vespasian, but the time is very uncertain. It related to fideicommissa libertas.⁷

VOLUSIANUM, enacted in the reign of Nero, in the consulship of Q. Volusius Saturninus and P. Cornelius Scipio, A.D. 56. It contained a provision against pulling down a domus or villa for the sake of profit; but the object of this law seems rather obscure: it is referred to without the name being given in the Digest.⁸ Tacitus⁹ mentions a senatus consultum in this consulship which limited the power of the ædiles: "*Quantum curules, quantum plebei pignoris caperent, vel pœna irrogarent.*" A senatus consultum Volusianum (if the name is right) enacted that persons should be liable to the penalties of the lex Julia de vi Privata, who joined in the suit of another person with the bargain that they should share whatever was acquired by the condemnatio.¹⁰

SENIOTRES. (*Vid. COMITIA*, p. 296.)

SEPTEMBER. (*Vid. CALENDAR, ROMAN.*)

SEPTIMVIRI EPULONES. (*Vid. EPULONES.*)

SEPTIMONTIUM, a Roman festival which was held in the month of December. It lasted only for one day (*dies Septimontium, dies Septimontialis*). According to Festus,¹¹ the festival was the same as the Agonalia; but Scaliger, in his note on this passage, has shown from Varro¹² and from Tertullian¹³ that the Septimontium must have been held on one of the last days of December, whereas the Agonalia took place on the tenth of this month. The day of the Septimontium was a dies ferivatus for the Montani, or the inhabitants of the seven ancient hills, or, rather, districts of Rome, who offered on this day sacrifices to the gods in their respective districts. These sacra (*sacra pro montibus*)¹⁴ were, like the Paganalia, not sacra publica, but privata.¹⁵ (*Com-*

pare SACRA.) They were believed to have been instituted to commemorate the enclosure of the seven hills of Rome within the walls of the city, and must certainly be referred to a time when the Capitoline, Quirinal, and Viminal were not yet incorporated with Rome.¹

SEPTUM. (*Vid. COMITIA*, p. 297.)

SERA. (*Vid. JANUA*, p. 526.)

SERICUM (Σηρικόν), Silk, also called *bombycinum*. The first ancient author who affords any evidence respecting the use of silk is Aristotle.² After a description, partially correct, of the metamorphoses of the silkworm (*bombyx*), he intimates that the produce of the cocoons was wound upon bobbins by women for the purpose of being woven, and that Pamphile, daughter of Plates, was said to have first woven silk in Cos. This statement authorizes the conclusion that raw silk was brought from the interior of Asia and manufactured in Cos as early as the fourth century B.C. From this it appears that the Roman ladies obtained their most splendid garments (*vid. COA VESTIS*), so that the later poets of the Augustan age, Tibullus,⁴ Propertius,⁵ Horace,⁶ and Ovid,⁷ adorn their verses with allusions to these elegant textures, which were remarkably thin, sometimes of a fine purple dye,⁸ and variegated with transverse stripes of gold.⁹ About this time the Parthian conquests opened a way for the transport into Italy of all the most valuable productions of Central Asia, which was the supposed territory of the Seres. The appearance of the silken flags attached to the gilt standards of the Parthians in the battle fought in 54 B.C.,¹⁰ must have been a very striking sight for the army of Crassus. The inquiries of the Romans respecting the nature of this beautiful manufacture led to a very general opinion that silk in its natural state was a thin fleece found on trees.¹¹ An author, nearly contemporary with those of the Augustan age already quoted,¹² celebrated not only the extreme fineness and the high value, but also the flowered texture of these productions. The circumstances now stated sufficiently account for the fact, that after the Augustan age we find no farther mention of Coan, but only of *Seric* webs. The rage for the latter increased more and more. Even men aspired to be adorned with silk, and hence the senate, early in the reign of Tiberius, enacted "*Ne vestis Serica viros faderet.*"¹³

In the succeeding reigns we find the most vigorous measures adopted by those emperors who were characterized by severity of manners, to restrict the use of silk, while Caligula and others, notorious for luxury and excess, not only encouraged it in the female sex, but delighted to display it in public on their own persons.¹⁴ Shawls and scarfs interwoven with gold, and brought from the remotest East, were accumulated in the wardrobe of the empress during successive reigns,¹⁵ until, in the year 176, Antoninus the philosopher, in consequence of the exhausted state of his treasury, sold them by public auction in the Forum of Trajan, with the rest of the imperial ornaments.¹⁶ At this period we find that the silken texture, besides being mixed with gold

(*χρυσόπαστος, χρυσούφης*), was adorned with embroidery, this part of the work being executed either in Egypt or Asia Minor (*Nilotis, Maonia, acus*¹). The Christian authors, from Clemens Alexandrinus² and Tertullian³ downward, discourage or condemn the use of silk. Plintarch also dissuades the virtuous and prudent wife from wearing it,⁴ although it is probable that ribands for dressing the hair⁵ were not uncommon, since these goods (*Serica*) were procurable in the vicus Tuscus at Rome.⁶ Silk thread was also imported and used for various purposes.⁷

Although Commodus in some degree replenished the palace with valuable and curious effects, including those of silk,⁸ this article soon afterward again became very rare, so that few writers of the third century make mention of it. When finely manufactured, it sold for its weight in gold, on which account Aurelian would not allow his empress to have even a single shawl of purple silk (*pallio blatio Serico*⁹). The use of silk with a warp of linen or wool, called *tramoserica* and *subserica*, as distinguished from *holoserica*, was permitted under many restrictions. About the end, however, of the third century, silk, especially when woven with a warp of inferior value, began to be much more generally worn both by men and women; and the consequence was, that, in order to confine the enjoyment of this luxury more entirely to the imperial family and court, private persons were forbidden to engage in the manufacture, and gold and silken borders (*paragaude*) were allowed to be made only in the imperial gynæcea. (*Vid. PARAGAUDA.*)

The production of raw silk (*μέγαλα*) in Europe was first attempted under Justinian, A.D. 530. The eggs of the silkworm were conveyed to Byzantium in the hollow stem of a plant from "Serinda," which was probably Khotan in Little Bucharía, by some monks, who had learned the method of hatching and rearing them. The worms were fed with the leaf of the black or common mulberry (*συκίμυρος*¹⁰). The cultivation both of this species and of the white mulberry, the breeding of silkworms, and the manufacture of their produce, having been long confined to Greece, were at length, in the twelfth century, transported into Sicily, and thence extended over the south of Europe.¹¹ The progress of this important branch of industry was, however, greatly impeded even in Greece, both by sumptuary laws restricting the use of silk except in the church service, or in the dress and ornaments of the court, and also by fines and prohibitions against private silkmills, and by other attempts to regulate the price both of the raw and manufactured article. It was at one time determined that the business should be carried on solely by the imperial treasurer. Peter Barsames held the office, and conducted himself in the most oppressive manner, so that the silk-trade was ruined both in Byzantium and at Tyre and Berytus, while Justinian, the Empress Theodora, and their treasurer, amassed great wealth by the monopoly.¹² The silks woven in Europe previously to the thirteenth century were in general plain in their pattern. Many of those produced by the industry and taste of the Seres, i. e., the silk manufacturers of the interior of Asia, were highly elaborate, and appear to have been very similar in their patterns and style of ornament to the Persian shawls of modern times.

*SERPENS. (*Vid. ASPIS, DRACO, SEPS, &c.*)

*SERPYLLUM. (*Vid. HERPYLLUS.*)

SERRA, *dim. SERRULA* (*πίων*), a Saw. It was made of iron (*ferrea*,¹ *de ferro lamina*²). The form of the larger saw used for cutting timber is seen in the annexed woodcut, which is taken from a miniature in the celebrated Dioscorides written at the beginning of the sixth century.³ It is of the kind

which we call the frame-saw, because it is fixed in a rectangular frame. It was held by a workman (*serrarius*⁴) at each end. The line (*vid. LINEA*) was used to mark the timber in order to guide the saw;⁵ and its movement was facilitated by driving wedges with a hammer between the planks (*tenuis tabula*) or rafters (*trabes*).⁶ A similar representation of the use of the frame-saw is given in a painting found at Herculaneum, the operators being winged genii, as in this woodcut;⁷ but in a bas-relief published by Micali,⁸ the two sawyers wear tunics girt round the waist like that of the shipbuilder in the woodcut at p. 112. The woodcut here introduced also shows the blade of the saw detached from its frame, with a ring at each end for fixing it in the frame, and exhibited on a funeral monument published by Gruter. On each side of the last-mentioned figure is represented a hand-saw adapted to be used by a single person. That on the left is from the same funeral monument as the blade of the frame-saw: that on the right is the figure of an ancient Egyptian saw preserved in the British Museum. These saws (*serrula manubriata*) were used to divide the smaller objects. Some of them, called *lupi*, had a particular shape, by which they were adapted for amputating the branches of trees.⁹

St. Jerome¹⁰ seems clearly to allude to the circular saw, which was probably used, as at present, in cutting veneers (*lamina prætenuis*¹¹). We have also intimations of the use of the centre-bit, and we find that even in the time of Cicero¹² it was employed by thieves.

Pliny¹³ mentions the use of the saw in the ancient Belgium for cutting white building stone: some of the oolitic and cretaceous rocks are still treated in the same manner, both in that part of the Continent and in the south of England. In this case Pliny must be understood to speak of a proper or toothed saw. The saw without teeth was then used, just as it is now, by the workers in marble, and the place of teeth was supplied, according to the hardness of the stone, either by emery, or by various kinds of sand of inferior hardness.¹⁴ In this manner the ancient artificers were able to cut slabs of the hardest rocks, which, consequently, were adapted to receive the highest polish, such as granite, por-

pyrry, lapis-lazuli, and amethyst. (*Vid.* MOLA, PARRIES.)

The saw is an instrument of high antiquity, its invention being attributed either to Dædalus¹ or to his nephew Perdix² (*vid.* CIRCINUS), also called Talos, who, having found the jaw of a serpent, and divided a piece of wood with it, was led to imitate the teeth in iron.³ In a bas-relief, published by Winckelmann,⁴ Dædalus is represented holding a saw approaching very closely in form to the Egyptian saw above delineated.

SERTA, used only in the plural (στέμμα, στεφάνωμα), a Festoon or Garland.

The art of weaving wreaths (*vid.* CORONA), garlands, and festoons, employed a distinct class of persons (*κορωνarii* and *κορονάρια*, στεφανηπλόκοι⁵ or στεφανοπλόκοι), who endeavoured to combine all the most beautiful variety of leaves, of flowers, and of fruits, so as to blend their forms, colours, and scents⁶ in the most agreeable manner. The annexed woodcut, taken from a sarcophagus at Rome,⁷ shows a festoon adapted to be suspended by means of the fillets at both ends. Its extremities are skillfully encased in acanthus-leaves: its body consists

apparently of laurel or bay, together with a profusion of fruits, such as apples, pears, pomegranates, bunches of grapes, and fir-cones. At Athens there was a market, called στεφανοπλόκιον, for the manufacture and sale of this class of productions, the work being principally performed by women and girls.⁸

When a priest was preparing a sacrifice, he often appeared with a festoon intended to be placed on the door of the temple (*festu fronde, variis sertis*¹⁰), on the front of the altar¹¹ (*vid.* ARA, p. 77, 78), or upon the head of the victim. Thus, in the Iliad,¹² Chryses, besides the gilded sceptre which denoted his office and authority (*vid.* SCEPTRUM), carries a

garland in honour of Apollo, which was probably wound about the sceptre.¹ The act here described is seen in the annexed woodcut, which is taken from a bas relief in the collection of antiques at Ince-Blundell, and represents a priestess carrying in her two hands a festoon to suspend upon the circular temple which is seen in the distance. As the festoons remained on the temples long after their freshness had departed, they became very combustible. The Temple of Juno at Argos was destroyed in consequence of their being set on fire.² The garlands on funeral monuments hung there for a year, and were then renewed.³ The funeral pile was also decorated in a similar manner, but with an appropriate choice of plants and flowers.⁴ (*Vid.* FUNUS, p. 458, 460.)

Festoons were placed upon the doorposts of private houses in token of joy and affection⁵ (*vid.* JANUA, p. 527), more especially on occasion of a wedding.⁶ They were hung about a palace in compliment to the wealthy possessor (*insertabo coronis atria*), and on occasions of general rejoicing; the streets of a city were sometimes enlivened with these splendid and tasteful decorations.⁸

The smaller garlands or crowns, which were worn by persons on the head or round the neck, are sometimes called *serta*.⁹ The fashion of wearing such garlands suspended from the neck was adopted by the early Christians.¹⁰

SERVILIA LEX. (*Vid.* Lex, p. 586.)

SERVIANA ACTIO. (*Vid.* PIGNUS, p. 776.)

SERVITUS. (*Vid.* SERVUS, ROMAN.)

SERVITUDES are considered by the Roman law as parts of ownership, which are opposed to ownership as the totality of all those rights which are included in the term ownership. The owner of a thing can use it in all ways consistent with his ownership, and he can prevent others from using it in any way that is inconsistent with his full enjoyment of it as owner. If the owner's power over the thing is limited either way, that is, if his enjoyment of it is subject to the condition of not doing certain acts in order that some other person may have the benefit of such forbearance, or to the condition of allowing others to do certain acts, which limit his complete enjoyment of a thing, the thing is said "serve," to be subject to a "servitus." Hence, when a thing was sold as "*optima maxima*," this was legally understood to mean that it was warranted free from servitudes.¹¹ Servitudes are also expressed by the terms "*jura*" and "*jura in re*," and these terms are opposed to dominion or complete ownership. He who exercises a servitus, therefore, has not the *animus domini*, not even in the case of usufructus, for the usufructuarius is never recognised as owner in the Roman law. The technical word for ownership, when the usufructus is deducted from it, is *proprietas*.

A man can only have a right to a servitus in another person's property: the notion of the term has no direct relation to his own property. Also, a servitus can only be in a corporeal thing. Viewed with respect to the owner of the thing, a servitus either consists in his being restrained from doing certain acts to his property, which otherwise he might do (*servitus quæ in non faciendo consistit*; *Servitus negativa*), or it consists in his being bound to allow some other person to do something to the property, which such person might otherwise be prevented from doing (*servitus quæ in patiendo con-*

statut; *Servitus affirmativa*). A servitus never consists in the owner of the servient property being obliged to do any act to his property, though he may be obliged to do acts which are necessary towards the enjoyment of the servitus.¹

There were two classes of servitudes. Either they had for their subject a definite person, who could exercise the right, in which case they were called personal, *personarum*; or they had for their subject another piece of property, or a house, or land, and the person who exercised the servitus exercised it in respect of his right to the house or land which was its subject. Servitudes of the latter kind were called *prædial*, *servitutes prædiorum* or *rerum*, or *jura prædiorum*;² and with reference to their special kinds, *jura aquarum*, &c.³

The exercise of personal servitudes, of which *usus* and *usufructus* were the principal, was always connected with the natural possession of the thing, and, consequently, the quasi possessio of such servitudes had a close resemblance to possession. (*Vid. Possessio*.) Servitudes of this class consisted solely "*in patiendo*."

Prædial servitudes consisted both in "*patiendo*" and "*in non faciendo*." Those which consisted in "*patiendo*" were either acts which a person might do, by virtue of his right, upon the property of another, as the *jus itineris*, &c., or they were acts which he could do to or upon the property of another, by virtue of possessing another piece of property, as the *jus tigni immittendi*. Those which consisted "*in non faciendo*" were acts which, as the possessor of a piece of property, he could require the owner of another piece of property not to do, but which, except for the servitus, the owner might do.

Personal servitudes were *Usus*, *Usufructus*, *habitatio*, and *operæ servorum et animalium*.

Habitatio, or the right of living in another person's house, resembled the *usufructus* or *usus ædium*. But it was not lost, as *usufructus* and *usus* were, by *capitis diminutio* or neglect to exercise the right. Also, it consisted in the right to inhabit some definite part of a house only, and not the whole; the *habitatio* could be sold or let. If it was a *donatio inter vivos*, it could be set aside by the *heredes* of the giver.⁴

Operæ servorum et animalium consisted in a man having a right to the use and services of another person's slave or beast, so long as the slave or beast lived. The servitus continued after the death of the person entitled to it, and was not lost by a *capitis diminutio*, nor by neglect to exercise it. This is called by Gaius⁵ the "*Usufructus hominum et ceterorum animalium*."

Prædial servitudes imply the existence of two pieces of land (*prædia*), one of which owes a servitus to the other (*servitutum debet, prædium, fundus serviens*), and the servitus is said to be due (*deberi*) from the one to the other. The name of *prædium dominans*, which is now often used to designate the *prædium* to which the servitus is due, is modern. It is of the nature of a servitus to be an advantage to the land to which it belongs: it must be something that in some way increases its value. It must also be a thing that is permanently to the advantage of the dominant *prædium*. The servitus is considered as belonging to the dominant *prædium* in such a sense that it cannot be alienated without the *prædium*, nor pledged, nor let.

Prædial servitudes were either *prædiorum urbanorum* or *rusticorum*. But the word *servitus* has a double meaning, according as we view it as a

right or a duty. The servitus of a *prædium rusticum* or *urbanum* is, in the former sense, the servitus which belongs to a particular *prædium* as a right: in the latter sense, it is the servitus which some particular *prædium* owes as a duty. When the two *prædia* are contemplated together in their mutual relations of right and duty, the word *servitus* expresses the whole relation. *Servitutes urbanae* appear to be those which are for the advantage of an edifice as such, and *rusticae* those which are for the advantage of a piece of ground as such, and mainly for the benefit of agriculture.

The following are the principal *servitutes urbanae*.

1. *Oneris ferendi*, or the right which a man has to use the edifice or wall of his neighbour to support his own edifice. The owner of the servient property was consequently bound to keep it in repair, so that it should be adequate to discharge its duty.¹

2. *Tigni immittendi*, or the right of planting a beam in or upon a neighbour's wall. 3. *Prociendi*, or the right of adding something to a man's edifice, though it shall project into the open space which is above his neighbour's grounds.

4. *Stillicidii*, or *fluminis recipiendi* or *immittendi*. This servitus was either a right which a man had for the rain water to run from his house upon and through his neighbour's premises, or a right to draw such water from his neighbour's premises to his own. The technical meaning of *stillicidium* is rain in drops; when collected in a flowing body, it is *flumen*.²

5. *Altius non tollendi*, or the duty which a man owed not to build his house higher than its present elevation, or the duty of the owner of a piece of land not to raise his edifice above a certain height, in order that the owner of some other house might have the advantage of such forbearance. If a man was released from this duty by his neighbour, he obtained a new right, which was the *jus altius tollendi*. In like manner, a man whose ground was released from the servitus *stillicidii*, was said to have the servitus *stillicidii non recipiendi*. This was not strictly accurate language; for if a servitus is defined to be some limitation of the usual rights of ownership, a recovery of these rights, or a release from the duties which is implied by the possession of these rights by another, merely gives the complete exercise of ownership, and so destroys all notion of a servitus. Still, such was the language of the Roman jurists; and, accordingly, we find enumerated among the *urbanae servitutes* "*Stillicidium avertendi in lectum vel aream vicini aut non avertendi*."³

7. *Servitus ne luminibus*, and *ne prospectui officiator*, or the duty which a man owes to his neighbour's land not to obstruct his light or his prospect;⁴ and *servitus luminum* or *prospectus*, or the duty of a man to allow his neighbour to make openings into his premises, as in a common wall, for instance, to get light or a prospect. It was a servitus the object of which was to procure light, whereas the *ne officiator* was to prevent the destroying of light.⁵ But there are different opinions as to the meaning of *servitus luminum*. 8. *Servitus stercolini*, or the right of placing dung against a neighbour's wall, &c. 9. *Servitus fumi immitendi*, or the right of sending one's smoke through a neighbour's chimney.

The following are the principal *servitutes rusticae*: 1. *Servitus itineris*, or the right of a footpath through another man's ground, or to ride through on horseback, or in a *sella* or *lectica*, for a man in such cases was said *ire*, and not *agere*. Viewed with reference to the person who exercised the right, this servitus was properly called *jus eundi*.¹

1. (Dig. 8, tit. 1, s. 15.)—2. (Gaius, ii., 17, 29.)—3. (Cic., Pro Cæciliis, 26.)—4. (Dig. 7, tit. 8: "De Usu et Habitatione."—Dig. 39, tit. 5, s. 27, 32.—Inst., ii., tit. 5.)—5. (ii., 32.)

1. (Dig. 8, tit. 5, s. 6.)—2. (Varro, De Ling. Lat., v., 27, ed. Müller.—Cic., De Or., i., 38.)—3. (Dig. 8, tit. 2, s. 2.)—4. (Vid. Gaius, ii., 31.—Cic., De Or., i., 39.)—5. (Dig. 8, tit. 2, s. 4, 40.)—6. (Gaius, iv., 3.)

2. Actus or agendi, or the right of driving a beast or carriage through another man's land. 3. Viæ, or the right eundi et agendi et ambulandi. Via of course included the other two servitudes, and it was distinguished from them by its width, which was defined by the Twelve Tables.¹ The width of an iter or actus might be a matter of evidence, and if it was not determined, it was settled by an arbiter. If the width of a via was not determined, its width was taken to be the legal width (*latitudo legitima*). In the work of Frontinus, De Colonis, the phrase "*iter populo debetur*" or "*non debetur*" frequently occurs. When "*iter debetur*" occurs, the width of the iter is given in feet. It seems that, in the assignment of the lands in these instances, the lands were made "*servire populo*," for the purposes of a road. 4. Servitus pascendi, or the right of a man in respect of the ground to which his cattle are attached, to pasture them on another's ground. 5. Servitus aquæductus, or the ducendi aquam per fundum alienum. There were also other servitudes, as aquæ haustus, pecoris ad aquam appulsus, calcis coquendæ, and arenæ fodiendæ. If a publicus locus or a via publica intervened, no servitus aquæductus could be imposed, but it was necessary to apply to the princeps for permission to form an aquæductus across a public road. The intervention of a sacer et religiosus locus was an obstacle to imposing an itineris servitus, for no servitus could be due to any person on ground which was sacer or religiosus.

A servitus negativa could be acquired by mere contract; and it seems the better opinion that a servitus affirmativa could be so acquired, and that traditum, at least in the later periods, was not necessary in order to establish the jus servitutis, but only to give a right to the publiciana in rem actio.² The phrases "*aquæ jus constituere*," "*servitutem fundo imponere*," occur.³ According to Gaius, servitudes urbanæ could only be transferred by the in jure cessio: servitudes rusticæ could be transferred by mancipation also.⁴

A servitus might be established by testament (*servitus legata*), and the right to it was acquired when the "*dies legati cessit*" (*vid. LEGATUM*); but tradition was necessary in order to give a right to the publiciana in rem actio. A servitus could be established by the decision of a iudex in the iudicium familiæ eriscundæ, communi dividundo, and in a case where the iudex adjudicated the proprietates to one and the usufructus to another.⁵ Servitudes could also be acquired by the præscriptio longi temporis.⁷ An obscure and corrupt passage of Cicero⁸ seems to allude to the possibility of acquiring a right to a servitus by use, as to which a lex Scribonia made a change. (*Vid. LEX SCRIBONIA*.) Quasi servitudes were sometimes simply founded on positive enactments, which limited the owner of a property in its enjoyment;⁹ and others were considered as "*velut jure imposita*."¹⁰

A servitus might be released (*remitti*) to the owner of the fundus serviens,¹¹ or it might be surrendered by allowing the owner of the fundus serviens to do certain acts upon it which were inconsistent with the continuance of the servitus.¹² If both the dominant and the servient land came to belong to one owner, the servitudes were extinguished; there was a confusio.¹³ If the separate owners of two separate estates jointly acquired an estate which was servient to the two separate estates, the servi-

tutes were not extinguished; but they were extinguished if the joint owners of a dominant estate jointly acquired the servient estate.¹ The servitus was also extinguished when the usufructuarius acquired the proprietates of the thing. A servitus was extinguished by the extinction of the object; but if the servient object was restored, the servitus was also restored.² A servitus was extinguished by the extinction of the subject, as in the case of a personal servitude, with the death of the person who was entitled to it; and in the case of prædial servitudes, with the destruction of the dominant subject; but they were revived with its revival. A servitus might be extinguished by not using it. According to the old law, usufructus and usus were lost, though not exercising the right, in two years in the case of things immovable, and in one year in the case of things movable. In Justinian's legislation, usufructus and usus were only lost by not exercising the right when there had been a usucapio libertatis on the part of the owner of the thing, or the ownership had been acquired by usucapion.³

Servitudes might be the subjects of actiones in rem. An actio confessoria or vindicatio servitutis had for its object the establishing the right to a servitus, and it could only be brought by the owner of the dominant land when it was due to land. The object of the action was the establishment of the right, damages, and security against future disturbance in the exercise of the right. The plaintiff had, of course, to prove his title to the servitus. The actio negatoria or vindicatio libertatis might be brought by the owner of the property against any person who claimed a servitus in it. The object was to establish the freedom of the property from the servitus for damages, and for security to the owner against future disturbance in the exercise of his ownership. The plaintiff had, of course, to prove his ownership, and the defendant to prove his title to the servitus.⁴

In the case of personal servitudes, the interdicts were just the same as in the case of proper possession; the interdict which was applied in the case of proper possession was here applied as a title in terdictum.⁵

In the case of prædial servitudes, we must first consider the positive. In the first class, the acquisition of the juris quasi possessio is effected by an act which is done simply as an exercise of the right, independent of any other right. The interference with the exercise of the right was prevented by interdicts applicable to the several cases. A person who was disturbed in exercising a jus itineris, actus, viæ, by any person whatever, whether the owner of the servient land or any other person, had a right to the interdict: the object of this interdict was protection against the disturbance, and compensation; its effect was exactly like that of the interdict uti possidetis. Another interdict applied to the same objects as the preceding interdict, but its object was to protect the person entitled to the servitus from being disturbed by the owner while he was putting the way or road in a condition fit for use.

There were various other interdicts, as in the case of the jus aquæ quotidianæ vel æstivæ ducendæ;⁶ in the case of the repair of water passages;⁷ in the case of the jus aquæ hauriendæ.⁸

The second class of positive servitudes consists in the exercise of the servitude in connexion with

1. (Dig. 8, tit. 3, s. 8.)—2. (Gaius, ii., 30, 31.—Savigny, Das Recht des Besitzes.)—3. (Cic. ad Quint., iii., l. c. 2.)—4. (Gaius, ii., 39.)—5. (Dig. 33, tit. 3.)—6. (Dig. 7, tit. 1, s. 6.)—7. (Cod., vii., tit. 33, s. 12.)—8. (ad Att., xv., 26.)—9. (Nov., 22, c. 46, s. 2.)—10. (Dig. 39, tit. 3, s. 1, § 23, and Dig. 43, tit. 27, De Arboribus Cædendis.)—11. (Dig. 8, tit. 1, s. 14.)—12. (Dig. 8, tit. 6, s. 8.)—13. (Dig. 8, tit. 6, s. 1.)

1. (Dig. 8, tit. 3, s. 27.)—2. (Dig. 8, tit. 2, s. 20; tit. 6, s. 14.)—3. (Cod., iii., tit. 33, s. 16, § 1, and tit. 34, s. 13.)—4. (Gaius, iv., 3.—Dig. 8, tit. 5.)—5. (Frag. Vat., 90, as emended by Savigny.)—6. (Dig. 43, tit. 20.)—7. (43, tit. 21, De Rivis.)—8. (43, tit. 22.)

the possession of another piece of property. The interdicts applicable to this case are explained under the next class, that of negative servitudes.

In the case of negative servitudes, there are only two modes in which the *juris quasi possessio* can be acquired: 1, when the owner of the servient property attempts to do some act which the owner of the dominant property considers inconsistent with his servitus, and is prevented; 2, by any legal act which is capable of transferring the *jus servitutis*. The possession is lost when the owner of the servient property does an act which is contrary to the right. The possession of the servitudes of the second and third class was protected by the interdict *uti possidetis*. There was a special interdict about sewers (*De Cloacis*¹).

It has been stated that quasi servitudes were sometimes founded on positive enactments. These were not servitudes properly so called, for they were limitations of the exercise of ownership made for the public benefit. The only cases of this limitation of the exercise of ownership by positive enactment which are mentioned in the Pandect, are reducible to three principal classes. The first class comprehends the limitation of ownership on religious grounds. To this class belongs *finis*, or a space of five feet in width between adjoining estates, which it was not permitted to cultivate. This intermediate space was sacred, and it was used by the owners of the adjoining lands for sacrifice. To this class also belongs the rule, that if a man had buried a dead body on the land of another without his consent, he could not, as a general rule, be compelled to remove the body, but he was bound to make recompense.² The second class comprehends rules relating to police. According to the Twelve Tables, every owner of land in the city was required to leave a space of two feet and a half vacant all round any edifice that he erected: this was called *legitimum spatium, legitimus modus*. Consequently, between two adjoining houses there must be a vacant space of five feet. This law was, no doubt, often neglected; for, after the fire in Nero's reign,³ it was forbidden to build houses with a common wall (*communio parietum*), and the old *legitimum spatium* was again required to be observed; and it is referred to in a rescript of Antoninus and Verus.⁴ This class also comprehends rules as to the height and form of buildings. Augustus⁵ fixed the height at seventy feet; Nero also, after the great fire, made some regulations with the view of limiting the height of houses. Trajan fixed the greatest height at sixty feet. These regulations were general, and had no reference to the convenience of persons who possessed adjoining houses: they had, therefore, no relation at all to the servitudes *altius tollendi* and *non tollendi*, as some writers suppose. The rule of the Twelve Tables, which forbade the removing a "*tignum furtivum ædibus vel vineis junctum*," had for its object the preventing of accidents.⁶ Another rule declared that the owners of lands which were adjoining to public aqueducts should permit materials to be taken from their lands for these public purposes, but should receive a proper compensation. The Twelve Tables forbade the burning or interring of a dead body in the city; and this rule was enforced by a *lex Duilia*. In the time of Antoninus Pius, this rule prevailed both in Rome and other cities.

The third class of limitations had for its object the promotion of agriculture. It comprised the rules relating to *Aqua Pluvia*, and to the *tignum junctum* in the case of a vineyard; and it gave a man permission to go on his neighbour's premises

to gather the fruits which had fallen thereon from his trees, with this limitation, that he could only go every third day.¹ The Twelve Tables enacted that if a neighbour's tree hung over into another person's land, that person might trim it to the height of fifteen feet from the ground (*quindecim pedes altius eam subluator*). The rule was a limitation of ownership, but not a limitation of the ownership of the tree-owner: it was a limitation of the ownership of the land-owner; for it allowed his neighbour's tree to overhang his ground, provided there were no branches less than fifteen feet from the ground.

With these exceptions, some of which were of great antiquity, ownership in Roman law must be considered as unlimited. These limitations, also, had no reference to the convenience of individuals who had adjoining houses or lands. With respect to neighbours, the law allowed them to regulate their mutual interests as they pleased; and, accordingly, a man could agree to allow a neighbour to derive a certain benefit from his land, which their proximity rendered desirable to him, or he could agree to abstain from certain acts on his land for the benefit of his neighbour's land. The law gave force to these agreements under the name of servitudes, and assimilated the benefits of them to the right of ownership by attaching to them a right of action like that which an owner enjoyed.

This view of the limitation of ownership among the Romans by positive enactment is from a valuable essay by Dirksen.²

This imperfect sketch may be completed by reference to the following works, and the authorities quoted in them: Mackeldey, *Lehrbuch*, &c.—Mühllebruch, *Doctrina Pandectarum*, p. 268, &c.—Savigny, *Das Recht des Besitzes, Juris Quasi Possessio*, p. 525, 5th ed.—*Von der Bestellung der Servituten durch simple Vertrag und Stipulation*, von Hasse, Rhein. SERVUS (GREEK). The Greek δούλος, like the Latin *servus*, corresponds to the usual meaning of our word slave. Slavery existed almost throughout the whole of Greece; and Aristotle³ says that a complete household is that which consists of slaves and freemen (οἰκία δὲ τέλειος ἐκ δούλων καὶ ἐλευθέρων), and he defines a slave to be a living working-tool and possession (ὁ δούλος ἐμπνευχον ὄργανον; ⁴ ὁ δούλος κτήματι τι ἐμπνευχον⁵). None of the Greek philosophers ever seem to have objected to slavery as a thing morally wrong; Plato, in his perfect state, only desires that no Greeks should be made slaves by Greeks,⁶ and Aristotle⁷ defends the justice of the institution on the ground of a diversity of race, and divides mankind into the free (ἐλεύθεροι), and those who are slaves by nature (οἱ φύσει δούλοι): under the latter description he appears to have regarded all barbarians in the Greek sense of the word, and therefore considers their slavery justifiable.

In the most ancient times there are said to have been no slaves in Greece;⁸ but we find them in the Homeric poems, though by no means so generally as in later times. They are usually prisoners taken in war (δορῶντες), who serve their conquerors; but we also read as well of the purchase and sale of slaves.⁹ They were, however, at that time mostly confined to the houses of the wealthy.

There were two kinds of slavery among the Greeks. One species arose when the inhabitants

of a country were subdued by an invading tribe, and reduced to the condition of serfs or bondsmen: they lived upon and cultivated the land which their masters had appropriated to themselves, and paid them a certain rent. They also attended their masters in war. They could not be sold out of the country or separated from their families, and could acquire property. Such were the Helots of Sparta (*vid. HELOTES*), the Penestæ of Thessaly (*vid. PENESTÆ*), the Bithynians at Byzantium, the Calliopeii at Syracuse, the Mariandyni at Heraclea in Pontus, the Aphamiotæ in Crete. (*Vid. COSM.*, p. 316.) The other species of slavery consisted of domestic slaves acquired by purchase (*ἀγγορήνητοι* or *χρησώνητοι*), who were entirely the property of their masters, and could be disposed of like any other goods and chattels: these were the *δούλοι* properly so called, and were the kind of slaves that existed at Athens and Corinth. In commercial cities slaves were very numerous, as they performed the work of the artisans and manufacturers of modern towns. In poorer republics, which had little or no capital, and which subsisted wholly by agriculture, they would be few: thus in Phocis and Locris there are said to have been originally no domestic slaves.¹ The majority of slaves were purchased; few, comparatively, were born in the family of their masters, partly because the number of female slaves was very small in comparison with the male, and partly because the cohabitation of slaves was discouraged, as it was considered cheaper to purchase than to rear slaves. A slave born in the house of a master was called *οἰκότροφος*, in contradistinction to one purchased, who was called *οἰκίτης*.² If both the father and mother were slaves, the offspring was called *ἐπιδούλος*:³ if the parents were *οἰκότριβες*, the offspring was called *οἰκοτρίβαιος*.⁴

It was a recognised rule of Greek national law, that the persons of those who were taken prisoners in war became the property of the conqueror,⁵ but it was the practice for the Greeks to give liberty to those of their own nation on payment of a ransom. Consequently, almost all slaves in Greece, with the exception of the serfs above mentioned, were barbarians. It appears to follow, from a passage in Timæus,⁷ that the Chians were the first who carried on the slave-trade, where the slaves were more numerous than in any other place except Sparta, that is, in comparison with the free inhabitants.⁶ In the early ages of Greece, a great number of slaves was obtained by pirates, who kidnapped persons on the coasts, but the chief supply seems to have come from the Greek colonies in Asia Minor, who had abundant opportunities of obtaining them from their own neighbourhood and the interior of Asia. A considerable number of slaves also came from Thrace, where he parents frequently sold their children.⁹

At Athens, as well as in other states, there was a regular slave-market, called the *κύκλος*,¹⁰ because the slaves stood round in a circle. They were also sometimes sold by auction, and appear then to have been placed on a stone called the *πράσιον λίθος*:¹¹ the same was also the practice in Rome, whence the phrase *homo de lapide emtus*. (*Vid. ACRITUS*.) The slave-market at Athens seems to have been held on certain fixed days, usually the last day of the month (the *ἐν η καὶ νέα* or *νομηνίαι*).¹² The price of slaves also naturally differed according to their age, strength, and acquire-

ments. "Some slaves," says Xenophon,¹ are well worth two minas, others hardly half a mina; some sell for five minas, and others even for ten; and Nicias, the son of Niceratus, is said to have given no less than a talent for an overseer in the mines." Böckh² has collected many particulars respecting the price of slaves; he calculates the value of a common mining slave at from 125 to 150 drachmas. The knowledge of any art had a great influence upon the value of a slave. Of the thirty-two or thirty-three sword-cutlers who belonged to the father of Demosthenes, some were worth five, some six, and the lowest more than three minas; and his twenty couch-makers, together, were worth 40 minas.³ Considerable sums were paid for courtesans and female players on the cithara; twenty and thirty minas were common for such.⁴ Neæra was sold for thirty minas.⁵

The number of slaves was very great in Athens. According to the census made when Demetrius Phalerens was archon (B.C. 309), there are said to have been 21,000 free citizens, 10,000 metics, and 400,000 slaves in Attica:⁶ according to which, the slave population is so immensely large in proportion to the free, that some writers have rejected the account altogether,⁷ and others have supposed a corruption in the numbers, and that for 400,000 we ought to read 40,000.⁸ Böckh⁹ and Clinton,¹⁰ however, remark, with some justice, that in computing the citizens and metics, the object was to ascertain their political and military strength, and hence the census of only males of full age was taken; while, in enumerating slaves, which were property, it would be necessary to compute all the individuals who composed that property. Böckh takes the proportion of free inhabitants to slaves as nearly one to four in Attica, Clinton as rather more than three to one; but, whatever may be thought of these calculations, the main fact, that the slave population in Attica was much larger than the free, is incontrovertible: during the occupation of Decelea by the Lacedæmonians, more than 20,000 Athenian slaves escaped to this place.¹¹ In Corinth and Ægina their number was equally large: according to Timæus, Corinth had 460,000, and according to Aristotle, Ægina had 470,000 slaves;¹² but these large numbers, especially in relation to Ægina, must be understood only of the early times, before Athens had obtained possession of the commerce of Greece.

At Athens even the poorest citizen had a slave for the care of his household,¹³ and in every moderate establishment many were employed for all possible occupations, as bakers, cooks, tailors, &c. The number possessed by one person was never so great as at Rome during the later times of the Republic and under the Empire, but it was still very considerable. Plato¹⁴ expressly remarks, that some persons had fifty slaves, and even more. This was about the number which the father of Demosthenes possessed;¹⁵ Lysias and Pohlenarchus had 120,¹⁶ Philemonides had 300, Hipponicus 600, and Nicias 1000 slaves in the mines alone.¹⁷ It must be borne in mind, when we read of one person possessing so large a number of slaves, that they were employed in various workshops, mines, or manufactories: the number which a person kept to attend to his own private wants or those of his household was probably never very large. And this constitutes one

great distinction between Greek and Roman slaves, that the labour of the former was regarded as the means by which an owner might obtain profit for the outlay of his capital in the purchase of the slaves, while the latter were chiefly employed in ministering to the wants of their master and his family, and in gratifying his luxury and vanity. Thus Athenæus¹ remarks that many of the Romans possess 10,000 or 20,000 slaves, and even more; but not, he adds, for the sake of bringing in a revenue, as the wealthy Nicias.

Slaves either worked on their masters' account or their own (in the latter case they paid their masters a certain sum a day), or they were let out by their master on hire, either for the mines or any other kind of labour, or as hired servants for wages (*ἀποφορά*). The rowers on board the ships were usually slaves;² it is remarked as an unusual circumstance, that the seamen of Paralos were freemen.³ These slaves belonged either to the state or to private persons, who let them out to the state on payment of a certain sum. It appears that a considerable number of persons kept large gangs of slaves merely for the purpose of letting out, and found this a profitable mode of investing their capital. Great numbers were required for the mines, and in most cases the mine lessees would be obliged to hire some, as they would not have sufficient capital to purchase as many as they wanted. We learn from a fragment of Hyperides preserved by Suidas,⁴ that there were at one time as many as 150,000 slaves who worked in the mines and were employed in country labour. Generally none but inferior slaves were confined in these mines: they worked in chains, and numbers died from the effects of the unwholesome atmosphere.⁵ We cannot calculate with accuracy what was the usual rate of profit which a slave proprietor obtained. The thirty-two or thirty-three sword-cutlers belonging to the father of Demosthenes annually produced a net profit of 30 minas, their purchase value being 190 minas, and the twenty couch-makers a profit of 12 minas, their purchase value being 40 minas.⁶ The leather-workers of Timarchus produced to their masters two oboli a day, the overseers three.⁷ Nicias paid an obolus a day for each mining slave which he hired.⁸ The rate of profit upon the purchase-money of the slaves was naturally high, as their value was destroyed by age, and those who died had to be replaced by fresh purchases. The proprietor was also exposed to the great danger of their running away, when it became necessary to pursue them, and offer rewards for their recapture (*σώστρον*). Antigenes of Rhodes was the first that established an insurance of slaves. For a yearly contribution of eight drachmas for each slave that was in the army, he undertook to make good the value of the slave at the time of his running away.¹⁰ Slaves that worked in the fields were under an overseer (*ἐπίτροπος*), to whom the whole management of the estate was frequently intrusted, while the master resided in the city; the household slaves were under a steward (*ραβίας*), the female slaves under a stewardess (*ραβία*).¹¹

The Athenian slaves did not, like the Helots of Sparta and the Penestæ of Thessaly, serve in the armies; the battles of Marathon and Arginusæ, when the Athenians armed their slaves,¹² were exceptions to the general rule.

The rights of possession with regard to slaves differed in no respect from any other property; they could be given or taken as pledges.¹ The condition, however, of Greek slaves was, upon the whole, better than that of Roman ones, with the exception, perhaps, of Sparta, where, according to Plutarch,² it is the best place in the world to be a freeman, and the worst to be a slave (*ἐν Λακεδαιμονίᾳ καὶ τὸν ἐλεύθερον μάλιστα ἐλεύθερον εἶναι, καὶ τὸν δούλον μάλιστα δούλον*). At Athens especially, the slaves seem to have been allowed a degree of liberty and indulgence which was never granted to them at Rome.³ On the reception of a new slave into a house at Athens, it was the custom to scatter sweetmeats (*καταχύματα*), as was done in the case of a newly-married pair.⁴

The life and person of a slave were also protected by the law: a person who struck or maltreated a slave was liable to an action (*ὕβρεως γραφή*); a slave, too, could not be put to death without legal sentence.⁵ He could even take shelter from the cruelty of his master in the Temple of Theseus, and there claim the privilege of being sold by him (*πρῶσιν αἰτελοῦσθαι*). The person of a slave, however, was not considered so sacred as that of a freeman: his offences were punished with corporeal chastisement, which was the last mode of punishment inflicted on a freeman;⁶ he was not believed upon his oath, but his evidence in courts of justice was always taken with torture. (*VID. BASANOS*.)

Notwithstanding the generally mild treatment of slaves in Greece, their insurrection was not unfrequent;⁷ but these insurrections in Attica were usually confined to the mining slaves, who were treated with more severity than the others. On one occasion they murdered their guards, took possession of the fortifications of Sunium, and from this point ravaged the country for a considerable time.¹⁰

Slaves were sometimes manumitted at Athens, though not so frequently as at Rome; but it seems doubtful whether a master was ever obliged to liberate a slave against his will for a certain sum of money, as some writers have concluded from a passage of Plautus.¹¹ Those who were manumitted (*ἀπελεύθεροι*) did not become citizens, as they might at Rome, but passed into the condition of metics. They were obliged to honour their former master as their patron (*προστάτης*), and to fulfil certain duties towards him, the neglect of which rendered them liable to the *δίκη ἀποστασίον*, by which they might again be sold into slavery. (*VID. LIBERTES, GREEK; ΑΠΟΣΤΑΣΙΟΥ ΔΙΚΗ.*)

Respecting the public slaves at Athens, see DEMOSTROI.

It appears that there was a tax upon slaves at Athens,¹² which Böckh¹³ supposes was three oboli a year for each slave.

SERVUS (ROMAN), SE'RVITUS. "*Servilus est constitutio juris gentium qua quis dominio alieno contra naturam subicitur.*"¹ Gaius also considers the potestas of a master over a slave as "*juris gentium.*"² The Romans viewed liberty as the natural state, and slavery as a status or condition which was contrary to the natural state. The mutual relation of slave and master among the Romans was expressed by the terms *servus* and *dominus*; and the power and interest which the *dominus* had over and in the slave was expressed by *dominium*. The term *dominium* or ownership, with reference to a slave, pointed to the slave merely as a thing or object of ownership, and a slave, as one of the *res mancipi*, was classed with other objects of ownership. The word *potestas* was also applied to the master's power over the slave, and the same word was used to express the father's power over his children. The boundaries between the *patria* and *dominica potestas* were originally very narrow, but the child had certain legal capacities which were altogether wanting to the condition of the slave. The master had no *potestas* over the slave if he had merely a "*nudum jus Quiritium in servo*:" it was necessary that the slave should be his in *bonis* at least.³

According to the strict principles of the Roman law, it was a consequence of the relation of master and slave that the master could treat the slave as he pleased; he could sell him, punish him, and put him to death. Positive morality, however, and the social intercourse that must always subsist between a master and the slaves who are immediately about him, ameliorated the condition of slavery. Still we read of acts of great cruelty committed by masters in the later republican and earlier imperial periods, and the *lex Petronia* was enacted in order to protect the slave. (*Vid. Lex PETRONIA*, p. 584.) The original power of life and death over a slave, which Gaius considers to be a part of the *jus gentium*, was limited by a constitution of Antoninus, which enacted that, if a man put his slave to death without sufficient reason (*sine causa*), he was liable to the same penalty as if he had killed another man's slave. The constitution applied to Roman citizens, and to all who were under the *imperium Romanum*.⁴ The same constitution also prohibited the cruel treatment of slaves by their masters, by enacting, that if the cruelty of the master was intolerable, he might be compelled to sell the slave, and the slave was empowered to make his complaint to the proper authority.⁵ A constitution of Claudius enacted, that if a man exposed his slaves who were infirm, they should become free; and the constitution also declared, that if they were put to death, the act should be murder.⁶ It was also enacted,⁷ that in sales of division of property, slaves, such as husband and wife, parents and children, brothers and sisters, should not be separated.

A slave could not contract a marriage. His cohabitation with a woman was *contubernium*, and no legal relation between him and his children was recognised. Still nearness of blood was considered an impediment to marriage after manumission: thus, a manumitted slave could not marry his manumitted sister.⁸

A slave could have no property. He was not incapable of acquiring property, but his acquisitions belonged to his master, which Gaius considers to be a rule of the *jus gentium*.⁹ A slave could acquire for his master by *mancipatio*, *traditio*, *stipulatio*, or in any other way. In this capacity of the

slave to take, though he could not keep, his condition was assimilated to that of a *filiusfamilias*, and he was regarded as a person. If one person had a *nudum jus Quiritium* in a slave, and he was another's in *bonis*, his acquisitions belonged to the person whose he was in *bonis*. If a man possessed another man's slave or a free person, he only acquired through the slave in two cases: he was entitled to all that the slave acquired out of or by means of the property of the possessor (*ex re ejus*), and he was entitled to all that the slave acquired by his own labour (*ex operis suis*); the law was the same with respect to a slave of whom a man had the *usufructus* only. All other acquisitions of such slaves or free persons belonged to their owner or to themselves, according as they were slaves or free men.¹ If a slave was appointed heres, he could only accept the *hereditas* with the consent of his master, and he acquired the *hereditas* for his master: in the same way the slave acquired a legacy for his master.²

A master could also acquire *possessio* through his slave, and thus have a commencement of *usucapion*;³ but the owner must have the possession of the slave in order that he might acquire possession through him, and, consequently, a man could not acquire possession by means of a pignoratized slave. (*Vid. PRONUS*.) A *bonæ fidei* possessor, that is, one who believed the slave to be his own, could acquire possession through him in such cases as he could acquire property; consequently, a pledgee could not acquire possession through a pignoratized slave, though he had the possession of him *bona fide*, for this *bona fides* was not that which is meant in the phrase *bonæ fidei* possessor. The *usufructuarius* acquired possession through the slave in the same cases in which the *bonæ fidei* possessor acquired it.⁴

Slaves were not only employed in the usual domestic offices and in the labours of the field, but also as factors or agents for their masters in the management of business (*vid. INSTITORIA ACTIO*, &c.), and as mechanics, artisans, and in every branch of industry. It may easily be conceived that, under these circumstances, especially as they were often intrusted with property to a large amount, there must have arisen a practice of allowing the slave to consider part of his gains as his own: this was his *peculium*, a term also applicable to such acquisitions of a *filiusfamilias* as his father allowed him to consider as his own. (*Vid. PATRIA POTESTAS*.) According to strict law, the *peculium* was the property of the master, but according to usage it was considered to be the property of the slave. Sometimes it was agreed between master and slave that the slave should purchase his freedom with his *peculium* when it amounted to a certain sum.⁵ If a slave was manumitted by the owner in his lifetime, the *peculium* was considered to be given together with *libertas*, unless it was expressly retained.⁶ Transactions of borrowing and lending could take place between the master and slave with respect to the *peculium*, though no right of action arose on either side out of such dealings, conformably to a general principle of Roman law.⁷ If, after the slave's manumission, the master paid him a debt which had arisen in the manner above mentioned, he could not recover it.⁸ In case of the claim of creditors on the slave's *peculium*, the debt of the slave to the master was first taken into the account, and deducted from the *peculium*. So far was the law modified, that in the case of the *naturales obli-*

gationes, as the Romans called them, between master and slave, a fidejussor could be bound for a slave, whether the creditor was an extraneous, or a dominus to whom the slave was indebted.

A naturalis obligatio might also result from the dealings of a slave with other persons than his master; but the master was not at all affected by such dealings. The master was only bound by the acts and dealings of the slave when the slave was employed as his agent or instrument, in which case the master might be liable to an actio EXERCITORIA or INSTITORIA.¹ There was, of course, an actio against the master when the slave acted by his orders. (*Vid. Jussu, Quod, &c.*) If a slave or filius-familias traded with his peculium with the knowledge of the dominus or father, the peculium and all that was produced by it were divisible among the creditors and master or father in due proportions (*pro rata portione*); and if any of the creditors complained of getting less than his share, he had a tributoria actio against the master or father, to whom the law gave the power of distribution among the creditors.² The master was not liable for anything beyond the amount of the peculium, and his own demand was payable first.³ Sometimes a slave would have another slave under him, who had a peculium with respect to the first slave, just as the slave had a peculium with respect to his master. On this practice was founded the distinction between servi ordinarii and vicarii.⁴ These subordinate peculia were, however, legally considered as included in the principal peculium. In the case of a slave dying, being sold or manumitted, the edict required that any action in respect of the peculium must be brought within a year.⁵ If a slave or filius-familias had carried on dealings without the knowledge and consent of his master or father, there might be an action against the master or father in respect of such dealings, so far as it could be proved that he had derived advantage from them. This was called the actio de in rem verso,⁶ and it was, in fact, the same actio as that de peculio. That was said "*in rem patris domine versum*," which turned out for his advantage. For instance, if a slave borrowed ten sestertia and paid them to the master's creditors, the master was bound to pay the loan, and the lender had an actio against him de in rem verso. If the slave paid any part of the borrowed sum to his master's creditors, the master was liable to the lender for the amount so applied; and if the slave had wasted the other part, the master was bound to make that good to the amount of the slave's peculium; but still with this provision, that the amount of the slave's peculium could only be ascertained by first deducting from it what he owed to the master. The case was the same with the peculium of a son and a slave. Thus, as Gaius observes,⁷ the actio de peculio and de in rem verso was one actio, but contained two condemnations.

It is a consequence of the relation of slave and master, that the master acquired no rights against the slave in consequence of his delicts. Other persons might obtain rights against a slave in consequence of his delicts, but their right could not be prosecuted by action until the slave was manumitted.⁸ They had, however, a right of action against the slave's master for damages, and if the master would not pay the damages, he must give up the slave. (*Vid. Noxa.*) The slave was protected against injury from other persons. If the slave was killed, the master might either prosecute the

killer for a capital offence, or sue for damages under the lex Aquilia.¹ (*Vid. AQUILIA LEX, INJURIA.*) The master had also a prætorial actio in duplum against those who corrupted his slave (*servus, serva*) and led him into bad practices;² the in duplum was to twice the amount of the estimated damage. He had also an action against a person who committed stuprum with his female slave.³

A runaway slave (*fugitivus*) could not lawfully be received or harboured; to conceal him was furtum. The master was entitled to pursue him wherever he pleased, and it was the duty of all authorities to give him aid in recovering the slave. It was the object of various laws to check the running away of slaves in every way, and, accordingly, a runaway slave could not legally be an object of sale. A class of persons called fugitivarii made it their business to recover runaway slaves. The rights of the master over the slave were in no way affected by his running away;⁴ there was a lex Fabia on this subject, and apparently two senatus consulta at least.⁵

A person was a slave either jure gentium or jure civili. A person was born a slave jure gentium whose mother was a slave when she gave him birth;⁶ for it was a legal principle, that the status of those who were not begotten in justæ nuptiæ was to be reckoned from the moment of the birth. A slave born in the master's house was verna; but it was also a principle of Roman law, that the status of a person who was begotten in justæ nuptiæ was reckoned from the time of conception. At a later period the rule of law was established, that, though a woman at the time of the birth might be a slave, still her child was free, if the mother had been free at any time reckoning backward from the time of the birth to the time of the conception.⁷ There were various cases of children the offspring of a free parent and a slave, as to which positive law provided whether the children should be free or slaves.⁸ (*Vid. SENATUS CONSULTUM CLAUDIANUM.*)

A person became a slave by capture in war, also jure gentium. Captives in war were sold as belonging to the ærarium, or distributed among the soldiers by lot.⁹ In reference to the practice of selling prisoners with a crown on their heads, we find the expression "*sub corona venire, vendere.*"¹⁰

A free person might become a slave in various ways in consequence of positive law, jure civili. This was the case with incensi (*vid. CAPUT*), and those who evaded military service.¹¹ In certain cases, a man became a slave if he allowed himself to be sold as a slave in order to defraud the purchaser; and a free woman who cohabited with a slave might be reduced to the same condition. (*Vid. SENATUS CONSULTUM CLAUDIANUM.*) Under the Empire, the rule was established that persons condemned to death, to the mines, and to fight with wild beasts, lost their freedom, and their property was confiscated, whence, concludes Gaius, it appears that they lose the testamenti factio.¹² But this was not the earlier law. A person so condemned, though he lost his freedom, had no master, and, consequently, the hereditates and legacies which were left to him were simply void, for such a person was "*pæna servus, non Casaris.*"¹³ A man never lost his freedom by usucapion.¹⁴ According to the old law, a manifestus fur was liable to a capitalis pena, and was addicted (*addicebatur*) to the

person whose property he had stolen; but it was doubted whether the effect of the addictio was to make him a servus, or to put him in the condition of an adjudicatus.¹

By a *constitutio* or *senatus consultum* of Claudius,² a freedman who misconducted himself towards his patron was reduced to his former state of slavery. But this was not the rule of law in the time of Nero.³ (*Vid.* PATRONUS, LIBERTUS.)

The state of slavery was terminated by *MANUMISSIO*. It was also terminated by various positive enactments, either by way of reward to the slave, or punishment to the master. The *SENATUS CONSULTUM SILANIANUM* is an example of the former; and various subsequent constitutions gave freedom to slaves who discovered the perpetrators of certain crimes.⁴ Liberty might also be acquired by the *præscriptio temporis*. After the establishment of Christianity, it might be acquired, subject to certain limitations, by becoming a monk or a spiritual person;⁵ but if the person left his monastery for a secular life, or rambled about in the towns or the country, he might be reduced to his former servile condition.

There were slaves that belonged to the state, and were called *servi publici*: they had the testamentary *factio* to the amount of one half of their property,⁶ from which circumstance it appears that they were viewed in a light somewhat different from the slaves of private persons.

The preceding account treats of the legal condition of slaves in their relation to their masters. It remains to give an account of the history of slavery among the Romans, of the sale and value of slaves, of the different classes into which they were divided, and of their general treatment.

Slaves existed at Rome in the earliest times of which we have any record, but they do not appear to have been numerous under the kings and in the earliest ages of the Republic. The different trades and the mechanical arts were chiefly carried on by the clients of the patricians, and the small farms in the country were cultivated, for the most part, by the labours of the proprietor and of his own family. But, as the territories of the Roman state were extended, the patricians obtained possession of large estates out of the *ager publicus*, since it was the practice of the Romans to deprive a conquered people of part of their land. These estates probably required a larger number of hands for their cultivation than could readily be obtained among the free population; and since the freemen were constantly liable to be called away from their work to serve in the armies, the lands began to be cultivated almost entirely by slave labour.⁷ Through war and commerce slaves could easily be obtained, and at a cheap rate, and their number soon became so great that the poorer class of freemen was thrown almost entirely out of employment. This state of things was one of the chief arguments used by Licinius and the Gracchi for limiting the quantity of public land which a person might possess;⁸ and we know that there was a provision in the Licinian rogations that a certain number of freemen should be employed on every estate.⁹ This regulation, however, was probably of little avail: the lands still continued to be almost entirely cultivated by slaves, although, in the latest times of the Republic, we find that Julius Cæsar attempted to remedy this state of things to some extent, by enacting that, of those persons who attended to cattle, a third

should always be freemen.¹ In Sicily, which supplied Rome with so great a quantity of corn, the number of agricultural slaves was immense: the oppressions to which they were exposed drove them twice to open rebellion, and their numbers enabled them to defy for a time the Roman power. The first of these servile wars began in B.C. 134, and ended in B.C. 132, and the second commenced in B.C. 102, and lasted almost four years.

Long, however, after it had become the custom to employ large gangs of slaves in the cultivation of the land, the number of those who served as personal attendants still continued to be small. Persons in good circumstances seem usually to have had one only to wait upon them,² who was generally called by the name of his master, with the word *por* (that is, *puer*) affixed to it, as *Caipor*, *Lucipor*, *Marcipor*, *Publipor*, *Quintipor*, &c.; and hence Quintilian³ says, long before whose time luxury had augmented the number of personal attendants, that such names no longer existed. Cato, when he went to Spain as consul, only took three slaves with him.⁴ But during the latter times of the Republic, and under the Empire, the number of domestic slaves greatly increased, and in every family of importance there were separate slaves to attend to all the necessities of domestic life. It was considered a reproach to a man not to keep a considerable number of slaves. Thus Cicero, in describing the meanness of Piso's housekeeping, says, "*Idem coquus, idem atriensis: pistor domi nullus.*"⁵ The first question asked respecting a person's fortune was "*Quot pascit servos?*"⁶ Horace⁷ seems to speak of ten slaves as the lowest number which a person in tolerable circumstances ought to keep, and he ridicules the prætor Tullius for being attended by no more than five slaves in going from his Tiburtine villa to Rome.⁸ The immense number of prisoners taken in the constant wars of the Republic, and the increase of wealth and luxury, augmented the number of slaves to a prodigious extent. The statement of Athenæus,⁹ that very many Romans possessed 10,000 and 20,000 slaves, and even more, is probably an exaggeration; but a freedman under Augustus, who had lost much property in the civil wars, left at his death as many as 4116.¹⁰ Two hundred was no uncommon number for one person to keep,¹¹ and Augustus permitted even a person that was exiled to take twenty slaves or freedmen with him.¹² The mechanical arts, which were formerly in the hands of the *clientes*, were now entirely exercised by slaves;¹³ a natural growth of things, for where slaves perform certain duties or practise certain arts, such duties or arts will be thought degrading to a freeman. It must not be forgotten that the games of the amphitheatre required an immense number of slaves trained for the purpose. (*Vid.* GLADIATORES.) Like the slaves in Sicily, the gladiators in Italy rose in B.C. 73 against their oppressors, and, under the able generalship of Spartacus, defeated a Roman consular army, and were not subdued till B.C. 71, when 60,000 of them are said to have fallen in battle.¹⁴

Under the Empire, various enactments, mentioned above (p. 883), were made to restrain the cruelty of masters towards their slaves; but the spread of Christianity tended most to ameliorate the condition of slaves, though the possession of them was for a long time by no means condemned as contrary to Christian justice. The Christian writers,

however, inculcated the duty of acting towards them as we would be acted by,¹ but down to the age of Theodosius wealthy persons still continued to keep as many as two or three thousand.² Justinian did much to promote the ultimate extinction of slavery, but the number of slaves was again increased by the invasion of the barbarians from the north, who not only brought with them their own slaves, who were chiefly Scelavi or Slavonians (whence our word *slave*), but also reduced many of the inhabitants of the conquered provinces to the condition of slaves. But all the various classes of slaves became merged, in course of time, into the *adscripti glebæ* or *serfs* of the Middle Ages.

The chief sources from which the Romans obtained slaves have been pointed out above. Under the Republic, one of the chief supplies was prisoners taken in war, who were sold by the *questors*³ with a crown on their heads (see above, p. 884), and usually on the spot where they were taken, as the care of a large number of captives was inconvenient. Consequently, slave-dealers usually accompanied an army, and frequently, after a great battle had been gained, many thousands were sold at once, when the slave-dealers obtained them for a mere nothing. In the camp of Lucullus, on one occasion, slaves were sold for four drachmæ each. The slave-trade was also carried on to a great extent, and after the fall of Corinth and Carthage, Delos was the chief mart for this traffic. When the Cilician pirates had possession of the Mediterranean, as many as 10,000 slaves are said to have been imported and sold there in one day.⁴ A large number came from Thrace and the countries in the north of Europe, but the chief supply was from Africa, and more especially Asia, whence we frequently read of Phrygians, Lycians, Cappadocians, &c., as slaves.

The trade of slave-dealers (*mangones*) was considered disreputable, and expressly distinguished from that of merchants (*mangones non mercatores sed venaliciarii appellantur*⁵); but it was very lucrative, and great fortunes were frequently realized from it. The slave-dealer Thoraninus, who lived in the time of Augustus, was a well-known character.⁶ Martial⁷ mentions another celebrated slave-dealer in his time, of the name of Gargilianus.

Slaves were usually sold by auction at Rome. They were placed either on a raised stone (hence *de lapide emtus*⁸) or a raised platform (*catasta*⁹), so that every one might see and handle them, even if they did not wish to purchase them. Purchasers usually took care to have them stripped naked,¹⁰ for slave-dealers had recourse to as many tricks to conceal personal defects as the horse-jockeys of modern times: sometimes purchasers called in the advice of medical men.¹¹ Slaves of great beauty and rarity were not exhibited to public gaze in the common slave-market, but were shown to purchasers in private (*arcana tabulata catasta*¹²). Newly-imported slaves had their feet whitened with chalk,¹³ and those that came from the East had their ears bored,¹⁴ which we know was a sign of slavery among many Eastern nations. The slave-market, like all other markets, was under the jurisdiction of the *ædiles*, who made many regulations by edicts respecting the sale of slaves. The character of the slave was set forth in a scroll (*titulus*) hanging

around his neck, which was a warranty to the purchaser:¹ the vendor was bound to announce fairly all his defects,² and if he gave a false account, had to take him back within six months from the time of his sale,³ or make up to the purchaser what the latter had lost through obtaining an inferior kind of slave to what had been warranted.⁴ The vendor might, however, use general terms of commendation without being bound to make them good.⁵ The chief points which the vendor had to warrant were the health of the slave, especially freedom from epilepsy, and that he had not a tendency to thievery, running away, or committing suicide.⁶ The nation of a slave was considered important, and had to be set forth by the vendor.⁷ Slaves sold without any warranty wore at the time of sale a cap (*pileus*) upon their head.⁸ Slaves newly imported were generally preferred for common work: those who had served long were considered artful (*veteratores*⁹); and the pertness and impudence of those born in their master's house (*vernæ*: see above, p. 884) were proverbial (*vernæ procaces*¹⁰).

The value of slaves depended, of course, upon their qualifications; but under the Empire, the increase of luxury and the corruption of morals led purchasers to pay immense sums for beautiful slaves, or such as ministered to the caprice or whim of the purchaser. Eunuchs always fetched a very high price,¹¹ and Martial¹² speaks of beautiful boys who sold for as much as 100,000 or 200,000 sesterces each (885l. 8s. 4d., and 1770l. 16s. 8d.). A *morio* or fool sometimes sold for 20,000 sesterces.¹³ Slaves who possessed a knowledge of any art which might bring in profit to their owners also sold for a large sum. Thus literary men and doctors frequently fetched a high price,¹⁴ and also slaves fitted for the stage, as we see from Cicero's speech on behalf of Q. Roscius. Female slaves who might bring in gain to their masters by prostitution were also dear: sometimes 60 minæ were paid for a girl of this kind.¹⁵ Five hundred drachmæ (perhaps at that time about 18l.) seem to have been a fair price for a good ordinary slave in the time of Horace.¹⁶ In the fourth century, a slave capable of bearing arms was valued at 25 solidi or aurei.¹⁷ (*Vid. AURUM*, p. 129.) In the time of Justinian, the legal valuation of slaves was as follows: common slaves, both male and female, were valued at 20 solidi apiece, and under ten years of age at half that sum; if they were artificers they were worth 30 solidi; if notarii, 50; if medical men or midwives, 60; eunuchs under ten years of age were worth 30 solidi, above that age, 50, and, if they were artificers also, as much as 70.¹⁸ Female slaves, unless possessed of personal attractions, were generally cheaper than male. Six hundred sesterces (about 5l.) were thought too much for a slave girl of indifferent character in the time of Martial,¹⁹ and two aurei or solidi were not considered so low a price for a slave girl (*ancilla*) in the time of Hadrian as to occasion doubt of her having come honestly into the hands of the vendor.²⁰ We have seen that in the time of Justinian the legal value of female slaves was equal to that of males; this may probably have arisen from the circumstance that the supply of slaves was not so abundant then as at

earlier times, and that, therefore, recourse was had to propagation for keeping up the number of slaves. But under the Republic, and in the early times of the Empire, this was done to a very limited extent, as it was found cheaper to purchase than to breed slaves.

Slaves were divided into many various classes: the first division was into public or private. The former belonged to the state and public bodies, and their condition was preferable to that of the common slaves. They were less liable to be sold, and under less control than ordinary slaves: they also possessed the privilege of the testamenti factio to the amount of one half of their property (see above, p. 885), which shows that they were regarded in a different light from other slaves. Scipio, therefore, on the taking of Nova Carthago, promised 2000 artisans, who had been taken prisoners, and were therefore to be sold as common slaves, that they should become public slaves of the Roman people, with a hope of speedy manumission, if they assisted him in the war.¹ Public slaves were employed to take care of the public buildings,² and to attend upon magistrates and priests. Thus the *ædiles* and *quæstors* had great numbers of public slaves at their command,³ as had also the *triumviri nocturni*, who employed them to extinguish fires by night.⁴ They were also employed as lictors, jailers, executioners, watermen, &c.

A body of slaves belonging to one person was called *familia*, but two were not considered sufficient to constitute a *familia*.⁵ Private slaves were divided into urban (*familia urbana*) and rustic (*familia rustica*); but the name of urban was given to those slaves who served in the villa or country residence as well as in the town house, so that the words urban and rustic rather characterized the nature of their occupations than the place where they served (*urbana familia et rustica non loco, sed genere distinguitur*⁶). The *familia urbana* could therefore accompany their master to his villa without being called *rustica* on account of their remaining in the country. When there was a large number of slaves in one house, they were frequently divided into *decuriæ*:⁷ but, independent of this division, they were arranged in certain classes, which held a higher or a lower rank according to the nature of their occupation. These classes are: *Ordinarii*, *Vulgares*, *Mediastini*, and *Quales-Quales*;⁸ but it is doubtful whether the *Literati*, or literary slaves, were included in any of these classes. Those that were called *Vicarii* are spoken of above (p. 884).

Ordinarii seem to have been those slaves who had the superintendence of certain parts of the housekeeping. They were always chosen from those who had the confidence of their master, and they generally had certain slaves under them. To this class the *actores*, *procuratores*, and *dispensatores* belong, who occur in the *familia rustica* as well as the *familia urbana*, but in the former are almost the same as the *villici*. They were stewards or bailiffs.⁹ To the same class also belong the slaves who had the charge of the different stores, and who correspond to our housekeepers and butlers: they are called *cellarii*, *promi*, *condi*, *procuratores peni*, &c. (*Vid. CELLA.*)

Vulgares included the great body of slaves in a house who had to attend to any particular duty in the house, and to minister to the domestic wants of their master. As there were distinct slaves of a distinct slave for almost every department of household economy, as bakers (*pistores*), cooks (*co-*

qui), confectioners (*dulciarii*), picklers (*salmmentarii*) &c., it is unnecessary to mention these more particularly. This class also included the porters (*ostiararii*), the bedchamber slaves (*vid. CUBICULARII*), the litter-bearers (*lecticarii*) (*vid. LECTICA*), and all personal attendants of any kind.

Mediastinii. (*Vid. MEDIASTINI.*)

Quales-Quales are only mentioned in the Digest,¹ and appear to have been the lowest class of slaves, but in what respects they differed from the *mediastini* is doubtful: Becker² imagines they may have been a kind of slaves, *qualiquali conditione viventes*, which, however, does not give us any idea of their duties or occupations.

Literati, literary slaves, were used for various purposes by their masters, either as readers (*anagnostæ*) (*vid. ACROAMA*), copyists or amanuenses (*vid. LIBRARI, AMANUENSIS*), &c. Complete lists of all the duties performed by slaves are given in the works of Pignorius, Pompa, and Blair, referred to at the close of this article.

The treatment of slaves, of course, varied greatly according to the disposition of their masters, but they appear, upon the whole, to have been treated with greater severity and cruelty than among the Athenians. Originally the master could use the slave as he pleased: under the Republic the law does not seem to have protected the person or life of the slave at all, but the cruelty of masters was to some extent restrained under the Empire, as has been stated above (p. 883). The general treatment of slaves, however, was probably little affected by legislative enactments.³ In early times, when the number of slaves was small, they were treated with more indulgence, and more like members of the family; they joined their masters in offering up prayers and thanksgivings to the gods,⁴ and partook of their meals in common with their masters, though not at the same table with them, but upon benches (*subsellia*) placed at the foot of the lectus. But with the increase of numbers and of luxury among masters, the ancient simplicity of manners was changed: a certain quantity of food was allowed them (*dimensum* or *demensum*), which was granted to them either monthly (*menstruum*)⁵ or daily (*diarium*)⁶. Their chief food was the corn called *far*, of which either four or five modii were granted them a month,⁷ or one Roman pound (*libra*) a day.⁸ They also obtained an allowance of salt and oil: Cato⁹ allowed his slaves a sextarius of oil a month, and a modius of salt a year. They also got a small quantity of wine, with an additional allowance on the Saturnalia and Compitalia,¹⁰ and sometimes fruit, but seldom vegetables. Butcher's meat seems to have been hardly ever given them.

Under the Republic they were not allowed to serve in the army, though after the battle of Cannæ, when the state was in such imminent danger, 8000 slaves were purchased by the state for the army, and subsequently manumitted on account of their bravery.¹¹

The offences of slaves were punished with severity, and frequently the utmost barbarity. One of the mildest punishments was the removal from the *familia urbana* to the *rustica*, where they were obliged to work in chains or fetters.¹² They were frequently beaten with sticks or scourged with the whip (of which an account is given under *FLAGRUM*); but these were such every-day punishments that many slaves ceased almost to care for them. thus Chrysalus says,¹³

"*Si illi sunt virga ruri, at mihi tergum est domi.*"

Runaway slaves (*fugitivi*) and thieves (*fures*) were branded on the forehead with a mark (*stigma*), whence they are said to be *notati* or *inscripti*.¹ Slaves were also punished by being hung up by their hands with weights suspended to their feet,² or by being sent to work in the Ergastulum or Pistrinum. (*Vid. ERGASTULUM, MOLA.*) The carrying of the furca was a very common mode of punishment. (*Vid. FURCA.*) The toilet of the Roman ladies was a dreadful ordeal to the female slaves, who were often barbarously punished by their mistresses for the slightest mistake in the arrangement of the hair or a part of the dress.³

Masters might work their slaves as many hours in the day as they pleased, but they usually allowed them holidays on the public festivals. At the festival of Saturnus in particular, special indulgences were granted to all slaves, of which an account is given under SATURNALIA. There was no distinctive dress for slaves. It was once proposed in the senate to give slaves a distinctive costume, but it was rejected, since it was considered dangerous to show them their number.⁴ Male slaves were not allowed to wear the toga or bulla, nor females the stola, but otherwise they were dressed nearly in the same way as poor people, in clothes of a dark colour (*pullati*) and slippers (*crepidæ*) (*vestis servilis*).⁵

The rites of burial, however, were not denied to slaves; for, as the Romans regarded slavery as an institution of society, death was considered to put an end to the distinction between slaves and freemen. Slaves were sometimes even buried with their masters, and we find funeral inscriptions addressed to the *Dii Manes* of slaves (*Dis Manibus*). It seems to have been considered a duty for a master to bury his slave, since we find that a person who buried the slave of another had a right of action against the master for the expenses of the funeral.⁶ In 1726 the burial vaults of the slaves belonging to Augustus and Livia were discovered near the Via Appia, where numerous inscriptions were found, which have been illustrated by Bianchini and Gori, and give us considerable information respecting the different classes of slaves and their various occupations. Other *sepulchreta* of the same time have been also discovered in the neighbourhood of Rome.⁷

*SES (σῆς), "a term generally supposed to signify the *Tinea* of the Latins, i. e., the Book-worm, but used by Aristotle in a more extended sense. That said to be formed in wax would appear to be the *Phalana cereana*; that formed in wood (called by him ἄκαρι) is the *Tennes fatalis*, or White Ant; that formed among clothes is probably the *Phalana sarcitella*. Others, says Schneider, hold them to be the *Tinea vestinella*, *T. pellinella*, and *T. mellonella*. It is to be borne in mind that the *Tinea* form a division of the genus *Phalana*."⁸

*SES'AMUM (σῆσαμον), the *Sesamum Orientale*, or Eastern Oily-grain.⁹

SESCUNX. (*Vid. As*, p. 110.)

*SESELI (σῆσέλι), a plant, of which Dioscorides describes three species, the *Seseli Massiliense*, *S. Æthiopicum*, and *S. Peloponnesiacum*. "The σῆσέλι of Galen is the first of these. The σῆσέλι of Theophrastus is the same as the *ροδόβλιον*, namely, the *Tordylium officinale*, or Hartwort. The alliance between the σῆσέλι and *tordylium* is pointed out

by Dioscorides and Pliny. According to Stephens Alston, and others, the popular name of the *Seseli Massiliense* is 'Hard Meadow Saxifrage,' but its scientific name is *Seseli tortuosum*. This species is the '*Sil Gallicus*' of Apicius. It is also called '*Sil*' by Celsus. Dr. Milligan, however, confounds it with the *Sil Atticum*, a sort of red ochre, which was never used for medicinal purposes. Sprengel follows Anguillara in referring the *S. Æthiopicum* to the *Bupleurum fruticosum*, and Matthioli in holding that the *Peloponnesiacum* is the *Ligusticum Peloponnesiacum*."¹¹

SESTERTIUS, a Roman coin, which properly belonged to the silver coinage, in which it was one fourth of the denarius, and therefore equal to 2½ asses. Hence the name, which is an abbreviation of *semis tertius* (sc. *nummus*), the Roman mode of expressing 2½.² The word *nummus* is often expressed with *sestertius*, and often it stands alone, meaning *sestertius*.

Hence the symbol H S or I I S, which is used to designate the sestertius. It stands either for L L S (*Libra Libra et Semis*), or for I I S, the two I's merely forming the numeral two (sc. *asses* or *libræ*), and the whole being in either case equivalent to *dupondius et semis*.³

When the as was reduced to half an ounce, and the number of asses in the denarius was made sixteen instead of ten (*Vid. As, DENARIUS*), the sestertius was still ¼ of the denarius, and therefore contained no longer 2½, but 4 asses. The old reckoning of 10 asses to the denarius was kept, however, in paying the troops.⁴ After this change the sestertius was coined in brass as well as in silver; the metal used for it was that called *aurichalcum*, which was much finer than the common *Æs*, of which the asses were made.⁵

The sum of 1000 *sestertii* was called *sestertium*. This was also denoted by the symbol H S, the obvious explanation of which is "I I S (2½) millia;" but Gronovius understands it as 2½ pounds of silver (*sestertium pondus argenti*), which he considers to have been worth originally 1000 *sestertii*, and therefore to have represented this value ever after.⁶ The *sestertium* was always a sum of money, never a coin; the coin used in the payment of large sums was the denarius.

According to the value we have assigned to the DENARIUS up to the time of Augustus, we have

£. s. d. farth.

the sestertius = 0 0 2 ½

the sestertium = 8 17 1

after the reign of Augustus :

the sestertius = 0 0 1 3 5

the sestertium = 7 16 3

The sestertius was the denomination of money almost always used in reckoning considerable amounts. There are a very few examples of the use of the denarius for this purpose. The mode of reckoning was as follows :

Sestertius = *sestertium nummus* = *nummus*.

Sums below 1000 *sestertii* were expressed by the numeral adjectives joined with either of these forms.

The sum of 1000 *sestertii* = mille *sestertii* = M *sestertium* (for *sestertiorum*) = M *nummi* = M *nummum* (for *nummorum*) = M *sesterti* *nummi* = M *sestertium nummum* = *sestertium*. These forms are used with the numeral adjectives below 1000; sometimes *millia* is used instead of *sestertia*; sometimes both words are omitted; sometimes *nummum* or *sestertium* is added. For example, 600,000 *sesterti* =

1. (Theophr., H. P., ix., 15.—Dioscor., iii., 33–35.—Celsus, v., 23.—Adams, Append., s. v.)—2. (Varro, L. L., v., 173, ed. Müller.—Festus, s. v.—Plin., H. N., xxxi., 13.)—3. (Priscian, De Ponder., p. 1347.—Festus, p. 347, Müller.)—4. (Plin., H. N., i. c. —5. (Plin., H. N., xxxiv., 2.)—6. (Pec. Vet., i., 4, 11.)

sescenta sestertia = *sescenta millia* = *sescenta* = *sescentia sestertia nummum*.

For sums of a thousand *sestertia* (i. e., a million *sestertii*) and upward, the numeral adverbs in *ies* (*decies*, *undecies*, *vicies*, &c.) are used, with which the words *centena millia* (a hundred thousand) must be understood. With these adverbs the contracted genitive plural *sestertiām* (for *sestertiorum*) is joined in the case required by the construction. Thus, *decies sestertium* = *decies centena millia sestertium* = ten times a hundred thousand *sestertii* = 1,000,000 *sestertii* = 1000 *sestertia* : *millies HS* = *millies centena millia sestertium* = a thousand times one hundred thousand *sestertia* = 100,000,000 *sestertii* = 100,000 *sestertia*. When an amount is described by more than one of these adverbs in *ies*, they must be added together if the larger numeral stands first, but multiplied when the smaller is first ; care, however, being taken not to reckon the *centena millia* which is understood more than once in the whole amount. Thus Suetonius¹ has *millies et quingentes* for 150,000 *sestertia*, i. e., 100,000,000 + 50,000,000 = 150,000,000 *sestertii*, and immediately after *quaterdecies millies* for 1,400,000 *sestertia*, i. e., 14 × 1000 × 100,000 (= 1,400,000,000) *sestertii*. A variety was allowed in these forms : thus Cicero uses *decies et octingenta millia* for 1800 *sestertia*, i. e., 1,000,000 + 800,000 *sestertii*, and *quaterdecies* for 1400 *sestertia*, i. e., 14 × 100,000 *sestertii*.²

When the numbers are written in cipher, it is often difficult to know whether *sestertii* or *sestertia* are meant. A distinction is sometimes made by a line placed over the numeral when *sestertia* are intended, or, in other words, when the numeral is an adverb in *ies*. Thus

HS. $\overline{\text{M. C.}}$ = 1100 *sestertii* ; but

HS. $\overline{\text{M. C.}}$ = HS millies centies

= 110,000 *sestertia* = 110,000,000 *sestertii*.

Wurm (p. 24) gives the following rule : When the numbers are divided into three classes by points, the right-hand division indicates units, the second thousands, the third hundreds of thousands. Thus, III. XII. DC = 300,000 + 12,000 + 600 = 312,600 *sestertii*. But these distinctions are by no means strictly observed in the manuscripts.

Like other parts and multiples of the as, the *sestertius* is applied to other kinds of magnitude, e. g., *pes sestertius* for 2½ feet. (*Vid. Pes*.)

Sestercie is sometimes used as an English word. If so, it ought to be used only as the translation of *sestertius*, never of *sestertium*.

SEVIR. (*Vid. Equites*, p. 418.)

SEX SUFFRAGIA. (*Vid. Equites*, p. 416.)

SEXTANS. (*Vid. As*, p. 111.)

SEXTARIUS, a Roman dry and liquid measure, which may be considered one of the principal measures in the Roman system, and the connecting point between it and that of the Greeks, for it was equal to the *ξέστης* of the latter. It was one sixth of the *congius*, and hence its name. It was divided, in the same manner as the *As*, into parts named *uncia*, *sextans*, *quadrans*, *triens*, *quincunx*, *semissis*, &c. The *uncia*, or twelfth part of the *sextarius*, was the *CYATHUS* ; its *sextans* was therefore two *cyathi*, its *quadrans* three, its *triens* four, its *quincunx* five, &c.³

The following table exhibits the principal Roman liquid measures, with their contents in the English imperial measure. The dry measures, which are nearly the same, have been given under *MODIUS*.

	Sextarii	Galle	Frate

SEXTULA, the sixth part of the *uncia*, was the smallest denomination of money in use among the Romans.¹ It was also applied, like the *uncia*, to other kinds of magnitude. (*Vid. UNCIA*.)

SHIPS (*ναῦς*, *πλοῖον*, *navis*, *navigium*). The beginning of the art of ship-building and of navigation among the Greeks must be referred to a time much anterior to the ages of which we have any record. Even in the earliest mythical stories long voyages are mentioned, which are certainly not altogether poetical fabrications, and we have every reason to suppose that at this early age ships were used which were far superior to a simple canoe, and of a much more complicated structure. The time, therefore, when boats consisted of one hollow tree (*Monoxyla*), or when ships were merely rafts (*Rates*, *σχεδιαί*) tied together with leathern thongs, ropes, and other substances,² belongs to a period of which not the slightest record has reached us, although such rude and simple boats or rafts continued occasionally to be used down to the latest times, and appear to have been very common among several of the barbarous nations with which the Romans came in contact.³ (*Vid. CODEX, LINTER*.) Passing over the story of the ship *Argo* and the expedition of the Argonauts, we shall proceed to consider the ships as described in the Homeric poems.

The numerous fleet with which the Greeks sailed to the coast of Asia Minor must, on the whole, be regarded as sufficient evidence of the extent to which navigation was carried on in those times, however much of the detail in the Homeric description may have arisen from the poet's own imagination. In the Homeric catalogue it is stated that each of the fifty *Boeotian* ships carried 120 warriors,⁴ and a ship which carried so many cannot have been of small dimensions. What Homer here states of the *Boeotian* vessels applies more or less to the ships of other Greeks. These boats were provided with a mast (*ιστός*), which was fastened by two ropes (*πρόροι*) to the two ends of the ship, so that, when the rope connecting it with the prow broke, the mast would fall towards the stern, where it might kill the helmsman.⁵ The mast could be erected or taken down as necessity required. They also had sails (*ἱστία*), but only a half-deck ; each vessel, however, appears to have had only one sail, which was used in favourable wind ; and the principal means of propelling the vessel lay in the rowers, who sat upon benches (*κλινίδες*). The oars were fastened to the side of the ship with leathern thongs (*τροποί δερμάτινοι*), in which they were turned as a key in its hole. The ships in Homer are mostly called black (*μέλαναι*), probably because they were painted or covered with a black substance, such as pitch, to protect the wood against the influence of the water and the air ; sometimes other colours, such as *μύλος*, *minium* (a red colour), were used to adorn the sides of the

1. (Octav., 10.)—2. (in Verr., II., i., 39.)—3. (Wurm, De Pond., &c., p. 118.)

1. (Varro, L. Lat., v., 171, ed. Müller.)—2. (Plin., II. N., vii., 57.)—3. (Compare Quintil., x., 2.—Flor., iv., 2.—Festus, s. v. Schedia.—Liv., xxi., 26.)—4. (Il., ii., 510.)—5. (Od., xii., 406 &c.)—6. (Od., iv., 782.)

ships near the prow, whence Homer occasionally calls ships *μυλοπάρροι*, i. e., red-cheeked;¹ they were also painted occasionally with a purple colour (*φοινικοπάρροι*).² When the Greeks had landed on the coast of Troy, the ships were drawn on land, and fastened at the poop with a rope to large stones, which served as anchors.³ (*Vid. ANCHORA*.) The Greeks then surrounded the fleet with a fortification to secure it against the attacks of the enemy. This custom of drawing the ships upon the shore, when they were not used, was followed in later times also, as every one will remember from the accounts in Cæsar's Commentaries. There is a celebrated but difficult passage in the *Odyssey*,⁴ in which the building of a boat is described, although not with the minuteness which an actual ship-builder might wish for. Odysseus first cuts down with his axe twenty trees, and prepares the wood for his purpose by cutting it smooth and giving it the proper shape. He then bores the holes for nails and hooks, and fits the planks together, and fastens them with nails. He rounds the bottom of the ship like that of a broad transport vessel, and raises the bulwark (*ικρία*), fitting it upon the numerous ribs of the ship. He afterward covers the whole of the outside with planks, which are laid across the ribs from the keel upward to the bulwark; next the mast is made, and the sailyard attached to it, and lastly the rudder. When the ship is thus far completed, he raises the bulwark still higher by wicker-work, which goes all around the vessel, as a protection against the waves. This raised bulwark of wickerwork and the like was used in later times also.⁵ For ballast, Odysseus throws into the ship *ὄλη*, which, according to the scholiast, consisted of wood, stones, and sand. Calypso then brings him materials to make a sail of, and he fastens the *ὑπερά* or ropes, which run from the top of the mast to the two ends of the yard, and also the *κάλοι*, with which the sail is drawn up or let down. The *πόδες* mentioned in this passage were undoubtedly, as in later times, the ropes attached to the two lower corners of the square sail.⁶ The ship of which the building is thus described was a small boat, a *σχεδία*, as Homer calls it; but it had, like all the Homeric ships, a round or flat bottom. Greater ships must have been of a more complicated structure, as ship-builders are praised as artists.⁷ In the article CERVICH, p. 234, a representation of two boats is given, which appear to bear great resemblance to the one of which the building is described in the *Odyssey*.⁸

It is a general opinion that in the Homeric age sailors did not venture out into the open sea, but that such was really done is clear from the fact that Homer makes Odysseus say that he had lost sight of land, and saw nothing but the sky and water,⁹ although, on the whole, it may be admitted that, even down to the later historical times, the navigation of the ancients was confined to coasting along the shore. Homer never mentions engagements at sea. The Greeks most renowned in the heroic ages as sailors were the Cretans, whose king, Minos, is said to have possessed a large fleet, and also the Phæaciens.¹⁰

After the times of the Trojan war, navigation, and with it the art of ship-building, must have become greatly improved, on account of the establishment of the numerous colonies on foreign coasts, and the increased commercial intercourse with

these colonies and other foreign countries. The practice of piracy, which was during this period carried on to a great extent, not only between Greeks and foreigners, but also among the Greeks themselves, must likewise have contributed to the improvement of ships and of navigation, although no particulars are mentioned. In Greece itself the Corinthians were the first who brought the art of ship-building nearest to the point at which we find it in the time of Thucydides, and they were the first who introduced ships with three ranks of rowers (*τρίηρεις*, *triremes*). About the year 700 B.C., Ameinocles the Corinthian, to whom this invention is ascribed, made the Samians acquainted with it;¹ but it must have been preceded by that of the *bi-remes*, that is, ships with two ranks of rowers, which Pliny attributes to the Erythræans. These innovations, however, do not seem to have been generally adopted for a long time; for we read that, about the time of Cyrus, the Phocæans introduced long sharp-keeled ships called *πεντηκόντοροι*.² These belonged to the class of long war-ships (*νῆες μακραί*), and had fifty rowers, twenty-five on each side of the ship, who sat in one row. It is farther stated that before this time vessels called *στρογγύλαι*, with large round or flat bottoms, had been used exclusively by all the Ionians in Asia. At this period most Greeks seem to have adopted the long ships with only one rank of rowers on each side; their name varied accordingly as they had fifty, or thirty (*τριακόντοροι*), or even a smaller number of rowers. A ship of war of this class is represented in the annexed woodcut, which is taken from Montfaucon, *l'Antiq. Explic.*, vol. iv., part 2, pl. 142.

The following woodcut contains a beautiful fragment of a bireme, with a complete deck.³ Another specimen of a small bireme is given in p. 58

The first Greek people who acquired a navy of importance were the Corinthians, Samians, and Phocæans. About the time of Cyrus and Camby ses, the Corinthian triremes were generally adopted by the Sicilian tyrants and by the Corcyræans, who soon acquired the most powerful navies among the Greeks. In other parts of Greece, and even at Athens and in Ægina, the most common vessels about this time were long ships with only one rank of rowers. Athens, although the foundation of its maritime power had been laid by Solon (*vid. NAVCRARIA*), did not obtain a fleet of any importance until the time of Themistocles, who persuaded them to build 200 triremes for the purpose of carrying on

1. (Il., ii., 637.—Od., ix., 125.)—2. (Od., xi., 124.)—3. (Mosc chop ad Il., i., 436.)—4. (v., 243, &c.)—5. (Eustath. ad Od., v., 256.)—6. the war against Ægina. But even then ships were not provided with complete decks (*καταστρώματα*) covering the whole of the vessel.¹ A complete deck appears to have been an invention of later times; Pliny ascribes it to the Thasians, and before this event the ships had only small decks at the poop and the prow. At the same time that Themistocles induced the Athenians to build a fleet of 200 sails, he also carried a decree that every year twenty new triremes should be built from the produce of the mines of Laurium.² After the time of Themistocles as many as twenty triremes must have been built every year, both in times of war and of peace, as the average number of triremes which was always ready was from three to four hundred. Such an annual addition was the more necessary, as the vessels were of a light structure, and did not last long. The whole superintendence of the building of new triremes was in the hands of the senate of the Five Hundred,³ but the actual business was intrusted to a committee called the *τρηροποιοί*, one of whom acted as their treasurer, and had in his keeping the money set apart for the purpose. In the time of Demosthenes, a treasurer of the *τρηροποιοί* ran away with the money, which amounted to two talents and a half. During the time after Alexander the Great, the Attic navy appears to have become considerably diminished, as in 307 B.C. Demetrius Poliorcetes promised the Athenians timber for 100 new triremes.⁴ After this time the Rhodians became the most important maritime power in Greece. The navy of Sparta was never of great importance.

Navigation remained, for the most part, what it had been before: the Greeks seldom ventured out into the open sea, and it was generally considered necessary to remain in sight of the coast, or of some island, which also served as guides in daytime: in the night, the position, the rising and setting of the different stars, also answered the same purpose. In winter navigation generally ceased altogether. In cases where it would have been necessary to coast around a considerable extent of country, which was connected with the main land by a narrow neck, the ships were sometimes drawn across the neck of land from one sea to the other by machines called *όλκοι*. This was done most frequently across the Isthmus of Corinth.⁵

Now, as regards the various kinds of ships used by the Greeks, we might divide them with Pliny, according to the number of ranks of rowers employed in them, into moneres, biremes, triremes, quadriremes, quinqueremes, &c., up to the enormous ship with forty ranks of rowers, built by Ptolemæus Philopator.⁶ But all these appear to have been constructed on the same principle, and it is more convenient to divide them into *ships of war* and *ships of burden* (*φορτικά, φορτηγού, όλκίδες, πλοία, σπογγόλαια, naves onerarie, naves actuariæ*). Ships of the latter kind were not calculated for quick movement or rapid sailing, but to carry the greatest possible quantity of goods. Hence their structure was bulky, their bottom round, and, although they were not without rowers, yet the chief means by which they were propelled were their sails.

The most common ships of war, after they had once been generally introduced, were the triremes, and they are frequently designated only by the name *νῆες*, while all the others are called by the name indicating their peculiar character. Triremes, however, were again divided into two classes: the

one consisting of real men-of-war, which were quick-sailing vessels (*ταχέλαι*), and the other of transports, either for soldiers (*στρατιάτιδες* or *όπλιταγωγοί*) or for horses (*ίππηγοί, ίππαγωγοί*). Ships of this class were more heavy and awkward, and were therefore not used in battle except in cases of necessity.¹ The ordinary size of a war-galley may be inferred from the fact that the average number of men engaged in it, including the crew and marines, was two hundred, to whom, on some occasions, as much as thirty *epibatæ* were added.² (*Vid. EPIBATÆ*.) The rapidity with which these war-galleys sailed may be gathered from various statements in ancient writers, and appears to have been so great, that even we cannot help looking upon it without astonishment when we find that the quickness of an ancient trireme nearly equalled that of a modern steamboat. Among the war-ships of the Athenians their sacred state-vessels were always included (*vid. SALAMINIA*); but smaller vessels, such as the *πεντηκόντοροι* or *τριάκόντοροι*, are never included when the sum of men-of-war is mentioned, and their use for military purposes appears gradually to have ceased.

Vessels with more than three ranks of rowers were not constructed in Greece till about the year 400 B.C., when Dionysius I., tyrant of Syracuse, who bestowed great care upon his navy, built the first quadriremes (*τετρήρεις*), with which he had probably become acquainted through the Carthaginians, since the invention of these vessels is ascribed to them.⁴ Up to this time no quinqueremes (*πεντήρεις*) had been built, and the invention of them is likewise ascribed to the reign of Dionysius. Mnesigeiton⁵ ascribes the invention of quinqueremes to the Salaminians; and, if this statement is correct, Dionysius had his quinqueremes probably built by a Salaminian ship-builder. In the reign of Dionysius II. *hexeres* (*έξήρεις*) are also mentioned, the invention of which was ascribed to the Syracusans.⁶ After the time of Alexander the Great, the use of vessels with four, five, and more ranks of rowers became very general, and it is well known from Polybius⁷ that the first Punic war was chiefly carried on with quinqueremes. Ships with twelve, thirty, or even forty ranks of rowers,⁸ such as they were built by Alexander and the Ptolemies, appear to have been mere curiosities, and did not come into common use. The Athenians at first did not adopt vessels larger than triremes, probably because they thought that with rapidity and skill they could do more than with large and unwieldy ships. In the year B.C. 356 they continued to use nothing but triremes; but in 330 B.C. the Republic had already a number of quadriremes, which was afterward increased. The first quinqueremes at Athens are mentioned in a document⁹ belonging to the year B.C. 325. Herodotus,¹⁰ according to the common reading, calls the theoris, which in Olympiad 72 the Æginetans took from the Athenians, a *πεντήρης*; but the reading in this passage is corrupt, and *πεντηρης* should be written instead of *πεντήρης*.¹¹ After the year 330 the Athenians appear to have gradually ceased building triremes, and to have constructed quadriremes instead.

Every vessel at Athens, as in modern times, had a name given to it, which was generally of the feminine gender, whence Aristophanes¹² calls the triremes *παρθένους*, and one vessel, the name of which

was Nauphante, he calls the daughter of Nausus.¹ The Romans sometimes gave to their ships masculine names. The Greek names were either taken from ancient heroines, such as Nausicaa, or they were abstract words, such as *Εὐπλοία*, *Θεραπεία*, *Πρόνοια*, *Σώζουσα*, *Ἡγεμόνη*, &c. In many cases the name of the builder also was added.

We now proceed to describe some of the parts of ancient vessels.

1. The *prora* (πύρα or μέτωπον, *prora*) was generally ornamented on both sides with figures, which were either painted upon the sides or laid in. It seems to have been very common to represent an eye on each side of the prow.² Upon the prow or fore-deck there was always some emblem (παράση- uon, *insigne, figura*) by which the ship was distinguished from others. (*Vid. INSIGNE.*) Just below the prow, and projecting a little above the keel, was the *rostrum* (ἔμβολος, *ἔμβολον*) or beak, which consisted of a beam, to which were attached sharp and pointed irons, or the head of a ram, and the like. This *ἔμβολος* was used for the purpose of attacking another vessel, and of breaking its sides. It is said to have been invented by the Tyrrhenian Pisæus.³ These beaks were at first always above the water, and visible; afterward they were attached lower, so that they were invisible, and thus became still more dangerous to other ships.⁴ The annexed woodcuts, taken from Montfaucon,⁵ represent three different beaks of ships.

Connected with the *ἔμβολος* was the *προεμβολίς*, which, according to Pollux,⁶ must have been a wooden part of the vessel in the prow above the beak, and was probably the same as the *ἐπιπίδες*, and intended to ward off the attack of the *ἔμβολος* of a hostile ship. The command in the prow of a vessel was exercised by an officer called *πρωρεύς*, who seems to have been next in rank to the steersman, and to have had the care of the gear, and the command over the rowers.⁷

2. The *stern* (πύρμνη, *puppis*) was generally above

the other parts of the deck, and in it the helmsman had his elevated seat. It is seen in the representations of ancient vessels to be rounder than the prow, though its extremity is likewise sharp. The stern was, like the prow, adorned in various ways, but especially with the image of the tutelary deity of the vessel (*tutela*). In some representations a kind of roof is formed over the head of the steersman (see woodcut, p. 58), and the upper part of the stern has the elegant form of a swan's neck. (*Vid. CHARNISCUS.*)

3. The *τράφηξ* is the bulwark of the vessel, or, rather, the uppermost edge of it.¹ In small boats, the pegs (*σκαλμοί*, *scalmi*) between which the oars move, and to which they are fastened by a thong (*τροπωτήρ*), were upon the *τράφηξ*.² In all other vessels the oars passed through holes in the side of the vessel (*ὀφθαλμοί*, *τρήματα*, or *τροπήματα*).³

4. The middle part of the deck in most ships of war appears to have been raised above the bulwark, or, at least, to a level with its upper edge, and thus enabled the soldiers to occupy a position from which they could see far around, and hurl their darts against the enemy. Such an elevated deck appears in the annexed woodcut, representing a *moneris*. In this instance the flag is standing upon the hind-deck.⁴

5. One of the most interesting as well as important parts in the arrangement of the biremes, triremes, &c., is the position of the ranks of rowers, from which the ships themselves derive their names. Various opinions have been entertained by those who have written upon this subject, as the information which ancient writers give upon it is extremely scanty. Thus much is certain, that the different ranks of rowers, who sat along the sides of a vessel, were placed one above the other. This seems at first sight very improbable, as the common ships in later times must have had five ordines of rowers on each side; and since even the lowest of them must have been somewhat raised above the surface of the water, the highest ordo must have been at a considerable height above it, and, consequently, required very long oars: the apparent improbability is still more increased when we hear of vessels with thirty or forty ordines of rowers above one another. But that such must have been the arrangement is proved by the following facts: First, On works of art, in which more than one ordo of rowers is represented, they appear above one another, as in the fragment of a breme given above, and in several others figured by Montfaucon. Secondly, the scholiast on Aristophanes⁸ states that the lowest rank of rowers having the shortest oars, and, consequently, the easiest work, received the smallest pay, while the highest ordo had the longest oars, and, consequently, had the heaviest work, and received

the highest pay. Thirdly, In the monstrous *τεσσαρακοντήρης* of Ptolemæus Philopator, the description of which by Callixenus¹ is as authentic as it well can be, the height of the ship from the surface of the water to the top of the prow (*Ἀκροστόλιον*) was 48 cubits, and from the water to the top of the stern (*Ἀψάστρα*) 53 cubits. This height afforded sufficient room for forty ranks of rowers, especially as they did not sit perpendicularly above one another, but one rower, as may be seen in the above representation of a bireme, sat behind the other, only somewhat elevated above him. The oars of the uppermost ordo of rowers in this huge vessel were 38 cubits long.

In ordinary vessels, from the moneris up to the quinqueremis, each oar was managed by one man, which cannot have been the case where each oar was 38 cubits long. The rowers sat upon little benches attached to the ribs of the vessel, and called *ἰδώλια*, and in Latin *fori* and *transtra*. The lowest row of rowers was called *θαλάμος*, the rowers themselves *θαλαμίται* or *θαλάμιοι*.² The uppermost ordo of rowers was called *θράνος*, and the rowers themselves *θρανίται*.³ The middle ordo or ordines of rowers were called *ζυγά*, *ζύγιοι*, or *ζυγίται*.⁴ Each of this last class of rowers had likewise his own seat, and did not, as some have supposed, sit upon benches running across the vessel.⁵

We shall pass over the various things which were necessary in a vessel for the use and maintenance of the crew and soldiers, as well as the machines of war which were conveyed in it, and confine ourselves to a brief description of things belonging to a ship as such. All such utensils are divided into wooden and hanging gear (*σκεύη ξύλινα* and *σκεύη κρεμαστά*). Xenophon⁷ adds to these the *σκεύη πλεκτά*, or the various kinds of wickerwork, but these are more properly comprehended among the *κρεμαστά*.

I. Σκεύη ξύλινα.

1. *Oars* (*κῶπαι*, *remi*).—The collective term for oars is *ταῖρος*, which properly signified nothing but the blade or flat part of the oar;⁸ but was afterward used as a collective expression for all the oars, with the exception of the rudder.⁹ The oars varied in size accordingly as they were used by a lower or higher ordo of rowers; and from the name of the ordo by which they were used, they also received their especial names, viz., *κῶπαι*, *θαλάμιοι*, *ζύγιοι*, and *θρανίτιδες*. Böckh¹⁰ has calculated that each trireme, on an average, had 170 rowers. In a quinquereme during the first Punic war, the average number of rowers was 300;¹¹ in later times we even find as many as 400.¹² The great vessel of Ptolemæus Philopator had 4000 rowers,¹³ and the handle of each oar (*ἐγχειρίδιον*) was partly made of lead, that the shorter part in the vessel might balance in weight the outer part, and thus render the long oars manageable. The lower part of the holes through which the oars passed appear to have been covered with leather (*ἄσκωμο*), which also extended a little way outside the hole.¹⁴ The *ταῖρος* also contained the *περίνευ*, which must, consequently, be a particular kind of oars. They must have derived their name, like other oars, from the class of rowers by whom they were used. Böckh supposes that they were oars which were not regularly used, but only

in case of need, and then by the epibatæ. Their length in a trireme is stated at from 9 to 9½ cubits, but in what part of the vessel they were used is unknown. Respecting oars in general, see the Appendix in Arnold's Thucydides.²

2. *The rudder.* (*Vid. GUBERNACULUM.*)

3. *Ladders* (*κλίμακες*, *scaleæ*). Each trireme had two wooden ladders, and the same seems to have been the case in *τριάκοντοροι*.²

4. *Poles or punt poles* (*κοντοί, conti*). Three of these belonged to every trireme, which were of different lengths, and were accordingly distinguished as *κοντὸς μέγας*, *κοντὸς μικρὸς*, and *κοντὸς μέσος*. Triacutores had probably always four punt poles (*Vid. CONTUS.*)³

5. *Παραστάται*, or supports for the masts. They seem to have been a kind of props placed at the foot of the mast.⁴ The mast of a trireme, as long as such props were used, was supported by two. In later times they do not occur any longer in triremes, and must have been supplanted by something else. The triacutores, on the other hand, retained their *παραστάται*.⁵

6. *The mast and yards.* (*Vid. MALUS and ANTENNA.*)

II. Σκεύη κρεμαστά.*

1. *ὑποζώμα α.*—This part of an ancient vessel was formerly quite misunderstood, as it was believed to be the boards or planks covering the outside of a ship, and running along it in the direction from poop to prow. But Schneider⁶ has proved that the word means cordage or tackling, and this opinion, which is supported by many ancient authors, is confirmed by the documents published by Böckh, where it is reckoned among the *σκεύη κρεμαστά*. The *ὑποζώματα* were thick and broad ropes, which ran in a horizontal direction around the ship from the stern to the prow, and were intended to keep the whole fabric together. They ran round the vessel in several circles, and at certain distances from one another. The Latin name for *ὑπόζωμα* is *tormentum*.⁷ The length of these tormenta varied accordingly as they ran around the higher or lower part of the ship, the latter being naturally shorter than the former. Their number varied according to the size of the ship. The tessaracutores of Ptolemæus Philadelphus had twelve *ὑποζώματα*, each 600 cubits long.⁸ Such *ὑποζώματα* were always ready in the Attic arsenals, and were only put on a vessel when it was taken into use. Sometimes, also, they were taken on board when a vessel sailed, and not put on till it was thought necessary.⁹ The act of putting them on was called *ὑποζωννύειν*, or *διαζωννύειν*, or *ζῶσαι*.¹⁰ A trireme required four *ὑποζώματα*, and sometimes this number was even increased, especially when the vessel had to sail to a stormy part of the sea.¹¹

2. *ἱστιον* (*velum*), sail. Most ancient ships had only one sail, which was attached with the yard to the great mast. In a trireme, too, one sail might be sufficient, but the trierarch might nevertheless add a second. As each of the two masts of a trireme had two sailyards, it farther follows that each mast might have two sails, one of which was placed lower than the other. The two belonging to the mainmast were probably called *ἱστία μεγάλα*, and those of the foremast *ἱστία ἀνάτεια*.¹² The former were used on ordinary occasions, but the latter probably only in cases when it was necessary to sail with extraordinary speed. The sails of the Attic

war-galleys, and of most ancient ships in general, were of a square form, as is seen in numerous representations on works of art. Whether triangular sails were ever used by the Greeks, as has been frequently supposed, is very doubtful. The Romans, however, used triangular sails, which they called *suppara*, and which had the shape of an inverted Greek Δ (∇), the upper side of which was attached to the yard. Such a sail had, of course, only one *πούς* (*pes*) at its lower extremity.¹

3. *Τοπεία*, cordage. This word is generally explained by the grammarians as identical with *σχονία* or *κάλτοι*: but from the documents in Böckh it is clear that they must have been two distinct classes of ropes, as the *τοπεία* are always mentioned after the sails, and the *σχονία* before the anchors. The *σχονία* (*funes*) are the strong ropes to which the anchors were attached, and by which a ship was fastened to the land; while the *τοπεία* were a lighter kind of ropes, and made with greater care, which were attached to the masts, yards, and sails. Each rope of this kind was made for a distinct purpose and place (*τόπος*, whence the name *τοπεία*). The following kinds are most worthy of notice: *a. καλώδια* or *κάλτοι*. What they were is not quite clear, though Böckh thinks it probable that they belonged to the standing tackle, *i. e.*, that they were the ropes by which the mast was fastened to both sides of the ship, so that the *πρότονοι* in the Homeric ships were only an especial kind of *καλώδια*, or the *καλώδια* themselves differently placed. In later times the *πόστονος* was the rope which went from the top of the mainmast (*καρχήσιον*) to the prow of the ship, and thus was what is now called the mainstay. *b. ἱμάντες* and *κεροῦχοι* are probably names for the same ropes which ran from the two ends of the sail-yard to the top of the mast. In more ancient vessels the *ἱμῆς* consisted of only one rope; in later times it consisted of two, and sometimes four, which, uniting at the top of the mast, and there passing through a ring, descended on the other side, where it formed the *ἐπίτονος*, by means of which the sail was drawn up or let down.² Compare the woodcut at p. 62, which shows a vessel with two *ceruchi*, and the woodcut at p. 234, which shows one with four *ceruchi*. *c. ἄγκονα*, Latin *anquina*,³ was the rope which went from the middle of a yard to the top of the mast, and was intended to facilitate the drawing up and letting down of the sail. The *ἄγκονα διπλή* of quadriremes undoubtedly consisted of two ropes. Whether triremes also had them double is uncertain.⁴ *d. Πόδες* (*pedes*) were in later times, as in the poems of Homer, the ropes attached to the two lower corners of a square sail. These *πόδες* ran from the ends of the sail to the sides of the vessel towards the stern, where they were fastened with rings attached to the outer side of the bulwark.⁵ Another rope is called *πρόπους*, *propes*,⁶ which was probably nothing else than the lower and thinner end of the *πούς*, which was fastened to the ring. *e. Ὑπέραι* were the two ropes attached to the two ends of the sail-yard, and thence came down to a part of the ship near the stern. Their object was to move the yard in a horizontal direction. In Latin they are called *opifera*, which is, perhaps, only a corruption of *hypera*.⁷ The last among the *τοπεία* is the *χαλμός*, or bridle, the nature of which is quite unknown.⁸

4. *Παραβρύματα*. The ancients, as early as the time of Homer, had various preparations raised above the edge of a vessel, which were made of

skins and wickerwork, and which were intended as a protection against high waves, and also to serve as a kind of breastwork, behind which the men might be safe against the darts of the enemy. These elevations of the bulwark are called *παραβρύματα*, and in the documents in Böckh they are either called *τρίχυνα*, made of hair, or *λενκά*, white. They were probably fixed upon the edge on both sides of the vessel, and were taken off when not wanted. Each galley appears to have had several *παραβρύματα*, two made of hair and two white ones these four being regularly mentioned as belonging to one ship.¹

5. *Κατάβλημα* and *ὑπόβλημα*. The former of these occurs in quadriremes as well as in triremes, the latter only in triremes. Their object and nature are very obscure, but they appear to have been a lighter kind of *παραβρύματα*.²

6. *Σχονία* are the stronger and heavier kinds of ropes. There were two kinds of these, *viz.*, the *σχονία ἀγκύρεα*, to which the anchor was attached, and *σχονία ἐπίγνα* or *ἐπίγεια* (*retinacula*), by which the ship was fastened to the shore or drawn upon the shore. Four ropes of each of these two kinds is the highest number that is mentioned as belonging to one ship. The thick ropes were made of several thinner ones.³

The Romans, in the earlier periods of their history, never conceived the idea of increasing their power by the formation of a fleet. The time when they first appear to have become aware of the importance of a fleet was during the second Samnite war, in the year B.C. 311. Livy,⁴ where he mentions this event, says: *dumviri navales classis ornande reficiendaeque causa* were then for the first time appointed by the people. This expression seems to suggest that a fleet had been in existence before, and that the *dumviri navales* had been previously appointed by some other power. (*Vid. Dumviri*.) Niebuhr⁵ thinks that the expression of Livy only means that at this time the Romans resolved to build their first fleet. The idea of founding a navy was probably connected with the establishment of a colony in the Pontian islands, as the Romans at this time must have felt that they ought not to be defenceless at sea. The ships which the Romans now built were undoubtedly triremes, which were then very common among the Greeks of Italy, and most of them were perhaps furnished by the Italian towns subject to Rome. This fleet, however insignificant it may have been, continued to be kept up until the time when Rome became a real maritime power. This was the time of the first Punic war. That their naval power until then was of no importance, is clear from Polybius,⁶ who speaks as if the Romans had been totally unacquainted with the sea up to that time. In the year B.C. 260, when the Romans saw that without a navy they could not carry on the war against Carthage with any advantage, the senate ordained that a fleet should be built. Triremes would now have been of no avail against the high-bulwarked vessels (quinqueremes) of the Carthaginians. But the Romans would have been unable to build others, had not, fortunately, a Carthaginian quinquereme been wrecked on the coast of Bruttium, and fallen into their hands. This wreck the Romans took as their model, and after it built 120,⁷ or, according to others,⁸ 130 ships. According to Polybius, one hundred of them were *πεντήρεις*, and the remaining twenty *τρίηρεις*, or, as Niebuhr proposes to read,

1. (Schol. ad Lucan., *Phars.*, v., 429. — *Isid.*, *Orig.*, xix., 3, 4. — Böckh, p. 138-143.) — 2. (Böckh, p. 148-152.) — 3. (*Isid.*, *Orig.*, xix., 4, 7.) — 4. τερόπρεος. This large fleet was completed within sixty days after the trees had been cut down.¹ The ships, built of green timber in this hurried way, were very clumsily made, and not likely to last for any time; and the Romans themselves, for want of practice in naval affairs, proved very unsuccessful in their first maritime undertaking, for seventeen ships were taken and destroyed by the Carthaginians off Messana.² C. Duilius, who perceived the disadvantage with which his countrymen had to struggle at sea, devised a plan which enabled them to change a seafight, as it were, into a fight on land. The machine by which this was effected was afterward called *corvus*, and is described by Polybius.³ (*Vid. Corvus*.) From this time forward the Romans continued to keep up a powerful navy. Towards the end of the Republic they also increased the size of their ships, and built war-vessels of from six to ten ordines of rowers.⁴ The construction of their ships, however, scarcely differed from that of Greek vessels; the only great difference was that the Roman galleys were provided with a greater variety of destructive engines of war than those of the Greeks. They even erected *turres* and *tabulata* upon the decks of their great men-of-war (*naves turritæ*), and fought upon them in the same manner as if they were standing upon the walls of a fortress. Some of such *naves turritæ* occur in the woodcuts given above.⁵

For a more detailed account of the ships and navigation of the ancients, see Scheffer, *De Militia Navali*, Upsala, 1654.—Berghaus, *Geschichte der Schifffahrtskunde der vornehmsten Völker des Alterthums*.—Benedict, *Gesch. der Schifffahrt und des Handels der Alten*.—Howell, *On the War-galleys of the Ancients*.—A. Jal, *Archéologie Navale*, Paris, 1840; and for the Attic navy especially, Böckh's *Urkunden über das Seewesen des Attischen Staates*, Berlin, 1840.

SIBYLLINI LIBRI. These books are said to have been obtained in the reign of Tarquinius Priscus, or, according to other accounts, in that of Tarquinius Superbus, when a sibyl (*Σιβυλλα*), or prophetic woman, presented herself before the king, and offered nine books for sale. Upon the king refusing to purchase them, she went and burned three, and then returned and demanded the same price for the remaining six as she had done for the nine. The king again refused to purchase them, whereupon she burned three more, and demanded the same sum for the remaining three as she had done at first for the nine: the king's curiosity now became excited, so that he purchased the books, and then the sibyl vanished.⁶ (Respecting the different sibyls mentioned by ancient writers, see DIVINATIO, p. 369.) These books were probably written in Greek, as the later ones undoubtedly were, and, if so, consequently came from a Greek source, though it is doubtful from what quarter: Niebuhr⁷ supposes them to have come from Ionia, but they were more probably derived from Cumæ in Campania.⁸ They were kept in a stone chest under ground in the Temple of Jupiter Capitolinus, under the custody of certain officers, at first only two in number, but afterward increased successively to ten and fifteen, of whom an account is given under DECEMVIRI, p. 340. The public were not allowed to inspect the books, and they were only consulted by the officers

who had the charge of them at the special command of the senate (*ad libros ire*).⁹ They were consulted in the case of prodigies and calamities, but it is difficult to ascertain whether they contained predictions, or merely directions as to what was to be done for conciliating or appeasing the gods, in consequence of the mystery which enveloped them from the time that one of their keepers was put to death for divulging their secrets.² Niebuhr remarks, from the instances in Livy, that the original books were not consulted, as the Greek oracles were, for the purpose of getting light concerning future events, but to learn what worship was required by the gods when they had manifested their wrath by national calamities or prodigies. Accordingly, we find that the instruction they give is in the same spirit; prescribing what honour was to be paid to the deities already recognised, or what new ones were to be imported from abroad. They were probably written on palm-leaves,³ and it is not unlikely that the leaves of the Cumæan sibyl described by Virgil were designed as an allusion to the form of the sibylline books. Their nature being such, Niebuhr supposes that they were referred to in the same way as Eastern nations refer to the Koran and to Hafiz: they did not search for a passage and apply it, but probably only shuffled the palm-leaves and then drew one.

When the Temple of Jupiter Capitolinus was burned in B.C. 82, the sibylline books perished in the fire; and in order to restore them, ambassadors were sent to various towns in Italy, Greece, and Asia Minor to make fresh collections, which, on the rebuilding of the temple, were deposited in the same place that the former had occupied.⁴ But as a great many prophetic books, many of them pretending to be sibylline oracles, had got into general circulation at Rome, Augustus commanded that all such books should be delivered up to the prætor urbanus by a certain day and burned, and that, in future, none should be kept by any private person. More than 2000 prophetic books were thus delivered up and burned, and those which were considered genuine, and were in the custody of the state, were deposited in two gilt cases at the base of the statue of Apollo, in the temple of that god on the Palatine, and were intrusted, as before, to the quindecimviri.⁵ The writing of those belonging to the state had faded by time, and Augustus commanded the priests to write them over again.⁶ A fresh examination of the sibylline books was again made by Tiberius, and many rejected which were considered spurious.⁷ A few years afterward, also in the reign of Tiberius, it was proposed to add a new volume of sibylline oracles to the received collection.⁸

The Christian writers frequently appeal to the sibylline verses as containing prophecies of the Messiah; but these, in most cases, are clearly forgeries. A complete collection of sibylline oracles was published by Gallæus, Amst., 1699: fragments of them have also been published by Mai, Milan, 1817, and Struve, Regiomont., 1818.⁹

The sibylline books were also called *Fata Sibyllina*¹⁰ and *Libri Fatales*.¹¹ Those that were collected after the burning of the temple on the Capitol were undoubtedly written in Greek verses, and were acrostics (*ἀκροστιχίς*).¹² Along with the sibylline books were preserved, under the guard of the same officers, the books of the two prophetic brothers,

1. (Cic., De Div., i., 43.—Liv., xxii., 57.)—2. (Dionys., l. c.—Val. Max., i., 1, § 13.)—3. (Serv. ad Virg., Æn., iii., 444, vi., 74.)—4. (Dionys., l. c.)—5. (Suet., Octav., 31.—Tacit., Ann., vi., 12.)—6. (Dion Cass., liv., 17.—7. (Id., lvi., 18.)—8. (Tacit., l. c.)—9. (Compare Heidebrede, De Sibyllis Dissertat., Berl., 1835.)—10. (Cic., Cat., iii., 4.)—11. (Liv., v., 15; xxii., 57.)—12. (Cic., De Div., ii., 54.—Dionys., l. c.)

the Marci,¹ the Etruscan prophecies of the nymph Bygoe, and those of Albuna or Albunea of Tibur.² Those of the Marci, which had not been placed there at the time of the battle of Cannæ, were written in Latin: a few remains of them have come down to us in Livy³ and Macrobius.⁴

SICA, *dim.* SICILA, whence the English *sickle*, and SICILICULA,⁵ a curved Dagger, adapted by its form to be concealed under the clothes, and therefore carried by robbers and murderers. (*Vid.* ACINACES, p. 14.)⁶ Sica may be translated a *cimeter*, to distinguish it from Pugio, which denoted a dagger of the common kind. *Scarius*, though properly meaning one who murdered with the sica, was applied to murderers in general.⁷ Hence the forms *de scariis* and *inter scarios* were used in the criminal courts in reference to murder. Thus *judicium inter scarios*, "a trial for murder;"⁸ *defendere inter scarios*, "to defend against a charge of murder."⁹ (*Vid.* JUDEX, p. 552.)

SICARIUS. (*Vid.* SICA, CORNELIA LEX DE SICAR.)

*SICYS (σίκυς or σίκυα), the Cucumber. The σίκυς ἄγριος, which produces the medicinal *Elaterium*, was formerly called *Cucumis agrestis*, but has now got the name of *Momordica elaterium*. It may be proper to remark in this place, that Hippocrates uses the term ἑλατήριον rather loosely, as applicable to all drastic purgatives. See *κολοκύνθη*, where the interchange of names between it and σίκυς is pointed out.¹⁰

*SIDE (σίδη), according to Sprengel, the white Water Lily, or *Nymphaea alba*. This, however, Adams regards as very uncertain.¹¹

*SIDERITES LAPIS (σιδηρίτης λίθος), Magnetic Iron Ore. (*Vid.* ADAMAS, towards the end of that article.)

*SIDEROS (σίδηρος), Iron. (*Vid.* ADAMAS.)

SIGILLARIA. (*Vid.* SATURNALIA, p. 856.)

*SIGILLATA. (*Vid.* LEMNIA TERRA.)

SIGMA. (*Vid.* MENSA, p. 633.)

SIGNA MILITARIA (σημεία, σημαίαι), military ensigns or standards. The most ancient standard employed by the Romans is said to have been a handful of straw fixed to the top of a spear or pole.

Hence the company of soldiers belonging to it was called MANIPULUS. The bundle of hay or fern was soon succeeded by the figures of animals, of which Pliny¹ enumerates five, viz., the eagle, the wolf, the minotaur,² the horse, and the boar. These appear to have corresponded to the five divisions of the Roman army as shown on page 614. The eagle (*aquila*) was carried by the *aquilifer* in the midst of the *hastati*, and we may suppose the wolf to have been carried among the *principes*, and so on. In the second consulship of Marius, B.C. 104, the four quadrupeds were entirely laid aside as standards, the eagle being alone retained. It was made of silver or bronze, and with expanded wings, but was probably of a small size, since a standard-bearer (*signifer*) under Julius Caesar is said, in circumstances of danger, to have wrenched the eagle from its staff, and concealed it in the folds of his girdle.³ The bronze horse just represented belonged to a Roman standard, and is delineated but a little less than the original: it is preserved in the collection at Goodrich Court.⁴

Under the later emperors the eagle was carried, as it had been for many centuries, with the legion, a legion being on that account sometimes called *aquila*,⁵ and, at the same time, each cohort had for its own ensign the serpent or dragon (*draco*, δράκων), which was woven on a square piece of cloth (*textilis anguis*⁶), elevated on a gilt staff, to which a cross-bar was adapted for the purpose,⁷ and carried by the *draconarius*.⁸

Another figure used in the standards was a ball (*pila*), supposed to have been emblematic of the dominion of Rome over the world,⁹ and for the same reason, a bronze figure of Victory was sometimes fixed at the top of the staff, as we see it sculptured, together with small statues of Mars, on the Column of Trajan and the Arch of Constantine.¹⁰ (See the next woodcut.) Under the eagle or other emblem was often placed a head of the reigning emperor, which was to the army the object of idolatrous adoration.¹¹ The name of the emperor, or of him who was acknowledged as emperor, was sometimes in-

scribed in the same situation.¹ The pole used to carry the eagle had at its lower extremity an iron joint (*cuspis*) to fix it in the ground, and to enable the *aquilifer*, in case of need, to repel an attack.²

The minor divisions of a cohort, called centuries, had also each an ensign, inscribed with the number both of the cohort and of the century. By this provision, together with the diversities of the crests worn by the centurions (*vid. GALEA*), every soldier was enabled, with the greatest ease, to take his place.³ (Compare *ARMY*, p. 104, and *MANIPULUS*, p. 613.)

The standard of the cavalry, properly called *vezillum*, was a square piece of cloth expanded upon a cross in the manner already indicated, and perhaps surmounted by some figure.⁴

In the arch of Constantine at Rome there are four sculptured panels near the top, which exhibit a great number of standards, and illustrate some of the forms here described. The preceding woodcut is copied from two out of the four. The first panel represents Trajan giving a king to the Parthians: seven standards are held by the soldiers. The second, containing five standards, represents the performance of the sacrifice called *suovetaurilia*.⁵

When Constantine had embraced Christianity, a figure or emblem of Christ, woven in gold upon purple cloth, was substituted for the head of the emperor. This richly-ornamented standard was called *labarum*.⁶

Since the movements of a body of troops, and of every portion of it, were regulated by the standards, all the evolutions, acts, and incidents of the Roman army were expressed by phrases derived from this circumstance. Thus *signa inferre* meant to advance,⁷ *referre* to retreat, and *convertere* to face about; *efferre*, or *castris vellere*, to march out of the camp;⁸ *ad signa convenire*, to reassemble.⁹ Notwithstanding some obscurity in the use of terms, it appears that, while the standard of the legion was properly called *aquila*, those of the cohorts were, in a special sense of the term, called *signa*, their bearers being *signiferi*, and that those of the manipuli, or smaller divisions of the cohort, were denominated *vezilla*, their bearers being *vezillarii*. Also, those who fought in the first ranks of the legion, before the standards of the legion and cohorts, were called

antesignani.¹ A peculiar application of the terms *vezillarii* and *subsignani* is explained in page 103.

In military stratagems it was sometimes necessary to conceal the standards.² Although the Romans commonly considered it a point of honour to preserve their standards, yet, in some cases of extreme danger, the leader himself threw them among the ranks of the enemy, in order to divert their attention or to animate his own soldiers.³ A wounded or dying standard-bearer delivered it, if possible, into the hands of his general,⁴ from whom he had received it (*signis acceptis*).⁵ In time of peace the standards were kept in the *Ærarium*, under the care of the *Quæstor*.

We have little information respecting the standards of any other nation besides the Romans. The banners of the Parthians appear to have had a similar form to that of the Romans, but were more richly decorated with gold and silk. (*Vid. SERICUM*.) A golden eagle with expanded wings was the royal standard of Persia.⁶ The military ensigns of the Egyptians were very various. Their sacred animals were represented in them,⁷ and in the paintings at Thebes we observe such objects as a king's name, a sacred boat, or some other emblem, applied to the same purpose.⁸ The Jewish army was probably marshalled by the aid of banners;⁹ but not so the Greek, although the latter had a standard, the elevation of which served as a signal for joining battle, either by land¹⁰ or by sea.¹¹ A scarlet flag (*φοινικίς*) was sometimes used for this purpose.¹²

SIGNINUM OPUS. (*Vid. HOUSE, ROMAN*, p. 519.)

***SIL**, a term applied by the Romans to *Yellow Ochre*, the *ὄψα* of the Greeks. "It appears to have been the principal yellow pigment of the ancients. Pliny specifies three varieties: the *Attic*, which was the best; the *Marmosum*, which may have been what we call Stone Ochre; and the *Syricum*, of a dull colour, named from the island of Syros; as may have been the red paint also, called by the same name. *Sil* was found in many places, Vitruvius observes, but the *Attic*, which used to be the best, was no longer to be obtained; because the veins of it, which occurred in the silver mines of Attica, were no longer now explored. It is described by Dioscorides as light, smooth, free from stone, friable, and of a full bright yellow."¹³

SILENTIARIUM. (*Vid. PRÆPOSTITUS*.)

***SILER**, a tree about which great uncertainty prevails. Martyn translates it "Osier," but speaks very doubtfully respecting it. Fée makes it the same with the *ἐλική* of the Greeks, and refers it to the *Salix vitellina*, L., though without condemning the opinion of Anguillara and Sprengel, who declare for the *Salix caprea*. Pliny merely says that it delights in watery places.¹⁴

***SILEX.** "The *Silices*," says Dr. Moore, "of which certain kinds are specified by Pliny as fit to be used in building, may in some cases have been such as we also term silicious; but the more probable opinion is, that the name *silices* was somewhat indiscriminately applied to the more compact and harder stones. The *Viridis silex*, which so remarkably resisted fire, which was never abundant, may perhaps have been serpentine. No inference to the contrary need be drawn from Pliny's calling it *silex*, for he presently after speaks of hune made

ez silice; as Vitruvius also directs that it be burned '*de albo saxo aut silice.*' It is probable that by *silex* in these passages is meant a dark-coloured, compact limestone."¹

SILICE'RNIIUM. (*Vid.* FUNUS, p. 462.)

*SILPHIUM (*σίλφιον*), a kind of *Laserpitium* or *Asafetida*, forming one of the chief natural productions of Cyrenaica. It was fattening for cattle, rendering their flesh also tender, and was a useful aperient for man. From its juice, too, when kneaded with clay, a powerful antiseptic was obtained. The silphium formed a great article of trade, and at Rome the composition just mentioned sold for its weight in silver. It is for this reason that the silphium appeared always on the medals of Cyrene. Its culture was neglected, however, when the Romans became masters of the country, and pasturage was more attended to. Captain Beechey, in the course of his travels through this region, noticed a plant about three feet in length, very much resembling the hemlock or wild carrot. He was told that it was usually fatal to the camels which ate of it, and that its juice was so acrid as to fester the flesh, if at all excoriated. He supposed it to be the silphium. Della Cella describes, apparently, the same production as an umbelliferous plant, with compound, indented leaves, fleshy, delicate, and shining, without any involucre; the fruit being somewhat flattened, surmounted by three ribs, and furnished all round with a membrane as glossy as silk. Captain Smith succeeded in bringing over a specimen of the plant, which is said to be now thriving in Devonshire. M. Pacho says that the Arabs call it *Derias*, and he proposes to class the plant as a species of *Laserwort*, under the name of *Laserpitium derias*. It seems to resemble the *Laserpitium ferulaceum* of Linnaeus.²

*SILURUS (*σίλουρος*), the name of a numerous genus of fishes, the species *Glanis* belonging to which inhabits the fresh waters of Europe, Asia, and Africa. It is the *Scheid* of the Germans, and the Sheat-fish of the English, and is the largest of the fresh-water fishes of Europe, growing sometimes to the weight of 150 lbs. and upward. "The silurus of Ausonius," says Adams, "has been referred by some to the sturgeon; this opinion, however, is untenable. It is a voracious fish, and is found in the Elbe, the Vistula, the Rhine, and the Danube. It is therefore natural to suppose that mention of it would have been made among the fishes of the *Moselle*, which forms the subject of Ausonius's poem, the *Moselle* being a branch of the Rhine."³

SILVA'NI ET CARBONIS LEX. (*Vid.* LEX PAPIRIA PLAUTIA, p. 584.)

*SIMIA (*πίθηκος*), the Ape. Buffon, treating of monkeys, says, "The ancients were only acquainted with one, the *Pithecos* of the Greeks; the *Simia* of the Latins is of this kind, and the real monkey, on which Aristotle, Pliny, and Galen have instituted all their physical comparisons, and founded all their relations of the monkey to mankind: but this *Pithecos*, this monkey of the ancients, so generally resembling man in external form, and still more so in its internal organization, nevertheless differs from it in an essential point, the size of the human species being generally above five feet, while that of the *pithecos* is seldom more than a fourth of that height." So far Buffon. "I am inclined to think, however," remarks Adams, "that the species of baboon called *Papia maimon*, or Mandril, answers best to the ancient accounts of the *pithecos*. It is

proper to mention, however, that Dr. Trail holds that Aristotle's description of the *pithecos* applies best to the young Barbary ape, or *Simia Innus*. The *κῆβος* was a species of monkey having a long tail. The *κυνόκεφαλος* would appear to have been the species of monkey now called Magot, which is the adult *Simia Innus*, L., or Barbary ape. Buffon refers the *καλλιθηρίξ* to the green ape; but, according to Dr. Trail, it may rather be set down as the *Simia sabæa* of Senegal. The *κερκοπίθηκος* was a monkey with a tail, as its name implies. Hardouin refers it, with little probability, to the Marmot. The *χοιροπίθηκος* of Aristotle cannot be determined satisfactorily. Pennant supposes the *Simia senex* the representative of the ancient *σάνυρος*, but Dr. Trail supposes it rather some species of large baboon."⁴

*SINAPI (*σίναπι*), Mustard. (*Vid.* NAPI.)

SINDON. (*Vid.* PALIUM, p. 718.)

*SINOPICA TERRA (*Σινωπική γῆ*), Sinopie Earth, a species of red ochre. According to Sir John Hill, the "*Rubrica Sinopica* was a dense, heavy, firm substance, of a deep red colour, staining the fingers on handling, and of a styptic, astringent taste." From Tournefort's account of it, there can be no doubt, as Adams thinks, that it owes its colour to an admixture of iron.⁵

*SION (*σίον*), a plant, of which Speusippus (cited by Adams) says that it grows in water, having a head like the Marsh Parsley. Sprengel inclines, with Fuchsius, to make it the *Veronica anagallis* but mentions that others took it for the *Sium latifolium* or *angustifolium*. Diebach makes it the *Sium modiflorum*, or procumbent Water Parsnip.⁶

SIPARIUM, a piece of tapestry stretched on a frame, which rose before the stage of the theatre, and consequently answered the purpose of the drop-scene with us, although, contrary to our practice, it was depressed when the play began, so as to go below the level of the stage (*auleæ premuntur*⁷), and was raised again when the performance was concluded (*tolluntur*⁸). From the last-cited passage we learn that human figures were represented upon it, whose feet appeared to rest upon the stage when this screen was drawn up. From a passage of Virgil⁹ we farther learn that the figures were sometimes those of Britons woven in the canvass, and raising their arms in the attitude of lifting up a purple curtain, so as to be introduced in the same manner as ATLANTES, PERSÆ, and CARYATIDES.

In a more general sense, *siparium* denoted any piece of cloth or canvass stretched upon a frame.¹⁰ (*Vid.* PAINTING, p. 702.)

*SIRIUS (*Σείριος*) and PROCYON (*Προκύων*), "the Greek names of the bright stars in the constellations of the Great and Little Dog (*Canis Major* and *Minor*). These are Orion's dogs, according to some, and those of minor personages according to others: the whole of their mythic explanations form a strong proof that these constellations are not Greek in their origin. In a passage of Hesiod, he has been supposed to speak of the sun under the name of Sirius; and Hesiarchus defines the word to mean both the sun and the dog star. The Egyptians called the dog-star *Sothis*, and from its heliacal rising had warning that the overflow of the Nile was about to commence. Now the overflow of the Nile follows the summer solstice; whereas, by the precession of the equinoxes, the heliacal rising of Sirius is now about the tenth of August. The greatest heats of sum-

1. (Moore's Anc. Mineral., p. 87.)—2. (Theophr. H. P., vi., 3.—Dioscor., iii., 84.—Antho'n's Class. Dict., s. v. Cyrenaica.)—3. (Aelian, N. A. xii., 29.—Aristot., H. A., ii., 13.—Plin., H. N., ix., 15.—Adams, Append., s. v.)

mer generally follow the summer solstice, and in ancient times it was observed that the unhealthy and oppressive period coincided with the heliacal rising of the dog-star. We say the dog-star, without specifying whether it was Sirius or Procyon; it is uncertain which it was, and may have been both, for the heliacal risings do not differ by many days. The star itself was in Latin *canicula*, which should seem to apply to the lesser dog, and Horace says, '*Jam Procyon furit*,' &c. Pliny supports the same meaning of *canicula*, and perhaps Hyginus; also the framers of the Alphonsine Tables, and Bede and Kepler among the moderns; while Germanicus and Julius Firmicus, with Apian, Margini, Argoli, Stephens, and Petavius among the moderns, contend for Sirius, which is the more common opinion. All antiquity ascribed an evil influence to the star: and though Geminus among the ancients, and Petavius among the moderns, thought that the effects were to be attributed to the sun alone, they had hardly any followers until the fall of judicial astrology. Even at this day, when the heats of the latter part of summer are excessive, we are gravely told that we are in the dog-days. The real classical dog-days are the twenty days preceding and the twenty days following the heliacal rising of whichever star it was, whether Sirius or Procyon.¹

*SIS'ARUM (σίσαρον). "Sprengel, who had formerly held this to be the *Sium Sisarum*, in his last work declares himself a convert to the opinion of Fuchsius, who made it to be the *Pastinaca sativa*, or Garden Parsnip."²

SISTRUM (σίστρον), a mystical instrument of music, used by the ancient Egyptians in their ceremonies, and especially in the worship of Isis.³ It was held in the right hand (see woodcut), and shaken, from which circumstance it derived its name (*era repulsa manu**). Its most common form is seen in the right-hand figure of the annexed woodcut, which represents an ancient sistrum formerly

belonging to the library of St. Genovefa at Paris. Plutarch⁴ says that the shaking of the four bars within the circular apsis represented the agitation of the four elements within the compass of the world, by which all things are continually destroyed and reproduced, and that the cat sculptured upon the apsis was an emblem of the moon. Apuleius⁵ describes the sistrum as a bronze rattle (*æreum crepitaculum*), consisting of a narrow plate curved like a sword-belt (*balteus*), through which passed a few rods that rendered a loud, shrill sound. He says

1. (Penny Cyclopædia, vol. xxii., p. 62.)—2. (Dioscor., ii., 139.—Adams, Append., s. v.)—3. (Ovid, Met., ix., 784.—Id., Amor., ii., 13, 11.—Id. ib., iii., 9, 34.—Id., De Ponto, i., 1, 36.)—4. (Tibull., i., 3, 24.)—5. (De Is. et Os., p. 670, 671, ed. Steph.)—6. (Met., x., p. 119, 121, ed. Ald.)

that these instruments were sometimes made of silver, or even of gold. He also seems to intimate that the shakes were three together (*tergeminus catus*), which would make a rude sort of music.

The introduction of the worship of Isis into Italy, shortly before the commencement of the Christian æra, made the Romans familiar with this instrument. The "*hinceri calvi, sistrataque turba*,"¹ are exactly depicted in two paintings found at Portici,² and containing the two figures of a priest of Isis and a woman kneeling at her altar, which are introduced into the preceding woodcut. The use of the sistrum in Egypt as a military instrument to collect the troops, is probably a fiction.³

Sistrum, which is, in fact, like *Sceptrum*, a Greek word with a Latin termination, the proper Latin term for it being *crepitaculum*, is sometimes used for a child's rattle.⁴

*SISYMBRIUM (σισιμβριον), a plant. "From the description," says Adams, "which Dioscorides gives of his first species, there can be no doubt that it was a species of mint, probably the *Mentha sylvestris*, as Anguillara contends. The other species is unquestionably the *Nasturtium officinale*, or Water-cress."⁵

*SISYRINCHION (σισυρύγγιον). "Sprengel and Stackhouse make this plant to be the *Iris Sisyrychium*, in which opinion they are supported by Cordus, Baubin, and many of the earlier authorities. Schneider's objection appears to me too fine-spun."⁶

SITELLA. (Vid. SITULA.)

SITONAI (σιτώναι). (Vid. SITOS.)

SITOPHYLACES (σιτοφύλακες), a board of officers, chosen by lot, at Athens. They were at first three, afterward increased to fifteen, of whom ten were for the city, five for the Piræus. Their business was partly to watch the arrival of the corn-ships, take account of the quantity imported, and see that the import laws were duly observed; partly to watch the sales of corn in the market, and take care that the prices were fair and reasonable, and none but legal weights and measures used by the factors; in which respect their duties were much the same as those of the *agoranomi* and *metronomi* with regard to other saleable articles. (Vid. SITOS.) Demosthenes refers to the entry in the books of the *sitophylaces* (τὴν παρὰ τοῖς σιτοφύλαξιν ἀπογραφὴν) to prove the quantity of corn imported from Pontus, which (he says) was equal to all that came from elsewhere, owing to the liberality of Leucon, king of the Bosphorus, who allowed corn to be exported from Theodosia to Athens free of duty.⁷ These books were probably kept by the five who acted for the Piræus, whose especial business it would be to inspect the cargoes that were unladen.⁸

SITOS (σίτος). The soil of Attica, though favourable to the production of figs, olives, and grapes, was not so favourable for corn; and the population being very considerable in the flourishing period of the Athenian republic, it was necessary to import corn for their subsistence. According to the calculation of Böckh, which does not materially differ from that of other writers, there were 135,000 free men and 365,000 slaves residing in Attica. The country, which contained an area of 64,000 stadia, produced annually about two millions of medimni of corn, chiefly barley. The medimnus was about 1 bushel, 3 gallons, and 5-75 pints, or 48 Attic choi-

1. (Mart., xii., 29.)—2. (Ant. d'Ercolano, t. ii., p. 309-320.)—3. (Virg., Æn., viii., 696.—Propert., iii., 11, 43.)—4. (Mart., xiv., 54.—Pollux, Onom., ix., 127.)—5. (Dioscor., ii., 154, 155.—Theophr., ii., 1.—Nicand., Ther., 896.—Adams, Append., s. v.)—6. (Theophr., H. P., i., 10: vii., 13.—Adams, Append., s. v.)—7. (Demosth., c. Leptin., 466, 467.)—8. (Harpocr., s. v. Σιτοφύλακες.—Böckh, Staatsh. der Athen., i., 52, 68-91.)

νικες. A *χοίνιξ* was considered a fair daily allowance of meal (*ἡμερησία τροφή*) for a slave. The consumption of the whole population was three million medimni, and one third, therefore, was imported. It came from the countries bordering on the Euxine Sea (Pontus, as it was called by the Greeks), and more especially from the Cimmerian Bosphorus and the Thracian Chersonese; also from Syria, Egypt, Libya, Cyprus, Rhodes, Sicily, and Eubœa. The necessities of the Athenians made them exceedingly anxious to secure a plentiful supply, and every precaution was taken for that purpose by the government as well as by the legislator. Sunium was fortified, in order that the corn vessels (*σιταγωγοὶ ὀλκάδες*) might come safely round the promontory. Ships of war were often employed to convey the cargo (*παρεμπνεῖν τὸν σῖτον*) beyond the reach of an enemy.¹ When Pollis, the Lacedæmonian admiral, was stationed with his fleet off Ægina, the Athenians embarked in haste, under the command of Chabrias, and offered him battle, in order that the corn-ships, which had arrived as far as Geræstus in Eubœa, might get into the Piræus.² One of the principal objects of Philip in his attack on Byzantium was that, by taking that city, he might command the entrance to the Euxine, and so have it in his power to distress the Athenians in the corn-trade. Hence the great exertions made by Demosthenes to relieve the Byzantines, of the success of which he justly boasts.³

The measures taken by the legislature to obtain supplies of corn may appear harsh, and their policy is at least doubtful, but they strongly evince the anxiety of the people on this subject. Exportation was entirely prohibited, nor was any Athenian or resident alien allowed to carry corn to any other place than Athens (*σιτῆγειν ἄλλόσε ἢ Ἀθῆνας*). Whoever did so was punishable with death.⁴ Of the corn brought into the Athenian port, two thirds were to be brought into the city and sold there.⁵ No one might lend money on a ship that did not sail with an express condition to bring a return cargo, part of it corn, to Athens. If any merchant, capitalist, or other person, advanced money, or entered into any agreement in contravention of these laws, not only was he liable to the penalty, but the agreement itself was null and void, nor could he recover any sum of money, or bring any action in respect thereof.⁶ Information against the offenders was to be laid before the *ἐπιμεληταὶ τοῦ ἐμπορίου*.⁷ Strict regulations were made with respect to the sale of corn in the market. Conspiracies among the corn-dealers (*σιτοπῶλαι*) to buy up the corn (*συννείσθαι*), or raise the price (*συνιστάναι τὰς τιμὰς*), were punished with death. They were not allowed to make a profit of more than one obol in the medimnus; and it was unlawful to buy more than fifty *φορμοὶ* at a time. It is not certain what the size of a *φορμός* was: Böckh supposes it to be about as much as a medimnus. These laws remind us of our own statutes against engrossing and regrating; but they appear to have been easily evaded by the corn-dealers.⁸ The sale of corn was placed under the supervision of a special board of officers called *σιτοφύλακες*, while that of all other marketable commodities was superintended by the *agoranomi*.⁹ It was their business to see that meal and bread were of the proper quality, and sold at the legal weight and price. They were bound to detect the frauds of the factor and the ba-

ker, and (if we may believe Lysias) they sometimes suffered death for their want of vigilance. The mode of proceeding against them was by *εἰσαγωγή* before the senate.¹

Notwithstanding these careful provisions, scarcity (*συντορία*) frequently occurred at Athens, either from bad harvests, the misfortunes of war, or other accidental causes. The state then made great efforts to supply the wants of the people by importing large quantities of corn, and selling it at a low price. Public granaries were kept in the Odeum, Pompeum, Long Porch, and naval storehouse near the sea.² *Σιτώναι* were appointed to get in the supply and manage the sale. Demosthenes was appointed on one occasion to that office.³ Persons called *ἀποδέκται* received the corn, measured it out, and distributed it in certain quantities.⁴ Public-spirited individuals would sometimes import grain at their own expense, and sell it at a moderate price, or distribute it gratuitously.⁵ We read of the Athenian state receiving presents of corn from kings and princes. Thus Leucon, king of the Bosphorus, sent a large present, for which he had the honour of *ἀτέλεια* (exemption from customs' duties) conferred on him by a decree of the people.⁶ Psammetichus, an Egyptian prince, sent a present in Olymp. 83, 4, Demetrius in Olymp. 118, 2, Spartacus, king of Bosphorus, a few years after. In later times, that made by the Roman Atticus is well known. On the whole of this subject the reader is referred to Böckh,⁷ where also he will find the various prices of meal and bread at Athens, and other details, copiously explained. As to the duty payable on the importation of corn, see ΠΕΝΤΕΚΟΣΤΕΣ.

Σίτος is strictly *wheat flour*, *ἄλφιτα* *barley flour*, *πυρροὶ* *wheat*, *κριθαὶ* *barley*, *ἄρτος* *wheat bread*, *μαῖα* *barley bread*. *Σίτος*, however, is often applied to all kinds of corn, and even, in a larger sense, to provisions in general. (*Vid.* ΣΙΤΟΥ ΔΙΚΗ.)

ΣΙΤΟΥ ΔΙΚΗ (*σῖτου δίκη*). The marriage portion (*προίξ*) being intended as a provision for the wife, although it was paid to the husband by her father, brother, or other natural guardian (*κύριος*), if anything happened to sever the marriage contract, the husband, or his representative, was bound to repay it; or, if he failed to do so, he was liable to pay interest upon it at the rate of 18 per cent. per annum (*ἐπ' ἐννέα ὀβολοῖς τεκοφορεῖν*). This was the law in case of a divorce,⁸ and also when, after a contract of marriage, and after payment of the marriage portion, the intended husband refused to perform his engagement.⁹ Upon the death of the husband without children, the wife and her money went back to the natural guardian;¹⁰ but if he died leaving children, she had the option of staying with them or going back to her κύριος. If she did the latter, the children (or their guardian, if they were under age) were bound to pay back the portion to the κύριος, or eighteen per cent. interest in the mean time.¹¹ And if she married again, her κύριος was bound in honour to give the same sum to her new husband.¹² Upon the transfer of a woman from one husband to another, which was not uncommon, the *προίξ* was transferred with her.¹³ A woman's fortune was usually secured by a mortgage of the husband's property; but whether this was so or not, her guardian, in any of the cases above mentioned, might bring an action against the party who unjustly withheld it; *δίκη προικός*, to re-

cover the principal, *δίκη αἴτου*, for the interest. The interest was called *αἴτος* (alimony or maintenance), because it was the income out of which the woman had to be maintained, *ἀπὸ δαιδόμενα τροφαί*, ἡ δαιδόμενη πρόσδοδος εἰς τροφήν ταῖς γυναῖξιν.¹ The word *αἴτος* is often used generally for provisions, just as we use the word *bread*. So in the law, which required the son of an *ἐπικληρός* to maintain his mother when he came of age and took possession of her inheritance, the expression is *τοῦ αἴτου μετρεῖν τῇ μητρὶ*.² The allowance for rations given to soldiers was called *αιτηρέσιον*.³ The *δίκη αἴτου* was tried before the archon in the Odeum, the same building in which the corn granaries were kept, which makes it not improbable that in earlier times the defendant was called upon to pay the damages *in kind*, that is, in corn or some other sort of provisions; though it was soon found to be more convenient to commute this for a money payment. This cause, like the *δίκη προικός*, seems to have belonged to the *ἐμμετροὶ δίκαι*, as it was presumed that the woman could not wait long for the means of her daily subsistence. It was *ἀνίμτος*, for the damages were clearly liquidated, being a mere matter of calculation, when the payment of the marriage portion was proved.⁴

**SITTA* (*σίττα*). According to Gesner, who follows the authority of Turner, this is the bird called *Nuthatch*, namely, the *Sitta Europaea*.⁵

SITULA, *dim.* *SITELLA* (*ὀψία*), was probably a bucket or pail for drawing and carrying water,⁶ but was more usually applied to the vessel from which lots were drawn: *siella*, however, was more commonly used in this signification.⁷ It appears that the vessel was filled with water (as among the Greeks, whence the word *ὀψία*), and that the lots (*sortes*) were made of wood; and as, though increasing in size below, it had a narrow neck, only one lot could come to the top of the water at the same time, when it was shaken (*situlam huc tecum afferto cum aqua et sortes*).⁸ The vessel used for drawing lots was also called *urna* or *ovra* as well as *situla* or *siella*.⁹

It is important to understand the true meaning of *siella*, since almost all modern writers have supposed that the name of *siella* or *cista* was given indifferently to the ballot-box, into which those who voted in the comitia and courts of justice cast their tabellæ; but Wunder¹⁰ has proved that the opinion of Manutius¹¹ is correct, who maintained that the *siella* was the urn from which the names of the tribes or centuries were drawn out by lot, so that each might have its proper place in voting, and that the *cista* was the box into which the tabellæ were cast (*cistas suffragiorum in comitiis*¹²). The form of the *cista* is preserved on a coin of the Cassian gens, figured by Spanheim,¹³ where a man is represented in the act of placing a tabella, marked with the letter A (i. e., *absolvo*) in the *cista*. This *cista*,

which is represented in the annexed cut, is evidently made of wicker or similar work (to which Tibullus¹⁴ alludes in the line "*Et levis oculis conscia cista sacris*"), and therefore could not possibly be used in the drawing of

lots, since we know that the vessels used for that purpose were filled with water. The form of the *siella* is also given by Spanheim,¹ from another coin of the Cassian gens. (See cut annexed.) This account has been taken from a very excellent dissertation by Wunder on the above-mentioned work.

SITTYBÆ. (*Vid.* LIBER, p. 588.)

**SMARAGDUS* (*σμάραγδος*), the Emerald. "The ancients," says Sir John Hill, "distinguished twelve kinds of emerald, some of which, however, seem to have been rather stones of the prasiu or jaspel kind, and others no more than coloured crystals and spars from copper mines." "As for the statues, obelisks, and pillars," observes Dr. Moore, "formed of emeralds of prodigious size, mentioned by Theophrastus, Pliny, and others, they were of some one or other of the several more abundant minerals that have been already suggested, or else of coloured glass. Larcher thinks the pillar of emerald which Herodotus saw in the Temple of Hercules at Tyre, and which shone at night, was a hollow cylinder of glass, within which lamps were placed. Theophrastus himself, speaking of this column, suggests that it may be a false emerald; for such, says he, there are. And such there are, even at the present day, which pass for native stones. Beckmann says that a piece of glass in the monastery of Reichenau, seven inches long, and weighing 28 lbs., and a large cup at Genoa, which is, however, full of flaws, are given out to be emeralds, even to the present time. It is very probable that our emerald ought not to be reckoned among the many varieties of smaragdi mentioned by the ancients. Dutens doubts if it was known to them; and from the researches and the positive assertion of Tavernier, it appears, at least, that no locality of emerald is known in Asia or its islands."²

**SMARIS* (*σμάρις*), a species of fish, the *Sparus Smaris*, L., or Pickerel.³

**SMILAX* (*σμίλαξ*), Bindweed. (*Vid.* MILAX.)

SMILE (*σμίλη*). (*Vid.* DOLABRA.)

**SMIRIS* (*σμίρις*) or *SMYRIS* (*σμίυρις*), the *Emerald* of British, and *Emeril* of French mineralogists. It was used by the ancients, as it is by the lapidaries of the present day, in polishing hard stones. It consists principally of alumine, with a small proportion of silex and iron.⁴

**SMYRNA* (*σμίρνα*), Myrrh. "It is not yet well ascertained," says Adams, "what is the nature of the tree which produces the *Myrrh* of the East. Bruce, the Abyssinian traveller, supposed it a species of *Acacia* or *Mimosa*. The ancients describe two kinds of liquid myrrh, under the name of *σάκκη*: the finest is that which runs fluid from the tree without cutting; the other was a fluid myrrh taken out of the midst of the larger pieces of the solid kind."⁵

SOCCUS, *dim.* *SOCCULUS*, was nearly, if not altogether, equivalent in meaning to *ΧΡΕΠΙΔΑ*, and denoted a slipper or low shoe, which did not fit closely, and was not fastened by any tie.⁶ Shoes of this description were worn, more especially among the Greeks, together with the *PALLIUM*, both by men and by women. But those appropriated to the female sex were finer and more ornamented⁷ (*soccus muliebris*), although those worn by men were likewise, in some instances, richly adorned, according to the taste and means of the wearer.⁸ Caligula wore gold and pearls upon his slippers.¹⁰

For the reasons mentioned under the articles *BAXA* and *CREPIDA*, the *soccus* was worn by comic actors,¹ and was in this respect opposed to the *COBURNUS*.² The annexed woodcut is taken from an ancient painting of a buffoon (*MIMUS*), who is

dancing in loose yellow slippers (*luteum soccum*).³ This was one of their most common colours.⁴ (*Vid. SOLEA*.)

SOCIETAS. *Societas* is classed by Gaius⁵ among those obligations which arise consensu. When several persons unite for a common purpose, which is legal, and contribute the necessary means, such a union is *societas*, and the persons are *socii*. The contract of *societas* might either be made in words, or by the acts of the parties, or by the consent of the parties signified through third persons. A *societas* might be formed either for the sake of gain to arise from the dealings and labour of the *socii* (*quæstus*), or not. *Societas* for the purpose of *quæstus* corresponds to the English partnership. A *societas* might be formed which should comprise all the property of the *socii* (*societas omnium bonorum*); in which case, as soon as the *societas* was formed, all the property of all the *socii* immediately became common (*res cœventium continuo communicantur*). But the *societas* might be limited to a part of the property of the *socii* or to a single thing, as the buying and selling of slaves, or to carry on trade in a particular thing in a particular place.⁶ The communion of property in a *societas* might also be limited to the use of the things.

Each *socius* was bound to contribute towards the objects of the *societas* according to the terms of the contract. But it was not necessary that all the *socii* should contribute money; one might supply money, and another might supply labour (*opera*), and the profit might be divisible between them, for the labour of one might be as valuable as the money of the other. In the case of Roscius the actor, Fannius had a slave Panurgus, who, by agreement between Roscius and Fannius, was made their joint property (*communis*). Roscius paid nothing for his one half of the man, but he undertook to instruct him in his art. Apparently they became partners in the man in equal shares, for Cicero complains of the terms of the *societas* on the part of Roscius, whose instruction was worth much more than the price of the slave before he was taught his art.⁷ The agreement between the *socii* might also be, that one *socius* should sustain no loss and should have a share of the gain, provided his labour was so valuable as to render it equitable for him to become a partner on such terms. If the

shares of the *socii* were not fixed by agreement, they were considered to be equal. One partner might have two or more shares, and another might have only one, if their contributions to the *societas* in money or in labour were in these proportions. If the agreement was merely as to the division of profit, it followed that the *socii* must bear the losses in the same proportion. Each *socius* was answerable to the others for his conduct in the management of the business; he was bound to use diligence, and was answerable for any loss through culpa. The action which one *socius* had against another in respect of the contract of partnership was an *actio directa*, and called *pro socio* (*arbitrum pro socio*).¹ The action might be brought for any breach of the agreement of partnership, for an account, and for a dissolution. A partner might transfer his interest to another person, but this transfer did not make that other person a partner, for consent of all parties was essential to a *societas*; in fact, such a transfer was a dissolution of the partnership, and the person to whom the transfer was made might have his *actio de communi dividundo*.

Each *socius* had a right of action in proportion to his interest against any person with whom any of the *socii* had contracted, if the *socii* had commissioned him to make the contract, or had approved of the contract, or if it was an action arising from a delict. Thus, in the case of Roscius and Fannius, they had severally sued a third person in respect of their several claims as partners, and yet Fannius still claimed the half of what Roscius had recovered in respect of his share in the partnership.² In all other cases the person who made the contract could alone sue. All the *socii* could be sued if they had all joined in the contract with a third person, and each in proportion to his share. If one *socius* contracted on behalf of all, being commissioned to do so, all were liable to the full amount. If a *socius* borrowed money, the other *socii* were in no case bound by his contract, unless the money had been brought into the common stock. In fact, the dealings of one partner did not bind the other partners, except in such cases as they would be bound independent of the existence of the *societas*. *Condemnatio* in an *actio pro socio* was sometimes attended with *INFAMIA*.

A *societas* could be ended at the pleasure of any one of the *socii*: any member of the body could give notice of dissolution when he pleased (*renunciare societati*), and therefore the *societas* was dissolved (*solvitur*). But in the case of a *societas omnium bonorum*, if one *socius* had been appointed heres, he could not, by giving notice of dissolution, defraud his copartners of their share of the hereditas. The death of a partner dissolved the *societas*, and a *capitis diminutio* was said to have the same effect. If the property of any one of the *socii* was sold either publicè (*donorum publicatio*) or privatim, the *societas* was dissolved. It was also dissolved when the purpose for which it was formed was accomplished, or the things in which there was a *societas* had ceased to exist.

If, on the dissolution of a partnership, there was no profit, but a loss to sustain, the loss was borne, as already stated, by the *socii* in proportion to their shares. If one man contributed money and another labour, and there was a loss, how was the loss borne? If the money and the labour were considered equivalent, it would seem to follow that, until the partnership property were exhausted by the payment of the debts, there should be no pecuniary contribution by the person who supplied

the labour. This principle is a consequence of what Gaius states, that the capital of one and the labour of another might be considered equal, and the gain might be divided; and if there was a loss, the loss must be divided in the same proportion.

Societates were formed for the purpose of farming the public revenues.¹ (*Vid. PUBLICANI.*)

SO'CII (σώμαχοι). In the early times, when Rome formed equal alliances with any of the surrounding nations, these nations were called *Socii*.² After the dissolution of the Latin league, when the name *Latini*, or *nomen Latinum*, was artificially applied to a great number of Italians, few only of whom were real inhabitants of the old Latin towns, and the majority of whom had been made Latins by the will and the law of Rome, there necessarily arose a difference between these Latins and the *Socii*, and the expression *Socii nomen Latinum* is one of the old asyndeta, instead of *Socii et nomen Latinum*. The Italian allies, again, must be distinguished from foreign allies. Of the latter we shall speak hereafter. The Italian allies consisted, for the most part, of such nations as had either been conquered by the Romans, or had come under their dominion by other circumstances. When such nations formed an alliance with Rome, they generally retained their own laws; or if at first they were not allowed this privilege, they afterward received them back again. The condition of the Italian allies varied, and mainly depended upon the manner in which they had come under the Roman dominion;³ but, in reality, they were always dependant upon Rome. Niebuhr⁴ considered that there were two main conditions of the *Socii*, analogous or equal to those of the provincials, that is, that they were either *federati* or *liberi* (*immunes*).⁵ The former were such as had formed an alliance with Rome, which was sworn to by both parties; the latter were those people to whom the senate had restored their autonomy after they were conquered, such as the Hernican towns.⁶ But the condition of each of these classes must again have been modified according to circumstances. The cases in which Rome had an equal alliance with nations or towns of Italy became gradually fewer in number: alliances of this kind existed indeed for a long time with Tibur, Præneste, Naples, and others,⁷ but these places were nevertheless, in reality, as dependant as the other *Socii*. It was only a few people, such as the Camertes and the Heracleans, that maintained the rights of their equal alliance with Rome down to a very late time.⁸ With these few exceptions, most of the Italians were either *Socii* (in the later sense) or *Latini*. During the latter period of the Republic they had the connubium with Rome,⁹ but not the suffrage of the Latins. It sometimes happened, as in the case of the Macedonian Onesimus, that a foreign individual was honoured by the senate by being registered among the Italian *Socii* (*in sociorum formulam referre*), and in this case the senate provided him with a house and lands in some part of Italy.¹⁰

Although the allies had their own laws, the senate, in cases where it appeared conducive to the general welfare, might command them to submit to any ordinance it might issue, as in the case of the *senatus consultum De Bacchanalibus*.¹¹ Many regulations, also, which were part of the Roman law,

especially such as related to usury, sureties, wills, and innumerable other things,¹ were introduced among the *Socii*, and nominally received by them voluntarily.² The Romans thus gradually united the Italians with themselves, by introducing their own laws among them; but, as they did not grant to them the same civic rights, the *Socii* ultimately demanded them, arms in their hands.

Among the duties which the Italian *Socii* had to perform towards Rome, the following are the principal ones: they had to send subsidies in troops, money, corn, ships, and other things, whenever Rome demanded them.³ The number of troops requisite for completing or increasing the Roman armies was decreed every year by the senate,⁴ and the consuls fixed the amount which each allied nation had to send, in proportion to its population capable of bearing arms, of which each nation was obliged to draw up accurate lists, called *formulae*.⁵ The consul also appointed the place and time at which the troops of the *Socii*, each part under its own leader, had to meet him and his legions.⁶ The infantry of the allies in a consular army was usually equal in numbers to that of the Romans; the cavalry was generally three times the number of the Romans;⁷ but these numerical proportions were not always observed.⁸ The consuls appointed twelve prefects as commanders of the *Socii*, and their power answered to that of the twelve military tribunes in the consular legions.⁹ These prefects, who were probably taken from the allies themselves, and not from the Romans, selected a third of the cavalry, and a fifth of the infantry of the *Socii*, who formed a select detachment for extraordinary cases, and who were called the *extraordinarii*. The remaining body of the *Socii* was then divided into two parts, called the right and left wing.¹⁰ The infantry of the wings was, as usual, divided into cohorts, and the cavalry into turmae. In some cases, also, legion were formed of the *Socii*.¹¹ Pay and clothing were given to the allied troops by the states or towns to which they belonged, and which appointed quaestors or paymasters for this purpose;¹² but Rome furnished them with provisions at the expense of the Republic: the infantry received the same as the Roman infantry, but the cavalry only received two thirds of what was given to the Roman cavalry.¹³ In the distribution of the spoil and of conquered lands, they frequently received the same share as the Romans.¹⁴ The *Socii* were also sometimes sent out as colonists with the Romans.¹⁵ They were never allowed to take up arms of their own accord, and disputes among them were settled by the senate. Notwithstanding all this, the *Socii* fell gradually under the arbitrary rule of the senate and the magistrates of Rome; and after the year B.C. 173, it even became customary for magistrates, when they travelled through Italy, to demand of the authorities of allied towns to pay homage to them, to provide them with a residence, and to furnish them with beasts of burden when they continued their journey.¹⁶ Gellius¹⁷ mentions a number of other vexations which the Roman magistrates inflicted upon the *Socii*, who could not venture to seek any redress against them. The only way for the allies to obtain any protection against such arbitrary proceedings, was to enter into a kind of clientela with

some influential and powerful Roman, as the Samnites were in the clientela of Fabricius Luscinus,¹ and the senate, which was at all times regarded as the chief protector of the Socii, not only recognised such a relation of clientela between Socii and a Roman citizen, but even referred to such patrons cases for decision which otherwise it might have decided itself.² Socii who revolted against Rome were frequently punished with the loss of their freedom, or of the honour of serving in the Roman armies.³ Such punishments, however, varied according to circumstances.

After the civitas had been granted to all the Italians by the lex Julia De Civitate, the relation of the Italian Socii to Rome ceased. But Rome had long before this event applied the name Socii to foreign nations also which were allied with Rome, though the meaning of the word in this case differed from that of the Socii Italici. Livy⁴ distinguishes two principal kinds of alliances with foreign nations: 1. *Fœdus æquum*, such as might be concluded either after a war in which neither party had gained a decisive victory, or with a nation with which Rome had never been at war; 2. a *fœdus iniquum*, when a foreign nation conquered by the Romans was obliged to enter the alliance on any terms proposed by the conquerors. In the latter case the foreign nation was to some extent subject to Rome, and obliged to comply with anything that Rome might demand. But all foreign Socii, whether they had an equal or an unequal alliance, were obliged to send subsidies in troops when Rome demanded them: these troops, however, did not, like those of the Italian Socii, serve in the line, but were employed as light-armed soldiers, and were called *militēs auxiliares*, *auxiliarii*, *auxilia*, or sometimes *auxilia externa*.⁵ Towards the end of the Republic, all the Roman allies, whether they were nations or kings, sank down to the condition of mere subjects or vassals of Rome, whose freedom and independence consisted in nothing but a name.⁶ (Compare *Fœderatæ Civitates*.)

SO'CIO, PRO, ACTIO. (*VID. SOCIETAS*.)

SO'CIIUS. (*VID. SOCIETAS*.)

SODA'LES AUGUSTA'LES. (*VID. AUGUSTALES*.)

SODALI'TIUM. (*VID. AMBITUS*.)

SOLA'RIMUM. (*VID. HOROLOGIUM*, p. 509; *HOUSE, ROMAN*, p. 518.)

SOLEA was the simplest kind of sandal (*vid. SANDALIUM*), consisting of a sole with little more to fasten it to the foot than a strap across the instep.⁷ It was sometimes made of wood,⁸ and worn by rustics (*καλοπέδιλα*⁹), resembling probably the wooden sandals which now form part of the dress of the Capuchins. The solea, as worn by the upper classes, was adapted chiefly for wearing in the house, so that when a man went out to dinner he walked in shoes (*vid. CALCEUS*), taking with him slippers (*vid. SOCCUS*) or soleæ, which he put on when he entered the house. Before reclining at table, these were taken away by a servant¹⁰ (see woodcut, p. 276); consequently, when dinner was over, it was necessary to call for them.¹¹ But, according to the state of the roads or of the weather, the shoes or boots were again put on in order to return home, the soleæ being carried, as before, under the arm.¹² When circumstances were favourable, this change of the

shoes for slippers or soleæ was not considered necessary, the latter being worn in the streets.¹

Solea lignea, soles or shoes of wood, were put on, under the authority of the Roman law, either for the purpose of torture, or perhaps merely to indicate the condition of a criminal, or to prevent his escape.² In domestic life, the sandal, commonly worn by females, was often used to chastise a husband, and to bring him into subjection³ (*solea oburgare rubra*,⁴ *sandalio*⁵).

Iron shoes (*soleæ ferreæ*) were put on the feet of mules;⁶ but instead of this, Nero had his mules shod with silver,⁷ and his empress Poppæa hers with gold.⁸

*SO'LEA, II. (ΒΟΥΓΛΩΣΣΟΣ or -η), the *Pleuronectes Solea*, L., or Sole. "The *Lingulaca* of Festus and Varro is supposed to have been the Sole. By a play on the word, it is called *σάνδαλον* in the curious parody of Matron preserved by Athenæus."⁹

*SOLEN (σωλήν), "the name of a testaceous fish mentioned by Aristotle, Galen, Xenocrates, and Pliny, and called also *αἰλος*, *δυνξ*, and *δόναξ*. According to Rondelet, they are called *Cape longe* by the Italians, *Couteaux* by the French, and *Pivots* by the English. Belon, however, gives them the name of *Piloto*, and Gesner of *Bagfish*. It is difficult to determine what animal they point to. But is there any reason to doubt that the *σωλήν* of the Greeks belonged to the genus *Solen* of modern naturalists?"¹⁰

SOROI (σοροί). (*VID. FUNUS*, p. 456.)

SORTES, Lots. It was a frequent practice among the Italian nations to endeavour to ascertain a knowledge of future events by drawing lots (*sortes*): in many of the ancient Italian temples the will of the gods was consulted in this way, as at Præneste, Cære, &c. (*VID. ORACULUM*, p. 693.) Respecting the meaning of Sors, see Cicero.¹¹

These sortes or lots were usually little tablets or counters of wood or other materials, and were commonly thrown into a stibula or urn filled with water, as is explained under *STIBILLA*. The lots were sometimes thrown like dice.¹² The name of sortes was in fact given to anything used to determine chances,¹³ and was also applied to any verbal response of an oracle.¹⁴ Various things were written upon the lots according to circumstances, as, for instance, the names of the persons using them, &c.: it seems to have been a favourite practice in later times to write the verses of illustrious poets upon little tablets, and to draw them out of the urn like other lots, the verses which a person thus obtained being supposed to be applicable to him: hence we read of *sortes Virgilianæ*, &c.¹⁵ It was also the practice to consult the poets in the same way as the Mohammedans do the Koran and Hafiz, and many Christians the Bible, namely, by opening the book at random, and applying the first passage that struck the eye to a person's own immediate circumstances.¹⁶ This practice was very common among the early

Christians, who substituted the Bible and the Psalter for Homer and Virgil: many councils repeatedly condemned these *sortes sanctorum*, as they were called.¹ The sibylline books were probably also consulted in this way. (*Vid. Sibyllini Libri*.) Those who foretold future events by lots were called *sortilegi*.²

The *sortes conviviales* were tablets sealed up, which were sold at entertainments, and upon being opened or unsealed, entitled the purchaser to things of very unequal value: they were, therefore, a kind of lottery.³

*SPARGANTION (*σπαργάνιον*). "It is clearly," says Adams, "one or other of the well-known *Bur-reeds*; the *Sparganium ramosum* according to Matthioli, or the *simplex* according to Sprengel."⁴

*SPARTUM (*σπάρτον*, *σπάρτιον*, or *σπάρτη*) or SPARTUS (*σπάρτος*), a shrub, a species of broom, out of the young branches and bark of which ropes and nets were made, and the seeds of which were used medicinally; the *Spartium junceum* or *scoparium*.⁵

SPARUS. (*Vid. HASTA*, p. 489.)

SPECULARIA. (*Vid. HOUSE, ROMAN*, p. 521.)

SPECULARIS LAPIS. (*Vid. HOUSE, ROMAN*, p. 521.)

SPECULATORES or EXPLORATORES were scouts or spies sent before an army to reconnoitre the ground and observe the movements of the enemy.⁶ Festus⁷ makes a distinction between these two words, which is not sustained by the usage of the ancient writers. As these speculatores were naturally active men, they were frequently employed by the emperors to convey letters, news, &c.⁸

Under the emperors there was a body of troops called speculatores, who formed part of the prætorian cohorts, and had the especial care of the emperor's person.⁹ They appear to have been so called from their duty of watching over the emperor's safety.¹⁰

SPECULUM (*κάτοπτρον*, *ἐσόπτρον*, *ἐνοπτρον*), a Mirror, a Looking-glass. The use of mirrors is of very high antiquity,¹¹ but they are not mentioned by Homer, even when he describes in so circumstantial a manner the toilet of Juno. In the historical times of Greece they are frequently spoken of,¹² and they were probably known in Greece long before, since every substance capable of receiving a fine polish would answer the purpose of a mirror. Thus basins were employed instead of mirrors,¹³ and also cups, the inside of which was sometimes so disposed that the image of the person who drank from them was seen multiplied.¹⁴

The looking-glasses of the ancients were usually made of metal, at first of a composition of tin and copper, but afterward more frequently of silver.¹⁵ Pliny says that silver mirrors were first made by Praxiteles in the time of Pompey the Great, but they are mentioned as early as that of Plantus.¹⁶ Under the Empire the use of silver mirrors was so common, that they began to be used even by maid-servants:¹⁷ they are constantly mentioned in the Digest when silver plate is spoken of.¹⁸ At first they were made of the purest silver, but metal of an inferior quality was afterward employed.¹⁹ Frequent-

ly, too, the polished silver plate was no doubt very slight; but the excellence of the mirror very much depended on the thickness of the plate, since the reflection was stronger in proportion as the plate was thicker.¹ We find gold mirrors mentioned once or twice by ancient writers;² but it is not impossible, as Beckmann has remarked, that the term golden rather refers to the frame or ornaments than to the mirror itself, as we speak of a gold watch, though the cases only may be of that metal.

Besides metals, the ancients also formed stones into mirrors; but these are mentioned so seldom that we may conclude they were intended for ornament rather than for use. Pliny³ mentions the obsidian stone, or, as it is now called, the Icelandic agate, as particularly suitable for this purpose. Domitian is said to have had a gallery lined with *phengites*, which, by its reflection, showed everything that was done behind his back,⁴ by which Beckmann understands a calcareous or gypseous spar or selenite, which is indeed capable of reflecting an image; but we cannot therefore conclude that the ancients formed mirrors of it. Mirrors were also made of rubies, according to Pliny,⁵ who refers to Theophrastus for his authority; but he seems to have misunderstood the passage of Theophrastus,⁶ and this stone is never found now sufficiently large to enable it to be made into a mirror. The emerald, it appears, also served Nero for a mirror.⁷

The ancients seem to have had glass mirrors also like ours, which consist of a glass plate covered at the back with a thin leaf of metal. They were manufactured as early as the time of Pliny at the celebrated glass-houses of Sidon,⁸ but they must have been inferior to those of metal, since they never came into general use, and are never mentioned by ancient writers among costly pieces of furniture, whereas metal mirrors frequently are. Pliny seems to allude to them in another passage,⁹ where he speaks of gold being applied behind a mirror, which we can understand, if we admit that Pliny was acquainted with glass mirrors.

Of mirrors made of a mixture of copper and tin, the best were manufactured at Brundisium.¹⁰ This mixture produces a white metal, which, unless preserved with great care, soon becomes so dim that it cannot be used until it has been previously cleaned and polished. For this reason, a sponge with pounded pumice-stone was generally fastened to the ancient mirrors.¹¹

1. (Vitruv., vii, 3, p. 204, ed. Bip.)—2. (Eurip., Hec., 925.—Senec. Quest. Nat., i, 17.—Elian, V. H., xii, 56.)—3. (xxxvi, 26, s. 67.)—4. (Suet., Dom., 14.)—5. (xxxvii, 7, s. 25.)—6. (De Lapid., 61.)—7. (Plin., H. N., xxvii, 5, s. 16.—Isid., Orig. xvi, 7.)—8. (Plin., H. N., xxxvi, 26, s. 60.)—9. (xxxiii, 9, s. 48.—10. (Id. ib., l. c.; xxxiv, 17, s. 48.)—11. (Plat., Tim., p. 72, c.—Vossius ad Catull., p. 97.)

Looking-glasses were generally small, and such as could be carried in the hand. Most of those which are preserved in our museums are of this kind; they usually have a handle, and are of a round or oval shape. Their general form is shown in the preceding woodcut.¹

Instead of their being fixed so as to be hung against the wall, or to stand upon the table or floor, they were generally held by female slaves before their mistresses when dressing,² which office was also performed sometimes by the lover, when admitted to the toilet of his mistress.³ On ancient vases we sometimes find female slaves represented holding up mirrors to their mistresses.⁴

Looking-glasses, however, were also made of the length of a person's body (*specula totis paria corporibus*⁵), of which kind the mirror of Demosthenes must have been.⁶ They were fastened to the walls sometimes (*speculum parieti affixum*⁷), though not generally. Suetonius, in his life of Horace, speaks of an apartment belonging to that poet which was lined with mirrors (*speculatum cubiculum*), which expression, however, Lessing considers as contrary to the Latin idiom, and therefore regards the whole passage as a forgery. That there were, however, rooms ornamented in this way, is probable from Claudian's description of the chamber of Venus, which was covered over with mirrors, so that whichever way her eyes turned she could see her own image.⁸ We frequently find the mirror mentioned in connexion with Venus,⁹ but Minerva was supposed to make no use of it.¹⁰

SPEIRON (σπειρον). (Vid. PALIUM, p. 720.)

SPHÆRISIS (σφαίρισις). (Vid. GYMNASIUM, p. 483.)

SPHÆRISTERIUM. (Vid. BATHS, p. 153; GYMNASIUM, p. 483.)

*SPHACELOS (σπάκελος), the *Salvia hortensis*, or common Sage.¹¹

*SPHENDAMNOS (σφένδαμνος), a species of Maple. Sprengel hesitates between the *Acer Pseudo-platanus* and the *Creticum*; Stackhouse between the former and the *A. campestris*. The γλειῖνος and ζυγία are varieties or synonyms of it.¹²

SPHENDONETÆ (σφενδονῆται). (Vid. FUNDA.)

*SPHEX (σφήξ), a term applied to the *Vespa vulgaris*, or common Wasp, but sometimes misapplied to the *Vespa crabro*, or Hornet.¹³

SPHRAGIS (σφραγίς). (Vid. RINGS, p. 839.)

*SPHYRÆNA (σφύραινα), a species of fish somewhat larger than the pike, and found only in the Mediterranean. "It is the *Esox Sphyræna*, L., or *Sphyræna*, Lacepede. In Italian, *Lazzo marino*; in French, *Spet*. The κέστρος of Athenæus is the same as the σφύραινα. Oppian mentions two species, the former of which is the one just described. Rondelet calls the other *Sphyræna parva*; in French, *Hautin*."¹⁴

SPHYRELATON (σφυρήλατον). (Vid. BRONZE, p. 177.)

SPICULUM. (Vid. HASTA, p. 489.)

*SPINA (ἄκανθα), the Thorn. (Vid. ACANTHA.)

SPINTER or SPINTHER. (Vid. ARMILLA, p. 96.)

SPIRA, *dim.* SPIRULA,¹ the base of a column.

This member did not exist in the Doric order of Greek architecture (*vid.* COLUMNA), but was always present in the Ionic and Corinthian, as well as in the Attic (*vid.* ATTICUSSES), which may be regarded as a variety of the Ionic. The term occurs frequently in Vitruvius² and in Pliny.³ They adopted it from the writings of Greek architects, whose works have perished. It is, in fact, the Greek term σπείρα, which was applied to this member of a column,⁴ probably on account of its resemblance to a coil of rope. In ancient Greek inscriptions, σπείρα denotes the base both of Ionic and Corinthian pillars, being applied to those of the temples of Minerva Polias at Athens,⁵ and of Jupiter at Labranda.⁶

In the Tuscan and the Roman Doric the base consisted of a single torus,⁷ sometimes surmounted by an astragal. In the Ionic and Attic it commonly consisted of two tori (*torus superior* and *torus inferior*) divided by a scotia (τρίχλος), and in the Corinthian of two tori divided by two scotias. The upper torus was often fluted (ραβδόστος), and surmounted by an astragal (*vid.* ASTRAGALUS), as in the left-hand figure of the annexed woodcut, which shows the form of the base in the Ionic or Attic temple of Panops on the Ilissus. The right-hand figure in the same woodcut shows the corresponding part in the Temple of Minerva Polias at Athens. In this the upper torus is wrought with a platted ornament, perhaps designed to represent a rope or cable. In these two temples the spira rests, not

upon a plinth (*plinthus*, πλίνθος), but on a podium. In Ionic buildings of a later date it rests on a square plinth, corresponding in its dimensions with the ABACUS.

SPITHAME (σπιθαμή). (Vid. PES, p. 763.)

*SPIZA (σπίζα), a species of bird, "generally held to be the Chaffinch, to which Rennie has given the scientific name of *Fringilla Spiza*, instead of the misnomer given to it by Linnæus, namely, *Fringilla cælebs*. I cannot help thinking it doubtful, however, whether the σπίζα of Aristotle be the chaffinch, seeing he compares the missel-thrush to the σπίζα, and it is well known that the former is much larger than the chaffinch."¹⁸

*SPODIAS (σποδίας). According to Sprengel, the *Prunus insititia*, or Bullace-tree.¹⁹

SPOILIA. Four words are commonly employed to denote booty taken in war, *Præda*, *Manubia*, *Exuvie*, *Spolia*. Of these, *præda* bears the most comprehensive meaning, being used for plunder of every description. (*Vid.* POSTLIMINIUM.) *Manubia* would seem strictly to signify that portion of the spoil which fell to the share of the commander-in-chief,¹⁹

the proceeds of which were frequently applied to the erection of some public building.¹ Aulus Gellius,² indeed, endeavours to prove that we must understand by *manubiae* the money which the *quæstor* realized from the sale of those objects which constituted *præda*; but the following passage, adduced by himself in a garbled form (for he omits the words printed in roman), when quoted fairly, is sufficient to confute his views: "Aurum, argentum, ex *præda*, ex *manubiis*, ex *coronario*, ad quoscunque pervenit."³ The term *Exuviae* indicates anything stripped from the person of a foe, while *Spolia*, properly speaking, ought to be confined to armour and weapons, although both words are applied loosely to trophies, such as chariots, standards, beaks of ships, and the like, which might be preserved and displayed.⁴

In the heroic ages, no victory was considered complete unless the conquerors could succeed in stripping the bodies of the slain, the spoils thus obtained being viewed (like scalps among the North American Indians) as the only unquestionable evidence of successful valour; and we find in Homer, that when two champions came forward to contend in single combat, the manner in which the body and arms of the vanquished were to be disposed of formed the subject of a regular compact between the parties.⁵ Among the Romans, spoils taken in battle were considered the most honourable of all distinctions; to have twice stripped an enemy, in ancient times, entitled the soldier to promotion;⁶ and during the second Punic war, Fabius, when filling up the numerous vacancies in the senate, caused by the slaughter at Cannæ and by other disastrous defeats, after having selected such as had borne some of the great offices of state, named those next "*qui spolia ex hoste fixa domi haberent, aut civicam coronam accepissent*."⁷ Spoils collected on the battle-field after an engagement, or found in a captured town, were employed to decorate the temples of the gods, triumphal arches, porticoes, and other places of public resort, and sometimes, in the hour of extreme need, served to arm the people;⁸ but those which were gained by individual prowess were considered the undoubted property of the successful combatant, and were exhibited in the most conspicuous part of his dwelling,⁹ being hung up in the atrium, suspended from the door-posts, or arranged in the vestibulum, with appropriate inscriptions.¹⁰ They were regarded as peculiarly sacred, so that, even if the house was sold, the new possessor was not permitted to remove them.¹¹ A remarkable instance of this occurred in the "*rostrata domus*" of Pompey, which was decorated with the beaks of ships captured in his war against the pirates; this house passed into the hands of Antonius the triumvir,¹² and was eventually inherited by the Emperor Gordian, in whose time it appears to have still retained its ancient ornaments.¹³ But while, on the one hand, it was unlawful to remove spoils, so it was forbidden to *replace* or *repair* them when they had fallen down or become decayed through age,¹⁴ the object of this regulation being, doubtless, to guard against the frauds of false pretenders.

Of all spoils, the most important were the *spolia*

opima, a term applied to those only which the commander-in-chief of a Roman army stripped in a field of battle from the leader of the foe.¹ Festus² gives the same definition as Livy, but adds, "*M. Varro ait opima spolia esse [etiam] si manipularis miles detraxerit dummodo duci hostium*," a statement, if correctly quoted, directly at variance with the opinion generally received and acted upon. Thus, when M. Crassus, in the fifth consulship of Octavianus (B.C. 29), slew Deldo, king of the Bastarnæ, he was not considered to have gained *spolia opima*, because acting under the auspices of another;³ and Plutarch⁴ expressly asserts that Roman history up to his own time afforded but three examples. The first were said to have been won by Romulus from Acro, king of the Cæninenses; the second by Aulus Cornelius Cossus from Lar Tolumnius, king of the Veientes; the third by M. Claudius Marcellus from Viridomarus (or Βιριδομαρος, as he is called by Plutarch), king of the Gætææ. In all these cases, in accordance with the original institution, the spoils were dedicated to Jupiter Feretrianus. The honours of *spolia opima* were voted to Julius Cæsar during his fifth consulship (B.C. 44, the year of his death), but it was not even pretended that he had any legitimate claim to this distinction.⁵ (The question with regard to the true definition of *spolia opima* is discussed with great learning by Perizonius.⁶)

SPONDA. (*Vid. LECTUS*, p. 573.)

SPONDEO. (*Vid. OBLIGATIONES*, p. 672.)

*SPONDYLE or SPHONDYLE (σπονδύλη or σφονδύλη), "an insect noticed by Aristotle and Theophrastus, and about which there has been much diversity of opinion. Some suppose it the *Gryllotalpa*; some the larva of the *Scarabæus melolontha*; and others a species of *Blatta*. Stackhouse offers another conjecture, that it is the *Julus*, L."¹

*SPONDYLUS (σπώνδυλος), a small species of oyster, mentioned by Aelian and Pliny; probably the Prickly Oyster, a species of the genus *Spondylus*.

*SPONGIA. (*Vid. PAINTING*, p. 704.)

*II. SPONGIA (σπογγία), Sponge, or *Spongia officinalis*. "The animal nature of the sponge is distinctly and repeatedly indicated by Aristotle. Of the three kinds, the *μύνος*, the *πόκκος*, and the *Ἀχιλλεῖος*, it is difficult to specify exactly the last two; but the first may be confidently pronounced to be the *Spongia officinalis*." Dr. Vincent derives the term "sponge," through the Greek, from the Arabic *suffange* (s'funge, s'phunge, sponge).⁹

SPONSA, SPONSUS. (*Vid. MARRIAGE, ROMAN*, p. 623.)

SPONSALIA. (*Vid. MARRIAGE, ROMAN*, p. 623.)

SPONSOR. (*Vid. INTERCESSIO*, p. 541.)

SPORTULA. In the days of Roman freedom, clients were in the habit of testifying respect for their patron by thronging his atrium at an early hour, and escorting him to places of public resort when he went abroad. As an acknowledgment of their courtesies, some of the number were usually invited to partake of the evening meal. After the extinction of liberty, the presence of such guests, who had now lost all political importance, was soon regarded as an irksome restraint, while, at the same time, many of the noble and wealthy were unwilling to sacrifice the pompous display of a numerous body of retainers. Hence the practice was introduced, under the Empire, of bestowing on each client, when he presented himself for his morning visit, a certain portion of food as a substitute and compensation

or the occasional invitation to a regular supper (*cæna recta*); and this dole, being carried off in a little basket provided for the purpose, received the name of *sportula*. Hence, also, it is termed by Greek writers on Roman affairs *δείπνον ἀπὸ σπυρίδος*, which, however, must not be confounded with the *δείπνον ἀπὸ σπυρίδος* of earlier authors, which was a sort of picnic.¹ For the sake of convenience, it soon became common to give an equivalent in money, the sum established by general usage being a hundred quadrantes.² Martial, indeed, often speaks of this as a shabby pittance (*centum miselli quadrantes*), which, however, he did not scorn himself to accept,⁴ but, at the same time, does not fail to sneer at an upstart who endeavoured to distinguish himself by a largess to a greater amount on his birthday.⁵ The donation in money, however, did not entirely supersede the *sportula* given in kind; for we find in Juvenal a lively description of a great man's vestibule crowded with dependants, each attended by a slave bearing a portable kitchen to receive the viands, and keep them hot while they were carried home.⁶ If the sketches of the sstirist are not too highly coloured, we must conclude that in his time great numbers of the lower orders derived their whole sustenance, and the funds for ordinary expenditure, exclusively from this source, while even the highborn did not scruple to increase their incomes by taking advantage of the ostentatious profusion of the rich and vain.⁷ A regular roll was kept at each mansion of the persons, male and female, entitled to receive the allowance; the names were called over in order, the individuals were required to appear in person, and the almoner was ever on his guard to frustrate the roguery of false pretenders,⁸ whence the proverb quoted by Tertullian,⁹ "*sportulum furunculus capiat*." The morning, as we have seen above,¹⁰ was the usual period for these distributions, but they were sometimes made in the afternoon.¹¹

Nero, imitating the custom of private persons, ordained that a *sportula* should be substituted for the public banquets (*publicæ cænæ*) given to the people on certain high solemnities; but this unpopular regulation was repealed by Domitian.¹²

When the Emperor Claudius, on one occasion, resolved unexpectedly to entertain the populace with some games which were to last for a short time only, he styled the exhibition a *sportula*; and in the age of the younger Pliny, the word was commonly employed to signify a gratuity, gift, or emolument of any description.¹³

(Compare a dissertation on the *sportula* by Buttmann, in the *Kritische Bibliothek* for 1821.—*Vid.* also Becker, *Gallus*, i., p. 147.)

STABULARIUS. (*Vid.* RECEPTA ACTIO.)

*STACTE (στάκτη). (*Vid.* SMYRNA.)

STADIUM (ὁ στάδιος and τὸ στάδιον). 1. A Greek measure of length, and the chief one used for itinerary distances. It was adopted by the Romans, also, chiefly for nautical and astronomical measurements. It was equal to 600 Greek or 625 Roman feet, or to 125 Roman paces; and the Roman mile contained 8 stadia.¹⁴ Hence the stadium contained 606 feet 9 inches English. (*Vid.* PES.) This standard prevailed throughout Greece under the name of the Olympic stadium, so called because it was the exact length of the stadium or footrace-course at Olympia, measured between the pillars at the two extremities of the course. The first use of the

measure seems to be contemporaneous with the formation of the stadium at Olympia, when the Olympic games were revived by Iphitus (B. C. 884 or 828). This distance doubled formed the *διὰλος*, the *ἵππικόν* was 4 stadia, and the *δολιχός* is differently stated at 6, 7, 8, 12, 20, and 24 stadia.

It has been supposed by some authors that there were other stadia in use in Greece besides the Olympic. The most ancient writers never either say or hint at such a thing; but when we compare the distances between places, as stated by them in stadia, with the real distances, they are found almost invariably too great if estimated by the Olympic stadium, never too small. Hence the conclusion has been drawn, that the Greeks used for itinerary measurements a stade much smaller than the Olympic. Major Rennell, who analyzes several of these statements, gives 505½ feet for the value of the itinerary stade.¹ It is, however, scarcely credible, that these authors, some of whom expressly inform us that the stade contained 600 feet, should reckon distances by another stade without giving any intimation of the fact, especially as they usually warn their readers when they speak of measures differing from the common standard.² The real cause of the excess in the itinerary distances of the Greeks is explained by Ukert in a way which seems decisive of the question.³ The most ancient mode of reckoning distances among the Greeks, as among most other nations, was by the number of days required to perform the journey. When the stadium was brought into use, the distances were still computed by days' journeys, but transferred into stadia by reckoning a certain number of stadia to a day's journey.⁴ It is evident that nearly all the distances given by the ancient Greek writers were *computed*, not *measured*. The uncertainties attending this mode of computation are obvious; and it is equally obvious that, as a general rule, the results would be above the truth. At sea the calculation was made according to the number of stadia which could be sailed over in a day by a good ship, in good order, and with a fair wind. Any failure in these conditions (and some such there must always have been) would increase the number of days' sail, and therefore the calculated distance when reduced to stadia. Similarly by land a day's journey was reckoned equal to the number of stadia which a good traveller (*ἀνὴρ εὖζωγος*) could perform in a day, which, for obvious reasons, would generally exceed the space passed over under ordinary circumstances. Even the Greeks themselves are not agreed as to the number of stadia in a day's journey. Herodotus⁵ gives 700 stadia for the voyage of a sailing ship by day, 600 by night. Most commonly 1000 stadia were reckoned as a 24 hours' voyage, but under unfavourable circumstances scarcely 500 were performed.⁶ Allowance must also be made for the windings of the coast, the difficulties of the navigation, the currents of the sea, the skilfulness of the seamen, and other circumstances.

A day's journey by land was reckoned at 200 or 180 stadia,⁷ or for an army 150 stadia.⁸ And here also delays would often occur. The ancients themselves differ widely in their accounts of distances, not only as compared with the true distances, but with one another, a fact which the theory of a separate itinerary stade cannot account for, but which is a natural result of their mode of reckoning, as explained above.

port of the view of different stadia. Censorinus, who lived in the time of Alexander Severus, after speaking of the astronomical measurements of Eratosthenes and Pythagoras, says that by the stadium used in them we must understand "the stadium which is called Italic, of 625 feet, for there are others besides this, of different lengths, as the Olympic, which consists of 600 feet, and the Pythian, of 1000."¹ This passage is evidently a complication of blunders. The "Italic stadium," unknown elsewhere, is manifestly the same as the Olympic, but reckoned in Roman feet, of which it contained 625. The "Olympic, of 600 feet," is the same in Greek feet. The value given for the Pythian stadium is clearly wrong, for the Olympic racecourse was the longest in Greece (as appears from the passage of Gellius quoted below), and, besides, Censorinus obviously confounds the racecourses named stadia with the measure of the same name; for it is not disputed that the former were of different lengths, though the latter never varied.

Aulus Gellius² quotes from Plutarch to the effect that Hercules measured out the stadium at Olympia with his own feet, making it 600 feet long; and that, when afterward other stadia were established in Greece containing the same number of feet, these were shorter than the Olympic in the proportion by which the foot of Hercules exceeded that of other men. But whatever there is of fact in this story obviously refers to the courses themselves, not the measure; for what he speaks of is "*curriculum stadii*." The statement that the other stadia, besides the Olympic, were originally 600 feet long, is probably a conjecture of Plutarch's.

Attempts have been made, especially by Romé de l'Isle and Gosselin, to prove the existence and to determine the lengths of different stadia from the different lengths assigned by ancient writers to a great circle of the earth. But surely it is far more reasonable to take these different values as a proof (among others) that the ancients did not know the real length of a great circle, than, first assuming that they had such knowledge, to explain them as referring to different standards.

On the whole, therefore, there seems no reason to suppose that different stadia existed before the third century of the Christian era.

From this period, however, we do find varieties of the stade, the chief of which are those of 7 and $7\frac{1}{2}$ to the Roman mile.³

The following table of supposed varieties of the stadium is from Hussey's *Ancient Weights, &c.*:

	Yards.	Feet.	Inches.
Stade assigned to Aristotle's measurement of the earth's surface	109	1	2-26992
Mean geographical stade computed by Major Rennell	168	1	6
Olympic stade	202	0	9
Stade of $7\frac{1}{2}$ to the Roman mile	215	2	2-4
Stade of 7 to the Roman mile	231	0	5-124

2. It has been mentioned above that the Olympic footrace-course was called a *stadium*, and the same name was used throughout Greece wherever games were celebrated. It was originally intended for the footrace, but the other contests which were added to the games from time to time (*vid. OLYMPIC GAMES*) were also exhibited in the stadium, except the horse-races, for which a place was set apart, of a similar form with the stadium, but larger: this was called the hippodrome (*ἵπποδρόμος*).

The stadium was an oblong area terminated at one end by a straight line, at the other by a semi-

circle having the breadth of the stadium on its base. Round this area were ranges of seats rising above one another in steps.

It was constructed in three different ways, according to the nature of the ground. The simplest form was that in which a place could be found which had by nature the required shape, as at Laodicea. Most commonly, however, a position was chosen on the side of a hill, and the stadium was formed on one side by a natural slope, on the other by a mound of earth (*γῆς χάμα*), as at Olympia, Thebes, and Epidaurus.¹ Sometimes, however, the stadium was on level ground, and mounds of earth were cast up round it to form seats, and covered with stone or marble. We have two celebrated examples of this construction in the Pythian stadium at Delphi and the Panathenaic at Athens. The former was originally constructed of Parian stone, and afterward covered with Pentelic marble by Herodes Atticus,² who adorned in the same manner the stadium at Athens, which had been originally constructed on the banks of the Ilissus by the orator Lycurgus. The marble covering, which took four years to complete, has now disappeared, but the area is still left, with some ruins of the masonry.³

The stadium sometimes formed a part of the buildings of the gymnasium (*vid. GYMNASIUM*), at other times it was placed in its neighbourhood, and often, as at Athens, stood entirely by itself. That at Olympia was in the sacred grove called *Altis*.

The size of the stadium varied both in length and breadth. The general length was, as above stated, the geographical stadium of 600 Greek feet. This was not, however, the total length, but only the distance between the pillars at the two ends, and it was exclusive of the semicircular end of the area.

The accounts left by ancient writers of the arrangement of the parts of the stadium are scanty, but, from a comparison of them with existing remains of stadia, we may collect the following particulars.

At one end a straight wall shut in the area, and here were the entrances, the starting-place for the runners, and (at Olympia) an altar of Endymion. At the other end, at or near the centre of the semicircle, and at the distance of a stadium from the starting-place, was the goal, which was the termination of the simple footrace, the runners in which were called *σταδιοδρόμοι*: the race itself is called *στάδιον* and *δρόμος*. In the *διανυλος δρόμος* the racers turned round this and came back to the starting-place. The starting-place and goal had various names. The former was called *ἀφῆσις*, *γραμμή*, *ὕσπληξ*, and *βαλλίς*: the latter, *τέρμα*, *βατήρ*, *τέλος*, *καμπτήρ*, and *νύσσα*. The term *γραμμή* is explained as the line along which the racers were placed before starting; *ὕσπληξ*, which means the *lash of a whip*, is supposed to have been a cord which was stretched in front of the racers to restrain their impatience, and which was let fall when the signal was given to start; the name *καμπτήρ* was applied to the goal because the runners in the *διανυλος* and *δολιχος* turned round it to complete their course. These terms are often applied indifferently to the starting-place and the goal, probably because the starting-place was also the end of all races except the simple *στάδιον*. The starting-place and goal were each marked by a square pillar (*σῆλαι*, *κίονες κυβοειδεῖς*), and half way between these was a third. On the first was inscribed the word *ἀρίστευε*, on the second *σπῦδε*, and on the third *κάμψον*. The *δολιχοδρόμοι* turned round both the extreme pillars till

1. (De De Natali, c. 13.)—2. (i., 1.)—3. (Wurm, De Pond., &c. § 58.)

1. (Pausan., ii., 27, § 6; vi., 20, § 5, 6; ix., 23, § 1.)—2. (Id x., 32, § 1.)—3. (Id., i., 19, § 7.—Leake's Topog. of Athens.)

they had completed the number of stadia of which their course consisted.¹

The semicircular end of the area, which was called *σφενδονή*, and was not used in the races, was probably devoted to the other athletic sports. This *σφενδονή* is still clearly seen in the Ephesian and Messenian stadia, in the latter of which it is surrounded by 16 rows of seats. The area of the stadium was surrounded by the seats for spectators, which were separated from it by a low wall or podium.

Opposite to the goal on one side of the stadium were the seats of the hellanodica, for whom there was a secret entrance into the stadium (*κρυπτή ἔσοδος*), and on the other side was an altar of white marble, on which the priestesses of Demeter Chamyne sat to view the games. The area was generally adorned with altars and statues.

Such was the general form and arrangement of the Greek stadium. After the Roman conquest of Greece, the form of the stadium was often modified so as to resemble the amphitheatre, by making both its ends semicircular, and by surrounding it with seats supported by vaulted masonry, as in the Roman amphitheatre. The Ephesian stadium still has such seats round a portion of it. A restoration of this stadium is given in the following woodcut, copied from Krause.

A is the boundary wall at the aphasis, 77 feet deep, B C the sides, and D the semicircular end, of the same depth as A; F F the area, including the *σφενδονή*; b b pieces of masonry jutting out into the area; e e the entrances; from o to P is the

length of an Olympic stadium; from q—z the rang of amphitheatrical seats mentioned above.¹ (Vid OLYMPIC GAMES.)

STALA'GMIA. (Vid. INAURIS, p. 533.)

*STANNUM, the same with the *Plumbum album* of the Romans or *κασσίτερος* of the Greeks, the "Pyramidal Tin Ore" of Jameson, or Oxyde of Tin. "The Phœnicians, at a very early period, were acquainted with the tin ores of Cornwall. The Jews had vessels of tin as early as the days of Moses. On the *κασσίτερος* of the Greeks, the reader is referred to Beckmann's *History of Inventions*, vol. iv., p. 1, &c. Heeren says of this work, 'it is there first shown that the Latin *stannum* may be different from the *κασσίτερος*. The former is what, in the German smelting-houses, is called *werk*, the latter is the *Plumbum album* of the Romans.'" "Lead and tin," observes Dr. Moore, "are metals which we have the best reason for treating under the same head, since the ancients frequently confounded them; and, however strange may appear such confusion in regard to metals so plainly distinguished by their properties as these, their names, nevertheless, in Hebrew, Arabic, Greek, and Latin, are often indifferently used. The Greeks, when they would distinguish the two metals, called tin *κασσίτερος*, and lead *μόλυβδος*; but as the French at the present day call pewter *étain*, and confound it with pure tin, so did the Greeks comprehend under the name *κασσίτερος* various alloys of tin with lead or other metal; and some such Homer is supposed to mean when he speaks of tin (*κασσίτερος*), used in the fabrication or ornament of various parts of armour. The Romans distinguished lead (*Plumbum*) into black and white. The latter (*Plumbum album*) was the more precious, Pliny says, being what the Greeks called *κασσίτερος*. *Plumbum album* is sometimes called *stannum*, while on other occasions the latter is spoken of as something different, in which case it may have been an alloy of tin and lead, or, as Beckmann thinks, of silver and lead; or it may have been designated by a different name merely because obtained from a different place, from an ore of different appearance, or by some different process; since any one of these, we know, was anciently sufficient ground of distinction between substances that were identical. If any reliance could be placed on Pliny's accuracy in a matter of this kind, we might infer, from what he says of the mode in which *stannum* was obtained, that the ancients were acquainted with an argentiferous galena containing also tin. Beckmann, however, in his examination of this passage, says that lead is seldom found without, but that tin, perhaps, has never been found with, silver. He admits that the passage in question cannot be fully understood with any explanation, yet he thinks it proves to conviction that the *stannum* of the ancients was not tin, but a mixture of silver and lead, called in the German smelting-houses *werk*. It is from *stannum*, however, that are derived the names *étain* and *tin*. He supposes the oldest *κασσίτερος* to have been nothing else than the *stannum* of the Romans. Aristotle, however, relating a phenomenon applicable to tin, calls the metal *τὸν κασσίτερον τὸν Κελτικόν*."²

STATĒR (*στατήρ*), which means simply a *standard* (in this case both of weight and more particularly of money), was the name of the principal gold coin of Greece, which was also called *chrysus* (*χρυσός*). The general subject of Greek gold money

1. (Krause, *Die Gymnastik und Agonistik der Hellenen*, p. 131, § 14.—Müller's *Archæol. der Kunst*, § 290.)—2. (Dioscor., v., 96.—Pliny, xxiv., 47.—Isid., Orig., xvi., 21.—Numbers, xxxi., 22.—Heeren's *Hist. Researches*, vol. vi., p. 187.—Adams, *Append.*, s. v.—Moore's *Ancient Mineralogy*, p. 44, 45.)

has been discussed under *AURUM*, where it is stated that the Greeks obtained their principal supply of gold from Asia. To the same quarter we must look for the origin of their gold money. The daricus, which came to them from Persia, has been already treated of. (*Vid.* *DARICUS*.) The stater is said to have been first coined in Lydia by Cræsus. To this country, indeed, one tradition ascribes the origin both of gold and silver money;¹ but, be this as it may, the stater of Cræsus was the first gold coinage with which the Greeks were acquainted.² Böckh³ asserts that these staters were undoubtedly formed of the pale gold or electrum which was washed down from Tmolus by the Pactolus, and which Sophocles speaks of as Sardin electrum.⁴ Electrum, according to Pliny,⁵ was gold containing a mixture of $\frac{1}{3}$ th part of silver. There is in the Hunterian collection (plate 66, fig. 1) a very ancient coin of this pale gold, of an oval, ball-like shape, impressed with the figure of a man kneeling, holding a fish in his left hand, and in his right a knife hanging down, which Pinkerton takes for a coin of Cræsus, but respecting which nothing more can be said with safety than that it is a very ancient specimen of Asiatic money. Its weight is $248\frac{1}{2}$ English grains, or about that of the Attic tetradrachm, which was twice the weight of the stater. This, therefore, would be a double stater.⁶ At all events, in the absence of certain specimens of the Lydian stater, and of any express statement of its value, we may suppose, from the very silence of the Greek writers, that it did not differ materially from the stater which was afterward current in Greece, and which was equal in weight to two drachmæ, and in value to twenty.⁷

MACEDONIAN STATER. BRITISH MUSEUM.

The following were the principal Greek staters :
1. The Attic stater, which has been spoken of under *AURUM*. The weights of the coins there mentioned are 132.3, 132.7, 132.6, and 132.75 grains, the average of which is 132.5875 grains, which only falls short of the weight of the Attic didrachm by a little more than half a grain. (*Vid.* *DRACHMA*.) The gold of the Attic coins is remarkably pure.

2. The stater of Cyzicus was common in Greece, especially at Athens. We learn from Demosthenes⁸ that at a particular period (a little after B.C. 335) this stater passed on the Bosphorus for 28 Attic drachmæ, which, by a comparison with the then value of the daricus (*vid.* *DARICUS*), would give for its weight about 180 grains. Several Cyzicene staters exist, but none of them come up to this weight. Hence we may conclude that the price of gold on the Bosphorus was at that time unusually high. Some of the existing coins give 160 grains, and others not more than 120, for the weight of the Cyzicene stater, so that the element of this coinage seems to have been a piece of 40 grains. Its value, calculated from the number of drachmæ it passed for, would be 12.2s. 9d.

3. The stater of Lampsacus is mentioned in an Attic inscription of B.C. 434. Several gold coins of Lampsacus are extant: they may be known by

the impression of a seahorse upon them. There are two in the British Museum, of the weight of about 129 grains, which is just that of the daricus. The weights of the Lampsacene staters are very unequal; and both Lampsacus and Cyzicus appear to have had gold coins which were multiples of different standards.

4. The stater of Phocæa is mentioned by Thucydides¹ and Demosthenes² as in circulation in their times. Sestini gives several of these, the largest of which, stamped with a Φ , weighs 255.42 English grains. This is a double stater, giving a single one of 127.71 grains, or 5 grains less than the Attic, and seems to follow the standard of the daricus. Most of the others are thirds of the stater, and of a lighter comparative weight. There was also at Athens a Phocæan coin called *ἐκτρη*,³ which may have been either the sixth of the stater or (Mr. Hussey conjectures) of the mina. Hesychiuss⁴ mentions the *ἐκτρη*, *τρίτρη*, and *τετάρτη* as coins of gold, or silver, or copper. There was a gold coin (of what state we are not told) called *ἡμικτρον*, which was worth eight silver obols.⁵ This stood in the same relation to the stater as the obol to the didrachm, namely, one twelfth, and was, therefore probably equal to the obol in weight. Its low value (giving the proportional worth of gold to silver as 8 to 1) may be accounted for by supposing that it was, like the Phocæan coins, of a light standard, or that the gold in it was not very pure.

5. The stater of Macedonia was coined by Philip II. and Alexander the Great after the standard of the Attic didrachm, and of very fine gold. Under those princes it came into general circulation in Greece and throughout the Macedonian empire. The extant specimens of this coinage are very numerous.

Mr. Hussey gives the following report of an assay which was made for him of a stater of Alexander :

Gold,	11 oz. 9 dwts. 6 grs.
Silver,	18 "
Alloy,	0

The silver is an accidental admixture, or, if known to be present, was not allowed for, so that this coin may be reckoned at 133 grains of fine gold. Our sovereign, after deducting the alloy, contains 113.12 grains of fine gold. Therefore the Macedonian stater = $\frac{133}{113.12}$ of the English sovereign, or 1*l.* 3*s.* 6*d.*

0.672 farthing. The average is, however, a little below this stater, but not more so than is due to wear. The stater of Philip was very recently current in Greece at the value of about 25 shillings. This standard was preserved, or very nearly so, under the later Macedonian kings, and was adopted by other states, as Epirus, Ætolia, Acarnania, and Syracuse.

Besides the staters noticed above, most of the cities of Ionia had gold coins, but their value is very doubtful. There are specimens in existence from Chios, Teos, Colophon, Smyrna, Ephesus, and many other places. Samos, Siphnus, Thasos, the Greek cities of Sicily, and Cyrene, had gold money at an early period.

Pollux mentions a Corinthian stater as used in Sicily, which he calls *δεκάλιτρος στατήρ*, and makes equal to ten Æginetan obols.⁶ The explanation of this statement is very difficult, and depends in a great measure on the disputed question whether the Corinthian money followed the Attic or the Æginetan standard.⁷

1. (Herod., i., 94.)—2. (Herod., i., 84.—Pollux, Onom., iii., 87; ix., 84.)—3. (Metrolog. Untersuch., p. 129.)—4. (Antiq., 1037.)—5. (xxiii., 23.)—6. (Böckh, I c.)—7. (Hesych., s. v. *ἡμικτρον*.—Pollux, Onom., iv., 173.—Harpocrat., s. v. *Δαρεικός*.)—8. (in Phorm. p. 914.)

1. (iv., 52.)—2. (in Boeot., p. 1019.)—3. (Böckh, Inscr., 150.)—4. (s. v. *ἐκτρη*.)—5. (Crates ap. Poll., Onom., ix., 62; and Meinecke, Frag. Comic., ii., p. 241.)—6. (Pollux, Onom., iv., 174; ix., 80.)—7. (Compare Hussey c. iv., s. 2, with Böckh, Metrolog. Untersuch., vii., 8.)

In calculating the value of the stater in our money, the ratio of gold to silver must not be overlooked. Thus the stater of Alexander, which we have valued, according to the present worth of gold, at 1*l.* 3*s.* 6*d.*, passed for twenty drachmæ, which, according to the present value of silver, were worth only 16*s.* 3*d.* But the former is the true worth of the stater, the difference arising from the greater value of silver in ancient times than now. (*Vid.* ARGENTUM.)

Besides the stater itself, there were, as appears from the above remarks, double staters, and the halves (*ἡμιχρυσός, ἡμιστατήρ*), quarters, thirds, sixths, and twelfths of the stater. The coins of the last four denominations are, however, much less common than the single, double, and half staters.

The term *στατήρ*, in later times, was applied to the silver tetradrachm, but whether it was so used in the flourishing times of Athens is doubtful. (*Vid.* DRACHMA.)

It was also used in reference to weight, apparently like the Hebrew *shekel* and the Latin *pondo*, in a general sense. The MINA¹ and the Sicilian LITRA² are both called stater.³

STATI DIES. (*Vid.* DIES, p. 362.)

STATIO NES. (*Vid.* CASTRA, p. 222.)

STATIO NES FISCI. The FISCUS was divided into various departments, called *stationes*, according to the different revenues belonging to it.⁴ Thus we read of a *statio XX. hereditarium*,⁵ a *statio hereditarium*,⁶ a *statio annona*.⁷

STATIO NES MUNICIPIO RUM, mentioned by Pliny,⁸ are supposed by Niebuhr⁹ to be places by the side of the comitium allotted to municipals, that they might hear the debates, like privileged seats in the hall of a parliamentary assembly. The *Græcostasis* mentioned by Cicero¹⁰ and Varro¹¹ was a similar place, as Niebuhr remarks, on the right of the comitium, allotted to the Greeks from the allied states for the same purpose.

STATOR, a public servant, who attended on the Roman magistrates in the provinces. The *statores* seem to have derived their name from standing by the side of the magistrate, and thus being at hand to execute all his commands: they appear to have been chiefly employed in carrying letters and messages.¹² Alexander Severus forbade the use of *statores* in the provinces, and commanded that their duties should be discharged by soldiers.¹³

STATU LIBER. (*Vid.* MANUMISSIO, p. 616.)

STATUARY (*statuaria ars*) is, in its proper sense, the art of making statues or busts, whether they consist of stone or metal, and includes the art of making the various kinds of reliefs (alto, basso, and mezzo rilievo). The ancients, accustomed to trace all their arts and sciences to a single person, who was generally believed to have been led to his discovery by some accidental circumstance, relate several stories to account for the origin and discovery of the arts of painting and statuary.¹⁴ But arts such as these cannot, like those which are the necessary result of particular local circumstances, or are in their origin of a complicated nature, be assigned to any particular nation or to any particular individual: they spring up naturally in all countries, and take their origin alike everywhere in the imitative faculty of man. It is, therefore, idle talk when modern

writers gravely repeat the stories about the invention of sculpture or painting, or assign the invention of either of them to the Egyptians or any other nation. These arts, in their infant state, existed among the Greeks from time immemorial; and if there are any resemblances between the earliest works of Grecian art and those of Egypt, we have still no right to infer that the Greeks learned them from the Egyptians; and we might as well assert that the Greeks learned their arts from the Gauls or from the Siamese, for the works of these nations, too, resemble those of early Greece. An art in its primitive state manifests itself nearly in the same manner in all parts of the world. But what is of real interest is to know the causes through which statuary, or, to use a more common but less appropriate term, sculpture, became so pre-eminently the art of the Greeks, that down to this day no other nation has produced artists that can compete with them, and that all look upon the Greeks as the great masters and models for all ages. Winckelmann has pointed out three great causes, viz., their innate genius, their religion, and their social and political institutions; and these three points, if accurately examined, will certainly be found to have singularly co-operated in making the Greek artists what they were. There is another point connected with the origin of Grecian sculpture which appears to have led some modern writers to form erroneous opinions. The peculiar form of the Hermæ (*vid.* HERMÆ) has given rise to the belief that in the earliest statues the head only (bust) was represented, and that the remaining part of the body was expressed by a simple pillar or block. This view is contrary to nature as well as to history; for neither a nation nor a child (which in this case may be fairly taken as a representative of a nation in its infancy), when they begin to exercise their imitative faculty, will rest satisfied with forming the mere head of a human being, but endeavour to produce the whole as well as they can. We may add, that no other nation presents such a phenomenon in the earliest history of its arts. The Hermæ, therefore, cannot have arisen from an incapability of forming a whole human figure. They appear rather to point to the time when the Greeks began to represent their gods in a human form. To give to a god the entire form of a man would have been irreverent, whereas the head was necessary, and, at the same time, sufficient to represent him as a distinct individual being, and endowed with spiritual and thinking powers. The process of humanizing the gods must have been preceded by the custom of representing them in unnatural forms, or such as were partly human and partly animal. The earliest images of the gods were pure images (not the gods themselves), and intended to express some thought or idea: now, as the natural figure of man is only expressive of itself, the significant parts of two or more beings were put together to express the idea which men had formed of their gods. Such monstrous figures were retained as representations of some gods down to the latest times. As instances of this, we may mention Glaucus with the tail of a fish;¹ the Arcadian Pan with goat's feet;² and the Demeter of Phigalia with the head and mane of a horse.³ Homer's silence on such compound representations of the gods is no proof that they did not exist in early times.

Before proceeding to consider statuary in its several stages of development, it is necessary to make a few preliminary remarks respecting the materials used by the Greeks in this art. On the whole, it may be said that there is no material applicable to statuary which was not used by the Greeks. As

soft clay is capable of being shaped without difficulty into any form, and is easily dried either by being exposed to the sun or by being baked, we may consider this substance to have been the earliest material of which figures were made. We have a trace of this in the story that Zeus, in his anger at Prometheus having stolen the fire, ordered Hephæstus to form Pandora of earth moistened with tears.¹ The name plastic art (*ἡ πλαστική*), by which the ancients sometimes designate the art of statuary, properly signifies to form or shape a thing of clay. But, notwithstanding the great facility of making figures of clay, they are not often mentioned in the early ages of Greece, while in Italy the *Di fictiles* (*πῆλιναι θεοὶ*) were very common from the earliest times. Clay figures, however, never fell into disuse entirely; and in later times we find not only statues of clay, but the pediments in small or rural temples frequently contained the most beautiful reliefs in clay, which were copies of the marble reliefs of larger temples. When Pliny² speaks of Rhæcus and Theodorus of Samos as the inventors of the *plastice*, he seems to labour under a mistake, and to confound the art of working in clay with that of working in metal, as in later times the latter of these two arts was commonly called plastic. Some ancient figures of clay are still preserved.

The second material was *wood*, and figures made of wood were called *ξόανα*, from *ξέω*, "to polish" or "carve." Various kinds of wood were used in statuary; we find mention of oak, cedar, cypress, sycamore, pine, fig, box, and ebony. It was chiefly used for making images of the gods, and probably more on account of the facility of working in it than for any other reason. It should, however, be remarked, that particular kinds of wood were used to make the images of particular deities: thus the statues of Dionysus, the god of figs, were made of fig-wood. The use of wood for statues of the gods continued to the latest times; but statues of men, as, for example, some of the victors in the public games, were likewise made of wood at a time when the Greeks were sufficiently acquainted with the art of working in stone and metal.

Stone was little used in statuary during the early ages of Greece, though it was not altogether unknown, as we may infer from the relief on the Lion-gate of Mycenæ. In Italy, where the soft peperino afforded an easy material for working, stone appears to have been used at an earlier period, and more commonly than in Greece. But in the historical times, the Greeks used all the principal varieties of marble for their statues; the most celebrated kinds of which were the marbles of Paros and of Mount Pentelicus, both of which were of a white colour. Different kinds of marble and of different colours were sometimes used in one and the same statue, in which case the work is called Poly lithic statuary.

Bronze (*χάλκος*, *as*), *silver*, and *gold* were used profusely in the state of society described in the Homeric poems, which is a sufficient proof that works of art in these metals were not altogether unknown in those times. Iron came into use much later, and the art of casting iron is ascribed to Rhæcus and to Theodorus of Samos.³ (*Vid. BRONZE.*)

Ivory came into use at a later period than any of the before-mentioned materials, and then was highly valued both for its beauty and rarity. In its application to statuary, ivory was generally combined with gold, and was used for the parts representing the flesh. Winckelmann has calculated that about one hundred statues of this kind are mentioned by the ancients.

The history of ancient art, and of statuary in particular, may be divided into five periods.

1. *First Period, from the earliest times till about Ol. 50, or 580 B.C.*

The real history of the arts is preceded by a period of a purely mythical character, which tradition has peopled with divine artists and most extraordinary productions. Three kinds of artists, however, may be distinguished in this mythical period: the first consists of gods and dæmons, such as Athena, Hephæstus, the Phrygian or Dardanian Dactyli, and the Cabiri. The second contains whole tribes of men, distinguished from others by the mysterious possession of superior skill in the practice of the arts, such as the Telchines and the Lycian Cyclopes. The third consists of individuals who are, indeed, described as human beings, but yet are nothing more than personifications of particular branches of art, or the representatives of families of artists. Of the latter the most celebrated is *Dædalus*, whose name indicates nothing but a smith or an artist in general, and who is himself the mythical ancestor of a numerous family of artists (*Dædalids*), which can be traced from the time of Homer to that of Plato, for even Socrates is said to have been a descendant of this family. He was believed to be an Athenian, but Crete also claimed the honour of being his native country. The stories respecting him are sometimes more like allegorical accounts of the progress of the arts than anything else. He was principally renowned in antiquity for his *ξόανα*, and several parts of Greece, as Bœotia, Attica, Crete, and even Libya in later times, were believed to possess specimens of his workmanship.¹ Numerous inventions, also, especially of instruments used in carving wood, are ascribed to him. He is said to have made his statues walking, which appears to mean that before his time human figures were represented with their legs close together, and that in his statues the legs were separated, which was at once a great step forward, as it imparted greater life and activity to a figure. *Smilis* (from *σμίλη*, a carving-knife) exercised his art in Samos, Ægina, and other places, and some remarkable works were attributed to him.² *Endæus* of Athens is called a disciple of Dædalus. Various works were attributed to him by the ancients. One among them was a colossal *ξόανον* of Athena Polias in a temple at Erythræ in Ionia. She was represented sitting upon a *θρόνος*, holding a spindle in her hand, and with a *πόλος* on her head. Pausanias³ saw this *ξόανον* himself.

According to the popular traditions of Greece, there was no period in which the gods were not represented in some form or other, and there is no doubt that for a long time there existed no other statues in Greece than those of the gods; a round statue of a man appears for a long time to have been a thing unheard of in Greece. The earliest representations of the gods, however, were by no means regarded as the gods themselves, or even as images of them, but only as symbols of their presence; and as the imagination of a pious primitive age does not require much to be reminded of the presence of the Deity, the simplest symbols were sometimes sufficient to produce this effect. Hence we find that in many places the presence of a god was indicated by the simplest and most shapeless symbols, such as unheun blocks of stone (*λίθοι ἀπογυῖ*), and by simple pillars or pieces of wood.⁴ (*Vid. DOCANA and DÆDALA.*) Many such symbolic rep-

1. (Hesiod., Theog., 571, &c.—Stob., Sermon., 1.)—2. (H. N., xiv., 43.)—3. (Paus., x., 38, § 3.)

1. (Paus., vii., 5; ix., 40, § 2; i., 18, § 5.—Seylax, p. 53, ed. Huds.)—2. (Müller, Æginet., p. 37.)—3. (vii., 5, § 4.)—4. (Paus. ix., 27, § 1; 35, § 1; vii., 22, § 3.)—5. (Paus., vii., 22, § 3.—Cleon. Alex., Strom., i., p. 418, and p. 348, ed. Sylburg.)

representations of gods were held in the greatest esteem, even in the historical ages, as sacred inheritances of former times, and remained the conventional representations of the gods, notwithstanding the progress which the arts had made. The general name for a representation of a god not consisting of such a rude symbol was *ἄγαλμα*.¹

In the Homeric poems, although the shield of Achilles, the gold and silver dogs which kept watch at the palace of Alcinoüs, and other similar things, may be pure fictions, there are sufficient traces of the existence of statues of the gods; but it would seem that, as the ideas of the gods were yet gigantic and undefined, the representations of several superhuman beings were more calculated to inspire awe than to display any artistic beauty.² This was, however, not always the case. Temples are mentioned in several places,³ and temples presuppose the existence of representations of the gods. A statue of Athena is mentioned at Ilion, upon whose knees the queen places a magnificent peplos.⁴ The statue thus appears to have been in a sitting position, like the statues of Athena among the Ionians in general.⁵ The existence of a statue of Apollo must be inferred from Iliad, i, 23, for the *στέμμα θεοῖο* can only mean the wreath or diadem with which his statue itself used to be adorned. This statue must, moreover, have been represented carrying a bow, for attributes like *ἀργυρότοξος* could have no meaning unless they referred to something existing and well-known. Other proofs of representations of the gods in human form may be found in Iliad, ii, 478, &c.; iii, 396, &c. These statues were undoubtedly all *ξόανα*, and, as we must infer from the expressions of Homer, were far more perfect than they are said to have been previously to the time of Dædalus. A work still extant, which is certainly as old as the time of Homer, if not much older, is the relief above the ancient gate of Mycenæ, representing two lions standing on their hind legs, with a sort of pillar between them.⁶ These facts justify us in supposing that, at the time of Homer, the Greeks, but more especially the Ionians of Asia Minor, had made great progress in sculpture. The Ionians appear to have been far in advance of the Greeks of the mother-country. The cause of this must probably be sought in the influence which some of the nations of Western Asia, such as the Lydians, Lycians, and Phœnicians, had upon the Ionian colonists, for that these nations excelled the Greeks in various branches of the arts is abundantly attested by numerous passages in the Homeric poems. We must not, however, attribute too much to this foreign influence, for there were many other causes at work besides, by which the Greek colonies, not only of Asia, but of Sicily and Italy also, were enabled to be in advance of the mother-country. The ancient coins of the Italian Greeks, too, are much more beautiful, and show more individuality than those of Greece proper; we also find that Learchus of Rhegium, about 720 B.C., came to Sparta, and formed there the earliest bronze statue of Zeus, which consisted of several pieces nailed together.⁷ It appears to have been shortly after this time that Gaiades at Sparta made a bronze statue of Athena.⁸ Another great work in bronze belonging to this period is the colossal statue of Zeus, which was dedicated at Olympia by Cypselus or Periander of Corinth, and for which the wealthy Corinthians were obliged to sacrifice a

considerable part of their property.¹ About 650 B.C., Myron of Sicyon dedicated two *θάλαμοι* of bronze at Olympia, which were still there in the days of Pausanias.²

The time which elapsed between the composition of the Homeric poems and the beginning of the fifth century before our era, may be termed the age of discovery; for nearly all the inventions upon the application of which the development of the arts is dependant are assigned to this period, which may, at the same time, be regarded as the first historical period in the history of art. Glaucus of Chios or Samos is said to have invented the art of soldering metal (*σιδήρου κάλλησις*).³ The two artists most celebrated for their discoveries were the two brothers Telecles and Theodorus of Samos, about the time of Polycrates. The most important of them was the art of casting figures of metal. This art appears to have been peculiar to the Greeks; at least we do not find that it was ever made use of by any other ancient nation. It is a singular circumstance, that the very two artists to whom this invention is ascribed are said to have made their studies in Egypt; and the curious story of the two brothers executing a *ξόανον* of the Pythian Apollo in such a manner, that while Telecles made the one half of the statue at Delos, the other half was made by Theodorus at Ephesus, and that, when the two halves were put together, they tallied as accurately as if the whole had been the work of one artist,⁴ has been thought to support the Egyptian tradition that these artists were greatly assisted in the exercise of their art by what they had learned in Egypt. But, in the first place, the whole story has a very fabulous appearance; and even admitting that the artists, as the Egyptians asserted, had actually been in their country, nobody will on this ground maintain that they learned their art there: the utmost they could have learned might have been some mechanical processes; the art itself must be vindicated for the Greeks. In the second place, Telecles and Theodorus are called by Diodorus sons of Rhæcus; and Pausanias himself, who was unable to discover a brooze work of Theodorus, saw at Ephesus a bronze statue which was the work of Rhæcus.⁵ Hence we have reason to suppose that Telecles and Theodorus learned, at any rate, the art of casting metal from their father, and not in a foreign country. Respecting the various accounts of these two artists, and the time at which they lived, see Pliny,⁶ Herodotus, and Pausanias. Pliny⁷ says that Pasiteles called the art of modelling clay the mother of the art of casting figures in metal (*statuaria*), and this passage has been explained as if Pasiteles meant to say that in Samos the former of these arts had given rise to the latter. But this is manifestly wrong; for, from the words which follow in the text of Pliny, it is clear that the meaning is, that he never executed any work in metal, marble, &c., without previously making a model in clay.

Statues of gods in baked clay, though in general more used for domestic and private than for public worship, continued to be made as before. Many specimens of small dimensions and of very rude workmanship have been discovered in Attic graves.⁸ Ornaments and reliefs on houses, porticoes, and temples, were likewise very commonly made of clay, especially at Corinth and in the Ceramicus.⁹

Representations of the gods in marble are not mentioned in Homer, although they may have existed in his time as well as statues of wood, which are

1. (Ruhnken ad Tim., p. 2.)—2 (Il., xi., 36, &c.—Hesiod., Scut. Herc., 144, 156, 218, &c.)—3. (Il., i., 39, vi., 83, &c.)—4. (Il., vi., 92.—Compare Il., 273.)—5. (Strab., xiii., p. 601.)—6. (Paus., iii., 16, § 4.—Sir W. Gell, *Artist*, ed. 8-10.—Götting in the *Rheinisch. Mus.*, 1841, p. 2.)—7. (Paus., iii., 17, § 6.—J. C. Paus., iii., 17, § 13.)

1. (Strab., viii., p. 353, 378.—Phot. and Suid., s. v. Κρυάλαρ ξόαν.—2. (Pl., ix., 4, § 2.)—3. (Herod., i., 25.)—4. (Diodor., i., 98.)—5. (x., 38, § 3.)—6. (H. N., xxxv., 53.)—7. (Pliny, H. N., xxxv., 55.)—8. (Fied. Scholz ad Aristoph., Av. 436.)—9. (Paus., i., 2, § 4; i., 3, § 1.)

likewise not expressly mentioned. Marble is found in the ancient Thesaurus of Orchomenos. Pliny¹ calculates that works in marble were executed by Malas in Chios at the beginning of the olympiads; and about Ol. 50 (580 B.C.) Dipœnus and Scyllis were renowned for their works in marble. The most ancient specimen of a marble statue was seen by Pausanias² in the market-place of Megara. The work consisted of two figures, Corœbus killing Pene. There are still extant some works in marble which may with certainty be ascribed to the period previous to Ol. 50.

Before we conclude our account of the works produced during this period, we have to mention the celebrated chest of Cypselus at Olympia, which Pausanias saw and described.³ It belonged, perhaps, to the year 733 B.C. The chest was made of cedar-wood, which was thought most durable. It was adorned on its four sides and on the cover with figures, partly in ivory, partly in gold, and partly in the cedar-wood itself, which represented various scenes taken from the stories of the heroic ages. Pausanias does not express his opinion as to their artistic merits, but the minuteness with which he describes them is a sufficient proof that he did not consider them as bad either in design or execution. Quatremère de Quincy has attempted (in his *Jupiter Olympien*) to restore this chest and its ornaments from the description of Pausanias; but the restoration is so egregiously bad, that an eye accustomed to the contemplation of genuine works of art shrinks from it in disgust.

During the whole of this period we scarcely hear of any statues except those of the gods; and although marble and bronze began to be extensively applied, yet wood was much more generally used for representations of the gods. These statues were painted (*vid. PAINTING*, p. 700), and in most cases dressed in the most gorgeous attire. The general character of the statues produced in the earlier times of this period is, on the whole, the same as among other nations at such an early period. The style in which they are executed is called the *archaic* or the *hieratic* style. The figures are stiff and clumsy, the countenances have little or no individuality, the eyes long and small, and the outer angles turned a little upward; the mouth, which is likewise drawn upward at the two corners, has a smiling appearance. The hair is carefully worked, but has a stiff, wiry appearance, and hangs generally down in straight lines, which are curled at the ends. The arms hang down the sides of the body, unless the figure carries something in its hands. The drapery is likewise stiff, and the folds are very symmetrical, and worked with little regard to nature. As the arts, during this period, were chiefly employed in the service of religion, they could, notwithstanding the many mechanical discoveries of the time, make but slow progress towards the production of works of sublimity or beauty, for in the representations of the gods for public worship, ancient forms, hallowed by time and custom, were retained, and repeated without the artist being allowed, even if he was able to do it, to depart from these forms, or to introduce any material change. Art, therefore, could not make any great progress until it was applied to purposes in which the artist's genius was not restrained by religious custom, and not bound to conventional forms. Religion, although the fostering mother of the arts in their infancy, became a tedious restraint when they grew up to manhood. But, as soon as other spheres of action were opened, religion, in her turn, could not escape from the influence of the advancement of

the arts, and the old conventional forms in many places gave way to works of real merit and genius. This great and important change took place about and after Ol. 50.

II. Second Period, from Ol. 50 to Ol. 75. (580-480 B.C.)

This period, although comprising no more than one century, developed all the elements which combined to make Grecian art what it became during the third and most flourishing period of its history. Greece now came into close contact with the nations of the East and with Egypt; commerce flourished at Corinth, Ægina, Samos, Miletus, Phocæa, and other places; gold became more abundant in Greece than it had been before, and the tyrants who sprang up in several parts of Greece surrounded themselves with splendour and magnificence, and acted as the patrons of art to palliate their own usurpation. But all these were only external influences, and could not have produced a nation of artists like the Greeks. Epic poetry had gradually created in the minds of the people more defined ideas of their gods and heroes, while philosophy began to make men look beyond what was conventional and traditionary. The athletic and orchestric arts attained about Ol. 50 a high degree of perfection, and the circumstance that about the same time the gymnastic and athletic contests at the great public festivals began to be performed naked, directed the attention of the artists, as well as of the public, to nature, and rendered them familiar with the beautiful forms of the human body. But the imitation of nature was at first of a very hard and severe character, and the influence of conventional forms still acted in many cases as an obstacle.

The number of artists who flourished during this period is truly astonishing. It has been said that the close connexion of father and son among the artists ceased at this time, and that individual artists worked free, and according to the dictates of their own genius. But this is going too far, for it still continued to be the common practice for a son to be instructed by his father; and although this relation is usually expressed by the term *μαθητής*, yet on statues we only meet with the term *πίο*. But, along with these families of artists, schools now became more general, in which the arts were taught and cultivated according to certain principles which were or became traditionary in each school; the schools thus acquired something of the spirit of castes or corporations.

The Ionians of Asia Minor and the islanders of the Ægean, who had previously been in advance of the other Greeks in the exercise of the fine arts, had their last flourishing period from Ol. 55 to Ol. 63 (560-528 B.C.) But this short period must have been one of the greatest as well as one of the most active and productive of numerous costly works of art. The presents which Cressus sent to Delphi, and some of which were said to have been made by the Samian Theodorus, must have been executed at the beginning of these forty years. Our want of information respecting the Ionians must be ascribed to the circumstance that we have no Pausanias to take us through their cities, and to describe and explain the works of art with which they were adorned. It is owing to the same circumstance that we know so little of Rhodes, Lemnos, Naxos, and Cyprus, although we may take for granted that these flourishing islands did not by any means neglect the arts. Respecting Chios and Samos we possess more information. Works in metal were produced in high perfection in the latter island, in Ægina, and Argos, while Chios gained the greatest reputation for its possessing the earliest

¹ (H. N., xxxvi., 4, 2.)—² (i., 43, § 7.)—³ (iv., 17, § 2, &c.)

great school of sculptors in marble, in which Bupalus and Anthernus were the most distinguished, about Olympiad 60. Their works were scattered over various parts of Greece, and their value may be inferred from the fact that Augustus adorned with them the pediment of the Temple of Apollo on the Palatine.¹ These works must be supposed originally to have belonged to a Greek temple of the same god, and must certainly have been of superior beauty to the works discovered in the island of Ægina, otherwise Augustus would not have chosen them as ornaments for the Palatine temple. Sicyon also possessed a celebrated school of sculptors in marble, and about Ol. 50 Dipœnus and Scyllis, who had come from Crete, were at the head of it, and executed several marble statues of gods.² In Ætolia, whither they withdrew for a time, and at Argos, there likewise existed works in marble by these artists. Disciples of them, such as Dorycleidas, Medon, and Theocles, were engaged at Sparta and in other places.³ Respecting Magna Græcia and Sicily we know few particulars, though it appears that the arts here went on improving, and continued to be in advance of the mother-country. The most celebrated artists in southern Italy were Dameas of Croton and Pythagoras of Rhegium.

In Greece itself, Sicyon continued, from early times, to be the seat of a distinguished school of artists. Here Canachus and Aristocles flourished about Ol. 70 as sculptors in metal, though the former was also celebrated in the art of carving in wood and in toreutic. Pliny⁴ calls Sicyon *dux artificinarum omnium metallorum patria*. Canachus, whose works Cicero⁵ calls more rigid and hard than was consistent with the truth of nature, was the most distinguished among the Sicyonian artists, and his skill found employment in other parts of Italy also. His most celebrated work was a colossal bronze statue of Apollo Phileus in the Didymæon, the description of which may give us an idea of the character of temple-statues at this period. The whole figure was stiff, very muscular, and without any elegance. In his right hand, which was stretched out, the god held a fawn, and in the left, which was somewhat lower, a bow. The features of the countenance were hard, and worked in the old hieratic style: the hair was divided, and hung down like wire, with little curls at the end.⁶

In Ægina the arts appear likewise to have continued to flourish as before, and the most celebrated among its artists was Callon, about Ol. 66.⁷ Athens, which at this time rivalled Ægina in the fine arts, appears in a short space to have made great progress, for great artists, as well as great works, begin now to appear in the pages of Athenian history. This was in part owing to the influence of the Pisistratids. After the death of Pisistratus himself, the first quadriga of bronze was erected in front of the Temple of Pallas. The most celebrated among the Athenian sculptors were Critias and Hegias or Hegesias, both distinguished for their works in bronze. The former of them made in Ol. 75 the statues of Harmodius and Aristogiton.

Argos also distinguished itself, and it is a curious circumstance, that the greatest Attic artists with whom the third period opens, and who brought the Attic art to its culminating point, are not disciples of Critias or Hegias, but of the Argive Ageladas (about Ol. 66), which at once raises this city and her other artists, such as Aristomedon, Glaucus, Dionysius, and others, to a greater importance than we might otherwise be inclined to attribute to them.

Among the numerous works produced during this

period we shall first mention the representations of the gods (*ἀγάλματα*). In all the statues which were made for temples as objects of worship, the hieratic style was more or less conscientiously retained, and it is therefore not in these statues that we have to seek for proofs of the progress of art. They were, for the most part, as of old, made of wood; and when an old statue was to be replaced by a new one, the latter was generally a faithful copy of the former. Thus the wooden statue of Demeter at Phigalia, with a horse's head, from which dragons and other monsters sprang forth, and which bore a dolphin and a dove in its hands, was imitated by Onatas in bronze after the wooden figure had been burned.¹ The same adherence to ancient forms of the gods was also visible in other cases; for when colonies were sent out, the images of the gods of the mother-city were, for the most part, faithfully copied for the colony, and such copies were called *ἀφιδρύματα*.² The instances of the Apollo Phileus and of the Demeter of Onatas show that, even in temple-statues, wood began to give way to other and better materials. Besides bronze, marble also, ivory, and gold were now applied to statues of the gods, and it was not very uncommon to form the body of a statue of wood, and to make its head, arms, and feet of stone (*ἀκρόλυθοι*), or to cover the whole of such a wooden figure with ivory and gold.³ The latter method, which about this time became a distinct and much admired branch of statuary, was practised by Dorycleidas, Theocles, Medon, Canachus, Menæchmus, and others, and appears to have been introduced by Dipœnus and Scyllis. Quatremère de Quincy considered this kind of sculpture, which the moderns call chryselephantine sculpture, as a part of the art which the ancients called toreutic (*τερευτική*). There are few errors more surprising than this, and yet the opinion of the French critic has been repeated as if there could be no doubt about it. But, although it is easy enough to see that the toreutic art is not what he thought, yet it would be difficult to say what it was. (*Vid. BRONZE*, p. 177.)

From the statues of the gods erected for worship, we must distinguish those statues which were dedicated in temples as *ἀνάθηματα*, and which now became customary instead of craters, tripods, &c. But here, too, the change was not sudden, for the statues at first were frequently connected with tripods and similar ornaments. At Amyclæ there were tripods made by Callon and Gitiadas, with small statues of goddesses under them.⁴ In the execution of statues to be dedicated as *ἀνάθηματα*, even though they were representations of gods, the artists were not only not bound to any traditional or conventional forms, but were also, like the poets, allowed to make free use of mythological subjects, to add, and to omit, or to modify the stories, so as to render them more adapted for their artistic purposes.

A third class of statues, which were erected during this period in great numbers, were those of the victors in the great national games, and of other distinguished persons (*ἀνδράγαγε*). The custom of erecting statues of the victors in public appears to have commenced about Ol. 58;⁵ but these statues soon became extremely numerous, and many of them were executed by the first artists of the time. In some the influence of the hieratic style was visible, or were even made in that style, as the statue of Mylon by Dameas.⁶ Although these statues were generally not portraits, for Pliny⁷ states that only

1. (Paus., viii., 42.)—2. (Diouys. Hal., ii., 22; viii., 56.—Strab., iv., p. 179.)—3. (Paus., ii., 4, § 1; vi., 25, § 4, &c.; ii., 22, § 6.—Euriip., Troad., 1081.)—4. (Paus., iii., 18.)—5. (Paus., vi., 18, § 5.)—6. (Philostr. Apoll. Tyan., iv., 28.—Compare Paus., iv., 28; vi., 14, § 2.)—7. (H. N., xxxiv., 9.)

1. (Plin., H. N., xxxvi., 4.)—2. (Plin., l. c.)—3. (Paus., v., 17, § 1; vi., 19.)—4. (H. N., xxxvi., 4.)—5. (Brut., 18.)—6. (Müller, Archæol., p. 64.)—7. (Paus., iii., 18, § 5; iv., 14, § 2.)

those who had gained the victory thrice were allowed to have iconic statues erected, yet they were destined to preserve the memory of the particular physical powers and the bodily development of the athletes, or even to show the peculiar skill or the peculiar stratagems by which an athlete had excelled and overcome his adversary, and thus afforded to the artists numerous opportunities of representing figures in a variety of attitudes and actions.¹ Statues erected in public, or dedicated in temples in honour of other distinguished persons, are mentioned very rarely during this period, but they appear generally to have been portraits (*eikônes*, *statua iconica*). The earliest statues of this kind we know of are those of Cleobis and Biton of Argos, which were dedicated in the Temple of Delphi about Ol. 50.² The first iconic statues of Harmodius and Aristogiton were made by Antenor in 509 B.C., and in 477 B.C. new statues of the same persons were made by Critias. It is allowed on all hands that nothing contributed more to the advancement of statuary than the contests at the public games, as they not only rendered the artists familiar with the greatest variety of attitudes, and with the most beautifully developed forms of the bodies of the athletes, but also afforded to them numerous opportunities to represent in their works those same persons and attitudes which they had seen and admired. The widest field for study and exercise was thus opened to the artists.

We have seen that, at a very early period of Grecian art, attempts were made to adorn the outside of temples and other public buildings, but it was not till the period we are now describing that it became customary to adorn the pediments, friezes, &c., of temples with reliefs or groups of statues of marble. We still possess two great works of this kind, which are sufficient to show their general character during this period. 1. The *Selinuntine Marbles*, or the metopes of two temples on the acropolis of Selinus in Sicily, which were discovered in 1823 by W. Harris and Sam. Angell, and are at present in the Museum of Palermo. Those belonging to the western temple appear to have been made at the beginning of this period, as they show a very great resemblance to the works in the hieratic style. The figures of the other or middle temple show indeed a considerable advancement of the art, but the execution is still hard and stiff; they may have possibly been executed a short time before Ol. 75.³ 2. The *Æginetan Marbles* were discovered in 1812, in the island of Ægina, and are now at Munich in the collection of the King of Bavaria. They consisted of eleven statues, which adorned two pediments of a temple of Athena, and represent the goddess leading the Æacids against Troy, and contain manifest allusions to the war of the Greeks with the Persians. Many small holes in the marble render it probable that originally several parts of these statues, perhaps the armour, were of bronze, and fixed to them with nails. The general character of these Æginetan statues is a mixture of the archaic style and an anxious imitation of nature. The hair is wiry, and traces of paint are visible on all parts of the statues with the exception of those representing the flesh.⁴

Besides these, a great number of works in bronze and marble of this period are still extant; they are partly round figures or statues, and partly reliefs.⁵ Some of the best specimens in marble relief, which seem to form the transition from this to the third

period, are preserved in the British Museum.¹ It is not always easy to say whether a work made in the archaic style is really as old as the style indicates, as this style was never entirely abandoned, and was retained in temple-statues even under the Roman emperors.

III. Third Period, from Ol. 75 to Ol. 111. (480-336 B.C.)

During this period Athens was the centre of the fine arts in Greece. The Persian wars awakened in the hearts of the people the feeling and the conviction of their own power, and the Greeks, who had at first only ward off the attacks of the barbarians, now felt strong enough to act on the offensive. The fall of the Spartan Pausanias raised Athens in 472 B.C. to the supremacy in the wars against Persia. Athens had now acquired a powerful navy, and the tributaries of the allies, which amounted at different times from 460 to 1200 talents, and which, from 462 B.C., were deposited in the treasury at Athens, raised the city to a height of power such as few cities have ever possessed. Only a small portion of these treasures were spent upon war; the rest was applied at first to the fortification of the city, and afterward to the building of temples, porticoes, theatres, gymnasia, &c. Among them we need only mention the Theseum, the Parthenon, the Propylæa, the stone theatre, the Pœcile, and the Odeum. After the wars with Persia, Athens appears by no means exhausted or broken down, but refreshed and strengthened, like nature after a heavy storm.

Statuary during this period went hand in hand with the other arts and with literature: it became emancipated from its ancient fetters, from the stiffness and conventional forms of former times. The free and noble spirit of the Athenian democracy showed its influence in all departments of literature and art, and among the latter statuary reached its culminating point in the sublime and mighty works of Phidias. The democratical spirit did not, however, lead to any kind of extravagance in the arts: no vehement passions or actions were represented; and although the character of those which belong to the latter half of this period differs very much from those of the former half, yet, on the whole, all show a calm dignity and an almost passionless tranquillity of mind, a feature so peculiar to all the great masterworks of Grecian art. The Peloponnesian war, and the calamities which accompanied it, produced a change in the state of things; a new generation now stepped into the place of the heroic race which had partaken in or witnessed the memorable events of the Persian war. Sensuality and an indulgence of the passions became the prominent features in the character of the Athenian people; and the prevailing desire after pleasures and strong excitements could not fail to produce an injurious influence upon the arts also. In the works of art which were produced after the year 380 B.C., there was no longer that calm and sublime majesty which characterized the works of Phidias and his more immediate followers, but the figures were more pathetic, and calculated to have a greater effect upon the senses of the beholders. The different stages of the arts during this period bears the most striking analogy with the three phases of tragedy, as they lie before us in the works of the three great dramatists, Æschylus, Sophocles, and Euripides.

Argos was, next to Athens, the most distinguished seat of the arts during this period, and the works of the Athenian and Argive artists spread over all Greece, and became the models for other Greek artists.

Evans, Sculptured Metopes discovered among the Ruins of Selinus, Lond., 1826.)—4. (Vid. Edw. Lyon, Outlines of the Ægina Marbles, 1829.)—5. (Müller, Archæol., p. 73, &c.)

The development of statuary at Athens and Argos had been prepared by Calamis of Athens and Pythagoras of Rhegium, the former of whom, although not quite free from the hardness of the earlier style, yet produced a great variety of works, among which are mentioned representations of gods in a sublime style, graceful statues of women, and spirited horses, in which he was unrivalled.¹ Pythagoras was distinguished for the perfection with which he expressed the muscles, veins, and hair in his athletic statues, for the beautiful proportions and the powerful expression of these statues, which, as Pliny says, made the beholders feel the pains which the individuals represented were suffering.² Several of his works are specified by Pausanias and Pliny. The career of Phidias the Athenian begins about Ol. 82. The genius of this artist was so great and so generally recognised, that all the great works which were executed in the age of Pericles were placed under his direction, and thus the whole host of artists who were at that time assembled at Athens were engaged in working out his designs and ideas.³ He himself was chiefly engaged in executing the colossal works in ivory and gold, the expenses of which were supplied by the Greek states with the greatest liberality, and other works in bronze and marble. The first among these works is the statue of Pallas Parthenos (made about Ol. 93, 3), of ivory and gold. The statue was twenty-six cubits in height, and represented the goddess in a long robe and in armour. She made the impression of a most majestic and victorious being. A description of the statue is given by Pausanias.⁴ It was frequently imitated in antiquity in marble statues and upon coins, and from these imitations, and the descriptions we possess of it, Quatremère de Quincy⁵ has made a very unsuccessful attempt at restoring the original statue. The robe which Pallas wore was of gold, forty-four talents in weight, though its thickness was not much above a line.⁶ The gold was taken off and used for other purposes in the time of Demetrius Poliorcetes. The style of this was, like that of all the works of Phidias, extremely simple, yet grand and sublime; the helmet, shield, and the pedestal were beautifully adorned with scenes belonging to the story of Attica. A second work of Phidias, which was still more admired, was the statue of the Olympian Zeus (made in Ol. 86), who was represented sitting upon a *θρόνος*. The statue was, like that of Pallas, made of ivory and gold, and, without the pedestal, forty feet high. The great richness with which the throne, sceptre, and the pedestal of this simple but majestic representation of the father of the gods were adorned, the profound wisdom in the proportions of the colossal work, and the sublime idea which the artist had formed and here imbodyed of the majesty of Zeus, made this statue one of the wonders of the ancient world. The idea of Zeus is said to have been suggested to Phidias by the celebrated verses of Homer,⁷ and the impression which the god in this work made upon the beholder was that of a god ruling in omnipotence, and yet graciously inclined to listen to the prayers of man, and to grant his wishes.⁸ The statue of the Olympian Zeus existed till A.D. 475, when it was destroyed in a fire at Constantinople, whither it had been transported by the Emperor Theodosius I. The most colossal statue of Phidias was his Athena Promachos, of bronze,

which was fifty feet high without taking the pedestal into account.¹ It stood on the Acropolis, between the Parthenon and the Propylæa, rising above each of these buildings, so that it was seen at a distance by the sailors when they approached the coast of Attica. This work, however, was not completed when he died, and it was finished nearly a generation later by Mys.² Phidias was greatest in the representation of the gods, and especially in portraying the character of Athena, which he represented with various modifications, sometimes as a warlike goddess, and sometimes as the mild and graceful protectress of the arts.³

We do not read of many disciples of Phidias, but the most distinguished among them were Agoracritus of Samos and Alcamenes of Athens. Both, though the latter with greater independence, applied their skill, like their master, to statues of the gods; both were especially renowned for the great beauty, softness, and calm majesty with which they represented goddesses, in the composition of which they rivalled each other. Some of the statues of Alcamenes were very highly valued in antiquity, especially his Hecate, Athena, Aphrodite in the gardens, Hephestus, and also the groups in the pediment of the temple at Olympia. The most celebrated statue of Agoracritus was the Nemesis of Rhamnus, which had originally been intended as an Aphrodite to compete with that of Alcamenes, but was afterwards, by the addition of proper attributes, consecrated as a Nemesis at Rhamnus.

We still possess a series of sculptured works in marble which were made by the school of Phidias, and some of them undoubtedly by the great master himself. These works are:

1. Some parts of the eighteen sculptured metopes, together with the frieze of the small sides of the cella of the Temple of Theseus. Ten of the metopes represent the exploits of Heracles, and the eight others those of Theseus. The figures in the frieze are manifestly gods, but their meaning is uncertain. All the figures are full of life and activity, and worked in the sublime style of the school of Phidias. Some antiquarians value them even higher than the sculptures of the Parthenon. Casts of these figures are in the British Museum.⁴

2. A considerable number of the metopes of the Parthenon, which are all adorned with reliefs in marble, a great part of the frieze of the cella, some colossal figures, and a number of fragments of the two pediments of this temple. The greater part of these works are now in the British Museum, where they are collected under the name of the Elgin Marbles. They have been described and commented upon so often, that they require no farther mention here.⁵ The best work, so far as the explanation of these sculptures is concerned, is Brøndsted's *Reisen*, vol. ii.

3. The marble reliefs of the Temple of Nike Apteros belong, indeed, to a later age than that of Phidias, but they are manifestly made in the spirit of his school. They represent, with great liveliness and energy, contests of Greeks with Persians, and of Greeks among themselves. These also are at present in the British Museum.

All these sculptures breathe, on the whole, the same sublime spirit, though it would seem that some, especially some figures of the metopes of the Parthenon, were executed by artists who had not emancipated themselves entirely from the influence of an earlier age. With this exception and some other slight defects, which are probably the conse-

quences of the place which the sculptures occupied in the temples they adorned, we find everywhere a truth in the imitation of nature, which, without suppressing or omitting anything that is essential, and without any forced attempt to go beyond nature, produces the purest and sublimest beauty: these works show lively movements combined with calmness and ease, a natural dignity and grace united with unaffected simplicity; no striving after effect, no excitement of the passions. These sculptures alone afford us ample means to justify the ancient critics, who state that the *μεγαλειον* and *σεμνόν*, or the grand and the sublime, were the characteristic features of Phidias and his school.¹ Phidias was the *Æschylus* of statuary, and it may be safely asserted that, although the art subsequently made certain progress in the execution of details, yet Phidias and his school were never excelled by subsequent generations.

Besides the sculptures of the three temples mentioned above, there are also similar ornaments of other temples extant, which show the influence which the school of Phidias must have exercised in various parts of Greece, though they are executed in a different style. Of these we need only mention two as the most important.

1. The Phigalian marbles, which belonged to the Temple of Apollo Epicurius, built about Olympiad 86 by Ictinus. They were discovered in 1812, and consist of twenty-three plates of marble belonging to the inner frieze of the cella. They are now in the British Museum. The subjects represented in them are fights with Centaurs and Amazons, and one plate shows Apollo and Artemis drawn in a chariot by stags. Many of the attitudes of the figures appear to be repetitions of those seen on the Attic temples; but there are, at the same time, great differences, for the Phigalian marbles sometimes show a boldness of design which almost borders on extravagance, while some figures are incorrectly drawn and in forced attitudes. The best descriptions of them are those in *Bassi relievi della Grecia*, *disegn. da G. M. Wagner* (1814), and in *Stackelberg's Apollontempel zu Bassa in Arcadien u. die daselbst ausgegrab. Bildwerke*, 1828.

2. Marbles of the Temple of the Olympian Zeus, which were made by Pæonius of Mende and Alcamenes of Athens.² Several fragments of these sculptures were discovered in 1829, and are at present at Paris.³ The figures of these marbles are indeed free from the fetters of the ancient style, and show a true imitation of nature, but do not nearly come up to the ideal simplicity of the works of Phidias.

About the same time that the Attic school rose to its highest perfection under Phidias, the school of Argos was likewise raised to its summit by Polyclethus, who was inferior to the former in his statues of gods,⁴ though he advanced the tarentic art in his colossal statue of Hera at Argos farther than Phidias.⁵ But the art of making bronze statues of athletes was carried by him to the greatest perfection: ideal youthful and manly beauty was the sphere in which he excelled. Among his statues of gods we only know two, that of Hera and another of Hermes. Pliny mentions several of his representations of human beings, in which, without neglecting to give them individuality, he made youthful figures in their purest beauty, and with the most accurate proportions of the several parts of the human body.⁶ One of these statues, a youthful doryphorus, was made with such accurate observation of the proportions

of the parts of the body, that it was looked upon by the ancient artists as a canon of rules on this point.¹ Polyclethus is said to have written a work on the same subject, and it may be that his doryphorus was intended to give a practical specimen of the rules he had laid down in his treatise. He gained a victory over Phidias in the representation of an Amazon, which must, consequently, have been a figure in the greatest luxuriance of female beauty combined with a manly character.² Polyclethus was also distinguished in portrait-statues, among which that of Artemon Periphoretus, a mechanician of the time of Pericles, is mentioned with especial praise.

Myron of Eleuthera, about Olympiad 87, was, like Polyclethus, a disciple of Ageladas, but adhered to a closer imitation of nature than Polyclethus, and, as far as the impression upon the senses was concerned, his works were most pleasing; but "*animi sensus non expressit*," says Pliny.³ The cow of Myron in bronze was celebrated in all antiquity.⁴ Pliny mentions a considerable number of his works, among which a dog, a discobolus, peotathl, and pancratiasts were most celebrated; the last of them were especially distinguished for their eurythmia, and the animation displayed in their movements, as well as for the most beautiful athletic attitudes. Among his statues of gods we find only mention of a colossal group representing Heracles, Zeus, and Athena, which he made for the Samians.⁵ In his execution of the hair, he adhered, according to Pliny, to the ancient style.

The deviation from the sublime ideality of the Attic school of Phidias was still more manifest in the works of Callimachus and Demetrius. The former executed his statues with the utmost possible accuracy and attention to the minutest details, but was careless in the conception as well as in the execution of the whole, which destroyed the value of his works, whence he was designated by the nickname of *καταψίρετρος*. Quincilian⁶ says of him, "*nimius in veritate*." On the whole, it should be observed, that near the end of the Peloponnesian war, and afterward, the greater part of the artists continued to work in the spirit and style of Polyclethus, and that the principal productions in Peloponnesus were bronze statues of athletes, and statues erected in honour of other distinguished persons.⁷

The change which took place after the Peloponnesian war in the public mind at Athens could not fail to show its influence upon the arts also; and the school of statuary, which had gradually become developed, was as different from that of Phidias as the then existing state of feeling at Athens was from that which had grown out of the wars with Persia. It was especially Scopas of Paros and Praxiteles of Athens, about one generation after Myron and Polyclethus, who gave the reflex of their time in their productions. Their works expressed the softer feelings, and an excited state of mind, such as would make a strong impression upon, and captivate the senses of the beholders. But the chief masters of this new school still had the wisdom to combine these things, which were commanded by the spirit of the age, with a noble and sublime conception of the ideas which they embodied in their works. Scopas and Praxiteles were both distinguished as sculptors in marble, and both worked in the same style; the legendary circles to which most of their ideal productions belong are those of Dionysus and Aphrodite, which also show the

character of the age. There was a time when this school of statuary was considered superior even to that of Phidias, and it is indeed true that its productions are distinguished by exquisite beauty and gracefulness, whence their female-statues in particular are, in one sense, unrivalled; but the effect they produced upon the minds of the beholders was by no means of the same pure and elevating nature as that of the works of their predecessors. Pliny¹ mentions a number of works of Scopas, some of which he himself saw at Rome. Among them were Aphrodite, Pothos, Phaëthon, Apollo, a sitting Demeter, Poseidon, Thetis, Achilles, the Nereids riding on dolphins, and a number of other marine deities.² Whether the celebrated group of Niobe and her children, which in the time of Pliny stood in a Temple of Apollo at Rome, was the work of Scopas or Praxiteles, was a matter of doubt among the ancients themselves. This group was discovered in 1583, near the Porta S. Giovanni at Rome, and the greater number of its fragments is at present in the museum of Florence, but some figures are in other museums; Munich possesses the finest head of all the Niobids. It has been the subject of much discussion whether the group discovered in 1583 is the original work of Scopas or Praxiteles, or only a copy; but, although the latter is by far the more probable opinion, these remains are the most beautiful relics of ancient art; the mother Niobe herself, especially, is unrivalled.³ The works of Praxiteles were of the same character as those of Scopas. The transition in all departments of the arts, from the ancient simplicity to the representation of subjects exciting sensual desires and appetites, was exceedingly slow and gradual; and thus, although in the works of Praxiteles youthful and female beauty appears naked, and clothed with all the charms that art can bestow, and although many of his figures were represented in actions and situations peculiar to the worship of Dionysus, yet we cannot say that they displayed any kind of sensuality. His most celebrated works were: 1. Figures of Dionysus, Satyrs, and Mænades.⁴ 2. Statues of Eros for various parts of Greece.⁵ 3. Statues of Aphrodite. The most celebrated among these were the Aphrodite of Cos (*velata specie*), and, above all, the naked Aphrodite of Cnidus, which stood in a chapel built expressly for the purpose, and open on all sides. This statue was of such extraordinary beauty, that, as Pliny states, many persons sailed to Cnidus merely for the purpose of seeing it.⁷ Some critics have asserted that the Venus known under the name of the Medicean is the Cnidian Venus of Praxiteles, or a copy of it, but Visconti has clearly proved that this is impossible. There is much more sensuality in the Medicean Venus than we have any reason to suppose existed in that of Cnidus. Praxiteles had also great reputation for his statues of the most beautiful hetærae, and it is said that he took the most charming among them as models for his representations of Aphrodite. There was also a statue of Praxiteles representing Apollo, surnamed Sarcoctonos, or the lizard-killer, which had great reputation in antiquity.⁸

Cepheidorus and Timarchus were sons of Praxiteles. There were several works of the former at Rome in the time of Pliny: he made his art subservient to passions and sensual desires. Pliny⁹ mentions among his works a celebrated Symplegma at Pergamus, which is the first instance of this kind

that we hear of in Grecian art. A similar spirit pervaded the works of Leochares (a Ganymedes carried by an eagle up to Zeus), of Polycles, who was the first that made the voluptuous statues of Hermaphroditus, and of Silanion, who made a dying Jocaste.¹ Leochares also made a number of portrait-statues in ivory and gold, of members of the royal family of Macedonia, and of other persons.³ Such portrait-statues about this time began to give much occupation to the artists. About the year 350 B.C., several of the greatest artists of the age, such as Scopas, Leochares, Timotheus, and Bryaxis, were engaged in Caria in making the magnificent mausoleum of Mausolus, a general description of which is given by Pliny.³

Most of the above-mentioned artists, however widely their works differed from those of the school of Phidias, may yet be regarded as having only continued and developed its principles of art in a certain direction; but towards the end of this period Euphranor and Lysippus of Sicyon carried out the principles of the Argive school of Polyclætus.⁴ Their principal object was to represent the highest possible degree of physical beauty, and of athletic and heroic power. Lysippus was the greater of the two: he was one of the most fruitful artists that have ever lived, for he is said to have made no less than 1500 figures. Among the heroes Heracles appears to have been a favourite subject of Lysippus, for he made several statues of him, representing him in various situations,⁵ and his figures of this hero served as types for subsequent artists. We still possess some representations of Heracles which are considered to be imitations of his works. The most celebrated among his portrait-statues were those of Alexander the Great.⁶ The chief characteristic of Lysippus and his school is a close imitation of nature, which even contrived to represent bodily defects in some interesting manner; its tendency is entirely realistic. The ideal statues of former times disappear more and more, and make way for mere portraits. Lysippus, it is true, made statues of gods, but they did not properly belong to his sphere; he merely executed them because he had received orders which he could not well refuse. His greatest care was bestowed upon the execution of the details (*argutie operum*), upon the correct proportions of the parts of the human body, and upon making portrait-statues slender and tall above the common standard. In short, all the features which characterize the next period appear in the school of Lysippus.

IV. Fourth Period, from Ol. 111' to Ol. 158. (336-146 B.C.)

Within a few generations Grecian art had passed through the various stages of development, and each of them had produced such an abundance of masterpieces, that it was difficult for a new generation of artists to produce new and original works. Hence the periods which followed could not do much more than imitate, and their productions are better or worse in proportion as they were founded upon the study of earlier works or not. But even this period of eclecticism has nevertheless produced statues and groups worthy of the highest admiration, and which can be placed by the side of the best works of antiquity. The very slow decay of the arts, in comparison with the rapid decline of literature, is indeed a strange phenomenon.

During the first fifty years of this period, the schools of Praxiteles and that of Sicyon continued

1. (H. N., xxxvi., 4, § 7.)—2. (Compare Paus., i., 43, § 6; vi., 25, § 2.)—3. (Vid. Galeria di Firenze, Stat., p. i., 4, 1, &c.)—4. (Paus., vi., 26, § 1.—Plin., H. N., xxxiv., 19, § 10; xxxvi., 4, § 5.—Paus., i., 20, § 1; 43, § 5.—Athen., xiii., p. 591.)—5. (Plin., H. N., l. c.—Lucian, Amor., 11, 17.—Paus., ix., 27.—Cic., c. Verr., iv., 2.)—6. (Plin., l. c.)—7. (Compare Lucian, Amor., 13; mag., 6.)—8. (Müller, Arch., p. 121.)—9. (H. N., xxxvi., 4, § 6.)

1. (Plin., H. N., xxxiv., 19, § 17 and 20.—Plut., De Aud. Poet., 3.—Symp., vi., 1.)—2. (Paus., vi., 20.)—3. (H. N., xxxvi., 4, § 9.)—4. (Cic., Brut., 56.)—5. (Müller, Arch., p. 124.)—6. (Plut., De Isid., 24.—De Alex. virt., ii., 2.—Alex., 4.—Plin., H. N., xxxiv., 19, § 6.)

to flourish, especially in works of bronze; but after this time bronze statues were seldom made until the art was carried on with new vigour at Athens about the end of the period. The school of Lysippus gave rise to that of Rhodes, where his disciple Chares formed the most celebrated among the hundred colossal statues of the sun. It was seventy cubits high, and partly of metal. It stood near the harbour, and was thrown down by an earthquake about 225 B.C.¹ Antiquarians assign to this part of the fourth period several very beautiful works still extant, as the magnificent group of Laocoon and his sons, which was discovered in 1506 near the baths of Titus, and is at present at Rome. This is, next to Niobe, the most beautiful among the extant works of ancient art; it was, according to Pliny, the work of three Rhodian artists: Agesander, Polydorus, and Athenodorus.² The celebrated Farnesian bull is likewise the work of two Rhodian artists, Apollonius and Tauriscus.³

In the various kingdoms which arose out of the conquests of Alexander, the arts were more or less cultivated, and not only were the great masterworks of former times copied to adorn the new capitals, but new schools of artists sprang up in several of them. Alexandria, Pergamus, and Seleucia rivalled each other in art no less than in literature. At Pergamus the celebrated groups were composed which represented the victories of Attalus and Eumenes over the Gauls.⁴ It is believed by some⁵ that the so-called dying gladiator at Rome is a statue of a Gaul, which originally belonged to one of these groups. Ephesus also had a flourishing school of art, which appears to have followed, in the main, the style of Lysippus, and excelled, like that of Pergamus, in the representation of battle scenes. The Borghese fighter in the Louvre is supposed to be the work of an Ephesian Agasias, and to have originally formed a part of such a battle scene. In Syria, too, art flourished at Antiochia until the time of Antiochus IV., before whose reign a number of statues had already been carried away by Scipio.

In these new monarchies statues of the gods were seldom made, and when they were executed, they were, in most cases, copies from earlier works, as the character in which the gods were represented had gradually become fixed, and few artists ventured to alter the forms, which had become typical. Portrait-statues of kings increased, on the other hand, to a great extent. The vanity of the kings and the flattery of the artists created a new kind of statues: the princes were frequently identified with certain deities, and were consequently represented as such, with all the requisite attributes. In many cases the mere bust of a king was put upon the body of a statue of a god. This was a most dangerous rock for artists; for the simple representation of a king in the shape of a god, which commenced as early as the time of Alexander, was soon thought an insufficient mark of veneration, and art degenerated into a mere instrument of the most vulgar flattery: pomp, and show, and tasteless ornaments were mistaken for art. Flattery towards the great was also shown in the monstrous number of statues that were erected to one and the same individual. Demetrius Phalerens had 360, or, according to others, 1500 statues erected to him.⁶ When the honour of a statue ceased to be considered as a high distinction, and when it became necessary to produce

such numbers of statues, the workmanship naturally became worse in proportion as the honour sank in public estimation. During this time it became customary to combine with the statues of kings and generals symbolical representations of towns, which are called *τύχαι πόλεων*. In Magna Græcia art gradually fell into decay after the wars with the Romans; and the example of Capua, from which all the statues were carried to Rome, affords us an instance of the robberies and plunder which were committed by the Romans in other towns of Italy. But even after the Roman conquests, the cultivation of the plastic arts cannot have ceased altogether, as we must infer from the numerous works found at Pompeii, some of which possess a higher degree of perfection and beauty than might have been expected in works of so late a date. In Sicily the activity of the artists appears to have ceased after the Roman conquest, for the numerous works with which Syracuse was adorned, and with which we are made acquainted by Cicero,¹ mostly belong to an earlier period.

Shortly before the taking of Corinth by Mummius, statues in bronze and marble were revived at Athens; and, although the artists were far inferior to those of former times, yet they still produced works of great excellence, as they showed their good sense and taste by making the masterworks of their predecessors the subjects of study and imitation.² Among those who contributed most to this revival of statuary were Cleomenes (who made the Medicean Venus, an imitation of that of Cnidus, but inferior in point of taste and delicacy), his son Cleomenes (by whom there is a statue in the Louvre, which shows an exquisite workmanship, but little life), Glycon, Apollonius, and others.

About the close of this period, and for more than a century afterward, the Romans, in the conquest of the countries where the arts had flourished, made it a regular practice to carry away the works of art; and, as they were unable to appreciate their value and merit, they acted, in many cases, no better than rude barbarians, regarding the most precious relics of art in no other light than that of chairs and tables, which might be made again at pleasure, and at any time. At first these robberies were carried on with some moderation, as by Marcellus at Syracuse and by Fabius Maximus at Tarentum, and only with a view to adorn their triumphs and the public buildings of Rome. The triumphs over Philip, Antiochus, the Ætolians, the Gauls in Asia, Perseus, Pseudo-Philip, and, above all, the taking of Corinth, and subsequently the victories over Mithradates and Cleopatra, filled the Roman temples and porticoes with the greatest variety of works of art. After the taking of Corinth the Roman generals and governors of provinces began to show a kind of amateurship in works of art which was probably more owing to the fashion prevailing among the Roman grandes than to any real taste or love for the fine arts: they now robbed whatever they could to adorn their own residences. Sometimes either their avarice or necessity induced them to melt down the most precious works without any regard to artistic worth. The sacrilegious plunder of temples, and the carrying away of the sacred statues from the public sanctuaries, which had at first been prevented to some extent by the pontiffs, became afterward a common practice. The manner in which Verres acted in Sicily is but one of many instances of the extent to which these robberies were carried on. The emperors, especially Augustus, Caligula, and Nero, followed these examples, and the immense number of statues which,

1. (Plin., H. N., xxxiv., 18.—Meursius, Rhod., i., 16.)—2. (Plin., H. N., xxxvi., 4, § 11.—Lessing's Laocoon.)—3. (Plin., H. N., xxxvi., 4, § 10.)—4. (Id., xxxiv., 19, § 24.—Paus., i., 25, § 2.—Plut., Anton., 60.)—5. (Müller's Archæol., p. 154.)—6. (Athr. a., xii., p. 537.—Paus., v., 24, § 3.—Clem. Alex., Protrept. iv, p. 16, ed. Sylb.—Dion Chrysost., Orat., 37, p. 122.)

notwithstanding all this, remained at Rhodes, Delphi, Athens, and Olympia, is truly astonishing.¹

Before we proceed to describe the state of statuary during the last stage, in which Rome was the centre of the ancient world, it will be necessary to give an outline of the history of statuary among the Etruscans and Romans down to the year 146 B.C.

The Etruscans were, on the whole, an industrious and enterprising people. Different hypotheses have been proposed to account for the cultivation of the arts, in which this nation excelled all others in central and northern Italy, as well as for the peculiar style in some of their productions. Some writers think that it was owing to colonies from Lydia, which were established at Cære and Tarquinii; others, that the Etruscans themselves were a Pelasgian tribe. With the works of Grecian art they must have become acquainted at an early time, through their intercourse with the Greeks of southern Italy; and their influence upon the art of the Etruscans is evident in numerous cases. The East, also, appears to have exercised some influence upon the Etruscans, as many works of art found in Etruria contain precisely the same representations as those which we find in Asia, especially among the Babylonians. However this may have been effected, we know for certain that the whole range of the fine arts was cultivated by the Etruscans at an early period. Statuary in clay (which here supplied the place of wood, *ξύα*, used in Greece) and in bronze appears to have acquired a high degree of perfection. In 267 B.C., no less than 2000 bronze statues are said to have existed at Volsinii,² and numerous works of Etruscan art are still extant, which show great vigour and life, though they do not possess a very high degree of beauty. Among them we may mention the Chimera of Arretium (at Florence); the Capitoline She-wolf,³ which was dedicated in B.C. 296; the Minerva of Arezzo (now at Florence), and others. Some of their statues are worked in a Greek style; others are of a character peculiar to themselves, and entirely different from works of Grecian art, being stiff and ugly; others, again, are exaggerated and forced in their movements and attitudes, and resemble the figures which we meet with in the representations of Asiatic nations. Etruscan utensils of bronze, such as candelabra, patenæ, cups, thrones, &c., embellished with various ornaments and figures, were very highly valued in antiquity, and even at Athens at a time when the arts were still flourishing there.⁴ Their works in stone, especially the alto and basso relievos, which are found in considerable numbers on chests containing the ashes of the dead, are, with few exceptions, of very inferior merit.

The Romans, previously to the time of the first Tarquin, are said to have had no images of the gods, and for a long time afterward their statues of gods in clay or wood were made by Etruscan artists.⁵ During the early part of the Republic, the works executed at Rome were altogether of a useful and practical, and not of an ornamental character, and statuary was, in consequence, little cultivated. But in the course of time, the senate and the people, as well as foreign states, which were indebted to some Roman, began to erect bronze statues to distinguished persons in the Forum and other places.⁶ The earliest works of this kind which we can consider as really historical are the statues of Attus Navius,⁷ of Minucius outside the Porta Trigemina, and of Pythagoras and Alcibiades, which

stood in the corners of the comitium from the year B.C. 314 down to the dictatorship of Sulla.¹ The last two statues were undoubtedly of Greek workmanship. The earliest metal statue of a deity was, according to Pliny, a Ceres which was made of the confiscated property of Spurius Cassius, about 485 B.C.² Two other metal statues of gods were the Capitoline Hercules, 306 B.C.,³ and the colossal statue of the Capitoline Jupiter, which, according to Livy, was made about 490 B.C.⁴ The number of statues of men in the Forum appears soon to have become very great, and many persons seem to have had them erected there without any right: hence, in 161 B.C., the censors P. Cornelius Scipio and M. Popilius removed from the Forum all statues of magistrates which had not been erected with the sanction of the senate or the people.⁵ A statue of Cornelia, the mother of the Gracchi, stood in the porticus of Metellus. The artists by whom these and other statues were executed were undoubtedly Greeks and Etruscans.

V. Fifth Period, from Ol. 158 (B.C. 146) to the fall of the Western Empire.

During this period Rome was the capital of nearly the whole of the ancient world, not through its intellectual superiority, but by its military and political power. But it nevertheless became the centre of art and literature, as the artists resorted thither from all parts of the Empire for the purpose of seeking employment in the houses of the great. The mass of the people, however, had as little taste for, and were as little concerned about the arts as ever.⁶ In addition to this, there was still a strong party of the Romans who, either from an affected or an honest contempt for the Greeks, entertained the vain hope of being able to restore the olden times. These circumstances account for the fact that a man like Cicero thought it necessary to conceal and disguise his love and knowledge of the fine arts. It was, therefore, only the most distinguished and intellectual Romans that really loved and cherished the arts. This was both a fortunate and an unfortunate circumstance: had it not been so, art would have perished at once; now it continued in some degree to be cultivated, but it experienced the same fate, which it has met with at all times, when it has continued its existence without the sympathies of the people, and merely under the patronage of the great. Notwithstanding these unfavourable circumstances, there were a number of distinguished artists at Rome during the latter period of the Republic, who had really imbibed the spirit of the ancient Greeks, and produced works of great beauty and merit. We need only mention such names as Pasiteles of southern Italy, who was a Roman citizen, and made an ivory statue of Jupiter for the Temple of Metellus;⁷ Arcesilaus, of whom Pliny mentions several highly valued works, and whose models were prized more than the statues of others; Decius, who even ventured to rival Chares in the art of founding metal statues; Praxiteles, Diogenes, and others. During the Empire the arts declined, and, with some noble exceptions, merely administered to the vanity, luxuries, and caprices of the emperors.⁸ The inertness of the times, says Pliny,⁹ has destroyed the arts; and as there were no more minds to be represented, the representations of the bodies were likewise neglected. Occasionally, however, excellent and talented sculptors still arose, and adorned the palaces of the emperors with beautiful

1. (Vid. Völkell, Ueber die Wegführung der Alten Kunstwerke aus den eroberten Ländern nach Rom.—Müller, Arch., p. 165, &c.)—2. (Plin., H. N., xxxiv, 16, 18.—Compare Vitruv., iii., 2.)—3. (Dionys., i., 79.—Liv., x., 23.)—4. (Athen., i., p. 28; xv., p. 700.)—5. (Plin., H. N., xxxv., 45; xxxiv., 16.)—6. (Id. ib., xxxiv., 14.)—7. (Id., xxxiv., 11.—Cic., De Div., i., 11.)

1. (Plin., H. N., xxxiv., 12.)—2. (Id., xxxiv., 9.)—3. (Liv., ix., 44.)—4. (Id., ix., 40; x., 38.—Plin., H. N., xxxiv., 18.)—5. (Id. ib., xxxiv., 14.)—6. (Horat. ad Pis., 323.—Petron., 88.)—7. (Plin., H. N., xxxvi., 4, § 12.)—8. (Senec. Epist., 88.)—9. (Id. N., xxxv., 2.)

groups. Pliny¹ mentions as such Craterus, Pythodorus, Polydetes, Hermolaus, a second Pythodorus, Artemon, and Aphrodisius of Tralles. In the time of Nero, who did much for the arts, we meet with Zenodorus, a founder of metal statues, who was commissioned by the emperor to execute a colossal statue of 110 feet high, representing Nero as the Sun. The work was not completely executed, as the art of using the metal had fallen into oblivion. In A.D. 75 the statue was consecrated as a Sol, and was afterward changed into a statue of Commodus by altering the head.² The principal sculptured works that were produced during the Empire were, 1. Reliefs on public monuments, such as those adorning the triumphal arch of Titus, which represented the apotheosis of the emperor, and his triumph over Judæa. The invention and grouping of the figures are good and tasteful, but the execution is careless. The same may be said of the reliefs of the Temple of Minerva in the Forum of Domitian, in which the drapery in particular is very bad. 2. Statues and busts of the emperors. These may again be divided into classes, and are easiest distinguished by the costumes in which they are represented. They are (a.) faithful portraits in the costume of ordinary life (*toga*), or in the attire of warriors (*statuæ thoracatae*), generally in an attitude as if they were addressing a body of men, as, e. g., the colossal statue of Augustus in the palace Grimaldi. To this class also belong the equestrian statues, and the statues upon triumphal cars with from two to six horses, and sometimes even with elephants, which were frequently made for emperors out of mere vanity, and without there having been any real triumph to occasion such a work.³ (b.) Such statues as were intended to show the individual in an exalted, heroic, or deified character. Among those were reckoned the so-called Achillean statues, which were first made in the time of Augustus; they were naked, and bore a hasta in one hand;⁴ and, secondly, statues in a sitting position, with the upper part of the body naked, and a pallium covering the loins. These statues were intended to represent an emperor as Jupiter, but sometimes also as an Apollo.⁵ This method of representing an emperor as a god was at first practised with much good taste. The statues of the ladies of the imperial families are likewise either simple and faithful portraits, or they are idealized as goddesses: specimens of each kind are still extant. The custom adopted in the Macedonian time, of combining allegorical representations of towns and provinces with the monuments erected in honour of the sovereigns, was sometimes followed by the Romans also, and some of them were made by very distinguished artists.⁶ In the reign of Trajan, the column of Trajan, with sculptures representing the victory of this emperor over the Dacians, and other similar works, were executed. We also possess a beautiful colossal statue of Nerva in the Vatican, and in the Louvre there is a beautiful *statua thoracata* of Trajan, and several fine busts of the same emperor.

Down to the reign of Hadrian, statuary had become more and more confined to the representation of subjects of a common nature, so that at length we scarcely find anything else but the records of victories in the reliefs on the public monuments, and the various kinds of statues of the emperors and the members of their families. But in the reign of Hadrian the arts seemed to begin a new æra. He himself was undoubtedly a real lover and connoisseur

of art, and he encouraged it not only at Rome, but in Greece and Asia Minor. The great villa of Trajan below Tivoli, the ruins of which cover an extent of ten Roman miles in circumference, was richer in works of art than any other place in Italy. Here more works of art have been dug out of the ground than anywhere else within the same compass. Hadrian was fond of the ancient forms in art as well as in language, and many works in the archaic style still extant may have been executed at this time. Some statues made at this time combine Egyptian stiffness with Grecian elegance, and especially the representations of Egyptian deities, such as that of Isis, are half Greek and half Egyptian. But by the side of this strange school there existed another, in which the pure Greek style was cultivated, and which has produced works worthy of the highest admiration. Foremost among these stand the statues and busts of Antinous, for whom the emperor entertained a passionate partiality, and who was represented in innumerable works of art. The colossal bust of Antinous in the Louvre is reckoned one of the finest works of ancient art, and is placed by some critics on an equality with the best works that Greece has produced. The two centaurs of black marble on the Capitol probably belong to the reign of Hadrian: one of them is executed in an old and noble style, and is managed by a little Eros riding on his back; the other looks more like an intoxicated satyr. There are also some very good works in red marble which are referred to this period, as it is not known to have been used before the age of Hadrian.

As the arts had received such encouragement and brought forth such fruits in the reign of Hadrian, the effects remained visible for some time during the reign of the Antonines. Antoninus Pius built the great villa at Lanuvium, of which ruins are still extant, and where many excellent works of art have been discovered. But sophistry and pedantic learning now began to regard the arts with the same contempt as the ignorance of the Romans had formerly done. The frieze of a temple, which the senate caused to be erected to Antoninus Pius and Faustina, is adorned with griffons and vessels of very exquisite workmanship; but the busts and statues of the emperors show in many parts an affected elegance, while the features of the countenance are tasteless and trivial copies of nature. The best among the extant works of this time are the equestrian statue of Marcus Aurelius of gilt bronze, which stands on the Capitol, and the column of M. Aurelius, with reliefs representing scenes of his war against the Marcomanni. The busts which we possess of M. Aurelius, Faustina, and Lucius Verus, are executed with very great care, especially as regards the hair. The number of the extant busts of the Antonines amounts to above one hundred; and the rate at which busts of emperors were sometimes multiplied, may be inferred from the fact that the senate sometimes ordained that the bust of an emperor should be in the house of every citizen.

After the time of the Antonines, the symptoms of decline in the arts became more and more visible. The most numerous works continued to be busts and statues of the emperors, but the best among them are not free from affectation and mannerism. The hair, especially in the representations of female figures, becomes gradually utterly tasteless; and instead of the natural hair, the artists made it a point to show that it was a large peruke, which in some cases might be put on and taken off at pleasure. (*Vid. GALERUS.*) In the time of Caracalla many statues were made, especially of Alexander the Great. Alexander Severus was a great admirer of

1. (H. N., xxxvi., 4, § 11.)—2. (Id., xxxiv., 18.—Herodian, i., 55)—3. (Dion Cass., liti., 22.—Stat., *Sylv.*, i., 1.—Mart., ix., 69.—Tacit., De Orat., 8, 11.—Juv., vii., 126.—Plin., H. N., xxxiv., 10.)—4. (Plin., l. c.)—5. (Müller, Arch., p. 219.)—6. (Strab., iv., p. 192.—Müller, Arch., p. 230.)

tates, not from a genuine love of art, but because he delighted in the representations of great and good men.¹ The reliefs on the triumphal arch of Septimius Severus, representing his victories over the Parthians, Arabs, and the Adiabeniens, have scarcely any artistic merits. During this time of decay the custom arose of adorning the sarcophagi with figures in high relief, representing scenes from the legends of Demeter, Dionysus, and from the heroic ages of Greece; sometimes, also, the fable of Eros and Psyche: all these contained allusions to the immortality of the soul. Art, however, now declined with great rapidity: busts and statues were more seldom made than before, and were awkward and poor; the hair is frequently indicated by nothing else but holes bored in the stone. The reliefs on the sarcophagi gradually become monotonous, lifeless, and evidently executed without spirit. The reliefs on the arch of Constantine, which are not taken from that of Trajan, are perfectly rude and worthless, and those on the column of Theodosius were not better. Art, in the proper sense of the word, ceased to exist; statues of victors in the public games continued to be erected down to the fourth, and statues of the emperors (at Constantinople) down to the eighth century; but at Rome, as at Constantinople, those who were honoured in this way were more concerned about their rank and dress being properly represented in their statues, than about the real artistic merit of the work. Statuary became mere manual labour, and required nothing but mechanical skill. At Constantinople, however, where statues had been collected from Rome, Greece, and Asia Minor, the events of history allowed the plastic arts to die away more gradually than in Italy.

Before concluding, it remains to say a few words on the destruction of ancient works of art. During the latter part of the reign of Constantine, many statues of the gods were destroyed and melted down, and not long after his time a systematic destruction began, which under Theodosius spread over all parts of the Empire. This spirit of destruction, however, was not directed against works of art in general and as such, but only against the pagan idols. The opinion, therefore, which is entertained by some, that the losses we have sustained in works of ancient art are mainly attributable to the introduction of Christianity, is too sweeping and general. Of the same character is another opinion, according to which the final decay of ancient art was a consequence of the spiritual nature of the new religion. The coincidence of the general introduction of Christianity with the decay of the arts is merely accidental. That the early Christians did not despise the arts as such, is clear from several facts. We know that they erected statues to their martyrs, of which we have a specimen in that of St. Hippolytus in the Vatican library; and it is expressly stated that Christians devoted themselves to the exercise of the arts.² The numerous works, lastly, which have been found in the Christian catacombs at Rome, might alone be a sufficient proof that the early Christians were not hostile towards the representation of the heroes of their religion in works of art. The hostility, such as it appears in the writings of Augustin, cannot therefore have been general; and, in fact, Christianity during the Middle Ages became as much the mother of the arts of modern times as the religion of Greece was the mother of ancient art. Another very general and yet incorrect notion is, that the Northern barbarians, after the conquest of Rome, intentionally destroyed works of art. This opinion is not supported by any

of the contemporary historians, nor is it at all probable. The barbarians were only anxious to carry with them the most precious treasures in order to enrich themselves; a statue must have been an object of indifference to them. What perished, perished naturally by the circumstances and calamities of the times: in times of need, bronze statues were melted down, and the material used for other purposes; marble statues were frequently broken to pieces and used for building materials. If we consider the history of Rome during the first centuries after the conquest of Italy by the Germans, we have every reason to wonder that so many specimens of ancient art have come down to our times.³

STELAI (στήλαι). (Vid. FUNUS, p. 457.)

STHENIA (σθηνία), a festival with contests, celebrated by the Argives in honour of Zeus, surnamed Sthenius, who had an altar, consisting of a large rock, in the neighbourhood of Hermione.² Plutarch³ states that the πάλη or wrestling, which formed a part of the contests at this festival, was accompanied by a flute; and he also mentions a tradition, according to which the festival had originally been held in honour of Danaus, and that it was afterward consecrated to Zeus Sthenius.

STIBADIUM. (Vid. MENSA, p. 633.)

*STIBIUM (στιβίμ), a Sulphuret of Antimony, used from the earliest times, and still employed at the present day in the East for tinging black the hair and eyebrows, the eyelashes and edges of the lids; this last application being with a view to increase the apparent size of the eye. "Pliny's description of *stibium*," says Dr. Moore, "does not suit, in all respects, the common sulphuret of antimony; but this mineral may have been found then more frequently associated, as it now sometimes is with the white oxide, or with the nickeliferous sulphuret, to either of which Pliny's description of it as '*candida nitensque*' might be with propriety applied." Hardouin correctly states, according to Adams, that the ancients were most probably unacquainted with pure antimony, which is a factitious substance, or, at least, is rarely found as a native ore. It is called τετραγώνων by Hippocrates, from its being made into pastils of a square form." On the ancient antimony, consult Pliny's Natural History.⁴

STILLICIDIUM. (Vid. SERVITUTES, p. 878.)

STILUS or STYLUS is in all probability the same word with the Greek στυλος, and conveys the general idea of an object tapering like an architectural column. It signifies,

1. An iron instrument,⁵ resembling a pencil in size and shape, used for writing upon waxed tablets.⁶ At one end it was sharpened to a point for scratching the characters upon the wax,⁷ while the other end, being flat and circular, served to render the surface of the tablets smooth again, and so to obliterate what had been written. Thus *vertere stilum* means to *erase*, and hence to *correct*, as in the well-known precept *sæpe stilum vertas*.⁸ The stylus was also termed *graphium*,⁹ and the case in which it was kept *grapharium*¹⁰ or *graphiaria theca*.¹¹ The following woodcut is from a picture found in Herculaneum.¹²

2. A sharp stake or spike placed in pitfalls before

1. (Winckelmann, *Gesch. der Kunst*.—Meyer, *Gesch. der bildenden Künste bei den Griechen*.—F. Thiersch, *Ueber die Epochen der bildenden Kunst unter den Griechen*.—K. O. Müller, *Arch. u. d. Kunst*, 2d ed., 1835.)—2. (Hesych., s. v. Στήλια.—Compare Paus., ii., 32, § 7; 34, § 6.)—3. (De Mus., p. 1140, C.)—4. (Dioscor., iii., 99.—Plin., H. N., xxxiii., 33.—Hardouin ad Plin., l. c.—Adams, *Append.*, s. v.—Moore's *Anc. Mineralogy*, p. 51.)—5. (Ovid, *Met.*, ix., 521.—Mart., xiv., 21.)—6. (Plaut., *Bacch.*, iv., 4, 63.—Plin., H. N., xxxiv., 14.)—7. (Quint., i., 1, § 27.)—8. (Hor., *Sat.*, i., 10, 72.—Cic., c. Verr., ii., n., 41.)—9. (Ovid, *Amor.*, i., 11 13.—Suet., *Jul.*, 82.)—10. (Mart., xiv., 21.)—11. (Suet., *Claud.*, 35.)—12. (Mus. Borbon., tom. vi., tav. 35.)

an intrenchment to embarrass the progress of an attacking enemy.¹ It was intended to answer the same purpose as the contrivances called *cippi*, *lilia*, and *stimuli* by Cæsar.²

3. A bronze needle or rod for picking worms off fruit-trees;³ also a wooden probe employed in gardening operations.⁴

It bears, also, the meaning of the stem of a tree or vegetable,⁵ which is, perhaps, the primary significance of *στύλος*.

*STIMULI, the Greek name for what the Romans called *Stibium*. (Vid. *STIBIUM*.)

STIPENDIARII. The stipendiariæ urbes of the Roman provinces were so denominated, as being subject to the payment of a fixed money tribute, "*stipendium*," in contradistinction to the vectigales, who paid a certain portion, as a tenth or twentieth of the produce of their lands, their cattle, or customs. The word "*stipendium*" was used to signify the tribute paid, as it was originally imposed for, and afterward appropriated to, the purpose of furnishing the Roman soldiers with pay (*stipendium*⁶). The condition of the urbes stipendiariæ is generally thought to have been more honourable than that of the vectigales, but the distinction between the two terms was not always observed.⁷ The word stipendiarius is also applied to a person who receives a fixed salary or pay, as a "*stipendiarius miles*,"⁸ a phrase which is sometimes used to denote a veteran who has received pay for many years, or served in many campaigns.⁹ Some MSS. have stipendiosus in the passage last quoted, which is, perhaps, a better reading.¹⁰

STIPENDIUM, a pension or pay, from *stipem* and *pendo*, because, before silver was coined at Rome, the copper money in use was paid by weight, and not by tale.¹¹ According to Livy, the practice of giving pay to the Roman soldiers (*ut stipendium miles de publico acciperet*) was not introduced till B.C. 405, on the occasion of the taking of Tarracina or Anxur. He represents the change as the spontaneous and unsolicited act of the senate; but from another passage¹² we learn, that in the year 421 B.C. the tribunes had proposed that the occupiers of the public land should pay their *vectigal* regularly, and that it should be devoted to the payment of the troops. The concession was probably accelerated by the prospect of the last war with Veii, and made with a view of conciliating the plebs, who, without some such favour, would in their then humour have refused to vote for the war. Livy also represents the funds for the payment to have been raised by a tributum or general tax; but, as Arnold observes,¹³ "The vectigal or tithe due from the occupiers of the public land was to provide pay for the soldiers; and if this were not sufficient, it was to be made good

by a tax or tribute levied upon the whole people. This tithe, however, was probably paid very irregularly, and hence the pay of soldiers would, in point of fact, be provided chiefly out of the tributum." A few years after this concession (B.C. 403), and during the hostilities against Veii, a certain amount of pay was assigned (*certus numerus aris est assignatus*¹) to the knights also, or EQUITES, p. 415. Livy, however, seems to be here speaking of the citizens who possessed an equestrian fortune, but had no horse (*equus publicus*) assigned to them by the state; for it had always been customary for the knights of the 18 centuries to receive pay out of the common treasury in the shape of an allowance for the purchase of a horse, and a yearly pension of 2000 *asses* for its keep. (Vid. *ÆS EQUESTRE*, *ÆS HORDEARIUM*.) Hence Niebuhr² doubts the accuracy of the account which is given by Livy,³ and observes that "the Veientine war cannot have been the occasion on which the practice of giving pay to the troops was first established: the *æarii* must undoubtedly have always continued to pay pensions (*capita*) to the infantry, in the same way as single women and minors did to the knights: and the change consisted in this, that every legionary now became entitled to pay, whereas the number of pensioners had previously been limited by that of the persons liable to be charged with them; and hence the deficiency was supplied out of the *ærarium* from the produce of the vectigal, and when this failed, by a tribute levied even from those plebeians who were themselves bound to serve." Consequently, the tribunes murmured that the tribute was only imposed for the sake of ruining the plebs.⁴ In support of his opinion, Niebuhr⁵ advances arguments which at least make it very probable that the "paterna legislation" of Servius Tullius provided for the pay of the infantry in the manner mentioned; but even admitting this, the practice might have been discontinued, so as to justify the statement made on this subject by Livy. We have not space to repeat or discuss those arguments here, and therefore simply refer to them in vol. i., p. 374, and vol. ii., p. 441, of his History. According to Polybius,⁶ the daily pay of a legionary amounted, in his time, to two oboli, which, as he makes a drachma equivalent to a denarius, and a denarius, in paying the soldiers, was then estimated at ten *asses*,⁷ and not at sixteen, as was usual in other money transactions, gives 3½ *d asses* a day, or 100 a month. Now the yearly pension of the knights (2000 *asses*), observes Niebuhr, gives, if we take the old year of 10 months, 200 *asses* a month; just double the pay of the foot-soldiers. In later times the knights received triple pay (*triplex stipendium merebant*). This allowance was first established by the military tribune Cn. Cornelius Cossus (400 B.C.), and, according to Niebuhr, was then designed as a compensation to those who served with their own horses: it did not become the general custom till some time afterward. Polybius⁸ thus speaks of the stipendium of his day, which he calls *ὀψώνιον*, as St. Luke⁹ also does. "The foot-soldier receives as pay two oboli a day; the centurion twice as much; the horseman a drachma or denarius. The foot-soldiers also receive in corn every month an allowance (*demensum*) of ¾ *d*s of an Attic medimnus, or about 2 bushels of wheat; the horsemen 7 medimni of barley and 2 of wheat. The infantry of the allies receive the same allowance (*σιτομετρούνται*) as the Roman; the horsemen 1½ medimni of wheat and 5 of barley. But there is this difference, that the allied forces receive their allowance as a gratuity; the Roman

1. (Liv., vi., 7.)—2. (i., 474, and ii., p. 441.)—3. (iv., 59.)—4. (Liv., iv., 60.)—5. (l. c.)—6. (vi., 37.)—7. (Plin., i. c.)—8. (vi., 37.)—9. (iii., 14.)

soldiers, on the contrary, have deducted from their pay the money value of whatever they receive, in corn, armour, or clothes." There was, indeed, a law passed by C. Gracchus,¹ which provided that, besides their pay, the soldiers should receive from the treasury an allowance for clothes; but from Tacitus² this law seems either to have been repealed or to have fallen into disuse. The two oboli of Polybius, which we make equal to 3½ asses, are reckoned by Plautus in round numbers at 3 asses. Thus he says,³ "*Isti qui trium nummorum causa subeunt sub fulas.*" This amount was doubled for the legionaries by Julius Cæsar⁴ before the civil war. He also gave them corn whenever he had the means, without any restrictions (*sine modo nensuraque*). Under Augustus⁵ it appears to have been raised to 10 asses a day (three times the original sum), or 300 a month, or 1200 in four months. Now, as the original amount of their pay had been tripled, the soldiers could not complain if the denarius were reckoned at 16 asses in payments made to themselves as well as other persons; and, taking this value, the 1200 asses amount to exactly 3 aurei, or 3×400 asses. This sum, then, was considered as a unit, and called *stipendium*, being paid three times a year. Hence Suetonius says of Domitian,⁶ "*Addidit et quartum stipendium, ternos aureos;*" a fact which Zonaras⁷ otherwise expresses by stating that, instead of 75 drachmæ (*i. e.*, denarii), Domitian gave the soldiers 100, *i. e.*, he made an addition of 25 denarii or 1 aureus to their pay. The expression of Suetonius supposes that 3 aurei were paid every quarter instead of every four months, after the addition made by Domitian; that of Zonaras implies that 4 aurei instead of 3 were paid, as before, every three months, the annual amount being the same either way, and the quarterly or four months' instalment of 3 or 4 aurei being called a *stipendium*. Niebuhr's⁸ statement on this subject is only partially correct, or else obscure: at any rate, if the soldiers received 10 asses a day, they must have received more than 1200 a year.

The prætorian cohorts received twice as much as the legionaries.⁹ The pay of the tribunes is not known; but it was considered very great,¹⁰ and probably was not less than 48 aurei per annum after the time of Domitian. We must not omit to mention that, if his pay were withheld, the Roman soldier was allowed, by an old unwritten custom, to distrain the goods (*per pignoris captionem*) of the officer whose duty it was to supply it. The eques was allowed the same privilege against the persons who were bound to furnish him with the æs equestre for the purchase of his horse, and the æs hordearium for his keep.¹¹

From an expression which Livy¹² puts into the mouth of a patrician orator, it might be supposed that the soldiers always received a full year's pay, independent of the length of their service. This, however, seems so unreasonable, that we cannot but agree with Niebuhr in supposing that the historian was misled by the custom of his own time, when a full year had long been the stipulated term of a soldier's pay as well as of his service.

STIPULATIO, STIPULATOR. (*Vid. Obligationes*, p. 673.)

STIVA. (*Vid. Aratrum*, p. 79.)

STLENGIS (στέλιγγις). (*Vid. Loutron*, p. 509.)

STOA (στοά). (*Vid. Porticus*.)

STOCHEION (στοχείον). (*Vid. Horologium*.)

*STOEBE (στοβή). "According to Hardouin, a species of *Scabiosa*; but this opinion is rejected by

Sprengel, who rather too confidently refers it to the *Peterium spinosum*, L. Stackhouse holds it to be the *Stabe centaurea*."¹

*STOECHAS (στοιχάς), a species of Lavender, probably, as Sprengel maintains, the *Lavandula Stachas*.²

STOLA was a female dress worn over the tunic. it came as low as the ankles or feet (*ad talos stola demissa*), and was fastened round the body by a girdle, leaving above the breast broad folds (*rugosiores stola frontem*). The tunic did not reach much below the knee, but the essential distinction between the tunic and stola seems to have been, that the latter always had an *INSTITA* or flounce sewed to the bottom, and reaching to the instep.³ Over the stola the palla or pallium was worn (*vid. PALLIUM*), as we see in the cut annexed.⁴

The stola seems to have been usually fastened over the shoulder by a *FIBULA* or clasp, and usually had sleeves, but not always.

The stola was the characteristic dress of the Roman matrons, as the toga was of the Roman men.⁵ Hence the meretrices were not allowed to wear it, but only a dark coloured toga;⁶ and, accordingly, Horace⁷ speaks of the *matrona* in contradistinction to the *togata*. For the same reason, women who had been divorced from their husbands on account of adultery were not allowed to wear the stola, but only the toga;⁸ to which Martial alludes.¹¹

*STOMOGA. (*Vid. ADAMAS*.)

STRAGULUM. (*Vid. TAPES*.)

STRATEGOS (στρατηγός). The office and title of *στρατηγός*, or general, seem to have been more especially peculiar to the democratic states of ancient Greece: we read of them, for instance, at Athens, Tarentum, Syracuse, Argos, and Thurii;¹ and when the tyrants of the Ionian cities in Asia Minor were deposed by Aristagoras, he established *στρατηγοί* in their room, to act as chief magistrates.¹²

The strategi at Athens were instituted after the remodelling of the constitution by Cleisthenes, to discharge the duties which fell on former times been performed either by the king or the archon polemarchus. They were ten in number, one for each of the ten tribes, and chosen by the suffrages (*χευρονομία*) of the people.¹⁴ Before entering on their duties, they were required to submit to a *dokimasia*, or examination of their character;¹⁵ and no one was eligible to the office unless he had legitimate children, and was possessed of landed property in Attica.¹⁶ They were, as their name denotes, intrusted

with the command on military expeditions, with the superintendence of all warlike preparations, and with the regulation of all matters in any way connected with the war department of the state. They levied and enlisted the soldiers (*κατέλεξαν*), either personally or with the assistance of the taxiarchs.¹ They were intrusted with the collection and management of the *ελοφοί*, or property-taxes raised for the purposes of war; and also presided over, or officiated as *ελεγωγείς* in, the courts of justice in which any disputes connected with this subject or the triarchy were decided.² They also nominated from year to year persons to serve as triarchs,³ and took cognizance of the cases of *ἀντιδότης* arising out of the triarchy and property-taxes (*ἐποιοῦν τὰς ἀντιδόσεις*).⁴ They also presided at courts-martial, and at the trials in cases of accusation for non-performance of military and naval duties. (*Ἰδ.* *ἈΕΤΡΑΤΕΙΑΣ* and *ΑΝΑΤΜΑΧΙΟΥ ΠΡΑΞΕΙΣ*.) They likewise had the power of convening extraordinary assemblies of the people in cases of emergency (*Ἰδ.* *Εκκλησία*, p. 384), and from the instance of Pericles, it would almost seem that in critical times they had the power of preventing an assembly being holden.⁵ But their most important trust was the command in war, and it depended upon circumstances to how many of the number it was given. At Marathon all the ten were present, and the chief command came to each of them in turn. The archon polemarchus also was there associated with them, and, according to the ancient custom, his vote in a council of war was equal to that of any of the generals.⁶ In the expedition against Samos, also, all the ten generals were engaged,⁷ the poet Sophocles being one of the number;⁸ but it is obvious that in most cases it would be neither convenient nor useful to send out the whole number on the same undertaking, and, during the course of a protracted war, it would be necessary for some of them to be left at home in charge of the war department there. Accordingly, in the best times of Athens, three only were, for the most part, sent out; one of these (*πρῶτος αὐτός*) was considered as the commander-in-chief, but his colleagues had an equal voice in a council of war. Sometimes a strategus, as Pericles, was invested with extraordinary powers:⁹ in like manner, the three generals engaged in the Sicilian expedition, Nicias, Alcibiades, and Lamachus, were made *αὐτοκράτορες*, or supreme and independent in all matters connected with it.¹⁰ So also was Aristides in his command at Platæa. But even in ordinary cases the Athenian generals were not fettered in the conduct of a campaign by any council of war or other controlling authority, as the Spartan kings sometimes were; still they were responsible for it, and in the time of Demosthenes¹¹ exposed, at the termination of their command, to capital indictment at the caprice of the people, or from the malevolence of personal enmity.¹² Even Pericles himself¹³ was fined by the people for imputed mismanagement, but really because the Athenians were disappointed in their expectations.

In the times of Chabrias and Phocion, however, the greater part of the generals regularly remained at home to conduct the processions, &c., as the citizens did to enjoy them, leaving their wars to be conducted by mercenaries and their leaders.¹⁴ Some of them, too, were not commanders of all the

troops, but only of the horse and foot of separate armies (*στρατηγὸς ὁ ἐπὶ τῶν ὀπλῶν* or *ὀπλιτῶν*, and *ὁ ἐπὶ τῶν ἱππέων*): and one of them, the general of the administration (*ὁ ἐπὶ τῆς διοικήσεως*), performed part of the judicial labours of the strategi and other civil services, such as that of giving out the pay of the troops.¹ We must also remember that the Athenian navy, as well as the army, was commanded by the strategi, whence the "prætorian navy" or flag-ship is called *στρατηγὴς ναῦς*.²

The strategi at Athens were perhaps the most important officers of the Republic, especially during war; and among them are numbered some of her most distinguished citizens, Miltiades, Themistocles, Pericles, Phocion, &c. But the generals of the early times differed in many respects from the contemporaries of Demosthenes. Formerly the general and the statesman were united in one person; the leader in the field was the leader in the assembly, and thus acquired a double influence, accompanied with a double responsibility. But in later times, the general and the professed orator or statesman were generally perfectly distinct,³ and the latter, as will always be the case in free states, had by far the greater influence. The last of the Athenian generals who was considered to unite the two characters was Phocion, who was general no less than forty-five times.⁴ Accordingly, the various parties into which the state was then divided had each their orator and general, the former acting as a recognised leader;⁵ and a general, when absent on foreign expeditions, was liable to be maligned or misrepresented to the people by an unfriendly and influential demagogue.⁶ Hence we cannot wonder that the generals of the age of Demosthenes were neither so patriotic nor so distinguished as those of former times, more especially when we call to mind that they were often the commanders of mercenary troops, and not of citizens, whose presence might have checked or animated them. Moreover, they suffered in moral character by the contamination of the mercenary leaders with whom they were associated. The necessity they were under of providing their hired soldiers with pay, habituated them to the practice of levying exactions from the allies; the sums thus levied were not strictly accounted for, and what should have been applied to the service of the state was frequently spent by men like Chares upon their own pleasures, or in the purchase of a powerful orator.⁷ Another effect of the separation of the two characters was, that the responsibility of the general and of the orator or minister was lessened, and it was in most cases easy for a general to purchase an apparently disinterested advocacy of his conduct. There was this farther abuse connected with the system, that, according to Isocrates,⁸ military command was so much coveted, that the election of generals was often determined by the most profligate bribery.

The most eminent generals of the time of Demosthenes were Timotheus, Chabrias, Iphicrates, and Diopithes. Chares and Lysicles were inferior to them both in loyalty and skill, but the former and the mercenary Charidemus were frequently employed. Towards the decline of the Roman Empire the chief magistrate at Athens was called *στρατηγός*, or the duke: Constantine bestowed on him the title of *μέγας στρατηγός*, or the *grand duke*.⁹ The military chieftains of the Ætolian and Achæan leagues were also called *στρατηγοί*. The Achæan *στρατηγοί* had the power of convening a

general assembly of the league on extraordinary occasions.¹

*STRATIOTĒS (στρατιώτης), a species of plant, probably a kind of water-lentil. "The στρατιώτης ποτάμιος was most probably, according to Sprengel, the *Pistia Stratiotis*. Woodville, treating of the common Yarrow or Millefoil, says of it, 'This plant appears to be the στρατιώτης χιλιόφυλλος of the Greek writers.' It is pretty generally looked upon as being the *Achillea millefolium*. It got the name of *Achillea* from its being supposed the herb used by Achilles in dressing wounds."²

STRATO'RES. 1. Imperial equerries subject to the tribunos stabuli. Their proper duty, as the name imports, was to saddle the horses; they also led them from the stable, and assisted the emperor to mount. Hence they were termed in Greek ἀναβαλεις. From the addition of miles to their title, it appears that they were considered as part of the military establishment.³ Consuls and prætors had their stratores, as we learn from inscriptions,⁴ and perhaps ædiles also.⁵

2. Officers sent into the provinces to select horses for the stud of the prince or for the general service of the state.⁶ These, in all probability, belonged to the same body with those mentioned above; the title *stratores a publicis rationibus*, by which they are usually distinguished in works upon Roman antiquities, rests upon no authority except the letters STR. A. P. R. in an inscription,⁷ the interpretation of which is very doubtful.

3. Jailers under the orders of the *commentariensis*, or chief inspector of prisons.⁸ To these Ulpian refers,⁹ "nemo proconsulum stratores suos habere potest, sed eorum vice milites ministerio in provinciis funguntur," although the passage is quoted in most dictionaries as bearing upon the stratores of the stable.¹⁰

4. In the later Latin writers, and especially in the monkish historians of the Middle Ages, *stratores* denote a chosen body of soldiers sent in advance of an army to explore the country, to determine the proper line of march, to select the spots best fitted for encamping, and to make all the arrangements necessary for the safety and comfort of the troops when they halted, their duties being in some respects analogous to those of the classical *metatores*, and in others to those of a modern *corps de guides*.¹¹

5. We find in an inscription the words DIOMEDES AP. STRATOR, which is generally understood to commemorate the labours of some individual in paving the Appian Way, and mention is made of *stratores* of this description in another inscription found at Mayence.¹²

STRENA, a present given on a festive day and for the sake of good omen,¹³ whence a good omen is called by Plautus *bona strena*.¹⁴ It was, however, chiefly applied to a new-year's gift, to a present made on the calends of January. In accordance with a senatus consultum, new-year's gifts had to be presented to Augustus in the Capitol, even when he was absent.¹⁵ The person who received such presents was accustomed to make others in return (*strenarium commercium*); but Tiberius, who did not like the custom on account of the trouble it gave him, and also of the expense in making presents in re-

turn, frequently left Rome at the beginning of January, that he might be out of the way,¹ and also strictly forbade any such presents to be offered him after the first of January, as he used to be annoyed by them during the whole of the month.² The custom, so far as the emperor was concerned, thus seems to have fallen almost entirely into disuse during the reign of Tiberius. It was revived again by Caligula,³ but abolished by Claudius;⁴ it must, however, have been restored afterward, as we find it mentioned as late as the reigns of Theodosius and Arcadius.⁵

STRIGIL. (Vid. BATHS, p. 146; LOUTROF, p. 599.)

*STRIX, the Screech Owl. (Vid. GLAUX.)

*STROMBUS (στρόμβος), a shellfish, called in French *Trompe*, in English *Trumpet*; namely, the *Cochlea Strombus*, L.¹

STROPHIUM (τανία, ταινίδιον, ἀπόδεσμος) was a girdle or belt worn by women round the breast and over the inner tunic or chemise? (*stretia strophio hucantes vincula papillas*). It appears from an epigram of Martial² to have been usually made of leather.¹⁰

*STROUTHION (στρούθιον), the *Saponaria officinalis*, or Soapwort. "Lucian mentions," says Adams, "that the impostor Alexander used it to procure a discharge of saliva from his mouth."¹¹

*STROUTHOS (στρούθος). "A term used by Pausanias Ægineta in the same general sense that *Passeres* is by Linnæus, as applying to the order of small birds. It is more particularly applied, however, to the *Passer domesticus*, or House Sparrow. Gesner supposes the πυργίτης and τραγλοούτης mere varieties of it; but it is more probable that the latter was the Hedge Sparrow, or *Accentor modularis*, Cuvier."¹²

*ΣΤΡΟΥΘΟΣ, μεγάλη, Λιθική, or 'Arabī, called also στρουθοκάμηλος, the Ostrich, or *Strouthio-camelus*, L. It is described by Xenophon, Aristotle, Ælian, Diodorus, and others. Oppian calls it Λιθής πτερόεν βοτόν ἄγκυλοδεύρον, and again, μετὰ στρουθοίο κάμηλον. "The length of its legs and of its neck," says Griffith, speaking of the ostrich, "and certain habits peculiar to it, have caused it to be compared to the camel. Eldemiri, in his 'History of Animals,' informs us, that the vulgar belief in Arabia is, that the ostrich is the production of a camel and a bird. From such approximations are derived the names which the ostrich has received in various countries. The Persian name of *suturmorg* literally signifies *camel-bird*; and it is the same with the *strouthio-camelus* of the Latins. We cannot, however, say with Aristotle, that the ostrich is of an equivocal nature, partly bird, partly quadruped; but still we may aver that, in the chain of being, it evidently constitutes a link between the birds and the mammalia. Though decreed, from its bulk, to remain upon the earth, and deprived of that faculty which is the eminent characteristic of its class, it has received in compensation a force and rapidity in the race far surpassing that of all other existing animals."¹³

STRUCTOR. (Vid. CÆNA, p. 275.)

*STRYCHNUS or -UM (στρύχνος or -ον), the herb Nightshade. "I cannot pretend," says Adams, "to unravel all the confusion which invests the subject of the ancient *strychni*. Both Celsus and Pliny

state that the *Strychnos* of the Greeks was called *Solanum* by the Romans. The Latin writers of the Middle Ages term it *Mamella*. Apuleius describes four species: the first called *Hortualis*; the second called *Cacabum*; the third called *Hypnotic somnifera*, &c.; the fourth, *Furialis*. Sprengel, in his annotations on Dioscorides, arranges the *strychni* as follows: 1st. The *στρύχνος κηραῖος* is the *Solanum nigrum* (common Nightshade), or *S. miniatum*. 2d. The *σ. ἀλκικάβος* is the *Physalis Alkekengi*, common Winter-cherry. 3d. The *σ. ὑπνωτικός* is the *Physalis somnifera*, or Cluster-leaved Winter-cherry. 4th. The *σ. μανικός* is the *Solanum Sodomeum*, or Black-spined Nightshade. Theophrastus describes the first, third, and fourth species. Stackhouse supposes the last to be the *Atropa belladonna*, which, by-the-way, is generally supposed to be the plant which Buchanan calls '*Solanum somniferum*,' and describes very graphically. Woodville thinks this species (the fourth) either the *Atropa belladonna* or *Solanum dulcamara*. Stackhouse agrees with Sprengel regarding the first and third species. On the *strychni* of the ancients, see in particular Schulze (*Toxicol. Veterum*, c. 18), whose account of them agrees in the main with that given above.¹¹

STULTORUM FERLÆ. (Vid. FORNACALIA.)
STUPRUM. (Vid. ADULTERIUM, CONCUBINA, INCESTUM.)

STYLUS. (Vid. STILUS.)

*STYPTERIA (στυπτήρια). "From the circumstance alone of the localities in which Dioscorides says the *στυπτήρια* was found, namely, Melos, Lipari, Sardinia, &c., we can have no difficulty in deciding it to have been the *Octohedral Alum* of Jameson, i. e., Sulphate of Alumine and Potash. The ancients, however, have described several varieties, which have exercised the ingenuity of the commentators to determine what they were. Alston calls the *στυπτήρια σχιστή* '*alumen scissile vel plumosum*.' He says, 'the true plumose or feathered alum is a salt, in colour and grain somewhat resembling amianthus, tasting like common alum.' Dr. Hill describes the *plumose alum* as consisting of efflorescences which hang from the rocks in certain islands of the Archipelago, where the earth is full of alum. These specimens were called *τριχίτις* by the Greeks, as if composed of hairs. He alludes, I presume, to the *Haar Salz* (Hair Salt) of Werner, formerly supposed a variety of alum, but consisting, according to Klaproth, of a mixture of the sulphates of magnesia and iron. Dr. Kidd states that the capillary or plumose alum consists of very delicate fibres like down. The *lygon*, or *liquid alum*, according to Dr. Hill, was what drops through the fissures of stones: when this assumed a round form, it was called *στρογγύλη*, 'round.' Dr. Milligan finds fault with Drs. Jameson and Thompson for holding that the ancient alum consisted principally of the sulphate of iron: they were right, however, in regard to the *alumen scissile*, or hair alum, which, as we have stated, Klaproth found to contain sulphate of iron. This variety was therefore considerably different from the common *στυπτήρια* of the Greeks.¹²

*STYRAX (στύραξ), a tree producing a resinous gum. The gum is called in Greek *τὸ στύραξ*, and the tree which produces it *ἡ* or *ὁ στύραξ*. The gum is known in the dispensatories by the name of *Styrax* or *Storax*. It has a fragrant odour, and an agreeable, slightly pungent, and aromatic taste; it is stimulant, and in some degree expectorant. The storax of commerce is chiefly obtained from Asiatic Turkey. The *στύραξ καλαμίνη*, mentioned by Paulus

Ægineta, is the *Styrax calamita*, so called because anciently packed up in reeds for safety of carriage. The styrax-tree is still called in the East *istorak* or *isterk*. The gum was formerly much employed in medicine, but now is little used except in perfumes. Some suppose that the *storax* is the true *thus Judæorum*, presented by the Magi to the infant Saviour; others, however, are in favour of the balm exuded by the *Amyris*.¹

*SUBER (φέλλος), the Cork-tree, or *Quercus Suber*, L. (Vid. PHELLUS.)

SUBLIGA'CULUM or SUCCINCTO'RIMUM (διαζωμα, περιζωμα), Drawers.² This article of dress, or a bandage wound about the loins so as to answer the same purpose, was worn by athletes at the public games of Greece in the earliest ages (vid. ΑΤΗ ΛΕΤÆ: ζῶσα νῦν³); but the use of it was soon discontinued, and they went entirely naked.⁴ The Romans, on the contrary, and all other nations except the Greeks, always adhered to the use of it in their gymnastic exercises.⁵ It was also worn by actors on the stage,⁶ by those who were employed in treading grapes (vid. TORCULAR⁷), and by the Roman popa at the sacrifices, and it then received the denomination of *linus*,⁸ which name was also applied to it as worn by Roman slaves.⁹ The circumstance of the slaves in India wearing this as their only covering,¹⁰ is agreeable to the practice of modern slavery in the West Indies and other tropical countries. Some of the ancient Gauls had such a contempt for death as to descend into the field of battle naked, with the exception of the subligaculum, or clothing for the loins.¹¹

SUBU'CULA. (Vid. TUNICA.)

SUCCE'SSIO. This word is used to denote a right which remains unchanged as such, but is changed with reference to its subject. The change is of such a nature, that the right, when viewed as attached to a new person, is founded on a preceding right, is derived from it, and depends upon it. The right must accordingly begin to be attached to the new person at the moment when it ceases to be attached to the person who previously had it. Thus, in the case of the transfer of ownership by tradition, the new ownership begins when the old ownership ceases, and it only arises in case the former possessor of the thing had the ownership; that is, prior ownership is a necessary condition of subsequent ownership. This kind of change in ownership is called *successio*. It follows from the definition of it that *usucapio* is not included in it. The *successio* of a heres is included; for though there might be a considerable interval between the death and the *aditio hereditatis*, when the *hereditas* was once taken possession of, the act of *aditio* had, by a legal fiction, relation to the time of the death. Thus, whereas we generally view persons who possess rights as the permanent substance and the rights as accidents, in the case of succession the right is the permanent substance, which persists in a series of persons.

The notion of succession applies mainly, though

not exclusively, to property. With respect to the law that relates to familia, it applies so far as the parts of the familia partake of the nature of property, such as the power of a master over his slave, and the case of patronatus and mancipii causa. Thus the patria potestas and the condition of a wife in manu may be objects of succession. It applies also to the case of adoption.

Successio is divided into singular succession and universal succession. These terms conveniently express the notion, but they were not Roman terms. The Roman terms were as follows: in universum jus, in eam duntaxat rem succedere;¹ per universitatem, in rem succedere;² in omne jus mortui, in singularum rerum dominium succedere;³ in universa bona, in rei tantum dominium succedere.⁴

It is singular succession when a single thing, as an object of ownership, is transferred, or several things together, when they are transferred as individual things, and not as having relation to one another in consequence of this accidental common mode of transfer.

The object of universal succession is property as an ideal whole (*universitas*) without any reference to its component parts. Yet the notion of succession applies as well to a fraction of this ideal whole as to the unit which this ideal whole is conceived to be; for the whole property being viewed as a unit, it may be conceived to be divided into fractional parts without any reference to the several things which are included in the ideal whole. It was also consistent with this species of succession that many particular rights should be incapable of being transferred: thus, in the case of an hereditas, the usufructus of the deceased did not pass to the heres, and in the case of adrogation neither the usufructus nor the debts of the adrogated person, according to the old law.

The object of universal succession is a universitas as such, and it is by means of the words universitas and universum that the Romans denote this kind of succession; but it would be erroneous to infer from this use of the term that succession applies to all universitates. Its proper application is to property, and the true character of universal succession is the immediate passing over from one person to another of all the credits and debts that belong or are attached to the property. This happens in the case of an hereditas, and in the case of adrogation as to most matters. The debts would be transferred by adrogation if this were not accompanied with a capitis diminutio. Credits and debts could not be transferred by singular succession. The cases of universal succession were limited, and the notion could not be applied and made effectual at the pleasure of individuals. The most important cases of universal succession were the property of a deceased person; as hereditas, bonorum possessio, fideicommissaria hereditas, and others of the like kind. The property of a living person might be transferred in this way, in the case of adrogatio, conventio in manum, and the bonorum emptio.⁵ In many other cases, though the object is to transfer a whole property, it is, in fact, effected by the transfer of the several things: the following are instances of this kind of transfer, the gift of a whole property, or its being made a dos, or being brought into a societas, or the sale of an hereditas by a heres.

The notion of a universal succession among the Romans appears to have been derived from the notion of the hereditas, to which it was necessary to attach the credits and debts of the deceased and the sacra. Other instances of universal succession,

such as the bonorum possessio, grew out of the notion of the hereditas; and it was found convenient to extend it to other cases, such as adrogation. But, as already observed, the extension of the notion was not left to the pleasure of individuals, and, accordingly, this doctrine was, to use a Roman phrase, *juris publici*.

The words *successio*, *successor*, *succedere*, by themselves, have a general meaning, and comprise both kinds of succession. Sometimes these words, by themselves, signify universal succession, as appears from the context,¹ and by such expressions as *heredes ceterique successores*. In other cases the kind of succession is denoted by appropriate words, as *per universitatem succedere*, *acquirere*, *transire*, *in universum jus succedere*, &c., in the case of universal succession; and in rem, in rei dominium, in singularum rerum dominium succedere, &c., in the case of singular succession.

In the phrase "*per universitatem succedere*," the notion of universal succession is not directly expressed; for the phrase has immediate reference to the acquisition of a single thing, and it is only by means of the word *universitas* that we express the notion that the acquisition of the individual thing is effected by means of the acquisition of the whole.²

SUCCESSOR. (*Vid. Successio.*)

SUCCINCTORIUM. (*Vid. Subligaculum.*)

*SUCCINUM, the Latin name for Amber, founded on the belief that it consisted of the resinous juice (*succus*) of certain trees, which had in the course of time become mineralized in the earth. (*Vid. Electrum.*)³

*SYC'ALIS (*συκαλῖς*), "a small bird, called by the Italians *Beccafico*. Its Latin name is *Ficedula*. Brookes says it is the same bird which is called *Petit-chaps* in Yorkshire, being about the size of a linnet. He alludes, probably, to the *Motacilla hypoleis*, L."⁴

*SYCAMINOS (*συκάμινος*). (*Vid. Morea.*)

*SYCE (*συκή*), the fig-tree, properly called *Ficus Carica*. "The wild fig-tree is called *ἑρπειός* by Homer. The *συκή Αἰγυπτίη*, called also *κερώνια*, is the *Ficus religiosa* according to Stackhouse, but according to Schneider the *Ceratonia siliqua*, L., or Carob-tree. The *συκή Ἀλεξανδρεία* is the *Pyrus amelanchier* according to Sprengel, the *Lonicera Pyrenaica* according to Stackhouse. The *συκή Ἰνδική* is the *Ficus Indica*, or Banyan, according to Sprengel, the *Rhizophora mangle*, or Mangrove, according to Stackhouse. The *Banyan*, or *Indian fig-tree*, is noticed by Theophrastus, Pliny, Strabo, Dioscorus Siculus, Quintus Curtius, Arrian, and Athenæus."⁵

*SYCOM'OROS or -ON (*συκόμορος, -ον*), the Syamore-tree, or *Ficus Sycomorus*. (*Vid. Morea.*)

SYCOPHANTES (*συκοφάντης*). At an early period in Attic history, a law was made prohibiting the exportation of figs. Whether it was made in a time of dearth, or through the foolish policy of preserving to the natives the most valuable of their productions, we cannot say. It appears, however, that the law continued in force long after the cause of its enactment, or the general belief of its utility had ceased to exist, and Attic fig-growers exported their fruit in spite of prohibitions and penalties. To inform against a man for so doing was considered harsh and vexatious, as all people are apt to think that obsolete statutes may be infringed with impunity. Hence the term *συκοφαντεῖν*, which originally signified to lay an information against another

1. (Dig. 21, tit. 3, s. 3.)—2. (Gaius, ii., 97.—Dig. 43, tit. 3, s. 1.)—3. (Dig. 29, tit. 2, s. 37.)—4. (Dig. 39, tit. 2, s. 24.)—5. Gaius, ii., 98.)

1. (Gaius, iii., 82.)—2. (Savigny, System, &c., iii., p. 8.—Gaius, ii., 97, &c.—Austin's *Outlines of a Course of Lectures on General Jurisprudence* may also be consulted as to the subject of this article.)—3. (Moore's *Anc. Mineral*, p. 105.)—4. (Adams, *Append.*, s. v.)—5. (Theophr., II. P., i., 5; ii., 3. iv., 2, 4.—Dioscor., i., 184.—Eustath. ad Il., vi., 423.—Adams, *Append.*, s. v.)

for exporting figs, came to be applied to all ill-natured, malicious, groundless, and vexatious accusations. It is defined by Suidas *ψευδὴς τιμὸς κατηγορεῖν*.¹ As to a different origin of the word, see Böckh.²

Συκοφάντης, in the time of Aristophanes and Demosthenes, designated a person of a peculiar class, not capable of being described by any single word in our language, but well understood and appreciated by an Athenian. He had not much in common with our *sycophant*, but was a happy compound of the common *barretor*, *informer*, *pettifogger*, *busybody*, *rogue*, *liar*, and *slanderer*. The Athenian law permitted any citizen (*τὸν βουλόμενον*) to give information against public offenders, and prosecute them in courts of justice. It was the policy of the legislator to encourage the detection of crime, and a reward (such as half the penalty) was frequently given to the successful accuser. Such a power, with such a temptation, was likely to be abused, unless checked by the force of public opinion or the vigilance of judicial tribunals. Unfortunately, the character of the Athenian democracy and the temper of the judges furnished additional incentives to the informer. Eminent statesmen, orators, generals, magistrates, and all persons of wealth and influence, were regarded with jealousy by the people. The more causes came into court, the more fees accrued to the judges, and fines and confiscations enriched the public treasury. The prosecutor, therefore, in public causes, as well as the plaintiff in civil, was looked on with a more favourable eye than the defendant, and the chances of success made the employment a lucrative one. It was not always necessary to go to trial, or even to commence legal proceedings. The timid defendant was glad to compromise the cause, and the conscious delinquent to avert the threat of a prosecution by paying a sum of money to his opponent. Thriving informers found it not very difficult to procure witnesses, and the profits were divided between them. According to Theophrastus,³ Athens was full of *Διανοσκοῦσιν καὶ λωποδύταις καὶ ψευδομαρτύρων καὶ συκοφαντῶν καὶ ψευδοκλητῶν*. The character of the *συκοφάνται* will be best understood by the examples and descriptions found in the Attic writers. Aristophanes directs the keenest edge of his satire against them.⁴ Demosthenes says: *πονηρὸν ὁ συκοφάντης καὶ βλάσκων καὶ φιλαίτιον*.⁵ *Συκοφαντεῖν* τριάκοντα μνᾶς in Lysias,⁶ signifies "to extort thirty minas by *sycophant-like* practices." That the increase of litigation and perjury was in some measure owing to the establishment of clubs and political associations, and the violence of party spirit, may be gathered from various passages of the Attic writers.⁸

The Athenian law did indeed provide a remedy against this mischievous class of men. There was a *γραφὴ συκοφαντίας* tried before the *thesmothetes*. Any person who brought a false charge against another, or extorted money by threat of legal proceedings, or suborned false witnesses, or engaged in a conspiracy to ruin the character of an innocent man, was liable to this *γραφὴ*. He might also be proceeded against by *φάσις*, *ἐνδείξις*, *ἀπαγωγὴ*, *προβολή*, or *εἰσαγγελία*.⁹ (See articles *PHASIS*, &c.) The trial was an *ἀγὼν τιμητός*. The heaviest punishment might be inflicted, together with *ἀτιμία* and confiscation of property. Besides this, if any

man brought a criminal charge against another, and neglected to prosecute it (*ἐπεξελεθεῖν*), he was liable to a penalty of 1000 drachmas, and lost the privilege of instituting a similar proceeding in future, which was considered to be a species of *ἀτιμία*.¹ The same consequence followed if he failed to obtain a fifth part of the votes at the trial. The *ἐποδελία* in civil action was a penalty of the same kind, and having the same object, viz., to prevent the abuse of legal process, and check frivolous and unjust actions. Such were the remedies provided by law, but they were found inefficacious in practice; and the words of Aristophanes² were not more severe than true: "there is no charm against the bite of a *συκοφάντης*."³

ΣΥΚΟΦΑΝΤΙΑΣ ΓΡΑΦΗ. (Vid. SYCOPHANTES.)
SUDATIO, SUDATORIUM. (Vid. BATHS, p. 149.)

*SYENITES LAPIS (*Συνεΐτης λίθος*), a species of stone quarried near Syene in Upper Egypt, whence its name. "Of this," says Dr. Moore, "were formed those celebrated obelisks described by Pliny, and which are still gazed at with wonder either in Egypt or at Rome. This stone is classed by Winckelmann with granite, of which, he says, Egypt furnished two varieties, one red and whitish, of which are formed these obelisks and many statues; the other white and black, peculiar, as he thinks, to Egypt."⁴

SUFFRAGIA SEX. (Vid. EQUITES, p. 416.)
SUFFRAGIUM, a vote. At Athens, the voting in the popular assemblies and the courts of justice was either by show of hands or by ballot, as is explained under *CHEIROTONΕΙΝ* and *ΠΣΕΦΗS*. It is commonly supposed that at Rome the people were always polled in the comitia by word of mouth, till the passing of the *Leges Tabellariæ* about the middle of the second century before Christ (vid. *TABELLARIÆ LEGES*), when the ballot by means of *tabellæ* was introduced. (Vid. *TABELLA*.) Wunder,⁵ however, has shown that the popular assemblies voted by ballot, as well as by word of mouth, long before the passing of the *Leges Tabellariæ*, but that, instead of using *tabellæ*, they employed stones or pebbles (the Greek *ψῆφοι*), and that each voter received two stones, one white and the other black, the former to be used in the approval, and the latter in the condemnation of a measure. The voting by word of mouth seems to have been adopted in elections and trials, and the use of pebbles to have been confined to the enactment and repeal of laws. That the latter mode of voting was adopted in early times is proved by many passages of Dionysius, and especially by x., 41: *ὡς ὁ ὄμιος ἀπῆτει τὰς ψῆφους, οἱ νεώτατοι τῶν πατριῶν—τὰ ἀγγεῖα τῶν ψῆφων τοὺς ἔχοντας ἀφροῦντο*; and xi., 52: *ἐκέλευσαν καθίσκον τεθῆναι ὑπὲρ τῆς πόλεως Ῥωμαίων, καθ' ἑκάστην ψῆλην, εἰς ἃν ἀποθίξονται τὰς ψῆφους*. It is also confirmed by the common expressions used with respect to voting, as *suffragium ferre*, *mittere in suffragia*, *inire*, or *ire in suffragia*, which lead us to suppose that the *suffragium* probably signified some thing which was put by the hand from one place into another. For if the Romans had from the first been polled only by word of mouth, it is scarcely possible that such an expression as *suffragium ferre* would have been used when they had nothing to carry; but, on the contrary, some such word as *dicere* would have been employed, more especially as it is certain that in the most ancient times those who voted by word of mouth did not go up one by one to the officer who received the votes, but re-

1 (Steph., *Thesaur.*, 8873, b.)—2. (*Staatsh. der Athen.*, i., 46.)—3. (*ap. Athene.*, vi., 254, b.)—4. (See particularly *Acharn.*, 818; *Aves.*, 1410; *Plut.*, 850.)—5. (*De Corn.*, 307.—Compare c. *Eubul.*, 1309.)—6. (*c. Evand.*, 177, ed. Steph.)—7. (See farther, *Lys.*, *Ant.*, *Karal.*, *Atol.*, 171.—*Æsch.*, *De Fals. Leg.*, 36, ed. maintained in their places, and were asked for their votes by the *rogatores*, who thence derived their name. Besides which, the word *suffragium* can scarcely signify the same as *sententia* or *vox*. The etymology is uncertain, for the opinions of those who connect it with *φράσσειν* or *fragor* do not deserve notice. Wunder thinks that it may possibly be allied with *suffrago*, and signified originally an ankle-bone or knuckle-bone. On the passing of the *Leges Tabellariae*, the voting with stones or pebbles went out of use. For farther particulars with respect to the voting in the comitia, see *COMITIA*, p. 295, *DIRIBITORES*, *SITULA*, *TABELLA*, *TABELLARIAE LEGES*.

Those who had the *jus suffragii*, or the right of voting in the comitia, as well as the capacity of enjoying magistracies, were citizens *optimo jure*. (*Vid. CIVITAS, ROMAN*, p. 261.)

SUGGESTUS means in general any elevated place made of materials heaped up (*sub* and *gero*), and is specially applied: 1. To the stage or pulpit from which the orators addressed the people in the comitia. (*Vid. ROSTRA*.) 2. To the elevation from which a general addressed the soldiers.¹ 3. To the elevated seat from which the emperor beheld the public games,² also called *cubiculum*. (*Vid. CUBICULUM*.)

SUGGRUNDARIUM. (*Vid. FUNUS*, p. 460.)

SUI HEREDES. (*Vid. HERES, ROMAN*, p. 497, 498.)

SULAI (*σῦλαι*). When a Greek state, or any of its members, had received an injury or insult from some other state or some of its members, and the former was unwilling or not in a condition to declare open war, it was not unusual to give a commission or grant public authority to individuals to make reprisals. This was called *σύλας* or *σῦλα*, *διδόναι*.³ Polybius⁴ calls it *λάφυρόν* or *βύσια καταγέλλειν*. Thus, when the Lacedæmonians thought the Athenians had broken the treaty with them by making incursions from Pylus, they issued a proclamation that any of their subjects might commit depredations on the Athenians (*ἀνιζεσθαι τοὺς Ἀθηναίους*).⁵ Demosthenes⁶ declares that the deputy captains of triremes so misbehaved themselves in foreign countries, plundering everybody they came near, that no Athenian could travel safely *διὰ τὰς ὑπὸ τούτων ἀνδροληψίας καὶ σύλας κατεσκευασμένας*, where *ἀνδροληψίας* refers to the arrest of the person, *σύλας* to the seizure of goods. Suidas explains *σῦλαι* by the synonyme *σπληνέεις*. As to *ἀνδροληψίαι* for another purpose, see *ΦΛΩΝΟΣ*. In the *ναυτικὴ συγγραφὴ* in the speech of Demosthenes,⁷ one of the conditions is that goods may be landed only *ὅπου ὦν ἡ σῦλαι ὡς ἂν Ἀθηναίους*, "where no hostilities are exercised against Athenians." The people of Athens passed a special decree to authorize privateering; and when any booty was taken by Athenian subjects, they reserved to themselves the right of determining whether it was lawfully taken, whether it ought to be kept or restored, and what should be done with it.⁸ The ancient practice may be compared with the modern one of granting letters of marque and reprisal.⁹

SYLLOGEIS (*σὺλλογεῖς*), usually called *Συλλογεῖς τοῦ ἔθνους*, or the collectors of the people, were special commissioners at Athens, who made out a list of the property of the oligarchs previously to its confiscation.¹⁰ They formed an *ἀρχή*,¹¹ and seem to have been introduced after the dominion of the

Thirty Tyrants. It appears from an inscription that the *σὺλλογεῖς* had to attend to the sacred rites connected with the worship of Athena and the Olympian Zeus, whence Böckh conjectures that they collected or summoned the citizens to certain sacred rites, in which the people were feasted, and that from this circumstance they derived their name: the property of the oligarchs, of which they are said to have made out a list for the purpose of confiscation, may have been applied to these public banquets, since confiscated property was not unfrequently divided among the citizens.¹

**SULPHUR*. (*Vid. THEION*.)

SULPICIE LEGES. (*Vid. LEX*, p. 586.)

SYMBOLAION, SYNALLAGMA, SYNTHECE (*συμβόλαιον, συνάλλαγμα, συνθήκη*), are all words used to signify a contract, but are distinguishable from one another. *Συμβόλαιον* is used of contracts and bargains between private persons, and peculiarly of loans of money. *Τὸ συμβάλλειν εἰς ἀνδράποδον* is to lend upon the security of a slave.² *Συνάλλαγμα* signifies any matter negotiated or transacted between two or more persons, whether a contract or anything else.³ *Συνθήκη* is used of more solemn and important contracts, not only of those made between private individuals, but also of treaties and conventions between kings and states.⁴

As to the necessity or advantage of having written agreements between individuals, see *SYNGRAPHĒ*. National compacts, on account of their great importance, and the impossibility of otherwise preserving evidence of them, were almost always committed to writing, and commonly inscribed on pillars or tablets of some durable material.⁵ Upon a breach, or on the expiration of the treaty, the pillars were taken down.⁶

For breaches of contract actions were maintainable at Athens, called *συμβολαίων* (or *συνθηκῶν*) *παράβασις δίκαι*.⁷ Such actions, it is apprehended, applied only to express contracts, not to obligations *ex delicto*, or the *ἀκούσια συναλλάγματα* of Aristotle.⁸ Thus, if I had promised to pay a sum of money by a certain day, and failed to perform that promise, an action for breach of contract would have lain at Athens. But if my cow had broken my neighbour's fence, my obligation to repair the damage would have given rise, not to an action for breach of contract, but to a *δίκη βλάβης*.⁹ On the other hand, a *δίκη βλάβης* would lie against a person who had committed a breach of contract; for he was regarded as a wrongdoer, and liable to pay compensation to the party injured. Therefore Dionysodorus, who had failed to perform the conditions of a *ναυτικὴ συγγραφὴ*, had a *δίκη βλάβης* brought against him by the persons who lent him money on his ship.¹⁰ The Athenian law frequently gave an option between various forms of action. It is not, however, improbable that the *δίκη συνθηκῶν παράβασις* was only one species of the *δίκη βλάβης*, and the name one of a less technical kind. Wherever a debt had become due to a man by reason of some previous contract, we may suppose that he had the option between an action of debt (*χρέους*) and one for breach of contract. The same observation will apply to the *δίκαι παρακαταθήκης, ἀγυρίων*, and others of a similar kind. The main point of difference might be this: that in a general action for

reach of contract, the plaintiff went for unliquidated damages, which the court had to assess; whereas, upon a claim to recover a debt or sum certain, or a specific chattel, the court had nothing more to do than to determine whether the plaintiff was entitled to it or not; the *ἀγών* was *ἀτίμητος*. All such actions were tried before the *θεσμοθέται*.¹

Ὁμολογία appears to be a word of less technical nature than *συνθήκη*, though (as we might expect in words of this sort) they are often used indifferently. Grammarians make them synonymous.² *Συνθήκας ποιέσθαι* or *τίθεσθαι μετὰ τινος* is to make an agreement with any one; *ἐμμένειν ταῖς συνθήκαις*, to abide by it; *ὑπερβαίνειν* or *παραβαίνειν*, to break or transgress. Here we may observe that *συνθήκαι* is constantly used in the plural instead of *συνθήκη*, the only difference being that strictly the former signifies the terms or articles of agreement, in the same manner as *διαθήκαι*, the *testamentary dispositions*, is put for *διαθήκη*, the *will*. *Σύμβολον* also signifies a compact or agreement, but had become (in Attic parlance) obsolete in this sense, except in the expression *δικαί ἀπὸ συμβόλων*. (*Vid. SYMBOLON, &c.*)

ΣΥΜΒΟΛΑΙΩΝ ΠΑΡΑΒΑΣΕΩΣ ΔΙΚΗ. (*Vid. SYMBOLAIION.*)

ΣΥΜΒΟΛΩΝ, ΑΠΟ, ΔΙΚΑΙ (*συμβόλων, ἀπὸ, δίκαι*). The ancient Greek states had no well-defined international law for the protection of their respective members. In the earlier times troops of robbers used to roam about from one country to another, and commit aggressions upon individuals, who in their turn made reprisals, and took the law into their own hands. Even when the state took upon itself to resent the injury done to its members, a violent remedy was resorted to, such as the giving authority to take *σύλα* or *ρίσια*, a sort of national distress. As the Greeks advanced in civilization, and a closer intercourse sprang up among them, disputes between the natives of different countries were settled (whenever it was possible) by friendly negotiation. It soon began to be evident that it would be much better if, instead of any interference on the part of the state, such disputes could be decided by legal process, either in the one country or the other. Among every people, however, the laws were so framed as to render the administration of justice more favourable to a citizen than to a foreigner; and, therefore, it would be disadvantageous, and often dangerous, to sue a man, or be sued by him, in his own country. The most friendly relation might subsist between two states, such as *συμμαχία* or *ἐπιγαμία*, and yet the natives of each be exposed to this disadvantage in their mutual intercourse. To obviate such an evil, it was necessary to have a special agreement, declaring the conditions upon which justice was to be reciprocally administered. International contracts of this kind were called *σύμβολα*, defined by Suidas thus: *συνθήκαι ἅς ἐν ἀλλήλαις αἱ πόλεις θέμειναι τάττωσι τοῖς πολῖταις, ὥστε διδόναι καὶ λαμβάνειν τὰ δίκαια*; and the causes tried in pursuance of such contracts were called *δικαί ἀπὸ συμβόλων*. The more constant and more important the intercourse between any two nations, the more necessary would it be for them to establish a good system of international jurisprudence. Commercial people would stand in need of it the most. Aristotle mentions the Tuscan and Carthaginians as having *σύμβολα περὶ τοῦ πρὸς ἀλλήλους*.³ No such agreement has been preserved to us, and we know but little about the terms that were usually prescribed. The basis of them seems to have been the principle that *actor sequitur forum*

rei; but this, as well as other conditions, must have varied according to circumstances. Liberty of person and protection of property would no doubt be secured to the foreigner as far as possible; and it would be the duty of the *πρόξενος* to see that these rights were respected. A common provision was, that the party who lost his cause might appeal to the tribunal of the other country, or to that of some third state mutually agreed upon.¹ This was perhaps suggested by the practice which had grown up, of referring national quarrels to the arbitration of some individual or third state.²

When the Athenians made any such treaty, they required it to be approved of and finally ratified by a jury of the *heliaæ*, under the direction of the *thesmothetæ*. Hence Pollux³ says of those magistrates, *τὰ σύμβολα τὰ πρὸς τὰς πόλεις κυροῦσιν*. The other contracting state was therefore compelled to send an envoy to Athens, with power to conclude the treaty (if he thought fit) as it was drawn up and settled by the *thesmothetæ* and jurors. Most of the people with whom the Athenians had to deal were either subject or inferior to them, and were content to acquiesce in the above regulation. Philip, however, would not submit to it, and demanded that the terms should receive final ratification in Macedonia. This demand is made the subject of complaint by Demosthenes.⁴

The name of *δικαί ἀπὸ συμβόλων* was given also to the causes which the allies of the Athenians sent to be tried at Athens.⁵ This fact has been called in question by Böckh, but there is not much reason for doubting it. It is true that the expression is not strictly applicable to causes, not between an Athenian and a foreigner, but between two foreigners; and it may be allowed that the object of the Athenians in bringing such causes to Athens was, not to give the allies a better or speedier means of obtaining justice, but to secure certain advantages to the imperial city.⁶ It is, however, not improbable that the arrangement was called *σύμβολα* for the very purpose of softening the harshness of the measure, by giving an honourable name to that which, in reality, was a mark of servitude. For the same reason, the confederate states were called *σύμμαχοι*, *allies*, while in point of fact they were rather *ὑπὸ κροί*, or *subjects*.

These causes were tried in the summer months, when the voyage to Athens was more convenient, and (like all other *δικαί ἀπὸ συμβόλων*) belonged to the jurisdiction of the *thesmothetæ*. We have but one example of such a cause preserved to us, viz., the speech of Antiphon on the death of Herodes, where both the prosecutor and the defendant are natives of Mytilene.⁷

As to the *σύμβολα* given to the jurors, see *DICAS-TES*.

ΣΥΜΒΟΥΛΟΙ (*σύμβουλοι*). (*Vid. PAREDROI.*)

ΣΥΜΜΟΡΙΑ (*συμμορία*). (*Vid. EISPHORA, p. 392; TRIERARCHIA.*)

*SYMPHYTON (*σῖμφυτον*), a plant having healing properties, Wallwort or Comfrey. The name is derived from its great efficacy in healing wounds, causing, as it were, the lips of the wound to grow together rapidly: hence the language of Pliny. "*Vulneribus sanandis tanta præstantia est, ut carnes quoque, dum coquantur, conglutinet addita: unde et Græci nomen imposuere.*" The first species of Dioscorides was the *σῖμφυτον πετραίων*, which, according to Sprengel, is the *Coris Monspeliensis*. Pliny

says this species was called *Alum* by the Romans. The second species of Dioscorides, which Apuleius says was called *Consolida* by the Romans, was in all probability the *Symphyton officinale*, or Comfort.¹

SYMPOSIUM (συμπόσιον). (Vid. SYMPOSIUM.)

SUMTUARIÆ LEGES, the name of various laws passed to prevent inordinate expense (*sumtus*) in banquets, dress, &c.² In the states of antiquity it was considered the duty of government to put a check upon extravagance in the private expenses of persons, and among the Romans in particular we find traces of this in the laws attributed to the kings and in the Twelve Tables. The censors, to whom was intrusted the *disciplina* or *cura morum*, punished by the *nota censoria* all persons guilty of what was then regarded as a luxurious mode of living: a great many instances of this kind are recorded. (Vid. *NOTA CENSORIA*, p. 665.) But as the love of luxury greatly increased with the foreign conquests of the Republic and the growing wealth of the nation, various *leges Sumtuarie* were passed at different times with the object of restraining it. These, however, as may be supposed, rarely accomplished their object, and in the later times of the Republic they were virtually repealed. The following is a list of the most important of them, arranged in chronological order.

OPPIA, proposed by the tribune C. Oppius in the consulship of Q. Fabius and Ti. Sempronius, in the middle of the second Punic war, B.C. 215, enacted that no woman should have above half an ounce of gold, nor wear a dress of different colours, nor ride in a carriage in the city or in any town, or within a mile of it, unless on account of public sacrifices. This law was repealed twenty years afterward,³ whence we frequently find the *lex Orchia* mentioned as the first *lex Sumtuaria*. Tacitus⁴ speaks of *Oppiæ leges*.

ORCHIA, proposed by the tribune C. Orchius in the third year after the censorship of Cato, B.C. 181, limited the number of guests to be present at entertainments.⁵ It appears that M. Cato was at first opposed to this law, but afterward supported it.⁶

FANNIA, proposed by the consul C. Fannius B.C. 161, limited the sums which were to be spent on entertainments, and enacted that not more than 100 asses should be spent on certain festivals named in the *lex*, whence it is called *Centussis* by Lucilius; that on ten other days in each month not more than 30 asses, and that on all other days not more than 10 asses should be expended: also, that no other fowl but one hen should be served up, and that not fattened for the purpose.⁷

DINIA, passed B.C. 143, extended the *lex Fannia* to the whole of Italy, and enacted that not only those who gave entertainments which exceeded in expense what the law had prescribed, but also all who were present at such entertainments, should be liable to the penalties of the law. We are not, however, told in what these consisted.⁸

LICINIA agreed in its chief provisions with the *lex Fannia*, and was brought forward, we are told, that there might be the authority of a new law upon the subject, inasmuch as the *lex Fannia* was beginning to be neglected. It allowed 200 asses to be spent on entertainments upon marriage days, and on other days the same as the *lex Fannia*: also, that on ordinary days there should not be served up more than three pounds of fresh and one pound of salt meat.⁹ Gellius¹⁰ states that this law was brought forward by P. Licinius Crassus, but we do

not know at what time, probably, however, in his prætorship, B.C. 103.

CORNELIA, a law of the dictator Sulla, B.C. 81, was enacted on account of the neglect of the Fanian and Licinian laws. Like these, it regulated the expenses of entertainments.¹ Extravagance in funerals, which had been forbidden even in the Twelve Tables,² was also restrained by a law of Sulla.³ It was probably the same law which determined how much might be spent upon monuments.⁴

ÆMILIA, proposed by the consul Æmilius Lepidus B.C. 78, did not limit the expenses of entertainments, but the kind and quantity of food that was to be used.⁵ Pliny⁶ and Aurelius Victor⁷ ascribe this law to the consulship of M. Æmilius Scaurus, B.C. 115. It is not impossible that there may have been two Æmilian *leges* on the subject.

ANTIA, of uncertain date, proposed by Antius Resto, besides limiting the expenses of entertainments, enacted that no actual magistrate, or magistrate elect, should dine abroad anywhere except at the houses of certain persons. This law, however, was little observed; and we are told that Antius never dined out afterward, that he might not see his own law violated.

JULIA, proposed by the dictator C. Julius Cæsar, enforced the former sumptuary laws respecting entertainments, which had fallen into disuse.⁸ Julius Cæsar adopted strong measures to carry this law into execution, but it was violated when he was absent from Rome.⁹ He stationed officers in the provision-market to seize upon all eatables forbidden by the law, and sometimes sent lictors and soldiers to banquets to take everything which was not allowed by the law.¹⁰ Cicero seems to refer to this law in two of his epistles.¹¹

JULIA, a *lex* of Augustus, allowed 200 sesterces to be expended upon festivals on *dies profesti*, 300 upon those on the *calends*, *ides*, *nones*, and some other festive days, and 1000 upon marriage feasts. There was also an edict of Augustus or Tiberius, by which as much as from 300 to 2000 sesterces were allowed to be expended upon entertainments, the increase being made with the hope of securing thereby the observance of the law.¹²

Tiberius attempted to check extravagance in banquets;¹³ and a *senatus consultum* was passed in his reign for the purpose of restraining luxury, which forbade gold vases to be employed except for sacred purposes, and also prohibited the use of silk garments to men.¹⁴ This sumptuary law, however, was but little observed.¹⁵ Some regulations on the subject were also made by Nero,¹⁶ and by succeeding emperors, but they appear to have been of little or no avail in checking the increasing love of luxury in dress and food.¹⁷

SYNALLAGMA (συνάλλαγμα). (Vid. *SYMBOLAION*.)

ΣΥΓΚΑΗΤΟΣ ΕΚΚΑΗΕΙΑ (σύνκλητος ἐκκλησία). (Vid. *ECCLESIA*, p. 383.)

SYNDICOS (σύνδικος), an *advocate*, is frequently used as synonymous with the word *συνήγορος*, to denote any one who pleads the cause of another, whether in a court of justice or elsewhere. *Συνδίκειν*, also, is used indifferently with *συνηγόρειν* or *συναγωνίζεσθαι*.¹⁸ Thus the five public advocates,

1. (Dioscor., iv, 9, 10.—Adams, *Append.*, a. v.)—2. (Gellius, ii, 24; xx., 1.)—3. (Liv., xxxiv., i, 8.—Vel. Max., ix, i, 3.)—4. (Ann., iii, 33, 34.)—5. (Macrob., Sat., ii, 13.)—6. (Fastus, v. *Percontatum* and *Oisontavere*.)—7. (Gell., ii, 24.—Macrob., Sat., i, c.—Plin., H. N., x, 50, a. 71.)—8. (Macrob., i, c.)—9. (Gell., Macrob., ii, cc.)—10. (l. c.)

1. (Gell., Macrob., ii, cc.)—2. (Cic., *De Leg.*, ii, 23–25.)—3. (Plut., *Sull.*, 35.)—4. (Cic. *ad Att.*, xii, 35, 36.)—5. (Gell., *Macrob.*, ii, cc.)—6. (H. N., viii, 57, s. 72.)—7. (*De Vir.* ii, 72.)—8. (Dion Cass., xliii, 25.)—9. (Cic. *ad Att.*, xiii, 7.)—10. (Suet., *Jul.*, 43.)—11. (*ad Fam.*, vii, 26; ix, 15.)—12. (Gell., i, c.—Suet., *Octav.*, 34.)—13. (Suet., *Tib.*, 34.)—14. (Tacit., i, c.—Suet., *Octav.*, 34.)—15. (Tacit., *Ann.*, iii, 52, *Ann.*, ii, 33.—Dion Cass., lvi.)—16. (Platner, *Exercit.* ii, *de Leg. Sumt.* Rom., 1752.—Bœrmann, *Dissert. Antiquar.-jurid.* de *Leg. Sumt.*, *Lugd. Bat.*, 1816.)—17. (Andoc., *De Myst.*, 19, ed. Steph.—Demosth., c. *Anatocr.*, 689; c. *Zenoth.*, 885; c. *Steph.* 1127.)

who were appointed to defend the ancient laws before the court of heliasts when an amendment or a new law in abrogation thereof was proposed, are called both *σύνδικοι* and *συνήγοροι*. As to them, see *ΝΟΜΟΘΗΤΕΣ*, and also Schömann, *De Comit.*, 255; *Ant. Jur. Publ. Gr.*, 228. The name of *σύνδικοι* seems to have been peculiarly applied to those orators who were sent by the state to plead the cause of their countrymen before a foreign tribunal. Æschines, for example, was appointed to plead before the Amphictyonic council on the subject of the Delian temple; but a certain discovery having been made not very creditable to his patriotism, the court of Areopagus took upon themselves to remove him, and appoint Hyperides in his stead.¹ These extraordinary advocates are not to be confounded with the *Πυλαγορά*, or ordinary Amphictyonic deputies.² There were other *σύνδικοι*, who acted rather as magistrates or judges than as advocates, though they probably derived their name from the circumstance of their being appointed to protect the interests of the state. These were extraordinary functionaries, created from time to time to exercise a jurisdiction in disputes concerning confiscated property; as when, for instance, an information was laid against a man for having in his possession the goods of a condemned criminal, or which were liable to be seized in execution on behalf of the state; or when the goods of a convict having been confiscated, a claim was made by a mortgagee, or other creditor having a lien thereupon, to have his debt satisfied out of the proceeds. Such a claim was called *ἐνεπίσκημμα*, and to prosecute it *ἐνεπίσκηψασθαι*.³ On this subject the reader is referred to the speeches of Lysias, *De Publ. Pecun.*, *De Nic. Fratr. Pecun.*, *De Aristoph. Pecun.*, and more especially p. 149, 151, 154, ed. Steph. The first appointment of these judicial *σύνδικοι* took place after the expulsion of the thirty tyrants; and one of their duties appears to have been to receive informations from the *φύλαρχοι* against those persons who had served in the cavalry during the interregnum, and who, by a special decree of the people, were ordered to restore to the treasury all the pay which they had received for that service.⁴ (*Vid. SYNEGOROS.*)

SY'NEDROI (*συνέδροι*), a name given to the members of any council or any body of men who sat together to consult or deliberate. The congress of Greeks at Salamis is called *συνέδριον*.⁵ Frequent reference is made to the general assembly of the Greeks, *τὸ κοινὸν τῶν Ἑλλήνων συνέδριον*, at Corinth, Thermopylæ, or elsewhere.⁶ When the new alliance of the Athenians was formed, after B.C. 377, upon fair and more equitable principles than the former, the several states who were included therein were expressly declared to be independent, and a congress was held at Athens, to which each of the allied states sent representatives. The congress was called *συνέδριον*, and the deputies *συνέδροι*, and the sums furnished by the allies *συνράξεις*, in order to avoid the old and hateful name of *φόρος*, or tribute.⁷ Many allusions to this new league are made by the orators, especially Isocrates, who strongly urges his countrymen to adhere to the principle on which the league was formed, and renounce all attempt to re-establish their old supremacy.⁸ Perhaps the *συνέδροι* mentioned in the oath of the *Δεκαστῆς* are the Athenian members of this congress.⁹ For farther information on the subject of this con-

federacy, see Schömann, *Ant. Jur. Publ. Gr.*, 434.—Böckh, *Staatsk. der Athen.*, i., 449.—Thirlwall, *Hist. of Greece*, vol. v., p. 42, 203.

The name of *συνέδροι* was given at Athens to any magisterial or official body, as to the court of Areopagus;¹ or to the place where they transacted business, their board or council-room.²

SYNEGORICON (*συνήγορικόν*). (*Vid. SYNEGOROS.*)

SYNEGOROS (*συνήγορος*) may be translated an advocate or counsel, though such translation will convey to the English reader a more comprehensive meaning than the Greek word strictly bears.

According to the ancient practice of the Athenian law, parties to an action were obliged to conduct their own causes without assistance; but, on the increase of litigation, the sciences of law and rhetoric began to unfold themselves, and men who had paid no attention to these were unable to compete with more experienced opponents. To consult a friend before bringing an action, or about the best means of preparing a defence, were obvious expedients. It was but another step to have a speech prepared by such friend out of court, to be delivered by the party himself when the cause was brought to trial. A class of persons thus sprang up, somewhat in the nature of chamber-counsel, who received money for writing speeches and giving legal advice to those who consulted them. Of this class Antiphon was the first who acquired any celebrity. Lysias, Isæus, and Isocrates obtained considerable incomes by speech-writing. Demosthenes followed the same profession for some time, until his engagements in public business forced him to relinquish it.³ These persons were called, not *συνήγοροι*, but *λογογράφοι*, a name applied to Demosthenes reproachfully by his rival, who accuses him also of betraying his clients by showing the speeches which he had written to the adversary.⁴ Still, whatever assistance the party might have received out of court, the law which compelled him to appear in person at the trial remained in force; although the prohibition to speak by counsel was so far relaxed, that if the party was labouring under illness, or through any physical or mental debility was unable to conduct his own cause without manifest disadvantage, he might (by permission of the court) procure a relative or friend to speak for him. Thus, when Miltiades was impeached for treason, and by reason of a gangrene in his hip was unable to plead his own cause, he was brought on a litter into court, and his brother Tisagoras addressed the people on his behalf. So, when Isocrates was ill, his son Aphareus spoke for him in the cause about the *ἀντιδοσίς*. And in the speech of Demosthenes against Leocrates, we see⁵ that the son conducts his father's cause. As a general rule, the party was expected to address the court himself; for the judges liked to form an opinion of him from his voice, look, and demeanour; and, therefore, if a man distrusted his own ability, he would open the case himself by a short speech, and then ask permission for his friend to come forward.⁶ This was seldom refused; and in the time of the orators, the practice was so well established that the principal speeches in the cause were not unfrequently made by the advocate. The defences by Demosthenes of Ctesiphon against Æschines, and of Phanus against Aphobus, may be cited as examples. In both of these it will be seen that Demosthenes was as much interested as the defendants themselves; and it is farther to be observed, that

1. (Demosth., *De Coron.*, 271, 272.)—2. (Schömann, *De Comit.*, 321; *Ant. Jur. Publ. Gr.*, 257.)—3. (Harpoer. and Suidas, s. v.)—4. (Lysias, *Pro Maat.*, 146, ed. Steph.—Harpoer., s. v. *σύνδικοι*.—Meier, *Att. Proc.*, 110.—Schömann, *De Comit.*, 316.)—5. (Herod., viii., 75, 79.)—6. (Æsch., c. Ctesiph., 62, ed. Steph.—Demosth., *Περὶ τῶν πρὸς Ἀλέξανδρον*, 215.)—7. (Harpoer., s. v.—Plut., *Sol.*, 15.—8. (De Pace, 165, ed. Steph.)—9. (Schömann, *Att. Proc.*, 130.)

1. (Æsch., c. Timarch., 13.—Dinarch., c. Demosth., 91, ed. Steph.)—2. (Isocr., *Περὶ Ἀντιδοσέως*, 318, ed. Steph.—Demosth., c. Theocr., 1324.)—3. (Demosth., c. Zenoth., 890.)—4. (Æsch., c. Ctesiph., 78; c. Timarch., 13, ed. Steph.)—5. (p. 1081.)—6. (Demosth., c. Phorm., 922; c. Near., 1349.)

the advocate was looked upon with more favour on this very account; for, as no fees were allowed to be taken, a speaker was regarded with suspicion who had no apparent motive for undertaking the cause of another person. Hence we find in most of the *συνήγοροὶ λόγοι* that the speaker avows what his motives are; as, for instance, that he is connected by blood or friendship with the one party, or at enmity with the other, or that he has a stake in the matter at issue between them.¹ In the cause against Leocrates above cited, it is evident that the son had an equal interest with his father in preserving the inheritance, and therefore he would be considered in the light of a party. The law which prohibited the advocate from taking fees under peril of a *γραφὴ* before the thesmothetæ,² made no provision (and perhaps it was impossible to make an effective provision) against an influence of a more pernicious kind, viz., that of political association, which induced men to support the members of their club or party without the least regard for the right or justice of the case. Hence the frequent allusions by the orators to the *ἐργαστήρια συκοφαντῶν, μοχθηρῶν ἀνθρώπων συνεστηκόντων, παρασκευῆς λόγων, μαρτύρων, συναμοσίων*, all which expressions have reference to that system of confederation at Athens by which individuals endeavoured to influence and control the courts of justice. (*Vid.* ERANOS, SYCOPHANTES.)³ That friends were often requested to plead, not on account of any incapacity in the party, but in order that by their presence they might exert an influence on the bench, is evident from an attentive perusal of the orators. In some cases this might be a perfectly legitimate course, as where a defendant, charged with some serious crime, called a man of high reputation to speak in his behalf, and pledge himself thereby that he believed the charge was groundless. With such view Æschines, on his trial for misconduct in the embassy, prayed the aid of Eubulus and Phocion, the latter of whom he had previously called as a witness.⁴

On criminal trials, the practice with respect to advocates was much the same as in civil actions, only that it seems to have been more common to have several speakers on the part of the prosecution; and in causes of importance, wherein the state was materially interested, more especially in those which were brought before the court upon an *εἰσαγγελία*, it was usual to appoint public advocates (called *συνήγοροι, σύνδικοι, or κατηγοροί*) to manage the prosecution. Thus Pericles was appointed, not at his own desire, to assist in the impeachment of Cimon.⁵ Public prosecutors were chosen by the people to bring to trial Demosthenes, Aristogiton, and others, charged with having received bribes from Harpalus.⁶ In ordinary cases, however, the accuser or prosecutor (*κατήγορος*) was a distinct person from the *συνήγορος*, who acted only as auxiliary to him. It might be, indeed, that the *συνήγορος* performed the most important part at the trial, as Anytus and Lycon are said to have done on the trial of Socrates, wherein Melitus was prosecutor; or it might be that he performed a subordinate part, making only a short speech in support of the prosecution, like those of Lysias against Epicrates, Ergocles, and Philocrates, which are called *ἐπίλογοι*. But, however this might be, he was in point of law an auxiliary only, and was neither entitled to a share of the reward (if any) given by the law to a successful accuser, nor liable, on the other hand, to the

penalty of a thousand drachms, or the *ἀτιμία* consequent upon a failure to get a fifth part of the votes. Here we must distinguish between an advocate and a joint prosecutor. The latter stood precisely in the same situation as his colleague, just as a co-plaintiff in a civil action. The names of both would appear in the bill (*ἐγκλήμα*), both would attend the *ἀνάκρισις*, and would, in short, have the same rights and liabilities; the elder of the two only having priority in certain matters of form, such as the *πρωτολογία*.¹ In the proceeding against the law of Leptines there were two prosecutors, Aphepsion and Ctesippus, the son of Chabrias; each addressed the court, Aphepsion first, as being the elder; each had his advocate, the one Phormio, the other Demosthenes, who tells us in the exordium that he had undertaken to speak partly from a conviction of the impolicy of the law, and partly to oblige the son of Chabrias, who would have been deprived of certain privileges inherited from his father if the law had taken effect.²

There seems to have been no law which limited the number of persons who might appear as advocates, either in public or private causes. There was, however, this practical limitation, that as the time allowed for speaking to either party was measured by the clepsydra, if either chose to employ a friend to speak for him, he subtracted so much from the length of his own speech as he meant to leave for that of his friend, and the whole time allowed was precisely the same, whatever the number of persons who spoke on one side. Both parties were usually allowed to make two speeches, the plaintiff beginning, the defendant following, then the plaintiff replying, and, lastly, the defendant again. These are often called *λόγοι πρότεροι* and *ὕστεροι* respectively, but are not to be confounded with the *συνήγορίαι* or *δευτερολογίαι*, which might, and usually did, immediately follow the speech of the party in whose favour they were made, though as a matter of arrangement it might be convenient sometimes to reserve the speech of the advocate for the reply, in which case the *συνήγορὸς λόγος* and the *ὕστερος λόγος* would be the same.³

With respect to the custom of producing friends to speak in mitigation of damages or punishment, see *ΤΙΜΕΜΑ*. As to the public advocates appointed to defend the old laws before the court of heliasts, see *ΣΥΝΔΙΚΟΣ, ΝΟΜΟΤΗΤΕΣ*.

The fee of a drachm (*τὸ σὺνήγορικόν*) mentioned by Aristophanes⁴ was probably the sum paid to the public advocate whenever he was employed on behalf of the state. It has been shown clearly by Schömann that Petit was wrong in supposing that the orators or statesmen who spoke in the assembly are called *συνήγοροι*. They are always distinguished by the title of *ρήτορες* or *δημήγοροι*, or, if they possessed much influence with the people, *δημαγωγοί*: and it is not to be supposed that they constituted a distinct class of persons, inasmuch as any Athenian citizen was at liberty to address the assembly when he pleased; though, as it was found in practice that the possession of the *βήμα* was confined to a few persons who were best fitted for it by their talent and experience, such persons acquired the title of *ρήτορες*, &c.⁵ There appears, however, to have been (at least at one period) a regular appointment of *συνήγοροι*, ten in number, with whom the scholiast on Aristophanes⁶ confounded the *ρήτορες*, or orators. For what purpose such ten *συνήγοροι* were appointed, is a matter about which we have no certain information. Some think they were officers connected with the board of scrutators

who audited magistrates' accounts. Aristotle¹ says the authorities to whom magistrates rendered their accounts were called in some of the Greek states *λογισται*, in others *λογισται*, in others *συνήγοροι* or *ἱερασταί*, and the author of the Lexicon Rhetoricum, published by Bekker,² says that the *synegori* were *ἀρχοντες κληρωτοὶ οἱ ἐξοθῶν τοῖς λογισταῖς πρὸς τὰς εὐθύνας*. But what sort of assistance did they render? Is it not probable that they performed the duty which their name imports, viz., that of prosecuting such magistrates as, in the opinion of the logistæ, had rendered an unsatisfactory account? Any individual, indeed, might prefer charges against a magistrate when the time for rendering his account had arrived; but the prosecution by a *συνήγορος* would be an *ex officio* proceeding, such as the logistæ were bound to institute if they had any reason to suspect the accounting party of malversation or misconduct. If this conjecture be well founded, it is not unreasonable to suppose that these ten *συνήγοροι* were no other than the public advocates who were employed to conduct state prosecutions of a different kind. They might be appointed annually, either by lot or by election (according to Harpocration³). Their duties would be only occasional, and they would receive a drachm as their fee whenever they were employed. Böckh's conjecture, that they received a drachm a day for every day of business, is without much foundation.⁴ The reader will find the authorities on this subject referred to in Schömann⁵ and Böckh.⁶

SYNGENEIA (συγγένεια). (Vid. HERES, GREEK, p. 494.)

SYNGRAPHE (συγγραφή) signifies a written contract, whereas *συνθήκη* and *συνδόλαιον* do not necessarily import that the contract is in writing; and *διαλογία* is, strictly speaking, a verbal agreement. Pollux explains the word *συνθήκη ἔγγραφος*, *φολογία ἔγγραφος*.⁷

At Athens important contracts were usually reduced to writing, such as leases (*μισθώσεις*), loans of money, and all executory agreements where certain conditions were to be performed. The rent, the rate of interest, with other conditions, and also the penalties for breach of contract (*ἐπιτίμια τὰ ἐκ τῆς συγγραφῆς*), were particularly mentioned. The names of the witnesses and the sureties (if any) were specified. The whole was contained in a little tablet of wax or wood (*βιβλίον* or *γραμματεῖον*, sometimes double, *διπτυχον*), which was sealed, and deposited with some third person, mutually agreed on between the parties.⁸ An example of a contract on a bottomry loan (*ναυτικὴ συγγραφή*) will be found in Demosthenes⁹ where the terms are carefully drawn up, and there is a declaration at the end, *κυριώτερον δὲ περὶ τούτων ἀλλὰ μὴδὲν εἶναι τῆς συγγραφῆς*, "which agreement shall be valid, anything to the contrary notwithstanding."

Anything might form the subject of a written contract—a release (*ἄφεσις*), a settlement of disputes (*διάλυσις*), the giving up of a slave to be examined by torture, or any other accepted challenge (*πρόκλησις*); in short, any matter wherein the contracting parties thought it safer to have documentary evidence of the terms. *Ἐκδιδοῦναι ἀνδρίαντα κατὰ συγγραφὴν* is to give an order for the making of a statue of certain dimensions, of a certain fashion, at a certain price, &c., as specified in the agreement.¹⁰ No particular form of words was necessary to make the instrument valid in point of law, the sole object being to furnish good evidence of the

parties' intention. The agreement itself was valid without any writing, and would form the ground of an action against the party who broke it, if it could be sufficiently proved. Hence it was the practice to have witnesses to a parol agreement. The law declared *κυρίας εἶναι τὰς πρὸς ἀλλήλους ὁμολογίας, ἅς ἂν ἐναντίον μαρτύρων ποιήσονται*.¹ It seems that for the maintenance of an *ἐμπορικὴ δίκη* it was necessary to have a written contract.²

Bankers were persons of extensive credit, and had peculiar confidence reposed in them. They were often chosen as the depositaries of agreements and other documents. Money was put into their hands without any acknowledgment, and often without witnesses. They entered these, and also the loans made by themselves to others, in their books making memoranda (*ὑπομνήματα*) of any important particulars. Such entries were regarded as strong evidence in courts of justice. Sureties were usually required by them on making loans.³

Συγγραφή denotes an instrument signed by both or all the contracting parties. *Χειρόγραφον* is a mere acknowledgment by one party. *Συγγράψασθαι συγγραφὴν* or *συνθήκην* is to draw up the contract, *σημῆνασθαι* to seal it, *ἀναρῆναι* to cancel, *ἀνελεῖσθαι* to take it up from the person with whom it was deposited, for the purpose of cancelling, when it was no longer of any use. *Ὑπανοίγειν*, to break the seal clandestinely for some fraudulent purpose, as to alter the terms of the instrument, or erase or destroy some material part, or even the whole thereof (*μεταγράφειν* or *διαφθεῖρειν*). (Vid. SYMBOLAION.)

SYNCECIA (συνοικία) differs from *οἰκία* in that the latter is a dwelling-house for a single family, the former adapted to hold several families, a lodging-house, *insula*, as the Romans would say. The distinction is thus expressed by Æschines:¹ *ὅπου μὲν γὰρ πολλοὶ μισθωσάμενοι μίαν οἰκῆσιν διελόμενοι ἔχουσι, συνοικία καλούμεν, ὅπου δ' εἰς ἑνὸς οἰκίαν*. There was a great deal of speculation in the building and letting of houses at Athens.² The lodging-houses were let mostly to foreigners who came to Athens on business, and especially to the *μέτοικοι*, whom the law did not allow to acquire real property, and who therefore could not purchase houses of their own.³ As they, with their families, formed a population of about 45,000, the number of *συνοικίαι* must have been considerable. Pasion, the banker, had a lodging-house valued at 100 minas. Xenophon recommended that the *μέτοικοι* should be encouraged to invest their money in houses, and that leave should be granted to the most respectable to build and become house-proprietors (*οἰκοδομησάμενοις ἐγκεκτῆσθαι*). The *ἱσοτελεῖς* laboured under no such disability; for Lysias and his brother Polemarchus, who belonged to that class, were the owners of three houses. The value of houses must have varied according to the size, the build, the situation, and other circumstances. Those in the city were more valuable than those in the Piræus or the country, *ceteris paribus*. Two counting-houses are mentioned by Isæus⁴ as yielding a return of rather more than 8½ per cent. interest on the purchase-money. But this probably was much below the average. The summer season was the most profitable for the letting of houses, when merchants and other visitors flocked to Athens. The rent was commonly paid by the month. Lodging-houses were frequently taken on speculation by persons called

ναύκληρο. or σταθμοῦχοι, who made a profit by underletting them, and sometimes for not very reputable purposes.¹ Hesychius explains the word ναύκληρος, ὁ συνοικίας προεστώς: see also Harpocration, s. v. Some derive the word from ναῖω: but it is more probable that it was given as a sort of nickname to the class, when they first sprang up.²

SYNŌECIA (συνοικία), a festival celebrated every year at Athens on the 16th of Hecatombæon, in honour of Athena. It was believed to have been instituted by Theseus to commemorate the concentration of the government of the various towns of Attica and Athens.³ According to the scholiast on Aristophanes,⁴ an unbloody sacrifice was on this day offered to the goddess of peace (εἰρήνη). This festival,⁵ which Plutarch calls μετοικία, is mentioned both by him and by Thucydides as still held in their days.⁶

SUPERFICIES, SUPERFICIARIUS. "Those are ædes superficariæ which are built on hired ground, and the property of which, both by the jus civile and naturale, belongs to him to whom the ground (solum) also belongs."⁷ Every building, then, was considered a part of the ground on which it stood; and the ownership and possession of the building were inseparable from the ownership and possession of the ground. The superficies resembles a servitus, and is classed among the jura in re. According to the definition, the superficiarius had not the thing even in bonia; and as the animus domini could not exist in the case of superficies, he consequently could not be possessor. He had, however, a juris quasi possessio. The superficiarius had the right to the enjoyment of the superficies: he could alienate the superficies, and pledge it for the term of his enjoyment; he could dispose of it by testament; and it could be the object of succession ab intestato; he could also make it subject to a servitus; and he could prosecute his right by a utilis in rem actio. As he had a jura quasi possessio, he was protected against threatened disturbance by a special interdict, which is given in the Digest,⁸ and in its effect resembles the interdictum uti possidetis. The explanation of the passage relating to this interdict⁹ is given by Savigny.¹⁰ If he was ejected, he could have the interdictum de vi, as in the case of proper possession; and if he had granted the use of the superficies to another precario, who refused to restore it, he had the interdictum de precario.

A man could obtain the use of a superficies by agreement with the owner of the land for permission to erect a building on it; and he might also, by agreement, have the use of an existing superficies. He was bound to discharge all the duties which he owed in respect of the superficies, and to make the proper payment in respect of it (solarium), if any payment had been agreed on.

The rule of law that the superficies belonged to the owner of the soil was expressed thus: *Superficies solo cedit*.¹¹ If, then, a man built on another man's land, the house became the property of the owner of the land. But if the owner of the land

claimed the house, and would not pay the expense incurred by building it, the builder of the house could meet the claimant with a plea of dolus malus (exceptio doli mali), that is to say, if he was a bona fidei possessor. In any other case, he had, of course, no answer to the owner's claim.

SUPERNUMERARIIL. (Vid. ACCENS.)

SUPPARUM. (Vid. SITES, p. 894.)

SUPPLICATIO was a solemn thanksgiving or supplication to the gods decreed by the senate, when all the temples were opened, and the statues of the gods frequently placed in public upon couches (pulvinaria), to which the people offered up their thanksgivings and prayers (ad omnia pulvinaria supplicatio decreta est). (Vid. LECTISTERNIUM.) A supplicatio was decreed for two different reasons:

I. As a thanksgiving when a great victory had been gained: it was usually decreed as soon as official intelligence of the victory had been received by a letter from the general in command. The number of days during which it was to last was proportioned to the importance of the victory. Sometimes it was decreed for only one day,² but more commonly for three or five days. A supplication of ten days was first decreed in honour of Pompey at the conclusion of the war with Mithradates,³ and one of fifteen days after the victory over the Belgæ by Cæsar, an honour which Cæsar himself says⁴ had never been granted to any one before.⁵ Subsequently a supplicatio of twenty days was decreed after his conquest of Vercingetorix.⁶ From this time the senate seems to have frequently increased the number of days out of mere compliment to the general. We thus find mention of thanksgivings for forty days,⁷ fifty days,⁸ and even sixty.⁹ A supplicatio was usually regarded as a prelude to a triumph, but it was not always followed by one, as Cato reminds Cicero, to whose honour a supplicatio had been decreed.¹⁰ This honour was conferred upon Cicero on account of his suppression of the conspiracy of Catiline, which had never been decreed to any one before in a civil capacity (togatus), as he frequently takes occasion to mention.¹¹

II. A Supplicatio, a solemn supplication and humiliation, was also decreed in times of public danger and distress, and on account of prodigies to avert the anger of the gods.¹²

SURDUS. (Vid. OBLIGATIONES, p. 673.)

*SUS. (Vid. HVVS)

SUSPENSURA. (Vid. BATHS, p. 144.)

SYMPOSIUM (συνπόσιον, commissatio, convivium), a drinking-party. The συνπόσιον, or the πότος, must be distinguished from the δειπνον; for though drinking almost always followed a dinner-party, yet the former was regarded as entirely distinct from the latter, was regulated by different customs, and frequently received the addition of many guests who were not present at the dinner. For the Greeks did not usually drink at their dinner, and it was not till the conclusion of the meal that wine was introduced, as is explained under ΔΕΙΠΝΩΝ, p. 344. Thus we read in the Symposium of Plato,¹³ that after the dinner had been finished, the libations made, and the pæan sung, they turned to drinking (τρέπεσθαι πρὸς τὸν πότον).

Symposia seem to have been very frequent at Athens. Their enjoyment was heightened by agreeable conversation, by the introduction of music and dancing, and by games and amusements of various kinds: sometimes, too, philosophical subjects were

discussed at them. The Symposia of Plato and Xenophon give us a lively idea of such entertainments at Athens. The name itself shows that the enjoyment of drinking was the main object of the symposia: wine from the juice of the grape (*οἶνος ἀμπέλινος*) was the only drink partaken of by the Greeks, with the exception of water. For palm-wine and beer (*vid. CEREVISIA*), though known to many of the Greeks from intercourse with foreign nations, were never introduced among them; and the extraordinary cheapness of wine at Athens (*vid. VINUM*) enabled persons even in moderate circumstances to give drinking-parties to their friends. Even in the most ancient times the enjoyment of wine was considered one of the greatest sources of pleasure, and hence Musæus and his son supposed that the just passed their time in Hades in a state of perpetual intoxication, as a reward of their virtue (*ἡγροσάμενοι κἄλλιστον ἀρετῆς μισθὸν μέθην δύνανται*). It would appear from the Symposium of Plato that even the Athenians frequently concluded their drinking-parties in rather a riotous manner, and it was to guard against this that such parties were forbidden at Sparta and in Crete.²

The wine was almost invariably mixed with water, and to drink it unmixed (*ἄκρατον*) was considered a characteristic of barbarians.³ Zaleucus is said to have enacted a law among the Locrians, by which any one who was ill and drank of unmixed wine without the command of his physician, was to be put to death;⁴ and the Greeks in general considered unmixed wine as exceedingly prejudicial to physical and mental health.⁵ The Spartans attributed the insanity of Cleomenes to his indulging in this practice, which he learned from the Scythians.⁶ So universal was it not to drink wine unless mixed with water, that the word *οἶνος* is always applied to such a mixture; and whenever wine is spoken of in connexion with drinking, we are always to understand wine mixed with water, unless the word *ἄκρατος* is expressly added (*τὸ κράμα, καὶ τοῦ θύστος μετέχον πλείονος, οἶνον καλοῦμεν*).⁷

The proportion in which the wine and water were mixed naturally differed on different occasions. To make a mixture of even half wine and half water (*ισὸν ἰσῶ*) was considered injurious,⁸ and generally there was a much greater quantity of water than of wine. It appears from Plutarch,⁹ Athenæus,¹⁰ and Eustathius,¹¹ that the most common proportions were 3 : 1, or 2 : 1, or 3 : 2. Hesiod¹² recommends the first of these.

The wine was mixed either with warm or cold water; the former, which corresponded to the *calida* or *caldia* of the Romans (*vid. CALIDA*), was by far the less common. On the contrary, it was endeavoured to obtain the water as cool as possible, and for this purpose both snow and ice were frequently employed. (*Vid. NIX, PSYCTER*.) Honey was sometimes put in the wine,¹³ and also spices; in the latter case it received the name of *τρίμμα*, and is frequently mentioned by the writers of the New Comedy.¹⁴ Other ingredients were also occasionally added.

The mixture was made in a large vessel called the *κρατήρ* (*vid. CRATER*), from which it was conveyed into the drinking-cups by means of *οἰνοχόου* or *κιάδου*. (*Vid. CYATHUS*.) The cups usually employed were the *κύλιξ*, *φιάλη*, *καρχήσιον*, and *κάνθαρος*, of which an account is given in separate articles. The *ρηντρον*, or drinking-horn, was also

very commonly used. We find several craters on vases representing drinking scenes.¹

The guests at a symposium reclined on couches, and were crowned with garlands of flowers, as is explained under *ΔΕΙΠΝΩΝ*. A master of the revels (*ἄρχων τῆς πόσεως, συμποσιαρχος* or *βασιλεύς*) was usually chosen to conduct the symposium (*παίδω-γαγεῖν συμπόσιον*), whose commands the whole company had to obey, and who regulated the whole order of the entertainment, proposed the amusements, &c. The same practice prevailed among the Romans, and their symposiarch was called the *magister* or *rex convivi*, or the *arbiter bibendi*. The choice was generally determined by the throwing of astragali or tali; but we find in Plato,³ Alcibiades constituting himself symposiarch. The proportion in which the wine and water were mixed was fixed by him, and also how much each of the company was to drink. The servants (*οἰνοχόου* and *οἰνηροὶ θεράποντες*), usually young slaves, who had to mix the wine and present it to the company, were also under his orders; but if there was no symposiarch, the company called for the wine just as they pleased.⁴

Before the drinking commenced, it was agreed upon in what way they should drink,⁵ for it was not usually left to the option of each of the company to drink as much or as little as he pleased, but he was compelled to take whatever the symposiarch might order. At Athens they usually began drinking out of small cups (*μέτρια ποτήρια*), but as the entertainment went on, larger ones were introduced.⁷ In the Symposium of Plato,⁸ Alcibiades and Socrates each empty an immense cup, containing eight cotylæ, or nearly four English pints; and frequently such cups were emptied at one draught (*ἀπνευστί* or *ἀνυστί πίνειν, ἀνυστίζειν*).⁹

The cups were always carried round from right to left (*ἐπὶ δεξιᾷ*), and the same order was observed in the conversation, and in everything that took place in the entertainment (*ἐπὶ δεξιᾷ διαπίνει*;¹⁰ *ἐπὶ δεξιᾷ λόγον εἰπεῖν*¹¹). The company frequently drank to the health of one another (*προπίνειν φιλοτησίας*),¹² and each did it especially to the one to whom he blended the same cup. This seems to have been the custom which Cicero alludes to when he speaks of "drinking after the Greek fashion" (*Græco more bibere*);¹³ *Græci in convivis solent nominare, cui poculum tradituri sunt*).¹⁴

Music and dancing were usually introduced, as already stated, at symposia, and we find few representations of such scenes in ancient vases without the presence of female players on the flute and the cithara. Plato, indeed, decidedly objects to their presence, and maintains that it is only men incapable of amusing themselves by rational conversation that have recourse to such means of enjoyment;¹⁵ but this says nothing against the general practice; and Xenophon, in his Symposium, represents Socrates mightily pleased with the mimetic dancing and other feats performed on that occasion. The female dancers, and the players on the flute and the cithara, were frequently introduced at the symposia of young men for another purpose, and were often-times actually *ἐταῖραι* (*vid. HETÆRÆ*, p. 502), as we see clearly represented on many ancient vases.¹⁶ Respecting the different kinds of dances performed at symposia, see *SALTATIO*.

(See, for example, Mus. Borb., v., t. 51.)

Respecting the games and amusements by which the symposia were enlivened, it is unnecessary to say much here, as most of them are described in separate articles in this work. Enigmas or riddles (*αἰνίγματα* or *γρίφοι*) were among the most usual and favourite modes of diversion. Each of the company proposed one in turn to his right-hand neighbour: if he solved it, he was rewarded with a crown, a garland, a cake, or something of a similar kind, and sometimes with a kiss; if he failed, he had to drink a cup of unmixed wine, or of wine mixed with salt-water, at one draught.¹ The cot-tabos was also another favourite game at symposia, and was played at in various ways. (*Vid. COTTABOS.*)

The other games at symposia which require mention are the *ἀστραγάλισμός* and *κυβεία*, explained under *TALI* and *TESSERÆ*, the *πεττεία*, spoken of under *LATRUNCULI*, and the *χαλκιπρόσ*. The latter consisted in turning round a piece of money placed upright on its edges, and causing it suddenly to stop while moving by placing a finger on its top.²

Representations of symposia are very common on ancient vases. Two guests usually reclined on each couch (*κλίνη*), as is explained on p. 344, and illustrated by the following cut from one of Sir W. Hamilton's vases, where the couch on the right hand contains two persons, and that on the left is represented with only one, which does not appear to have been the usual practice. The guests wear garlands of flowers, and the two who are reclining on the same couch hold a phiala each in the right hand. Sometimes there were four or five persons on one couch, as in the woodcut on p. 326.

A drinking-party among the Romans was sometimes called *convivium*, but the word *comissatio* more nearly corresponds to the Greek *συμπόσιον*. (*Vid. COMISSATIO.*) The Romans, however, usually drank during their dinner (*cæna*), which they frequently prolonged during many hours in the later times of the Republic and under the Empire. Their customs connected with drinking differed little from those of the Greeks, and have been incidentally noticed above.

The preceding account has been mainly composed from Becker's *Charikles*³ and *Gallus*,⁴ where the subject is treated at length.

SYNTHESIS, a garment frequently worn at dinner, and sometimes also on other occasions. As it was inconvenient to wear the toga at table on account of its many folds, it was customary to have dresses especially appropriated to this purpose, called *vestes cenatoria* or *cenatoria*,⁵ *accubitoria*,⁶ or *syntheses*. The synthesis is commonly explained to be a loose kind of robe like the pallium, but Becker⁷ supposes, from a comparison of a passage of Dion Cassius⁸ with one of Suetonius,⁹ describing the dress of Nero, that it must have been a kind of tunic, an *indumentum* rather than an *amictus*. (*Vid. AMICTUS.*) That it was, however, an easy

and comfortable kind of dress, as we should say, seems to be evident from its use at table above mentioned, and also from its being worn by all classes at the *SATURNALIA*, a season of universal relaxation and enjoyment.¹ More than this respecting its form we cannot say: it was usually dyed with some colour,² and was not white like the toga.

The word *synthesis* is also applied to a set of wearing apparel or a complete wardrobe.³ This use of the word agrees better with its etymology (*σύνθεσις, συντίθημι*) than the one mentioned above.⁴

SYRINX (*σύριγξ*), the Pan's Pipe, or Pandean Pipe, was the appropriate musical instrument of the Arcadian and other Grecian shepherds, and was regarded by them as the invention of Pan, their tutelary god,⁵ who was sometimes heard playing upon it (*συνήκοντος*), as they imagined, on Mount Mænalus.⁶ It was, of course, attributed to Faunus, who was the same with Pan.⁷ When the Roman poets had occasion to mention it, they called it *fis-tula*.⁸ It was also variously denominated according to the materials of which it was constructed, whether of cane (*τεμνί ἀρουδίνῃ*,⁹ *πευκενίῃ δονάκῃ*¹⁰), reed (*καλαμό*,¹¹ *κάλαμος*¹²), or hemlock (*κικυλά*).¹³ In general, seven hollow stems of these plants were fitted together by means of wax, having been previously cut to the proper length, and adjusted so as to form an octave;¹⁴ but sometimes nine were admitted, giving an equal number of notes.¹⁵ Another refinement in the construction of this instrument, which, however, was rarely practised, was to arrange the pipes in a curve so as to fit the form of the lip, instead of arranging them in a plane.¹⁶ A syrinx of eight reeds is shown in the gem figured on page 696. The annexed woodcut is taken from a bas-relief in the collection at Appledurcombe in the Isle of Wight.¹⁷ It represents Pan reclining at the entrance of the cave which was dedicated to him in the Acropolis at Athens. He holds in his right hand a drinking-horn (*vid. ΡΑΥΤΟΝ*), and in his left a syrinx, which is strengthened by two transverse bands.

The ancients always considered the Pan's Pipe as a rustic instrument, chiefly used by those who tended flocks and herds,¹⁸ but also admitted to regulate the dance.¹⁹ The introduction of it on more solemn occasions was very unusual. Telephans

Scut., 278.)

at Megara refused to go to the PYTHIAN GAMES on account of the performance on Pandean pipes (σύμφωνον). The Lydians, whose troops marched to military music, employed this, together with other instruments, for the purpose.² This instrument was the origin of the organ. (*Vid.* HYDRAULA.)

The term σύμφωνος was also applied to levels, or narrow subterranean passages made either in searching for metals, in mining at the siege of a city,³ or in forming catacombs for the dead.⁴

SYRMA (σύρμα), which properly means that which is drawn or dragged (from σύρω), is applied to a dress with a train. The long peplos worn by the Trojan matrons was consequently a dress somewhat of this kind.⁵ The syrma, however, was more especially the name of the dress worn by the tragic actors, which had a train to it trailing upon the ground; whence the word is explained by Pollux⁶ as a τραγικὸν φόρημα ἐπισυρόμενον, and is alluded to by Horace⁷ in the words

"trazique vagus per pulpita vestem."

Hence we find syrma used metaphorically for tragedy itself.⁸

SYSSITIA (συσσίτια). The custom of taking the principal meal of the day in public prevailed extensively among the Greeks from very early ages. It existed not only with the Spartans and Cretans, among both of whom it was kept up till comparatively recent times, but also at Megara in the age of Theognis,⁹ and at Corinth in the time of Perianther, who, it seems, abolished the practice as being favourable to aristocracy.¹⁰ Nor was it confined to the Hellenic nation; for, according to Aristotle,¹¹ it prevailed still earlier among the Eñotrians in the south of Italy, and also at Carthage, the political and social institutions of which state resembled those of Sparta and Crete.¹² The origin of the usage cannot be historically established, but it seems reasonable to refer it to infant or patriarchal communities, the members of which, being intimately connected by the ties of a close political union and kindred, may naturally be supposed to have lived together almost as members of the same family. But, however and wherever it originated, the natural tendency of such a practice was to bind the citizens of a state in the closest union; and, accordingly, we find that at Sparta Lycurgus availed himself of it for this purpose, though we cannot determine with any certainty whether he introduced it there, or merely perpetuated and regulated an institution which the Spartans brought with them from their mother-country, and retained at Sparta as being suitable to their position and agreeable to their national habits. The latter supposition is perhaps the more probable. The Cretan usage Aristotle¹³ attributes to Minos; this, however, may be considered rather "the philosopher's opinion than an historical tradition;" but the institution was confessedly of so high antiquity, that the Peloponnesian colonists may well be supposed to have found it already existing in Crete, even if there had been no Dorian settlers in the island before them.¹⁴

The Cretan name for the syssitia was Ἀνδρεία,¹⁵ the singular of which is used to denote the building or public hall where they were given. This title affords of itself a sufficient indication that they were confined to men and youths only: a conclusion justified and supported by all the authorities on the subject.¹⁶ It is not, however, improbable, as Hoecck¹⁷

suggests, that in some of the Dorian states there were syssitia of the young unmarried women as well as of the men.¹ All the adult citizens partook of the public meals among the Cretans, and were divided into companies or "messes," called Ἐταιρία, or sometimes ἄνδρεια.² These divisions were perhaps originally confined to persons of the same house and kindred, but afterward any vacancies in them were filled up at the discretion of the members.³ The divinity worshipped under the name of Ζεὺς Ἐταιρεῖος⁴ was considered to preside over them.

According to Dosiadas, who wrote a history of Crete,⁵ there were in every town of the island (πανταχοῦ) two public buildings, one for the lodging of strangers (κοιμητήριον), the other a common hall (ἀνδρείον) for the citizens. In the latter of these the syssitia were given, and in the upper part of it were placed two tables for the entertainment of foreign guests (ξενικὰ τράπεζαι), a circumstance deserving of notice, as indicating the extent to which the Dorians of Crete encouraged mutual intercourse and hospitality. Then came the tables of the citizens. But, besides these, there was also a third table, on the right of the entrance, dedicated to Ζεὺς ἕνιος, and perhaps used for the purpose of making offerings and libations to that god.

The syssitia of the Cretans were distinguished by simplicity and temperance. They always sat at their tables, even in later times, when the custom of reclining had been introduced at Sparta.⁶ The entertainment began with prayer to the gods and libations.⁷ Each of the adult citizens received an equal portion of fare, with the exception of the "archon" or "master of the tables," who was, perhaps, in ancient times, one of the κόσμοι, and more recently a member of the γερωνία or council. This magistrate received a fourfold portion; "one as a common citizen, a second as president, a third for the house or building, a fourth for the furniture" (τῶν σκευῶν): an expression from which it would seem that the care of the building, and the provision of the necessary utensils and furniture, devolved upon him. The management of all the tables was under the superintendence of a female of free birth (ἡ προεστηκυῖα τῆς συσσιτίας γυνή), who openly took the best fare, and presented it to the citizen who was most eminent in the council or the field. She had three or four male assistants under her, each of whom, again, was provided with two menial servants (καλῆφόροι, or wood-carriers). Strangers were served before the citizens, and even before the archon or president.⁸ On each of the tables was placed a cup of mixed wine, from which the messmates of the same company drank. At the close of the repast this was replenished, but all intemperance was strictly forbidden by a special law.¹⁰

Till they had reached their eighteenth year, when they were classed in the ἀγέλαι, the youths accompanied their fathers to the syssitia along with the orphans of the deceased.¹¹ In some places the youngest of the orphans waited on the men; in others this was done by all the boys.¹² When not thus engaged, they were seated near to the men on a lower bench, and received only a half portion of meat: the eldest of the orphans appear to have received the same quantity as the men, but of a plainer description of fare.¹³ The boys, like the men, had also a cup of mixed wine in common, which, however, was not replenished when emptied.

During the repast a general cheerfulness and gayety prevailed, which were enlivened and kept up by music and singing.¹ It was followed by conversation, which was first directed to the public affairs of the state, and afterward turned on valiant deeds in war and the exploits of illustrious men, whose praises might animate the younger hearers to an honourable emulation. While listening to this conversation, the youths seem to have been arranged in classes (*ἀνδρεία*), each of which was placed under the superintendence of an officer (*παιδονόμος*) especially appointed for this purpose, so that the *syssitia* were thus made to serve important political and educational ends.

In most of the Cretan cities the expenses of the *syssitia* were defrayed out of the revenues of the public lands and the tribute paid by the Perioeci, the money arising from which was applied partly to the service of the gods and partly to the maintenance of all the citizens, both male and female,² so that in this respect there might be no difference between the rich and the poor. From the statement of Aristotle compared with Dosiadas,³ it appears probable that each individual received his separate share of the public revenues, out of which he paid his quota to the public table, and provided with the rest for the support of the females of his family. This practice, however, does not appear to have prevailed exclusively at all times and in all the cities of Crete. In Lyctus, for instance, a colony from Sparta, the custom was different: the citizens of that town contributed to their respective tables a tenth of the produce of their estates; a practice which may be supposed to have obtained in other cities, where the public domains were not sufficient to defray the charges of the *syssitia*. But, both at Lyctus and elsewhere, the poorer citizens were in all probability supported at the public cost.

In connexion with the accounts given by the ancient authors respecting the Cretan *syssitia*, there arises a question of some difficulty, viz., how could one building accommodate the adult citizens and youths of such towns as Lyctus and Gortyna? The question admits of only two solutions: we are either misinformed with respect to there being only one building in each town used as a common hall, or the number of Dorian citizens in each town must have been comparatively very small.

The Spartan *syssitia* were in the main so similar to those of Crete, that one was said to be borrowed from the other.⁴ In later times they were called *φειδίτια*, or the "spare meals," a term which is probably a corruption of *φιλήτια*, the love-feasts, a word corresponding to the Cretan *ἐρασιπεία*.⁵ Anciently they were called *ἀνδρεία*, as in Crete.⁶ They differed from the Cretan in the following respects. Instead of the expenses of the tables being defrayed out of the public revenues, every head of a family was obliged to contribute a certain portion at his own cost and charge; those who were not able to do so were excluded from the public tables.⁷ The guests were divided into companies generally of fifteen persons each, and all vacancies were filled up by ballot, in which unanimous consent was indispensable for election. No persons, not even the kings, were allowed what was called an *ἀφιδίτιος ἡμέρα*,⁸ or excused from attendance at the public tables, except for some satisfactory reason, as when engaged in a sacrifice or a chase, in which latter case the individual was required to send⁹ a

present to his table. Each person was supped with a cup of mixed wine, which was filled again when required; but drinking to excess was prohibited at Sparta as well as in Crete. The repast was of a plain and simple character, and the contribution of each member of a mess or *φειδίτης* was settled by law.¹ The principal dish was the *μείλας ζωμός*, or black broth, with pork.² The *ἐπάκλειον*, or after-meal (from the Doric *άικλον*, a meal), was, however, more varied, and richly supplied by presents of game, poultry, fruit, &c., and other delicacies, which no one was allowed to purchase. (*Vid. ALCION*.) Moreover, the entertainment was enlivened by cheerful conversation, though on public matters.³ Singing, also, was frequently introduced, as we learn from Alcman⁴ that "at the banquets and drinking entertainments of the men it was fit for the guests to sing the *pæan*." The arrangements were under the superintendence of the polemarchs.

The use and purposes of the institutions described above are very manifest. They united the citizens by the closest ties of intimacy and union, making them consider themselves as members of one family, and children of one and the same mother, the state. They maintained a strict and perfect separation between the higher and the subject classes, both at Sparta and in Crete, and kept up in the former a consciousness of their superior worth and station, together with a strong feeling of national identity. At Sparta, also, they were eminently useful in a military point of view; for the members of the *syssitia* were formed into corresponding military divisions, and fought together in the field, as they had lived together at home, with more bravery and a keener sense of shame (*αἰδώς*) than could have been the case with merely chance comrades.⁵ Moreover, "they gave an efficacy to the power of public opinion which must have nearly superseded the necessity of penal laws."⁶ With respect to their political tendencies, they were decidedly arranged upon aristocratical principles, though no individual of a company or mess was looked upon as superior to his fellows. Plutarch⁷ accordingly calls them *συνέδρια ἀριστοκρατικά*, or aristocratical meetings, and compares them with the Prytaneum and Thesmothesium at Athens.

The simplicity and sobriety, which were in early times the characteristics both of the Spartan and Cretan *syssitia*, were afterward, in Sparta at least, supplanted by luxury and effeminate indulgence. The change was probably gradual, but the kings Areus and Acrotatus (B.C. 300) are recorded as having been mainly instrumental in accelerating it. The reformer Agis endeavoured, but in vain, to restore the old order of things, and perished in the attempt.⁸ In his days Sparta contained 4500 families, out of which he proposed to make fifteen *syssitia*, whence Müller infers that formerly, when the number of families was 9000, the number of *syssitia* was thirty, and, consequently, that Herodotus, when he spoke of Lycurgus having instituted the "*syssitia*" for war, alluded to the larger divisions, and not the single banqueting companies; a conclusion justified by the context. Müller, moreover, supposes that in this sense the *syssitia* at Sparta corresponded to the divisions of the state called *οἶα*, and sometimes *φοατρία*, which were also thirty in number.⁹

T. 6.

*TABANUS. (Vid. CESTRUS.)

TABELLA, *din.* of **TABULA**, a Billet or Tablet, with which each citizen and judex voted in the comitia and courts of justice. In the comitia, if the business was the passing of a law, each citizen was provided with two tabellæ, one inscribed V. R., i. e., *Utī Rogas*, "I vote for the law," the other inscribed A., i. e., *Antiquo*, "I am for the old law."¹ If the business was the election of a magistrate, each citizen was supplied with one tablet, on which the names of the candidates were written, or the initials of their names, as some suppose from the oration *Pro Domo*, c. 43; the voter then placed a mark (*punctum*) against the one for whom he voted, whence *puncta* are spoken of in the sense of votes.² For farther particulars respecting the voting in the comitia, see **DIRIBITORES** and **SITELLA**.

The judices were provided with three tabellæ, one of which was marked with A., i. e., *Absolvo*, "I acquit;" the second with C., i. e., *Condemno*, "I condemn;" and the third with N. L., i. e., *Non Liquet*, "It is not clear to me." The first of these was called *tabella absolutoria*, and the second *tabella damnatoria*,³ and hence Cicero⁴ calls the former *littera salutaris*, and the latter *littera tristis*. It would seem that in some trials the tabellæ were marked with the letters L. D. respectively, i. e., *Libero* and *Damno*, since we find on a denarius of the Cælian gens a tabella marked with the letters L. D.; and as we know that the vote by ballot in cases of perduellio was first introduced by C. Cælius Caldus (*vid.* **TABELLARIÆ LEGES**), the tabella on the coin undoubtedly refers to that event. There is also a passage in Cæsar⁵ which seems to intimate that these initial letters were sometimes marked on the tabellæ: "*Unam fore tabellam, qui liberandos omni periculo censerent; alteram, qui captis damnarent*," &c.⁶

BRITISH MUSEUM.

The cut annexed contains a copy of a coin of the Cassian gens, in which a man wearing a toga is represented in the act of placing a tabella marked with the letter A. (i. e., *absolvo*) in the cista. The letter on the tabella is evidently intended for A.

For the other meanings of **Tabella**, see **TABULA**.

TABELLARIÆ LEGES, the laws by which the ballot was introduced in voting in the comitia. As to the ancient mode of voting at Rome, see **SUFFRAGIUM**. There were four enactments known by the name of **Tabellariæ Leges**, which are enumerated by Cicero.⁷ They are mentioned below according to the order of time in which they were passed.

1. **GABINIA Lex**, proposed by the tribune Gabinius B.C. 139, introduced the ballot in the election of magistrates,⁸ whence Cicero⁹ calls the tabella "*rudex tacite libertatis*."

2. **CASSIA Lex**, proposed by the tribune L. Cassius Longinus B.C. 137, introduced the ballot in the "*judicium populi*," with the exception of cases of perduellio. The "*judicium populi*" undoubtedly applies to cases tried in the comitia by the whole body of the people (*vid.* **JUDEX**, p. 551, 552), although Ernesti¹⁰ wishes to give a different interpretation to the words. This law was supported by

Scipio Africanus the younger, for which he was censured by the aristocratical party.¹

3. **PAPIRIA Lex**, proposed by the tribune C. Papirius Carbo B.C. 131, introduced the ballot in the enactment and repeal of laws.²

4. **CÆLIA Lex**, proposed by C. Cælius Caldus B.C. 108, introduced the ballot in cases of perduellio, which had been excepted in the Cassian law.³

There was also a law brought forward by Marius B.C. 119, which was intended to secure freedom and order in voting.⁴

TABELLARIUS, a Letter-carrier. As the Romans had no public post, they were obliged to employ special messengers, who were called *tabellarii*, to convey their letters (*tabellæ, litteræ*), when they had not an opportunity of sending them otherwise.⁵

TABELLIO, a Notary.⁶ Under the Empire the tabelliones succeeded to the business of the scribæ in the times of the Republic. (*Vid.* **SCRIBÆ**.) They were chiefly employed in drawing up legal documents, and for this purpose usually took their stations in the market-places of towns.⁷ They formed a special order in the state.⁸

TABERNA is defined by Ulpian as any kind of building fit to dwell in, "*ncmpe ex eo, quod tabulis clauditur*," or,⁹ according to the more probable etymology of Festus, because it was made of planks.¹⁰ Festus¹¹ asserts that this was the most ancient kind of abode used among the Romans, and that it was from the early use of such dwellings that the words *taberna* and *tabernaculum* were applied to military tents, though the latter were constructed of skins. We know very little of the form and materials of the ancient tents; but we may infer, from the notices we have of them, that they were generally composed of a covering of skins, partly supported by wooden props, and partly stretched on ropes. Sometimes, in a permanent camp, they may have been constructed entirely of planks; and sometimes, in cases of emergency, garments and rushes were spread over any support that could be obtained.¹² From *taberna*, when used in this sense, are derived *tabernaculæ*, the more common name of a tent, and **CONTUBERNALES**.

The usual name of *taberna* is a *shop*. Neither the ancient authors nor the remains of Pompeii lead us to suppose that tradesmen often had their shops forming parts of their houses, as with us. A few houses are indeed found at Pompeii entirely devoted to the purposes of trade, consisting, that is, of the shop and the rooms occupied by the tradesman and his family.

Most commonly, the shops formed a part of a large house, to the owner of which they belonged, and were by him let out to tradesmen. (*Vid.* **HOUSE, ROMAN**, p. 519.) Some of the shops round a house were retained by the owner for the sale of the produce of his estates. This arrangement of the shops was probably an improvement on an older plan of placing them against the walls of houses. Even under the emperors we find that shops were built out so far into the street as to obstruct the thoroughfare. Martial¹³ mentions an edict of Domitian by which the practice was put down, and the shops were confined within the areas of the houses.

The following are the most remarkable classes of shops of which we have notices or remains:

1. Shops for the sale of wine, hot drinks, and ready-dressed meat. (*Vid.* **CAUPONA**.)

TABERNA'CULUM. (*Vid. TABERNA, TEMPLUM.*)
TABLINUM. (*Vid. HOUSE, ROMAN, p. 517.*)

TABULÆ. This word properly means planks or boards, whence it is applied to several objects, as gaming-tables,¹ pictures,² but more especially to tablets used for writing, of which alone we have to speak here. The name of tabulæ was applied to any flat substance used for writing upon, whether stone or metal, or wood covered with wax. Livy,³ indeed, distinguishes between *tabula* and *cera*, by the former of which he seems to mean tablets of stone and metal; but *tabula* and *tabellæ* more frequently signify waxen tablets (*tabula ceratæ*), which were thin pieces of wood, usually of an oblong shape, covered over with wax (*cera*). The wax was written on by means of the stylus. (*Vid. STYLUS.*) These tabulæ were sometimes made of ivory and citron-wood,⁴ but generally of the wood of a more common tree, as the beech, fir, &c. The outer sides of the tablets consisted merely of the wood; it was only the inner sides that were covered over with wax. They were fastened together at the backs by means of wires, which answered the purpose of hinges, so that they opened and shut like our books; and to prevent the wax of one tablet rubbing against the wax of the other, there was a raised margin around each, as is clearly seen in the woodcut on p. 925. There were sometimes two, three, four, five, or even more tablets fastened together in the above-mentioned manner. Two such tablets were called *diptycha* (διπτυχα), which merely means "twice-folded" (from πτύσσω, "to fold"), whence we have πτυκτιον, or, with the τ omitted, πτυκτιον. The Latin word *pugillares*, which is the name frequently given to tablets covered with wax,⁵ may perhaps be connected with the same root, though it is usually derived from *pugillus*, because they were small enough to be held in the hand. Such tablets are mentioned as early as the time of Homer, who speaks of a πίναξ πτυκτός.⁶ (*Vid. DIPTYCHA.*) Three tablets fastened together were called *triptycha* (τριπτυχα), which Martial⁷ translates by *triplices (ceræ)*; in the same way we also read of *pentaptycha* (πεντάπτυχα), called by Martial⁸ *quintuplices (ceræ)*, and of *polyptycha* (πολύπτυχα) or *multiplices (ceræ)*. The pages of these tablets were frequently called by the name of *cera* alone; thus we read of *prima cera*, *altera cera*, "first page," "second page."⁹ In tablets containing important legal documents, especially wills, the outer edges were pierced through with holes (*foramina*), through which a triple thread (*linum*) was passed, and upon which a seal was then placed. This was intended to guard against forgery; and, if it was not done, such documents were null and void.¹⁰ (*Vid. TESTAMENTUM.*)

Waxen tablets were used among the Romans for almost every species of writing where great length was not required. Thus letters were frequently written upon them, which were secured by being fastened together with packthread and sealed with wax. Accordingly, we read in Plautus,¹¹ when a letter is to be written,

"Effer cito stilum, ceram, et tabellas, et linum."

The sealing is mentioned afterward.¹ Tabulæ and tabellæ are therefore used in the sense of letters.² Love-letters were written on very small tablets called *vitelliani*,³ of which word, however, we do not know the meaning. Tablets of this kind are presented by Amor to Polyphemus on an ancient painting.⁴

Legal documents, and especially wills, were almost always written on waxen tablets, as mentioned above. Such tablets were also used for accounts, in which a person entered what he received and expended (*tabula* or *codex accepti et expensi*), whence *novæ tabulæ* mean an abolition of debts, either wholly or in part.⁵ The above are merely instances of the extensive use of waxen tablets: it is unnecessary to pursue the subject farther. Respecting the *tabula publica*, see TABULARIUM.

Two ancient waxen tablets have been discovered in a perfect state of preservation, one in a gold mine four or five miles from the village of Abrudbányá in Transylvania, and the other in a gold mine in the village itself. Of this interesting discovery an account has been published by Massmann in a work entitled "*Libellus Aurarius, sive Tabula Ceratæ, et antiquissima et unica Romana in Fodina Auraria apud Abrudbanyam, oppidulum Transsylvanum, nuper reperta.*" Lipsiæ (1841). An account of these tablets, taken from Massmann's description, will serve as a commentary on what has been said above. Both the tabulæ are triptycha, that is, consisting of three tablets each. One is made of firwood, the other of beechwood, and each is about the size of what we call a small octavo. The outer part of the two outside tablets of each exhibits the plain surface of the wood, the inner part is covered with wax, which is now almost of a black colour, and is surrounded with a raised margin. The middle tablet has wax on both sides, with a margin around each, so that each of the two tabulæ contains four sides or four pages covered with wax. The edges are pierced through, that they might be fastened together by means of a thread passed through them. The wax is not thick in either; it is thinner on the beechen tabulæ, in which the stylus of the writer has sometimes cut through the wax into the wood. There are letters on both of them, but on the beechen tabulæ they are few and indistinct; the beginning of the first tablet contains some Greek letters, but they are succeeded by a long set of letters in unknown characters. The writing on the tabulæ made of firwood is both greater in quantity, and in a much better state of preservation. It is written in Latin, and is a copy of a document relating to some business connected with a collegium. The name of the consuls is given, which determines its date to be A.D. 169. One of the most extraordinary things connected with it is, that it is written from right to left. The writing begins on what we should call the last or fourth page, and ends at the bottom of the third; and by some strange good fortune it has happened that the same document is written over again, beginning on the second page and ending at the bottom of the first, so that where the writing is effaced or doubtful in the one, it is usually supplied or explained by the other.

Waxen tablets continued to be used in Europe for the purposes of writing in the Middle Ages; but the oldest of these with which we are acquainted belongs to the year 1301 A.D., and is preserved in the Florentine museum.

The tablets used in voting in the comitia and the

courts of justice were also called *tabulæ* as well as *tabellæ*. (Vid. *TABELLÆ*.)

TABULARII were notaries or accountants, who are first mentioned under this name in the time of the Empire.¹ Public notaries, who had the charge of public documents, were also called *tabularii*,² and these seem to have differed from the *tabelliones* in the circumstance that the latter had nothing to do with the custody of the public registers. Public *tabularii* were first established by M. Antoninus in the provinces, who ordained that the births of all children were to be announced to the *tabularii* within thirty days from the birth.³ Respecting the other duties of the public *tabularii*, see *Cod. Theod.*, viii., tit. 2, and *Gothofr.*, *ad loc.*

TABULARIUM, a place where the public records (*tabula publica*) were kept.⁴ These records were of various kinds, as, for instance, *senatus consulta*, *tabulæ censoriæ*, registers of births, deaths, of the names of those who assumed the *toga virilis*, &c.⁵ There were various *tabularia* at Rome, all of which were in temples; we find mention made of *tabularia* in the temples of the nymphs,⁶ of *Lucina*, of *Iuventus*, of *Libitina*, of *Ceres*, and more especially in that of *Saturn*, which was also the public treasury.⁷ (Vid. *ÆRARIUM*.)

A *tabularium* was also called by other names, as *grammatophylacium*, *archium*, or *archivum*.⁸ In a private house the name of *tablinum* was given to the place where the family-records and archives were kept. (Vid. *HOUSE*, *ROMAN*, p. 517.)

TEDA or *TEDA* (*δαίς*, *Att. δᾶς*, *dim. δαδίων*), a light of firwood, called on this account *pinæa tæda*.⁹ Before the adoption of the more artificial modes of obtaining light, described under *CANDELA*, *ELLYCHNIUM*, *FAX*, *FUNALE*, and *LUCERNA*, the inhabitants of Greece and Asia Minor practised the following method, which still prevails in those countries, and to a certain extent in Scotland and Ireland, as well as in other parts of Europe, which abound in forests of pines.¹⁰ A tree having been selected of the species *Pinus Maritima*, *Linna.*, which was called *πέυκη* by the ancient Greeks from the time of Homer,¹¹ and which retains this name, with a slight change in its termination, to the present day, a large incision was made near its root, causing the turpentine to flow so as to accumulate in its vicinity. This highly resinous wood was called *δαίς*, *i. e.*, torch-wood; a tree so treated was called *ἐνδοφόρος*, the process itself *ἐνδοφούν* or *δαδουπνύν*, and the workmen employed in the manufacture, *δαδουπνοί*. After the lapse of twelve months, the portion thus impregnated was cut out and divided into suitable lengths. This was repeated for three successive years, and then, as the tree began to decay, the heart of the trunk was extracted, and the roots were dug up for the same purpose.¹² These strips of resinous pinewood are now called *δαδία* by the Greeks of Mount Ida.¹³

When persons went out at night they took these lights in their hands,¹⁴ more particularly in a nuptial procession.¹⁵ Hence *tæda felices* signified "a happy marriage,"¹⁶ and these lights, no less than proper torches, are attributed to Love and Hymen.¹⁷

It was usual to place these articles as offerings in the temples, especially at the great festivals.¹

Having been previously burned into charcoal, they were used in the manufacture of lampblack or *ATRAMENTUM*.²

TÆNIA or *TAINIA*. (Vid. *VITTA*, *STROPHIUM*.) *II. The *Cepola Tænia*, L., or Tape-fish. It is so called from its being striped like a riband. Rondelet describes two species of it.³

TAGUS (*ταγός*), a leader or general, was more especially the name of the military leader of the Thessalians. Under this head it is proposed to give a short account of the Thessalian constitution.

The Thessalians were a Thesprotian tribe,⁴ and originally came from the Thesprotian Ephyra. Under the guidance of leaders who are said to have been descendants of Hercules, they invaded the western part of the country, afterward called Thessaly, and drove out or reduced to the condition of *Penestæ*, or bondsmen, the ancient Æolian inhabitants (*τὴν τότε μὲν Αἰολίδα, νῦν δὲ Θερταλίαν καλομένην*).⁵ The Thessalians afterward spread over the other parts of the country, and took possession of the most fertile districts, and compelled the *Peræbi*, *Magnetes*, *Achaean Phthiotæ*, and other neighbouring people to submit to their authority and to pay them tribute.⁶ The population of Thessaly therefore consisted, like that of *Laconica*, of three distinct classes. 1. The *Penestæ*, whose condition was nearly the same as that of the *Helots*. (Vid. *PENESTAL*.) 2. The subject people, who inhabited the districts which were not occupied by the Thessalian invaders. They paid tribute, as stated above, but were personally free, though they had no share in the government. They corresponded to the *Periœci* of *Laconica*, by which name they are called by Xenophon.⁷ (Vid. *PERIœCI*.) 3. The Thessalian conquerors, who alone had any share in the public administration, and whose lands were cultivated by the *Penestæ*.

For some time after the conquest Thessaly seems to have been governed by kings of the race of Hercules, who may, however, have been only the heads of the great aristocratical families, invested with the supreme power for a certain time. Under one of these princes, named *Aleuas*, the country was divided into four districts, *Phthiotis*, *Histiæotis*, *Thessaliotis*, and *Pelagiotis*.⁸ This division continued till the latest times of Thessalian history, and we may therefore conclude that it was not merely a nominal one. Each district may perhaps have regulated its affairs by some kind of provincial council, but respecting the internal government of each we are almost entirely in the dark.⁹

When occasion required, a chief magistrate was elected under the name of *tagus* (*ταγός*), whose commands were obeyed by all the four districts. He is sometimes called king (*βασιλεύς*),¹⁰ and sometimes *ἀρχός*.¹¹ His command was of a military rather than of a civil nature, and he seems only to have been appointed when there was a war, or one was apprehended. Pollux,¹² accordingly, in his list of military designations, classes together the beotarchs of the Thebans, the king of the Lacedæmonians, the polemarch of the Athenians (in reference to his original duties), and the *tagus* of the Thessalians. We do not know the extent of the power which the *tagus* possessed constitutionally, nor the time for which he held the office; probably neither

was precisely fixed, and depended on the circumstances and the character of the individual.¹ He levied soldiers from the states in each district, and seems to have fixed the amount of tribute to be paid by the allies.² When Jason was tagus, he had an army of more than 8000 cavalry and not less than 20,000 hoplites;³ and Jason himself says that when Thessaly is under a tagus, there is an army of 6000 cavalry and 10,000 hoplites.⁴ The tribute which Jason levied from the subject towns was the same as had been previously paid by one of the Scopadæ, whom Buttmann supposes to be the same Scopas as the one mentioned by Ælian⁵ as a contemporary of Cyrus the younger. When Thessaly was not united under the government of a tagus, the subject towns possessed more independence.⁶ In later times some states called their ordinary magistrates *ταγῆς*,⁷ which may have been done, however, as Hermann suggests, only out of affectation.

Thessaly, however, was hardly ever united under one government. The different cities administered their own affairs independent of one another, though the smaller towns seem to have frequently been under the influence of the more important ones (*τῶν ἐξ ἑνῶν (τῶν Φαρσαλίων) ἡρτημένων πόλεων*⁸). In almost all the cities the form of government was aristocratical (*θυσαστεία μᾶλλον ἢ ἰσονομία ἐχρῶντο τὸ ἐγχώριον οἱ Θεσσαλοὶ*⁹); and it was chiefly in the hands of a few great families, who were descended from the ancient kings. Thus Larissa was subject to the Alenadæ, whence Herodotus¹⁰ calls them kings of Thessaly; Cranon or Crannon to the Scopadæ, and Pharsalus to the Creondæ.¹¹ These nobles had vast estates cultivated by the *Penestæ*; they were celebrated for their hospitality, and lived in a princely manner (*φιλόξενός τε καὶ μεγαλοπρεπὴς τὸν Θετταλικὸν τρόπον*¹²); and they attracted to their courts many of the poets and artists of southern Greece. The Thessalian commonalty did not, however, submit quietly to the exclusive rule of the nobles. Contests between the two classes seem to have arisen early, and the conjecture of Thirlwall,¹³ that the election of a tagus, like that of a dictator at Rome, was sometimes used as an expedient for keeping the commonalty under, appears very probable. At Larissa the Alenadæ made some concessions to the popular party. Aristotle¹⁴ speaks, though we do not know at what time he refers to, of certain magistrates at Larissa, who bore the name of *πολιτοφύλακες*, who exercised a superintendence over the admission of freemen, and were elected themselves out of the body of the people, whence they were led to court the people in a way unfavourable to the interests of the aristocracy. There were also other magistrates at Larissa of a democratical kind, called *Δαρισσοποιοί*.¹⁵ Besides the contests between the oligarchical and democratical parties, there were feuds among the oligarchs themselves; and such was the state of parties at Larissa under the government of the Alenadæ two generations before the Persian war, that a magistrate was chosen by mutual consent, perhaps from the commonalty, to mediate between the parties (*ἀρχὼν μεσιδίας*¹⁶). At Pharsalus, too, at the close of the Peloponnesian war, the state was torn asunder by intestine commotions, and for the sake of quiet and security the citizens intrusted the acropolis and the whole direction of the government to Polydamas, who discharged his trust with the strictest integrity.¹⁷

The power of the aristocratical families, however, seems to have continued with little diminution till towards the close of the Peloponnesian war, when decided democratical movements first begin to appear. At this time the Alenadæ and the Scopadæ had lost much of their ancient influence. Pheræ and Pharsalus then became the two leading states in Thessaly. At Pheræ a tyranny, probably arising from a democracy, was established by Lycophron, who opposed the great aristocratical families, and aimed at the dominion of all Thessaly.¹ The latter object was accomplished by Jason, the successor and probably the son of Lycophron, who effected an alliance with Polydamas of Pharsalus, and caused himself to be elected tagus about B.C. 374. While he lived the whole of Thessaly was united as one political power, but after his murder in B.C. 370 his family was torn asunder by intestine discords, and did not long maintain its dominion. The office of tagus became a tyranny under his successors, Polydorus, Polyphron, Alexander, Tisiphonus, and Lycophron; till at length the old aristocratical families called in the assistance of Philip of Macedonia, who deprived Lycophron of his power in B.C. 353, and restored the ancient government in the different towns. At Pheræ he is said to have restored popular, or, at least, republican government.² The country, however, only changed masters; for a few years later (B.C. 344) he made it completely subject to Macedonia by placing at the head of the four divisions of the country, tetrarchies or tetradarchies, which he re-established, governors devoted to his interests, and probably members of the ancient noble families, who had now become little better than his vassals.³ Thessaly from this time remained in a state of dependance on the Macedonian kings,⁴ till the victory of T. Flaminius at Cynoscephalæ, in B.C. 197, again gave them a show of independence under the protection of the Romans.⁵

TALARA'RIA, small wings fixed to the ankles of Mercury, and reckoned among his attributes (*πέδιλα, πτερνυπόδιος*). In many works of ancient art they are represented growing from his ankles, as if they were a part of his bodily frame; but more frequently they are attached to him as a part of his dress, agreeably to the description of the poets;⁶ and this is commonly done by representing him with sandals, which have wings fastened to them on each side over the ankles. But there is a most beautiful bronze statue of this divinity in the Museum at Naples, in which the artist, instead of the sole of a sandal, has made the straps unite in a rosette under the middle of the foot (see woodcut), evidently intending by this elegant device to represent the messenger of the gods as borne through space without touching the ground.

Besides Mercury, the artists of antiquity also represented Perseus as wearing winged sandals,⁷ because he put on those of Mercury when he went on his aerial voyage to the rescue of Andromeda.⁸ (*Vid. FALX*.) The same appendage was ascribed to Minerva, according to one view of her origin, viz. as the daughter of Pallas.¹¹

TALAROS (τάλαρος). (Vid. CALATHUS.)

TALA'SSIO. (Vid. MARRIAGE, ROMAN, p. 625.)

TALENTUM (τάλαντον) meant originally a *balance* (vid. LIBRA), then the substance weighed, and lastly and commonly a certain weight, the *talent*. The Greek system of money, as well as the Roman (vid. AS), and those of most other nations, was founded on a reference to weight. A certain weight of silver among the Greeks, as of copper among the Romans, was used as a representative of a value, which was originally and generally that of the metal itself. The talent, therefore, and its divisions, are denominations of money as well as of weight.

The Greek system of weights contained four principal denominations, which, though different at different times and places, and even at the same place for different substances, always bore the same relation to each other. These were the *talent* (τάλαντον), which was the largest, then the *mina* (μνᾶ), the *drachma* (δραχμή), and the *obolus* (ὀβολός). Their relative values are exhibited in the following table :

Obol.			
6	Drachma.		
600	100	Mina.	
36,000	6000	60	Talent.

The multiples and subdivisions of the drachma and obolus have been noticed under DRACHMA.

1. *The Attic Talent*.—It appears from existing coins, which we have every reason to trust, since the Attic silver money was proverbially good, that the drachma, which was the unit of the system, weighed 66·5 grains. (Vid. DRACHMA.) Hence we get the following values for the Attic weights in English avoirdupois weight :

	lb.	oz.	grs.
Obol			11·08
Drachma			66·5
Mina		15	83·75
Talent	56	15½	100·32

These values refer to the time after Solon, for we have no drachmæ of an earlier date. We may, however, arrive at a probable conclusion respecting the state of things before Solon's reform of the currency, by referring to another standard of the talent, which was used in commercial transactions, and the mina of which was called the *commercial mina* (ἡ μνᾶ ἡ ἐμπορικῇ). This mina is mentioned in a decree,¹ the date of which is uncertain (about the 155th Olympiad, or B.C. 160, according to Böckh), as weighing 138 drachmæ, Στεφανφδρου, according to the standard weights in the silver mint. (Vid. ARGYROCOPEION.) In this system, however, the relative proportion of the weights was the same as in the other; we have, therefore,

	lb.	oz.	grs.
Obol			15·29
Drachma			91·77
Mina	1	4½	93·69
Talent	75	5½	14·69

These weights were used for all commodities except such as were required by law to be weighed

according to the other standard, which was also the one always used for money, and is therefore called the silver standard. No date is mentioned for the introduction of this system : it was, therefore, probably very old ; and, in fact, as Böckh has shown, there is every reason to believe that it was the old system of Attic weights which was in use before the time of Solon.¹ Solon is known to have lowered the standard of money in order to relieve debtors ; and Plutarch² informs us, on the testimony of Androtion, that "Solon made the mina of 100 drachmæ, which had formerly contained 73." It is incredible that a large prime number, such as 73, should have been used as a multiplier in any system of weights ; but what Plutarch meant to say was, that Solon made a *mina*, or 100 drachmæ, *out of the same quantity of silver* which was formerly used for 73 drachmæ. The proportion, therefore, of the ancient weights to those fixed by Solon was 100 : 73. Now this was very nearly the proportion of the commercial mina to the silver mina, namely, 138 : 100, = 100 : 73½. But why should Solon have adopted so singular a proportion ? It was probably an accident. Böckh has shown that in all probability Solon intended to reduce the mina one fourth, that is, to make 100 drachmæ of the new coinage equal to 75 of the old, but that, by some inaccuracy of manufacture, the new coins were found to be a little too light ; and, as Solon's coinage furnished the standard for all subsequent ones, the error was retained. In fixing upon one fourth as the amount of the reduction, Solon seems to have been guided by the wish of assimilating the Attic system to another which was extensively used, but the origin of which is unknown, namely, the Euboic talent, which will be presently spoken of.

The commercial weights underwent a change by the decree mentioned above, which orders that 12 drachmæ of the silver standard shall be added to the mina of 138 drachmæ ; that to every five commercial minæ one commercial mina shall be added ; and to every commercial talent five commercial minæ. Thus we shall have,

the mina = 150 drachmæ (silver),
5 minæ = 6 minæ (commercial),
the talent = 65 minæ (commercial).

The five-minæ weight of this system was equal to 7 lbs. 13½ oz. 14·96 grs. avoirdupois, and the talent to 85 lbs. 2½ oz. 70·7 grs.

"The weights were kept with great care at Athens. The standards or models (σγκώματα) were deposited in the Acropolis ; and there were others in the keeping of persons appointed to take charge of them, in the Prytæum at Piræus and at Eleusis."³

The other Greek weights are computed from their relation to the Attic, as stated by ancient writers, and from existing coins. Unfortunately, the writers do not always agree with the coins, nor with each other.

2. *The Euboic Talent* is often reckoned equivalent to the Attic. Herodotus⁴ makes the Babylonian talent equal to 70 Euboic minæ, Pollux⁵ to 7000 Attic drachmæ, i. e., to 70 Attic minæ. Comparing these two statements, we find the Attic and Euboic weights equal. But it is likely that Pollux is not quite right, and that the Euboic standard was a little greater than the Attic : for Ælian⁶ gives 72 Attic minæ for the value of this same Babylonian talent, which would make the ratio of the Euboic to the Attic 72 : 70, which is the same as 75 : 72½. In this fact we have the ground of the supposition

1. (Böckh, Publ. Econ. of Athens, i., p. 193. — Id., Metrolog. Unters., ix., 1, p. 115.) — 2. (Solon, 15.) — 3. (Hussey, p. 26, who quotes Böckh, Inscr., i., 150, § 24 ; 151, § 40 ; 123, § 5, 6.) — 4. (iii., 89.) — 5. (Onom., ix., 6.) — 6. (Var. Hæst., i., 22.)

stated above, that Solon intended to assimilate the Attic standard to the Euboic: for we have seen that the old Attic talent was to Solon's as 100 : 72 $\frac{3}{8}$. Assuming that Solon intended this ratio to have been 100 : 75, we have the *intended value* of Solon's talent to its *actual value* as 75 : 72 $\frac{3}{8}$, which is almost identical with the ratio of the Euboic talent to the Attic talent of Solon. The Euboic talent would therefore exceed the Attic merely by the error which was made in the formation of the latter.

Another computation of the Euboic talent is given by Appian,¹ who makes it equal to 7000 drachmæ, i. e., 70 minæ of Alexandria. (See below, on the Alexandrian talent.)

Festus, in the Excerpta of Paulus,² makes it equal to 4000 denarii. This is clearly an error: very probably Paulus applied the statement of Festus respecting the Rhodian talent to the Euboic. (See below, on the Rhodian talent.)

The Romans seem to have reckoned both the Euboic and Attic talents equal to 80 Roman pounds.³

3. *The Talent of Ægina* has been almost always considered to have borne to the Attic the ratio of 5 : 3, according to the statement of Pollux, that the Æginetan talent contained 10,000 Attic drachmæ, and the drachma 10 Attic obols.⁴ Mr. Hussey, however, observes that this value would give an Æginetan drachma of 110 grains, whereas the existing coins give an average of only 96; and he explains the statement of Pollux as referring, not to the old Attic drachmæ of the full weight, but to the lighter drachma which was current in and after the reign of Augustus, and which was about equal to the Roman denarius. (*Vid. DRACHMA.*)

Taking, then, the value of the drachma given by the coins, we have the following values for the Æginetan weights:

	lb.	oz.	grs.
Otol			15
Drachma			96
Mina	1	5 $\frac{1}{2}$	78 96
Talent	82	3 $\frac{1}{2}$	30 46

On the other hand, Böckh adheres to the proportion of 5 : 3, as given by Pollux, who could not (he contends) have meant by drachmæ those equal to the denarii, because he is not making a calculation of his own, suited to the value of the drachma in his time, but repeating the statement of some ancient writer, who lived when the Attic and Æginetan currencies were in their best condition. Mr. Hussey himself states,⁵ and for a similar reason to that urged by Böckh, that when Pollux speaks of the value of the Babylonian talent in relation to the Attic, he is to be understood as referring to Attic money of the full weight: and Böckh adds the important remark, that where Pollux reckons by the lighter drachmæ, as in the case of the Syrian and small Egyptian talents, this only proves that those talents had but recently come into circulation. Böckh thinks it very probable that Pollux followed the authority of Aristotle, whom he used much, and who had frequent occasions for speaking of the values of money in his political works.

Again: as the Æginetan standard was that which prevailed over the greater part of Greece in early times, we should expect to find some definite proportion between it and the old Attic before Solon; and, if we take the statement of Pollux, we do get such a proportion, namely, that of 6 : 5.

Böckh supports his view by the evidence of existing coins, especially the old Macedonian, before the adoption of the Attic standard by Philip and Alexander, which give a drachma of about 110

grains, which is to the Attic as 5 : 3. The identity of the old Macedonian standard with the Æginetan is proved by Böckh.¹ There are also other very ancient Greek coins of this standard, which had their origin, in all probability, in the Æginetan system.

The lightness of the existing coins referred to by Hussey is explained by Böckh from the well-known tendency of the ancient mints to depart from the full standard.

Mr. Hussey quotes a passage where Herodotus states that Democedes, a physician, after receiving a talent in one year at Ægina, obtained at Athens the next year a salary of 100 minæ, which Herodotus clearly means was more than what he had before. But, according to Pollux's statement, the two sums were exactly equal. But Herodotus says nothing of different standards; surely, then, he meant the same standard to be applied in both cases.

From comparing statements made respecting the pay of soldiers, Hussey² obtains 4 : 3 as about the ratio of the Æginetan to the Attic standard. Böckh accounts for this by supposing that the pay of soldiers varied, and by the fact that the Æginetan money was actually lighter than the proper standard, while the Attic at the same period was very little below the full weight.

There are other arguments on both sides, but what has been said will give a sufficiently complete view of the question.

It is disputed whether the standards of Corinth and Sicily followed that of Athens or that of Ægina. For the discussion of this question, the reader is referred to the works of Böckh and Hussey.

4. *The Babylonian talent* had to the Attic the ratio of 7 : 6 according to Pollux³ and Herodotus,⁴ or 72 : 60 according to Ælian.⁵ Böckh, understanding these statements as referring to the old Attic, makes the Babylonian standard equal to the Æginetan. This standard was much used for silver in the Persian empire.

5. *The accounts of the Egyptian, Alexandrian, or Ptolemaic Talent* are very confused. On the whole, it seems to have been equal to twice the Attic.

6. *The Tyrian Talent* appears to have been exactly equal to the Attic.

7. *A Rhodian Talent* is mentioned by Festus in a passage which is manifestly corrupt.⁷ The most probable emendation of the passage gives 4000 cistophori or 7500 denarii as the value of this talent.

8. *A Syrian Talent* is mentioned, the value of which is very uncertain. There were two sizes of it. The larger, which was six times that used for money, was used at Antioch for weighing wood.

9. *A Cilician Talent* of 3000 drachmæ, or half the Attic, is mentioned by Pollux.⁸

The above were used for silver, but the actual coinage went no higher than the drachma, and a few multiples of it, the highest known with certainty being the tetradrachm. The mina and talent were sums of money, not coins.

A table of Attic money up to the tetradrachma is given under DRACHMA. The mina was 4l. 1s. 3d., the talent 243l. 15s. The Æginetan mina was, according to the existing coins, 5l. 14s. 7d., the talent 343l. 15s.; but, according to the statement of Pollux mentioned above, the mina was 6l. 15s. 5d., the talent 406l. 5s.

A much smaller talent was in use for gold. It was equal to 6 Attic drachmæ, or about $\frac{1}{2}$ oz. and 71 grs. It was called the *gold talent*, or the *Sicilian talent*, from its being much used by the Greeks of Italy and Sicily. This is the talent always meant

1. (Hist. Sic., v., 2.)—2. (s. v. Eubolcum talentum.)—3. (Polyb., xxi., 14.—Liv., xxxvii., 45, compared with Polyb., xxi., 26.—Liv., xxxviii., 38.)—4. (Poll., Onom., ix., 76, 86.)—5. (p. 34.)

1. (Metrol., p. 89.—Compare Müller, Dor., iii., 10, § 12, and Æginet., p. 54–58.)—2. (iii., 131.)—3. (p. 61.)—4. (ix., 86.)—5. (iii., 89.)—6. (Var. Hist., i., 22.)—7. (s. v. Talentum.)—8. (ix., 6.)

when the word occurs in Homer. The Italian Greeks divided it into 24 *nummi*, and afterward into 12,¹ each *nummus* containing 2½ *litrae*. (Compare *LITRA* and *SESTERTIUS*.) This talent was perhaps so called from the weight of gold contained in it being equal in value to a talent of copper, for the proportional value of gold to copper was 1000 : 1. This talent seems to have been divided into 3 minæ, each equal in weight to a didrachm or stater; for the talent of Thyatira is said to have been equal to three gold staters,² and Pollux³ states that the gold stater was equal in value to a mina.

This small talent explains the use of the term *great talent* (*magnum talentum*), which we find in Latin authors, for the silver Attic talent was *great* in comparison with this. But the use of the word by the Romans is altogether very inexact.

There are other talents barely mentioned by ancient writers. Hesychius⁴ mentions one of 100 pounds (*λίτρων*), Vitruvius⁵ one of 120; Suidas,⁶ Hesychius, and Epiphanius⁷ of 125; Dionysius of Halicarnassus⁸ one of 125 asses, and Hesychius three of 165, 400, and 1125 pounds respectively.

Where talents are mentioned in the classical writers without any specification of the standard, we must generally understand the Attic.

TALIO, from talis, signifies an equivalent, but it is used only in the sense of a punishment or penalty the same in kind and degree as the mischief which the guilty person has done to the body of another. A provision as to talio occurred in the Twelve Tables: "*Si membrum rupit ni cum eo pacit talio esto*." This passage does not state what talio is. Cato, as quoted by Priscian,¹⁰ says: "*Si quis membrum rupit aut os frigit, talione proximum cognatus ulciscatur*." The law of talio was probably enforced by the individual or his friends: it is not probable that the penalty was inflicted under a decision of a court of justice. It seems likely that it bore some analogy to the permission to kill an adulterer and adulteress in certain cases, which the Julia lex confirmed; and if so, the law would define the circumstances under which an injured person or his cognati might take this talio. The punishment of death for death was talio; but it is not said that the cognati could inflict death for death. Talio, as a punishment, was a part of the Mosaic law: "breach for breach, eye for eye, tooth for tooth: as he hath caused a blemish in a man, so shall it be done to him again."¹¹

*TALPA, the Mole. (*Vid. ASPALAX*.)

TALUS (*ἀσπράγαλος*), a Huckle-bone. The huckle-bones of sheep and goats have often been found in Greek and Roman tombs, both real, and imitated in ivory, bronze, glass, and agate. Those of the antelope (*δορκάδαιοι*) were sought as objects of elegance and curiosity.¹² They were used to play

with from the earliest times, principally by women and children,¹ occasionally by old men.² A painting by Alexander of Athens, found at Resina, represents two women occupied with this game. One of them, having thrown the bones upward into the air, has caught three of them on the back of her hand.³ (See the annexed woodcut, and compare the account of the game in Pollux.⁴)

Polygnotus executed a similar work at Delphi, representing the two daughters of Pandarus thus employed (*παίζούσας ἀσπράγαλους*).⁵ But a much more celebrated production was the group of two naked boys, executed in bronze by Polyclethus, and called the *Astragalizontes*.⁶ A fractured marble group of the same kind, preserved in the British Museum, exhibits one of the two boys in the act of biting the arm of his playfellow, so as to present a lively illustration of the account in Homer of the fatal quarrel of Patroclus.⁷ To play at this game was sometimes called *πενταλιθεῖν*, because five bones or other objects of a similar kind were employed,⁸ and this number is retained among ourselves.

While the tali were without artificial marks, the game was entirely one of skill; and in ancient no less than in modern times, it consisted not merely in catching the five bones on the back of the hand, as shown in the woodcut, but in a great variety of exercises requiring quickness, agility, and accuracy of sight. When the sides of the bone were marked with different values, the game became one of chance. (*Vid. ALEA, TESSERA*.) The two ends were left blank, because the bone could not rest upon either of them, on account of its curvature. The four remaining sides were marked with the numbers 1, 3, 4, 6, 1 and 6 being on two opposite sides, and 3 and 4 on the other two opposite sides. The Greek and Latin names of the two positions were as follows:⁹ 1. *Μονάς, εἰς, κύων, Χίος*,¹⁰ *Ion. Οἶνη: Unio, Vulturius, canis*; ¹¹ 3. *Τριάς: Ternio*; 4. *Τετράς: Quaternio*; 6. *Ἑξάς, ἑξίτης, Κῶος: Senio*.

As the bone is broader in one direction than in the other, it was said to fall upright or prone (*ὀρθός ἢ πρηνής, rectus aut pronus*), according as it rested on the narrow or the broad side.¹²

Two persons played together at this game, using four bones, which they threw up into the air, or emptied out of a dicebox (*vid. FRITILLUS*), and observing the numbers on the uppermost sides. The numbers on the four sides of the four bones admitted of thirty-five different combinations. The lowest throw of all was four aces (*jacit voltorios quatuor*).¹³ But the value of a throw (*βόλος, jactus*) was not in all cases the sum of the four numbers turned up. The highest in value was that called *Venus*, or *jactus Venerius*,¹⁴ in which the numbers cast up were all different,¹⁵ the sum of them being only fourteen. It was by obtaining this throw that the king of the feast was appointed among the Romans¹⁶ (*vid. SYMPOSIUM*), and hence it was also called *Basilius*.¹ Certain other throws were called by particular names, taken from gods, illustrious men and women, and heroes. Thus the throw consisting of two aces and two trays, making eight, which number, like the *jactus Venerius*, could be obtained only once, was denominated *Stesichorus*. When the object was simply to throw the highest numbers, the game

was called *πλετρεβολίνδα*.¹ Before a person threw the tali, he often invoked either a god or his mistress.² These bones, marked and thrown as above described, were also used in divination.³

In the Greek mythology, Cupid and Ganymede were supposed to play together at huckle-bones on Mount Olympus;⁴ and they are thus represented in some remaining specimens of ancient sculpture.⁵

TAMIAS (*ταμίας*). This was a name given to any person who had the care, managing, or dispensing of money, stock, or property of any description confided to him, as a steward, butler, housekeeper, storehousekeeper, or treasurer: and the word is applied metaphorically in a variety of ways. But the *ταμίαι* who will fall under our notice in this article are certain officers intrusted with important duties by the Athenian government, and more especially the treasurers of the temples and the revenue.

In ancient times, every temple of any importance had property belonging to it, besides its furniture and ornaments, and a treasury where such property was kept. Lands were attached to the temple, from which rents accrued; fines were made payable to the god; trophies and other valuables were dedicated to him by the public; and various sacred offerings were made by individuals. There was a *ταμίας ἱερῶν χρημάτων*, who, together with *ἐπιστάται* and *ἱεροποιοί*, had the custody and management of these funds. The wealthiest of all the temples at Athens was that of Minerva in the Acropolis, in which were kept the spoils taken from the Persians (*τὰ ἀριστεία τῆς πόλεως*), besides magnificent statues, paintings, and other works of art.⁶ To the goddess large fines were specially appropriated by the law, or given by decree of the courts or the assembly; and, besides this, she received a tenth of all the fines that went to the state, a tenth of all confiscations and prizes taken in war. Her treasurers were called *ταμίαι τῆς θεοῦ*, or *τῶν τῆς θεοῦ*, or *ταμίαι ἱερῶν χρημάτων τῆς θεοῦ*, and sometimes simply *ταμίαι*.⁷ They appear to have existed from an early period. Herodotus⁸ relates that the *ταμίαι τοῦ ἱεροῦ*, with a few other men, awaited the attack of Xerxes upon the Acropolis, and perished in its defence. They were ten in number, chosen annually by lot from the class of Pentacosiomedimni, and afterward, when the distinction of classes had ceased to exist, from among the wealthiest of Athenian citizens.⁹ The treasurers of the other gods were chosen in like manner; but they, about the 90th Olympiad, were all united into one board, while those of Pallas remained distinct.¹⁰ Their treasury, however, was transferred to the same place as that of Minerva, viz., to the Opisthodomus of the Parthenon, where were kept not only all the treasures belonging to the temples, but also the state treasure (*δοσα χρήματα*, as contradistinguished from *ἱερά*), under the care of the treasurers of Pallas.¹¹ All the funds of the state were considered as being in a manner consecrated to Pallas; while, on the other hand, the people reserved to themselves the right of making use of the sacred moneys, as well as the other property of the temples, if the safety of the state should require it.¹² Payments made to the temples were received by the treasurers in the presence of some members of the senate, just as public moneys were by the apodectæ; and then the treasurers became responsible for their safe custody. As to fines, see

ΕΠΙΒΟΛΕ, ΠΡΑΚΤΟΡΕΣ, and on the whole of this subject, Böckh, *Staatsh. der Athen*, i., 172-176.

The treasurer of the revenue, *ταμίας* or *ἐπιμελητής τῆς κοινῆς προσόδου*, was a more important personage than those last mentioned. He was not a mere keeper of moneys like them, nor a mere receiver like the apodectæ, but a general paymaster, who received through the apodectæ all money which was to be disbursed for the purposes of the administration (except the property-taxes, which were paid into the war-office, and the tribute from the allies, which was at first paid to the hellenotamiae, and afterward to other persons hereafter mentioned), and then distributed it in such manner as he was required to do by the law; the surplus (if any) he paid into the war-office or the theoric fund. As this person knew all the channels in which the public money had to flow, and exercised a general superintendence over the expenditure, he was competent to give advice to the people upon financial measures, with a view to improve the revenue, introduce economy, and prevent abuses; he is sometimes called *ταμίας τῆς διοικήσεως*, or *ὁ ἐπὶ τῆς διοικήσεως*, and may be regarded as a sort of minister of finance. To him Aristophanes refers in *Equit.*, 947. He was elected by *χειροτονία*, and held his office for four years, but was capable of being re-elected. A law, however, was passed during the administration of Lycurgus, prohibiting re-election; so that Lycurgus, who is reported to have continued in office for twelve years, must have held it for the last eight years under fictitious names. The power of this officer was by no means free from control, inasmuch as any individual was at liberty to propose financial measures, or institute criminal proceedings for malversation or waste of the public funds; and there was an *ἀντιγραφὴς τῆς διοικήσεως* appointed to check the accounts of his superior. Anciently there were persons called *πορίσται*, who appear to have assisted the *ταμίαι* in some part of their duties.¹ (*Vid.* **ΠΟΡΙΣΤΑΙ**.)

The money disbursed by the treasurer of the revenue was sometimes paid directly to the various persons in the employ of the government, sometimes through subordinate pay offices. Many public functionaries had their own paymasters, who were dependant on the *ταμίας τῆς προσόδου*, receiving their funds from him, and then distributing them in their respective departments. Such were the *τριηροποιοί*, *τευχιστοί*, *ὁδοποιοί*, *ταροποιοί*, *ἐπιμεληταὶ νεωρίων*, who received through their own *ταμίαι* such sums as they required from time to time for the prosecution of their works. The payment of the judicial fees was made by the *colacretæ* (*κολακρέται*), which, and the providing for the meals in the Prytæum, were the only duties that remained to them after the establishment of the apodectæ by Clisthenes.² The *ταμίαι* of the sacred vessels, *τῆς Παράλλου* and *τῆς Σαλαμινίας*, acted not only as treasurers, but as trierarchs; the expenses (amounting for the two ships together to about sixteen talents) being provided by the state. They were elected by *χειροτονία*.³ Other trierarchs had their own private *ταμίαι* for the keeping of accounts and better despatch of business.⁴

The duties of the *ἐλληνοταμίαι* are spoken of in a separate article. (*Vid.* **ΕΛΛΗΝΟΤΑΜΙΑΙ**.)

The war fund at Athens (independently of the tribute) was provided from two sources; first, the property-tax (*vid.* **ΕΙΣΦΟΡΑ**), and, secondly, the surplus of the yearly revenue, which remained after defraying the expenses of the civil administration, *τὰ περὶ ὄντα χρήματα τῆς διοικήσεως*. Of the ten

1. (Pollux, *Onom.*, vii., 206; ix., 95, 110, 117.)—2. (Plaut., *Capt.*, i., 1, 5.—Cure., ii., 3, 77-79.)—3. (Sueton., *Tib.*, 14.)—4. (Apoll. Rhod., iii., 113-126.—Philost. *Jon.*, Imag., 8.)—5. στρατηγοί who were annually elected to preside over the war department, one was called *στρατηγός ὁ ἐπὶ τῆς διοικήσεως*, to whom the management of the war fund was intrusted. He had under him a treasurer called *ταμίης τῶν στρατιωτικῶν*, who gave out the pay of the troops, and defrayed all other expenses incident to the service. Demosthenes, perhaps on account of some abuses which had sprung up, recommended that the general should have nothing to do with the military fund, but that this should be placed under the care of special officers, *ταμίαι καὶ δημόσιοι*, who should be accountable for its proper application: *τὸν μὲν τῶν χρημάτων λόγον παρὰ τούτων λαμβάνειν, τὸν δὲ τῶν ἔργων παρὰ τοῦ στρατηγοῦ*.¹ The passage just cited confirms the opinion of those who think that in Demosthenes² the words *ὁ ἐπὶ τῆς διοικήσεως* refer to a *στρατηγός* so designated, and not to the *ταμίης* τῆς *προσόδου*.³

So much of the surplus revenue as was not required for the purposes of war, was to be paid by the treasurer of the revenue into the theoric fund, of which, after the archonship of Euclides, special managers were created. (*Vid.* THEORICA.)

Lastly, we have to notice the treasurers of the *demi*, *δήμων ταμίαι*, and those of the tribes, *φυλῶν ταμίαι*, who had the care of the funds belonging to their respective communities, and performed duties analogous to those of the state treasurers. The *demi*, as well as the tribes, had their common lands, which were usually let to farm. The rents of these formed the principal part of their revenue. *Φύλαρχοι*, *δήμαρχοι*, and other local functionaries, were appointed for various purposes; but with respect to their internal economy we have but scanty information.⁴

*TANUS (*τανός*), a sort of bastard Emerald, consisting of crystal tinged by an admixture of metallic particles. In the old editions of Theophrastus (*De Lapid.*, c. 45), we have a small lacuna after *τῶν δέ* at the beginning of the chapter, and at the end of this the form *άνων*, the end of the word that is wanting. This lacuna Turnebus fills up by appending a capital T in *άνων*, and thus forming *Τάνων*, whence we get our term *τανός*. Others, however, read *Βακτριάνων*, filling up the lacuna with *Βακτρι*, and this latter is the more received reading.⁵

*TAOS (*ταός*), the Peacock, or *Pavo cristatus*, L. (*Vid.* PAVO.)

TAPES or TAPE'TE' (*τάπης*, *τάπις*, or *όπίης*, *dim.* *όπίδιον*), a piece of tapestry, a carpet.

The use of tapestry was in very ancient times characteristic of Oriental rather than of European habits.⁷ We find that the Asiatics, including the Egyptians, and also the Carthaginians, who were of Asiatic origin, excelled in the manufacture of carpets, displayed them on festivals and other public occasions, and gave them as presents to their friends.⁸ They were nevertheless used by the Greeks as early as the age of Homer,⁹ and by some of the later Roman emperors they were given as presents to the combatants at the Circensian games.¹⁰ The places most renowned for the manufacture were Babylon¹¹ (*vid.* BABYLONICUM), Tyre and Sidon,¹² Sardes,¹³ Miletus,¹⁴ Alexandria,¹⁵ Carthage,¹⁶ and Corinth.¹⁷ In reference to the texture, these articles

were distinguished into those which were light and thin, with but little nap, chiefly made at Sardes, and called *ψιλοτάπιδες*,¹ and those in which the nap (*μαλλός*) was more abundant, and which were soft and woolly (*όβλοι*,² *μαλακοῦ ἑρίου*).³ The thicker and more expensive kinds (*μαλλωτοί*) resembled our baize or drugget, or even our soft and warm blankets, and were of two sorts, viz., those which had the nap on one side only (*ἐτερέμαλλοι*), and those which had it on both sides, called *ἀμφίτατοι*,⁴ *αμφίταρα*,⁵ or *ἀμφιτάπητες*,⁶ and also *ἀμφιμαλλοί*, or *αμφιμαλλαί*.⁷ Instead of being always used, like blankets, in single pieces as they came from the loom (*vid.* PALLIUM), carpets were often sewed together.⁸ They were frequently of splendid colours, being dyed either with the kermes⁹ or with the murex (*όλουργεῖς*, *όλιπορόφουροι*), and having figures, especially hunting-pieces, woven into them.¹⁰ These fine specimens of tapestry were spread upon thrones or chairs, and upon benches, couches, or sofas at entertainments,¹¹ more especially at the nuptials of persons of distinction. Catullus¹² represents one to have been so employed, which exhibited the whole story of Theseus and Ariadne. They were even used to sleep upon,¹³ and for the clothing of horses.¹⁴ The tapestry used to decorate the bier and catafaque at the *Αποκρῆσις* of a Roman emperor was interwoven with gold.¹⁵ The Orientals, upon occasions of state and ceremony, spread carpets both over their floors and upon the ground.¹⁶

Besides the terms which have now been explained, the same articles of domestic furniture had denominations arising from the mode of using them either in the *TRICLINIUM* (*tricliniaria Babylonica*)¹⁷, or in the *CUBICULUM* (*cubicularia polymita*)¹⁸, and especially from the constant practice of spreading them out (*textile stragulum*;¹⁹ *stratum*;²⁰ *ocstis stragula*;²¹ *σπρωμαί*;²² *σπρώματα*)²³. The Greek term *περιστрома*, which was transferred into the Latin,²⁴ had a special signification, meaning probably a coverlet made so large as to hang round the sides of the bed or couch.

TA'PHOI (*τάφοι*). (*Vid.* FUNUS, p. 457.)

*TARANDUS (*τάρανδος*), the Reindeer, or *Cervus Tarandus*, L. Such, at least, is the general opinion of naturalists. Schneider, however, refers it to the Elk, or *Cervus alces*, L.²⁵

TAURIN LUDI. (*Vid.* LUDI SCESALARES.)

*TAURUS (*ταῦρος*). (*Vid.* BISON.)

TAXIARCHI (*ταξιάρχοι*) were military officers at Athens, who were next in rank to the strategoi. (*Vid.* STRATEGOS.) They were ten in number like the strategoi, one for each tribe, and were elected in the same way, namely, by *χειροτονία*.²⁶ In war each commanded the infantry of his own tribe,²⁷ and they were frequently called to assist the strategoi with their advice at the war-council.²⁸ In peace they as-

sisted the strategi in levying and enlisting soldiers, as stated under *STRATEOS*, and seem to have also assisted the latter in the discharge of many of their other duties.

The taxiarchs were so called from their commanding *τάξεις*, which were the principal divisions of the hoplites in the Athenian army. Each tribe (*φυλή*) formed a *τάξις*, whence we find *φυλή* used as synonymous with *τάξις*.¹ As there were ten tribes, there were, consequently, in a complete Athenian army, ten *τάξεις*, but the number of men would, of course, vary according to the importance of the war. Among the other Greeks the *τάξις* was the name of a much smaller division of troops. The *λόχος* among the Athenians was a subdivision of the *τάξις*, and the *λοχαγοί* were probably appointed by the taxiarchs.²

TAXIS (*τάξις*). (Vid. TAXIARCHI.)

*TAXUS (*μίλος*), the Yew-tree, or *Taxus baccata*, L. The *Taxus* receives from Virgil the epithet of *nocens*, or "hurtful," because the berries of this tree pass for poisonous. The same opinion appears to have been prevalent during the Middle Ages, and still forms an article of popular belief. It has even been regarded as dangerous to sleep for some hours under the shade of this tree. A modern writer, however (M. Percy), has set himself in opposition to this very prevalent opinion, and maintains that the berries of the yew are innocuous, and merely possess a slight purgative property, which might be usefully employed in medicine. The yew is indigenous to the North. In southern countries, therefore, it seeks a mountainous and cold region. Hence it flourishes in Corsica. The wood might be turned to a variety of useful purposes: the Ituræans of antiquity, dwelling in Cœle-Syria, made bows of it. Its sombre foliage and general appearance have caused it to be selected by the moderns as a funeral tree.³

TE'GULA (*κέραμος*, *dim. κεραμίσκος*), a roofing-tile. Roofing-tiles were originally made, like bricks, of baked clay (*γῆς ὀπτήρης*). Byzes of Naxos first introduced tiles of marble about the year 620 B.C.⁴ Besides the superior beauty and durability of the material, these tiles could be made of a much larger size than those of clay. Consequently, when they were employed in the construction of the greatest temples, such as that of Jupiter at Olympia,⁵ the Parthenon at Athens, and the Serapeum at Puteoli, their dimensions were in exact proportion to the other parts of the building; and the effect of the parallel rows of joint-tiles descending from the ridge to the eaves, and terminated by ornamental frontons, with which the lions'-heads (*capita leonina*;⁶ *χολέπαι*) over the cornice alternated, was exceedingly grand and beautiful. How highly this invention was prized by the ancients is proved by the attempt of the Roman censor Q. Fulvius Flaccus to despoil the temple of the Lacinian Juno of some of its marble tiles (*tegula marmorea*), in order to adorn another temple which he had vowed to erect in Rome.⁷ A still more expensive and magnificent method of roofing consisted in the use of tiles made of bronze and gilt.⁸

Tiles were originally made perfectly flat, or with nothing more than the hook or nozzle underneath the upper border, which fulfilled the purpose of fixing them upon the rafters. They were afterward formed with a raised border on each side, as is shown in the annexed woodcut, representing the section of four of the tiles remaining at Pompeii.

In order that the lower edge of any tile might overlap the upper edge of that which came next below it, its two sides were made to converge downward. See the next woodcut, representing a tiled roof, from a part of which the joint-tiles are removed, in order to show the overlapping and the convergence of the sides. It was evidently necessary to cover the lines of junction between the rows of flat tiles, and this was done by the use of semicylindrical tiles called *imbrices*. The above woodcut shows the section of three imbrices found at Pompeii, and indicates their position relatively to the flat tiles. This is also shown in the next woodcut. The roof also, by the exact adaptation

of the broad *tegulae* and the narrow *imbrices* throughout its whole extent, became like one solid and compact framework.¹ The rows of joint-tiles divided the roof into an equal number of channels, down which the water descended into the gutter (*canalis*), to be discharged through openings made in the lions'-heads, the position and appearance of which are shown in the woodcuts. The rows of flat tiles terminated in a variously ornamented front, which rose immediately above the cornice, and of which specimens are shown in the first woodcut. The first and fourth patterns are drawn from tiles found at Pompeii, and the two internal from tiles preserved in the British Museum, and brought thither from Athens. The lions'-heads upon the third and fourth are perforated. (Vid. ANTEFIXA, COLUMNÆ, p. 289.) The frontons, which were ranged along the cornice at the termination of the rows of joint-tiles, were either painted or sculptured so as to represent leaves, apustria (*vid. APLUSTRE*), or masks. The first woodcut shows three examples of such frontons, which belong to the Elgin collection in the British Museum. They are drawn on a much larger scale than the other objects in the same woodcut. The invention of these graceful ornaments is ascribed to Dibutades of Corinth.²

Other highly curious details upon the tiled roofs of Greek temples may be seen in the *Unedited Antiquities of Attica*, Lond., 1817.

The same arrangement of tiles which was placed round a temple was also to be found within a house which was formed with an opening in the *ceretere*. Hence any person who descended from the roof

into the open court or impluvium of a house (*vid. House*, p. 516, 519) was said to pass "through the tiles" (*per tegulas*; ¹ διὰ τῶν κεράμων²).

Pliny mentions a kind of tiling under the name *πανοκαεῦμα*,³ so called probably because the tiles were semicircular at their lower edge, and overlapped one another like the feathers in the train of a peacock.

TEICHOPOIOS (τεικοποῖός). Among the various persons to whom was intrusted the management of public works at Athens (*ἐπιστάται δημοσίων ἔργων*) were those whose business it was to build and keep in repair the public walls. It is needless to observe how important to the city of Athens were her walls and fortifications, more especially the long walls, which connected the upper city with the Piræus, which gave it the advantages of an island. These were maintained at considerable expense. The *τεικοποῖοι* appear to have been elected by *χειροτονία*, one from each tribe, and probably for a year. They were considered to hold a magisterial office (*ἀρχή*), and in that capacity had an *ἡγεμονία δικαστηρίου*. Æschines calls them *ἐπιστάται τοῦ μεγίστου τῶν ἔργων*. Funds were put at their disposal, for which they had their treasurer (*ταμίης*), dependant on the treasurer of the revenue. They were liable to render an account (*εὐθύνη*) of their management of these funds, and also of their general conduct, like other magistrates. The office of *τεικοποῖός* has been invested with peculiar interest in modern times on account of its having been held by Demosthenes, and its having given occasion to the famous prosecution of Ctesiphon, who proposed that Demosthenes should receive the honour of a crown before he had rendered his account according to law. As to the nature of the office, and the laws thereto relating, we may probably rely upon the account given by Æschines.⁴

TELA (ἱστός), a Loom. Although weaving was among the Greeks and Romans a distinct trade, carried on by a separate class of persons (*ὀφάνται, textores et textrices, linteones*), who more particularly supplied the inhabitants of the towns with the productions of their skill⁵ (*vid. PALLIUM*, p. 718), yet every considerable domestic establishment, especially in the country, contained a loom,⁶ together with the whole apparatus necessary for the working of wool (*lanificium, τालασία, τਾਲασουργία*⁷). (*Vid. ΣΑΛΑΤΗΣ*.) These occupations were all supposed to be carried on under the protection of Minerva, specially denominated *Ἐργάνη*, who was always regarded in this character as the friend and patroness of industry, sobriety, and female decorum.⁸

When the farm or the palace was sufficiently large to admit of it, a portion of it, called the *ἱστόν* (*histones*⁹) or *textrinum*, was devoted to this purpose.¹⁰ The work was there principally carried on by female slaves (*quasillarie, at ἐρῶντι*¹¹), under the superintendence of the mistress of the house, who herself also, together with her daughters, took part in the labour, both by instructing beginners, and by finishing the more tasteful and ornamental parts.¹² But, although weaving was employed in providing the ordinary articles of clothing among the Greeks and Romans from the earliest times, yet, as an inventive and decorative art, subservient to luxury and refinement, it was almost entirely Oriental. Persia, Babylonia, Egypt, Phœnicia, Phrygia, and Lydia, are all celebrated for the wonderful skill and

magnificence displayed in the manufacture of scarfs, shawls, carpets, and tapestry. (*Vid. BABYLONICUM, CHLAMYD, PALLIUM, PEPLUM, TAPES.*)

Among the peculiarities of Egyptian manners, Herodotus¹ mentions that weaving was in that country the employment of the male sex. This custom still continues among some Arab and negro tribes.² Throughout Europe, on the other hand, weaving was in the earliest ages the task of women only. The matron, assisted by her daughters, wove clothing for the husband and the sons.³ This domestic custom gives occasion, in the works of the epic and tragic poets, to some very interesting *dénoûments* and expressions of affection between near relatives. Indeed, the recognition, or *ἀναγνώρισις*, as Aristotle calls it,⁴ often depends on this circumstance. Thus Creusa proves herself to be the mother of Ion⁵ by describing the pattern of a shawl which she had made in her youth, and in which she had wrapped her infant son. Iphigenia recognises her brother Orestes on one occasion,⁶ and Electra recognises him on another,⁷ by the figured clothing which he wore, and which they had long before woven for him.

Besides the shawls which were frequently given to the temples by private persons, or obtained by commerce with foreign nations, companies or colleges of females were attached to the more opulent temples for the purpose of furnishing a regular supply. Thus the sixteen women, who lived together in a building destined to their use at Olympia, wove a new shawl every five years to be displayed at the games which were then celebrated in honour of Hera, and to be preserved in her temple.⁸ (*Vid. HERÆA.*) A similar college at Sparta was devoted to the purpose of weaving a tunic every year for the sitting statue of the Amylean Apollo, which was thirty cubits high.⁹ At Athens the company of virgins called *ἐργαστιναι* or *ἐργάναι*, and *ἀρήφοροι*, who were partly of Asiatic extraction, wove the shawl which was carried in the Panathænaic procession, and which represented the battle between the gods and the giants.¹⁰ (*Vid. ARREPHORIA, PANATHENÆA*, p. 723.) A similar occupation was assigned to young females of the highest rank at Argos.¹¹ In the fourth century, the task of weaving began to be transferred in Europe from women to the other sex, a change which St. Chrysostom deplors as a sign of prevailing sloth and effeminacy.¹² Vegetius,¹³ who wrote about the same time, mentions *linteones*, or the manufacturers of linen cloth, in the number of those who were ineligible as soldiers.

Everything woven consists of two essential parts, the warp and the woof, called in Latin *stamen* and *subtegmen, subtemen, or trama*,¹⁴ in Greek *στήμων* and *κροκή*.¹⁵ Instead of *κροκή* Plato¹⁶ sometimes uses *ἐφυφή*, and in the passages referred to he mentions one of the most important differences between the warp and the woof: viz., that the threads of the former are strong and firm, in consequence of being more twisted in spinning, while those of the latter are comparatively soft and yielding. This is, in fact, the difference which in the modern silk manufacture distinguishes *organzine* from *trama*, and

in the cotton manufacture *twist* from *weft*. Another name for the woof or tram was *ῥοδάνη*.¹

The warp was called *stamen* in Latin (from *stare*), on account of its erect posture in the loom.² The corresponding Greek term *στήμων*, and likewise *στήρις*, have evidently the same derivation. For the same reason, the very first operation in weaving was to set up the loom, *στήριον στήσασθαι*:³ and the web or cloth, before it was cut down, or "descended" from the loom (*κατέβα ὑπὸ τῶν*), was called "*vestis pendens*," or "*pendula tela*,"⁴ because it hung from the transverse beam or *ἵψον*. These particulars are all clearly exhibited in the picture of Circe's loom, which is contained in the very ancient illuminated MS. of Virgil's *Æneid* preserved at Rome in the Vatican Library. (See the annexed woodcut, and compare Virgil,⁵ *apud majores stantes texebant*.) Although the upright loom here

exhibited was in common use, and employed for all ordinary purposes, the practice, now generally adopted, of placing the warp in a horizontal position was occasionally resorted to in ancient times; for the upright loom (*stans tela*, *στήρις ὀρθίως*), the management of which required the female to stand and move about, is opposed to another kind at which she sat.⁷

We observe in the preceding woodcut, about the middle of the apparatus, a transverse rod passes through the warp. A straight cane was well adapted to be so used, and its application is clearly expressed by Ovid in the words "*stamen secernit arundo*."⁸ In plain weaving it was inserted between the threads of the warp so as to divide them into two portions, the threads on one side of the rod alternating with those on the other side throughout the whole breadth of the warp. The two upright beams supporting the jugum, or transverse beam from which the warp depends, were called *κατέβοντες*⁹ and *στήριδες*, literally, "the legs of the loom."¹⁰

While the improvements in machinery have to a great extent superseded the use of the upright loom in all other parts of Europe, it remains almost in its primitive state in Iceland. The following woodcut is reduced from an engraving of the Icelandic loom in Olaf Olafsen's *Economie Tour* in that island, published in Danish at Copenhagen, A.D. 1780. We observe underneath the jugum a roller (*ἄντρον*¹¹), which is turned by a handle, and on which the web is wound as the work advances. The threads of the warp, besides being separated by a transverse rod or plank, are divided into thirty or forty parcels, to each of which a stone is suspended, for the purpose of keeping the warp in a perpendicular position, and allowing the necessary play to the strokes of the spatha, which is drawn at the side of the loom. The mystical ode written about the eleventh century of our era, with which Gray has made us familiar in his translation, and

which describes the loom of "the Fatal Sisters," represents warriors' skulls as supplying the place of these round stones (*pondera*). The knotted bundles of threads to which the stones were attached often remained after the web was finished in the form of a fringe. (*Vid. FIMBELÆ*.)

While the comparatively coarse, strong, and much-twisted thread, designed for the warp, was thus arranged in parallel lines, the woof remained upon the spindle (*vid. FUSUS*), forming a spool, bobbin, or pen (*πῆνη*, *dim. πῆνιον*).¹² This was either conveyed through the warp without any additional contrivance, as is still the case in Iceland, or it was made to revolve in a shuttle (*πανούλκος*,¹³ *radius*).¹⁴ This was made of box brought from the shores of the Euxine, and was pointed at its extremities, that it might easily force its way through the warp.¹⁵ The annexed woodcut shows the form in which it is still used in some retired parts of our island for common domestic purposes, and which may be regarded as a form of great antiquity. An oblong cavity is seen in its upper surface, which holds the bobbin. A small stick, like a wire, ex-

tends through the length of this cavity, and enters its two extremities so as to turn freely. The small stick passes through a hollow cane, which our manufacturers call a *quill*, and which is surrounded by the woof. This is drawn through a round hole in the front of the shuttle, and, whenever the shuttle is thrown, the bobbin revolves, and delivers the woof through this hole. The process of winding the yarn so as to make it into a bobbin or pen was called *πρίνισθαι*¹⁶ or *ἀνπρίνισθαι*.¹⁷ The reverse process, by which it was delivered through the hole in front of the shuttle (see the last woodcut), was called *ἐκπρίνισθαι*. Hence the phrase *ἐκπρίνισθαι ταῦτα* means "he shall disgorge these things."¹⁸

All that is effected by the shuttle is the conveyance of the woof across the warp. To keep every thread of the woof in its proper place, it is necessary that the threads of the warp should be decussated. This was done by the leashes, called in

Latin *licia*, in Greek *μίτροι* (*μίτρος*). By a leash we are to understand a thread, having at one end a loop, through which a thread of the warp was passed, the other end being fastened to a straight rod called *liciatorium*, and in Greek *κανών*.² The warp, having been divided by the *arundo*, as already mentioned, into two sets of threads, all those of the same set were passed through the loops of the corresponding set of leashes, and all these leashes were fastened at their other end to the same wooden rod. At least one set of leashes was necessary to decussate the warp even in the plainest and simplest weaving. The number of sets was increased according to the complexity of the pattern, which was called *bilix* or *trilix*,³ *δίμιτρος*, *τρίμιτρος*,⁴ or *πολύμιτρος*,⁵ according as the number was two, three, or more.

The process of annexing the leashes to the warp was called *ordiri telam*,⁶ also *licia tela addere*, or *adnectere*.⁷ It occupied two women at the same time, one of whom took in regular succession each separate thread of the warp, and handed it over to the other; this part of the process was called *παραφέρειν, παραδίδουαι, or προφορείσθαι*.⁸ The other woman, as she received each thread, passed it through the loop in proper order, and this act, which we call "entering," was called in Greek *διάζεσθαι*.⁹

Supposing the warp to have been thus adjusted, and the pen or the shuttle to have been carried through it, it was then decussated, by drawing forward the proper rod so as to carry one set of the threads of the warp across the rest, after which the woof was shot back again, and by the continual repetition of this process the warp and woof were interlaced.¹⁰ In the preceding figure of the Icelandic loom we observe two staves, which are occasionally used to fix the rods in such a position as is most convenient to assist the weaver in drawing her woof across her warp. After the woof had been conveyed by the shuttle through the warp, it was driven sometimes downward, as is represented in the first woodcut, but more commonly upward, as in the second.¹¹ Two different instruments were used in this part of the process. The simplest, and probably the most ancient, was in the form of a large wooden sword (*spatha, σπάθη, dim. σπάθιον*).¹² From the verb *σπαθῶ*, to beat with the *spatha*, cloth rendered close and compact by this process was called *σπαθητός*.¹³ This instrument is still used in Iceland exactly as it was in ancient times, and a figure of it, copied from Olafsen, is given in the second woodcut.

The *spatha* was, however, in a great degree superseded by the comb (*pecten, κερκίς*), the teeth of which were inserted between the threads of the warp, and thus made, by a forcible impulse, to drive the threads of the woof close together.¹⁴ It is probable that the teeth were sometimes made of metal,¹⁵ and they were accommodated to the purpose intended by being curved (*pectinis unci*)¹⁶, as is still the case in the combs which are used in the same manner by the Hindus. Among us the office of the comb is executed with greater ease and effect by the *reed, lay, or batten*.

The lyre (*vid. LYRA*), the favourite musical instru-

ment of the Greeks, was only known to the Romans as a foreign invention. Hence they appear to have described its parts by a comparison with the loom, with which they were familiar. The terms *jugum* and *stamina* were transferred by an obvious resemblance from the latter to the former object; and, although they adopted into their own language the Greek word *plectrum*,¹ they used the Latin *Pecten* to denote the same thing, not because the instrument used in striking the lyre was at all like a comb in shape and appearance, but because it was held in the right hand, and inserted between the *stamina* of the lyre, as the comb was between the *stamina* of the loom.²

After enumerating those parts of the loom which were necessary to produce even the plainest piece of cloth, it remains to describe the methods of producing its varieties, and more especially of adding to its value by making it either warmer and softer, or more rich and ornamental. If the object was to produce a checked pattern (*scutulis dividere*), or to weave what we should call a Scotch plaid, the threads of the warp were arranged alternately black and white, or of different colours in a certain series, according to the pattern which was to be exhibited. On the other hand, a striped pattern (*παβωτός*,³ *virgata sagula*) was produced by using a warp of one colour only, but changing at regular intervals the colour of the woof. Of this kind of cloth the Roman *trabea*⁴ was an example. Checked and striped goods were, no doubt, in the first instance, produced by combining the natural varieties of wool, white, black, brown, &c. (*vid. PALLIUM*, p. 718.) The woof also was the medium through which almost every other diversity of appearance and quality was effected. The warp, as mentioned above, was generally more twisted, and consequently stronger and firmer than the woof; and with a view to the same object, different kinds of wool were spun for the warp and for the woof. The consequence was, that after the piece was woven, the fuller drew out its nap by carding, so as to make it like a soft blanket (*vid. FULLO*, p. 453); and, when the intention was to guard against the cold, the warp was diminished, and the woof or nap (*κρός, κρόκνυς*) made more abundant in proportion.⁵ In this manner they made the soft *χλαῖνα* or *LÆNA*. (*vid. PALLIUM*, p. 718.) On the other hand, a woof of finely-twisted thread (*ἡτριον*) produced a thin kind of cloth, which resembled our buntine (*lacræ nimia subteminum tenuitate perfilabiles*).⁶ Where any kind of cloth was enriched by the admixture of different materials, the richer and more beautiful substance always formed part of the woof. Thus the *vestis subserica* or *tramoserica* had the tram of silk. (*vid. SERICUM*.) In other cases it was of gold,⁷ or of woof dyed with Tyrian purple¹¹ (*Tyrio subtegmine*,¹² *picto subtegmine*),¹³ or of beavers'-wool (*vestis fibrina*).¹⁴ Hence the epithets *φοινικόκροκος*, "having a purple woof,"¹⁵ *ἄνθοκρόκος*, "producing a flowery woof,"¹⁶ *χρυσοπενήγντος*, "made from bobbins or pens of gold thread,"¹⁷ *εὐτηνος*, "made with good bobbins,"¹⁸ *κερκίδι ποικιλλούσα*, "variegating with the comb,"¹⁹ &c.

But, besides the variety of materials constituting the woof, an endless diversity was effected by the manner of inserting them into the warp. The terms *bilix* and *δίμιτρος*, the origin of which has been explained, probably denoted what we call *dimity*, or

wheeled cloth, and the Germans *zwillich*. The poets apply *trilix*, which in German has become *drillich*, to a kind of armour, perhaps chain-mail, no doubt resembling the pattern of cloth which was denoted by the same term.¹ In the preceding figure of the Icelandic loom, the three rods with their leashes indicate the arrangement necessary for this texture. All kinds of damask were produced by a very complicated apparatus of the same kind (*plurimis liciis*), and were therefore called *polymita*.²

The sprigs or other ornaments produced in the texture at regular intervals were called flowers (*ἄνθη*; ³ *θρόνα**) or feathers (*πλῦμα*). Another term, adopted with reference to the same machinery, was *ἐξίμιτον* or *ἐξάμιτον*, denoting velvet. In the Middle Ages it became *ζίμιτον*, and thus produced the German *sammet*.

The Fates are sometimes mentioned by classical writers in a manner very similar to the description of "the Fatal Sisters" after referred to (*Dira sororum licia*; ⁴ *fatorum inextricabiliter contorta licia**).

As far as we can form a judgment from the language and descriptions of ancient authors, the productions of the loom appear to have fallen in ancient times very little, if at all, below the beauty and variety of the damasks, shawls, and tapestry of the present age, and to have vied with the works of the most celebrated painters, representing first mythological, and afterward scriptural subjects. In addition to the notices of particular works of this class, contained in the passages and articles which have been already referred to, the following authors may be consulted for accounts of some of the finest specimens of weaving: Eurip., *Ion*, 190–202, 1141–1165.—Aristot., *Mir. Auscult.*, 99.—Athen., xii., p. 541.—Asteri., *Homilia de Div. et Laz.*—Theod. Prodrom., *Rhod. et Dos. Honor.*, 561–577; *in Stilich.*, ii., 330–365.

TELAMONES. (Vid. ATLANTES.)

*TELEPHION (τελέφιον), a plant which Stephens and Hardouin call the Orpine, *i. e.*, *Sedum Telephium*. Sprengel, however, although he inclined to this opinion in his *R. H. H.*, seems in his edition of Dioscorides to join Sibthorp and others in referring it to the *Cerinth minor*. The leaves of this plant, as also of the poppy and anemone, were used by lovers in a species of divination; the leaf, laid on the thumb and forefinger, being smartly struck with the right hand, yielded a sound from which the sentiments of the beloved object were guessed.⁷

*TELETAI (τελεταί). (Vid. MYSTERIA.)

*TELIS (τήλις), the *Trigonella Fœnum Græcum*, or *Fenugreek*.⁸

TELONES (τελώνης). Most of the taxes at Athens were farmed by private persons, who took upon themselves the task of collecting, and made periodical payments in respect thereof to the state. They were called by the general name of *τελώναι*, while the farmers of any particular tax were called *εἰκοστόναι*, *πεντηκοστολόγοι*, &c., as the case might be. The duties were let by auction to the highest bidder. Companies often took them in the name of one person, who was called *ἀρχώνης* or *τελωνάρχης*, and was their representative to the state. Sureties were required of the farmer for the payment of his dues. The office was frequently undertaken by resident aliens, citizens not liking it, on account of the vexatious proceedings to which it

often led. The farmer was armed with considerable powers: he carried with him his books, searched for contraband or uncustomed goods, watched the harbour, markets, and other places, to prevent smuggling, or unlawful and clandestine sales; brought a *φάσις* or other legal process against those whom he suspected of defrauding the revenue; even seized their persons on some occasions, and took them before the magistrate. To enable him to perform these duties, he was exempted from military service. Collectors (*ἐκλογεῖς*) were sometimes employed by the farmers, but frequently the farmer and the collector were the same person.¹

The taxes were let by the commissioners, acting under the authority of the senate. (Vid. POLETAI.) The payments (*καταβολαὶ τέλων*) were made by the farmer on stated *prytaneias* in the senate-house. There was usually one payment made in advance, *προκαταβολή*, and one or more afterward, called *προκαταύλημα*. Upon any default of payment, the farmer became *ὑίμος* if a citizen, and he was liable to be imprisoned at the discretion of the court, upon an information laid against him. If the debt was not paid by the expiration of the ninth *prytania*, it was doubled; and if not then paid, his property became forfeited to the state, and proceedings to confiscation might be taken forthwith. Upon this subject the reader should consult the speech of Demosthenes against Timocrates.²

TELOS (τέλος). The taxes imposed by the Athenians, and collected at home, were either ordinary or extraordinary. The former constituted a regular or permanent source of income; the latter were only raised in time of war or other emergency. The ordinary taxes were laid mostly upon property, and upon citizens indirectly in the shape of toll or customs, though the resident aliens paid a poll-tax, called *μετοίκιον*, for the liberty of residing at Athens under the protection of the state. (Vid. ΜΕΤΟΙΚΟΙ.) As to the customs and harbour dues, see PENTECOSTE. An excise was paid on all sales in the market, called *ἐπωνία*, though we know not what the amount was;³ and a duty was imposed on aliens for permission to sell their goods there.⁴ Slave-owners paid a duty of three obols for every slave they kept, and slaves who had been emancipated paid the same.⁵ This was a very productive tax before the fortification of Deceleia by the Lacedæmonians.⁶ There was also a *πορνικὸν τέλος*, and some others of minor importance, as to which the reader is referred to Böckh.⁷ The justice fees (*πρυτανεῖα*, *παράστυσις*, &c.) were a lucrative tax in time of peace.⁸

The extraordinary taxes were the property-tax, and the compulsory services called *leitourgiai*. Some of these last were regular, and recurred annually; the most important, the *τριηραρχία*, was a war-service, and performed as occasion required. As these services were all performed, wholly or partly, at the expense of the individual, they may be regarded as a species of tax. (Vid. ΕΙΣΦΟΡΑ, ΛΕΙΤΟΥΡΓΙΑ, ΤΡΙΗΡΑΡΧΙΑ.)

The tribute (*φοροί*) paid by the allied states to the Athenians formed, in the flourishing period of the Republic, a regular and most important source of revenue.⁹ In Olymp. 91, 2, the Athenians substituted for the tribute a duty of five per cent. (*εἰκοστή*) on all commodities exported or imported by the subject states, thinking to raise by this means a larger income than by direct taxation.¹⁰ This was terminated by the issue of the Peloponnesian war,

though the tribute was afterward revised on more equitable principles, under the name of *σύνταξις*.¹

A duty of ten per cent. (*δεκάτη*) on merchandise passing into and from the Euxine Sea was established for a time by Alcibiades and other Athenian generals, who fortified Chrysopolis, near Chalcedon, and built a station for the collection of the duty called *δεκαρηνήριον*. This occurred in Ol. 92. It was lost after the battle of Ægos Potamos, afterward revived by Thrasybulus, and probably ceased at the battle of Antalcidas.² This may be regarded as an isolated case. In general, where *δεκάται* are mentioned among the Greeks, they denote the tithes of land, such as the Persian satraps collected from conquered countries, or such as tyrants exacted of their subjects for the use of land held under them as lord of the whole country. For instance, Pisistratus took a tithe of this kind, which was reduced by his sons to a twentieth. The state of Athens held the tithe of some lands; other tithes were assigned to the temples or service of the gods, having been dedicated by pious individuals, or by reason of some conquest or vow, such as that recorded by Herodotus.³

Other sources of revenue were derived by the Athenians from their mines and public lands, fines and confiscations. The public demesne lands, whether pasture or arable, houses or other buildings, were usually let by auction to private individuals. The conditions of the lease were engraven on stone. The rent was payable by prytaneias. If not paid at the stipulated time, the lessee, if a citizen, became *ἄνυμος*, and subject to the same consequences as any other state debtor.⁴ As to fines and confiscations, see *ΤΙΜΕΜΑ*.⁵

These various sources of revenue produced, according to Aristophanes, an annual income of two thousand talents in the most flourishing period of the Athenian empire.⁶ See the calculations of Böckh.⁷

Τελεῖν signifies "to settle, complete, or perfect," and hence "to settle an account," and generally "to pay." Thus *τέλος* comes to mean any payment in the nature of a tax or duty. The words are connected with *zahlen* in German, and the old sense of *tale* in English, and the modern word *toll*.⁸ Though *τέλος* may signify any payment in the nature of a tax or duty, it is more commonly used of the ordinary taxes, as customs, &c. *Τέλος, τελεῖν*, is used with reference to the property-tax, in the sense of *being rated in a certain proportion*, or, which is the same thing, *belonging to a particular class of rate-payers*. Thus *ἱππῶδα*, or *ἱππικὸν τελεῖν*, or *εἰς ἱππῶδα τελεῖν*, means to belong to the class of knights; and the same expression is used metaphorically, without any immediate reference to the payment of a tax. Thus *εἰς ἀνδράς τελεῖν* is to be classed among adults. So *εἰς βουλευτὰς τελεῖν*.⁹ *Ἰσοτέλεια* signifies the right of being taxed on the same footing, and having other privileges, the same as the citizens; a right sometimes granted to resident aliens. (*Vid.* *ΜΕΤΟΙΚΟΙ*.) *Ἀτέλεια* signifies an exemption from taxes, or other duties and services; an honour very rarely granted by the Athenians. As to this the reader is referred to the speech of Demosthenes against Leptines, with the commentaries of Wolf. As to the farming of the taxes, see *ΤΕΛΟΝΕΣ*. For an epitome of the whole subject, see Schömann.¹⁰

TEMENOS (*τέμενος*). (*Vid.* *AGER SANCTUS*, *TEMPLUM*.)

TEMO. (*Vid.* *CURRUS*, p. 331.)

TEMPLUM is the same word as the Greek *τέμενος*, from *τέμνω*, to cut off, for *templum*, according to Servius,¹ was any place which was circumscribed and separated by the augurs from the rest of the land by a certain solemn formula. The technical terms for this act of the augurs are *liberare* and *effari*, and hence a *templum* itself is a *locus liberatus et effatus*. A place thus set apart and hallowed by the augurs was always intended to serve religious purposes, but chiefly for taking the auguria ("Templum locus augurii aut auspicii causa quibusdam conceptis verbis finitus"). When Varro² says that a locus effatus was always outside the city, we must remember that this only means outside the pomerium, for the whole space included within the pomerium was itself a *templum*, i. e., a place in which auspices could be taken (*vid.* *ΠΟΜΕΡΙΣΜ*), but when they were to be taken in any place outside the pomerium, it was always necessary for such a place to be first circumscribed and sanctified by the augur (*liberare et effari*). The place in the heavens within which the observations were to be made was likewise called *templum*, as it was marked out and separated from the rest by the staff of the augur. When the augur had defined the *templum* within which he intended to make his observations, he fixed his tent in it (*tabernaculum capere*), and this tent was likewise called *templum*, or, more accurately, *templum minus*. To this minus *templum* we must refer what Servius⁴ and Festus⁵ state, that a *templum* was enclosed with planks, curtains, &c., attached to posts fixed in the ground, and that it had only one door (*exitus*). The place chosen for a *templum* was generally an eminence, and in the city it was the *arx*, where the fixing of a tent does not appear to have been necessary, because here a place called *auguraculum* was once for all consecrated for this purpose.⁶

Besides this meaning of the word *templum* in the language of the augurs, it also had that of a temple in the common acceptance. In this case too, however, the sacred precinct within which a temple was built was always a *locus liberatus et effatus* by the augurs, that is, a *templum* or a *fanum*;⁷ the consecration was completed by the pontiffs, and not until inauguration and consecration had taken place could *sacra* be performed or meetings of the senate be held in it.⁸ It was necessary, then, for a temple to be sanctioned by the gods, whose will was ascertained by the augurs, and to be consecrated or dedicated by the will of man (pontiffs). Where the sanction of the gods had not been obtained, and where the mere act of man had consecrated a place to the gods, such a place was only a *sacrum*, *sacrarium*, or *sacellum*. (*Vid.* *SACRARIIUM*, *SACELLUM*.) Varro⁹ justly considers the ceremony performed by the augurs as essential to a temple, as the consecration by the pontiffs took place also in other sanctuaries which were not *templa*, but mere *sacra* or *ædes sacra*. Thus the sanctuary of Vesta was not a *templum*, but an *ædes sacra*, and the various *curiæ* (*Hostilia*, *Pompeia*, *Julia*) required to be made *templa* by the augurs before *senatus consulta* could be made in them. In what manner a *templum* differed from a *delubrum* is more difficult to decide, and neither the ancient nor modern writers agree in their definitions. Some ancients believed that *delubrum* was originally the name given to a place before or at the entrance of a temple, which contained a font or a vessel with water, by which persons, before entering the temple, perform-

ed a symbolic purification;¹ others state that delubrum was originally the name for a wooden representation of a god (ξύανον), which derived its name from librum (the bark of a tree), which was taken off (*dehibrare*) before the tree was worked into an image of the god, and that hence delubrum was applied to the place where this image was erected.² Hartung³ derives the word delubrum from liber (anciently *luber*), and thinks that it originally meant a locus liberatus, or a place separated by the angur from the profane land, in which an image of a god might be erected, and sacred rites be performed. A delubrum would therefore be a sanctuary, whose chief characteristic was its being separated from the profane land. But nothing certain can be said on the subject.⁴

After these preliminary remarks we shall proceed to give a brief account of the ancient temples, their property and their ministers, both in Greece and Rome. We must, however, refer our readers for a detailed description of the architectural structure of ancient temples to other works, such as Stieglitz, *Archäologie der Baukunst*, and others, especially as the structure of the temples varied according to the divinities to whom they were dedicated, and other circumstances.

Temples in Greece.—Temples appear to have existed in Greece from the earliest times. They were separated from the profane land around them (τόπος βέβηλος or τὰ βέβηλα), because every one was allowed to walk in the latter.⁵ This separation was in early times indicated by very simple means, such as a string or a rope.⁶ Subsequently, however, they were surrounded by more efficient fences, or even by a wall (ἔρκος, περιβολός⁷). The whole space enclosed in such a περιβολός was called τέμενος, or sometimes ἱερόν,⁸ and contained, besides the temple itself, other sacred buildings, and sacred ground planted with groves, &c. Within the precincts of the sacred enclosure no dead were generally allowed to be buried, though there were some exceptions to this rule, and we have instances of persons being buried in, or at least near, certain temples. The religious laws of the island of Delos did not allow any corpses to be buried within the whole extent of the island,⁹ and when this law had been violated, a part of the island was first purified by Pisistratus, and subsequently the whole island by the Athenian people.

The temple itself was called νεώς, and at its entrance fonts (περιβάλλοντρία) were generally placed, that those who entered the sanctuary to pray or to offer sacrifices might first purify themselves.¹⁰ In the earliest times the Greek temples were either partly or wholly made of wood,¹¹ and the simplest of all appear to have been the σηκοί, which were probably nothing but hollow trees, in which the image of a god or a hero was placed as in a niche,¹² for a temple was originally not intended as a receptacle for worshippers, but simply as a habitation for the deity. The act of consecration, by which a temple was dedicated to a god, was called ἱδρύσις. The character of the early Greek temples was dark and mysterious, for they had no windows, and they received light only through the door, which was very large, or from lamps burning in them. Vitruvius¹³ states that the entrance of Greek temples was

always towards the west, but most of the temples still extant in Attica, Ionia, and Sicily, have their entrance towards the east. Architecture in the construction of magnificent temples, however, made great progress even at an earlier time than either painting or statuary, and long before the Persian wars we hear of temples of extraordinary grandeur and beauty. All temples were built either in an oblong or round form, and were mostly adorned with columns. Those of an oblong form had columns either in the front alone (*prostylus*), in the fore and back fronts (*amphiprostylus*), or on all the four sides (*peripterus*).¹⁴ Respecting the original use of these porticoes, see PORTICUS. The friezes and metopes were adorned with various sculptures, and no expense was spared in embellishing the abodes of the gods. The light, which was formerly let in at the door, was now frequently let in from above, through an opening in the middle which was called ὑπαίθρον.¹⁵ Many of the great temples consisted of three parts: 1. the πρόναος or πρόδομος, the vestibule; 2. the cella (ναός, σηκός); and, 3. the οπισθόδομος. The cella was the most important part, as it was, properly speaking, the temple or the habitation of the deity whose statue it contained. In one and the same cella there were sometimes the statues of two or more divinities, as in the Erechtheum at Athens the statues of Poseidon, Hephestus, and Butas. The statues always faced the entrance, which was in the centre of the prostylus. The place where the statue stood was called ἕδος, and was surrounded by a balustrade or railings (κρία, ἐρύματα). Some temples also had more than one cella, in which case the one was generally behind the other, as in the temple of Athena Polias at Athens. In temples where oracles were given, or where the worship was connected with mysteries, the cella was called ἄδυτον, μέγαρον, or ἀνάκτορον, and to it only the priests and the initiated had access.⁴ In some cases the cella was not accessible to any human being, and various stories were related of the calamities that had befallen persons who had ventured to cross the threshold.⁵ The οπισθόδομος was a building which was sometimes attached to the back front of a temple, and served as a place in which the treasures of the temple were kept, and thus supplied the place of θησαυροί which were attached to some temples.⁶

Independently of the immense treasures contained in many of the Greek temples, which were either utensils or ornaments, and of the tithes of spoils, &c.,⁷ the property of temples, from which they derived a regular income, consisted of lands (τεμένη), either fields, pastures, or forests. In Attica we sometimes find that a demos is in possession of the estates of a particular temple: thus the Peiræus possessed the lands belonging to the Theseum: in what their right consisted is not known; but of whatever kind it may have been, the revenues accruing from such property were given to the temples, and served to defray the expenses for sacrifices, the maintenance of the buildings, &c. For this purpose all temple-property was generally let out to farm, unless it was, by some curse which lay on it, prevented from being taken into cultivation.⁸ The rent for such sacred domains was, according to Demosthenes,⁹ received by the demarch, probably the demarch of the demos by which the sacred domain was occupied; for in other cases we find

that the rents were paid to the authorities intrusted with the administration of the temples.¹ The supreme control over all property of temples belonged to the popular assembly.²

Respecting the persons intrusted with the superintendence, keeping, cleaning, etc., of temples, we scarcely possess any information. (*Vid.* Αἱετις and ΖΑΚΟΡΟΙ.) We have mention of persons called κλειδοῦχοι, κληροῦχοι, and νεοφύλακες, who must have been employed as guards and porters,³ although it is not certain whether these functions were not performed by priests who were occasionally called by names derived from some particular function. At Olympia φαιδρόνται were appointed who belonged to the family of Phidias, and had to keep clean the statue of the Olympian Zeus.⁴

Temples at Rome.—In the earliest times there appear to have been very few temples at Rome, and in many spots the worship of a certain divinity had been established from time immemorial, while we hear of the building of a temple for the same divinity at a comparatively late period. Thus the foundation of a temple to the old Italian divinity Saturnus, on the Capitoline, did not take place till 498 B.C.⁵ In the same manner, Quirinus and Mars had temples built to them at a late period. Jupiter also had no temple till the time of Ancus Marcius, and the one then built was certainly very insignificant.⁶ We may therefore suppose that the places of worship among the earliest Romans were in most cases simple altars or sacella. The Roman temples of later times were constructed in the Greek style. The cella was here, as in Greece, the inner spacious part of the temple which contained the statue or statues of the gods, and an altar before each statue.⁷ The roof which covered the cella is called testudo, but it was in most cases not wholly covered, in order to let the light in from above.⁸ The entrance of a Roman temple was, according to Vitruvius, if possible, always towards the west, which side was at the same time faced by the image of the divinity, so that persons offering prayers or sacrifices at the altar looked towards the east.⁹ If it was not practicable to build a temple in such a position, it was placed in such a manner that the greater part of the city could be seen from it; and when a temple was erected by the side of a street or road, it was always so situated that those who passed by could look into it, and offer their salutations to the deity.

As regards the property of temples, it is stated that in early times lands were assigned to each temple, but these lands were probably intended for the maintenance of the priests alone. (*Vid.* SACERDOS.) The sacra publica were performed at the expense of the treasury; and in like manner we must suppose, that whenever the regular income of a temple, arising from fees and fines, was not sufficient to keep a temple in repair, the state supplied the deficiency, unless an individual volunteered to do so.

The supreme superintendence of the temples of Rome, and of all things connected with them, belonged to the college of pontiffs. Those persons who had the immediate care of the temples were the Αἱετις.

TEMPORALIS ACTIO. (*Vid.* ACTIO, p. 18.)

TENSÆ. (*Vid.* THENSÆ.)

*TENTHREDO (τενθρηδών), a species of *Tenthredo*, or Saw-fly.¹⁰

TEPIDARIUM. (*Vid.* ΒΑΤΗΣ, p. 146.)

*TEREBINTHUS (τερεβινθος), the *Pistacia Terbinthus*, or Chian Turpentine-tree. The modern Greek name is κοκορέζια. According to Sibthorp, the fruit of this tree is eaten, and an oil expressed from it. In Cyprus it is called τριμύθια, a corruption evidently of its other and more ancient appellation, τέριμνθος. The Cyprian turpentine was formerly much esteemed, and employed for medical uses; at present the principal culture of the turpentine-tree, as well as the mastic, is in the island of Scio, and the turpentine, when drawn, is sent to Constantinople.¹

*TEREDO (τερηδών), an insect that preys on wood, especially that species which injures the timbers of ships at sea, the *Teredo navalis*. "The term *τερηδών* is also applied by the Greek writers on veterinary surgery," says Adams, "to a worm which is formed in the intestines of cattle. The word is also used by the medical authors to signify the caries of bones."²

TERENTILIA LEX. (*Vid.* Lex, p. 586.)

TERMINALIA, a festival in honour of the god Terminus, who presided over boundaries. His statue was merely a stone or post stuck in the ground to distinguish between properties. On the festival the two owners of adjacent property crowned the statue with garlands, and raised a rude altar, on which they offered up some corn, honeycombs, and wine, and sacrificed a lamb³ or a sucking pig. They concluded with singing the praises of the god.⁴ The public festival in honour of this god was celebrated at the sixth milestone on the road towards Laurentum,⁵ doubtless because this was originally the extent of the Roman territory in that direction.

The festival of the Terminalia was celebrated a. d. VII. Kal. Mart., or the 23d of February, on the day before the Regifugium. The Terminalia was celebrated on the last day of the old Roman year, whence some derive its name. We know that February was the last month of the Roman year, and that when the intercalary month Mercedonius was added, the last five days of February were added to the intercalary month, making the 23d of February the last day of the year.⁶ When Cicero, in a letter to Atticus,⁷ says, "*Accepi tuas litteras a. d. V. Terminalia*" (i. e., Feb. 19), he uses this strange mode of defining a date, because, being then in Cilicia, he did not know whether any intercalation had been inserted that year, as is explained under CALENDAR, ROMAN, p. 191.

TERUNCUS. (*Vid.* AS, p. 110.)

TESSERA, *dim.* TESSERULA and TESSELLA (κύβος), a square or cube, a die, a token.

The use of small cubes of marble, earthenware, glass, precious stones, and mother-of-pearl for making tessellated pavements (*pavimenta tessellata*)⁸ is noticed under HOUSE, ROMAN, p. 519, and PAINTING, p. 715.

The dice used in games of chance (*vid.* ALEA) had the same form, and were commonly made of ivory, bone, or some close-grained wood, especially privet (*ligustura tesseris utilissima*).⁹ They were numbered on all the six sides like the dice still in use;¹⁰ and in this respect, as well as in their form they differed from the *tali*, which are often distinguished from tesserae by classical writers.¹¹ (*Vid.* TALUS.) While four tali were used in playing, only three tesserae were anciently employed. Hence arose the proverb, ἡ τρίς ἔξ, ἡ τρεῖς κύβοι, i. e.,

(Ovid, Trist., i., 473.)—10. (Gellius, xviii., 13.—Cic., De Sen., 16.)

"either three sizes or three accs," meaning all or none;¹ for *kúboç* was used to denote the ace, as in the throw *δύο κύβοι καὶ τέτταρα*, i. e., 1, 1, 4.—6.² Three sizes is mentioned as the highest throw in the Agamemnon of Æschylus (32). As early as the time of Eustathius³ we find that the modern practice of using two dice instead of three had been established.

The ancients sometimes played with dice *πλειροβολοῦντα* (vid. TALUS), when the object was simply to throw the highest numbers. At other times they played also with two sets of LATRUNCULI or draughtsmen, having fifteen men on each side. The board (*alveus lusorius*,⁴ *alveolus*⁵) was divided by twelve lines, so that the game must have been nearly or altogether the same with our backgammon.⁶ Perhaps the *duodecim scripta* of the Romans was the same game. (Vid. ABACUS.)

Objects of the same materials with dice, and either formed like them or of an oblong shape, were used as tokens for different purposes. The *tessera hospitalis* was the token of mutual hospitality, and is spoken of under HOSPITIUM, p. 512. This token was probably in many cases of earthenware, having the head of Jupiter Hospitalis stamped upon it.⁷ *Tessera frumentaria* and *nummaria* were tokens given at certain times by the Roman magistrates to the poor, in exchange for which they received a fixed amount of corn or money.⁸ Similar tokens were used on various occasions, as they arose in the course of events. For example, when the Romans sent to give the Carthaginians their choice of peace or war, they sent two tessere, one marked with a spear, the other with a CADUCEUS, requesting them to take either the one or the other.⁹

From the application of this term to tokens of various kinds, it was transferred to the word used as a token among soldiers. This was the *tessera militaris*, the *σύνθημα* of the Greeks. Before joining battle it was given out and passed through the ranks, as a method by which the soldiers might be able to distinguish friends from foes.¹⁰ Thus, at the battle of Cunaxa, the word was "Zeus the Saviour and Victory," and on a subsequent engagement by the same troops, "Zeus the Saviour, Heracles the Leader."¹¹ The soldiers of Xenophon used a verbal sign for the same purpose when they were encamped by night.¹² Æneas Tacticus¹³ gives various directions necessary to be observed respecting the word.

TESTA. (Vid. FICTILE, p. 441.)

TESTAMENTUM is "*mentis nostræ justa contestatio in id solemniter facta ut post mortem nostram valeat*."¹⁴ In this passage the word *justa* means "*jure facta*," "as required by law." The word *testamentum* is apparently used with reference to the origin of the term testamentum, which is to be referred to "*testari*," which signifies "to make a solemn declaration of one's will." Testamentum is not so named with reference to testes. Gellius¹⁵ properly finds fault with Servius Sulpicius for saying that the word is compounded "*a mentis contestatione*." The person who made a testamentum was testator.¹⁶

In order to be able to make a valid Roman will, the testator must have the testamentifacio, which term expresses the legal capacity to make a valid will: the word has also another signification. (Vid.

HERES, ROMAN, p. 497.) The testamentifacio was the privilege only of Roman citizens who were *paterfamilias*. The following persons, consequently had not the testamentifacio: those who were in the potestas or manus of another, or in *mancipi causa*, as sons and daughters, wives in *manu* and slaves; but, with respect to his *castrense peculium* (vid. PATRIA POTESTAS, p. 742), a *filiusfamilias* had the privilege of testamentary disposition: Latini Juniani, *dedictici*: peregrini could not dispose of their property according to the form of a Roman will: a person who was doubtful as to his status, as, for instance, a person whose father had died abroad and the fact was not ascertained, could not make a testament: an *impubes* could not dispose of his property by will, even with the consent of his tutor; when a male was fourteen years of age he obtained the testamentifacio, and a female obtained the power, subject to certain restraints, on the completion of her twelfth year: *muti*, *surdi*, *furiosi*, and *prodigi* "*quibus lege bonis interdictum est*" had not the testamentifacio; the reasons why these several classes of persons had not the testamentifacio illustrate the Roman mode of deducing legal conclusions from general principles: the *mutus* had not the testamentifacio, because he could not utter the words of *nuncupatio*; the *surdus*, because he could not hear the words of the *emtor familiae*; the *furiosus*, because he had not intellectual capacity to declare his will (*testari*) about his property; and the *prodigus*, because he was under a legal restraint, so that he had no *commercium*, and, consequently, could not exercise the formal act of the *familiae Mancipatio*.¹ (Vid. CURATOR, IMPUBES.)

Women had originally no testamentifacio, and when they did acquire the power, they could only exercise it with the *autoritas* of a tutor. Of course a daughter in the power of her father, whether she was unmarried or married, and a wife in *manu*, could never make a will. The rules, therefore, as to a woman's capacity to make a will, could apply only to unmarried women after the death of their father, and to widows who were not in the power of a father. This subject requires explanation.

Cicero² observes, "if a woman has made a will, and has never undergone a *capitis diminutio*, it does not appear that the *bonorum possessio* can be granted in pursuance of such will according to the *prætor's edict*; for if it could, the *edict* must give the *possessio* in respect of the wills of *servi*, *exules*, and *pueri*." Cicero means to say that if a woman made a will without having sustained a *capitis diminutio*, the will could have no effect at all; and he derives his argument "*ab adjunctis*," for if such a will could have any effect, then the wills of other persons, who had not the testamentifacio, might be effectual so far as to give the *bonorum possessio*. It is not a logical inference from the language of Cicero that a woman who had sustained a *capitis diminutio* could make a will; but this is the ordinary meaning of such language, and it appears to be his. Consistently with this, Ulpian says,³ "women, after their twelfth year, can make a will with the *autoritas* of a tutor, so long as they are in *tutela*;" and the comment of Boethius on the passage of the *Topica* clearly shows that he understood it in this way. A woman, then, could make a will with the *autoritas* of her tutor, and not without.

Now if a woman was in *tutela legitima*, it might be correctly said that she could not make a will; for if she was *ingenna*, the *tutela* belonged of right to the *agnati* and *gentiles*, and if she was a *liberta*, it belonged to the *patron*. In these cases a woman could indeed make a valid will with the consent of

her tutores, but, as her tutores were her heirs in case of intestacy, such consent would seldom be given; and though a woman under such circumstances might be allowed to make a will, it may be assumed that it was a circumstance altogether unusual, and thus the rule as to a woman in tutela legitima, as above stated, might be laid down as generally true. The passage of Cicero, therefore, does not apply to the tutela legitima, but to something else. Since the discovery of the Institutes of Gaius the difficulty has been cleared up, though it had been solved in a satisfactory manner by Savigny before the publication of Gaius.¹

A woman could make a "coemptio fiducia causa" in order to qualify herself to make a will; for "at that time women had not the power of making a will, except certain persons, unless they made a coemptio, and were remancipated and manumitted; but, on the recommendation of Hadrian, the senate made the ceremony of coemptio unnecessary for this purpose."² The coemptio was accompanied with a capitis diminutio, and this is what Cicero alludes to in the passage of the Topica. (*Vid. MARIAGE, ROMAN.*) A woman who came in manum viri had sustained a capitis diminutio, but it must not be inferred from this that if she became a widow she could make a will. The capitis diminutio of Cicero means that the will must be made with the auctoritas of a tutor. Now if the husband died when the wife had been in manu, and he appointed no tutor for her, she was in the legitima tutela of her nearest agnati, who would be her own children and step-children, if she had any. But the tutela legitima in such a case would seem something unnatural, and, accordingly, the magistratus would give a tutor to the woman; and such a tutor, as he had no interest in the woman's property, could not prevent her from making a will. The husband might, by his will, give the wife a power to choose a tutor (tutoris optio), and such a tutor could not refuse his consent to the woman making a will; for, instead of the woman being in the potestas of the tutor, he was in the potestas of the woman, so far as to be bound to assent to her testamentary dispositions.³

The case of Silius⁴ may be a case of a woman's making a will without the auctoritas of a tutor, for it appears that a woman (Turpilia) had disposed of property by will, and Serrius Sulpicius was of opinion that this was not a valid will, because the will-maker had not the testamentificatio. There may, however, have been other reasons why the will-maker had not the testamentificatio than the want of a capitis diminutio (in the sense of Cicero⁵), and, consequently, the opinion of those critics who refer the case mentioned in this letter to the principle of the capitis diminutio is not a certain truth.

The following references may be consulted as to this matter: Cic., *Pro Cæcina*, 6, 25; *Pro Flac.*, 35; *Pro Muren.*, 12; *ad Att.*, vii., 8.—Liv., xxxix., 19.—Gaius, i., 150, &c.

Libertæ could not make a testament without the auctoritas of their patronus, except so far as this rule was altered by enactments, for they were in the legitima tutela of their patronus. Libertæ who had a certain number of children could make a will without the auctoritas of their patronus. (*Vid. PATRONUS.*)

The vestal virgins had no tutor, and yet they could make a testament. The Twelve Tables released them from all tutela "*in honorem sacer-*

In order to constitute a valid will, it was necessary that a heres should be instituted, which might be done in such terms as follow: *Titius heres esto, Titium heredem esse jubeo.* (*Vid. HERES, ROMAN*, p. 497.)

All persons who had the commercium could be heredes; slaves also, and others who were not sui juris, could be made heredes. (*Vid. HERES; SERVUS, ROMAN*, p. 883.) But there were many classes of persons who could not be heredes: Peregrini, who had not received the commercium: persons who were imperfectly described: juridical persons or universitates, except by their liberti, a privilege granted by a senatus consultum; gods, or the temples of gods, except such as were excepted by a senatus consultum and imperial constitutions, such as Jupiter Tarpeius, Apollo Didymæus, Mars in Gallia, Minerva Iliensis, Hercules Gaditanus, and others enumerated by Ulpian:¹ a postumus alienus could not be made a heres, for he was an incerta persona: it is a disputed question whether, according to the old law, women could be made heredes; but the question concerns only those who were sui juris, as to whom there seems no sufficient reason why they could not be made heredes; the capacity of women to take under a will was limited by the Voconia Lex: unmarried persons, and persons who had no children, were limited as to their capacity to take under a will by the Papia Poppæa Lex. (*Vid. JULIA LEX ET PAPIA POPPÆA.*)

The first question as to the validity of a will was the capacity of the testator; the next question was as to the proper observance of the forms required by law, "except in the case of soldiers, who, in consideration of their little acquaintance with such matters, were allowed to make their wills as they pleased or as they could."² This remark of Gaius seems to refer to the imperial period.

As to the form of wills, Gaius³ and Ulpian⁴ are now the best authorities.

Originally there were two modes of making wills for people made their wills either at calata comitia, which were appointed twice a year for the making of wills, or they made wills in *procinctu*, that is, when they were going to battle, for an army in movement and under arms is *procinctus*. A third mode of making wills was introduced, which was effected *per æs et libram*, whence the name of testamentum *per æs et libram*. If a man had neither made his will in calata comitia nor in *procinctu*, and was in imminent danger of death, he would mancipate (*mancipio dabo*) his familia, that is, his patrimonium, to a friend, and would tell him what he wished to be given to each after his death. The old form of making a will *per æs et libram* was this: The familiæ emtor, that is, the person who received the familia by mancipation, filled the place of heres, and, accordingly, the testator instructed him what he wished to be given to each after his death. In the time of Gaius the practice was different. One person was instituted heres (*heres testamento instituitur*), who was charged with the payment of the legacies, or, as it is expressed in the phraseology of the Roman law, "*quo etiam legata relinquebantur*;" and another person was present as familiæ emtor, from a regard to the old legal form. The mode of proceeding was this: The testator, after having written his will (*tabula testamenti*), called together five witnesses, who were Roman citizens and puberes, and a libripens, as in the case of other mancipationes, and mancipated his familia to some person in compliance with legal forms (*dicis causa*). The words of the familiæ emtor show clearly the original nature of the transaction: "*Familiam pe-*

1. (Beytrag zur Gesch. der Geschlecht., Zeitschrift, vol. iii., p. 228.)—2. (Gaius, i., 150, a.)—3. (Comp. Liv., xxxix., 19, and Cic., *Pro Muren.*, c. 17.—Gaius, i., 150.)—4. (Cic. *ad Div.*, vii., 21.)—5. (Top., 4.)—6. (Cic., *De Rep.*, iii., 10.—Gaius, i., 145.)

1. (Frag., tit. 22, s. 6.)—2. (Gaius, ii., 114.)—3. (ii., 101.)—4. (Frag., tit. xx.)

unamque tuam endo mandatam tutelam custodelamque meam recipio eaque quo tu jure testamentum facere possis secundum legem publicam hoc ere (æneaque libra) esto mihi emto." The emtor then struck the scales with a piece of money, which he gave to the testator as the price of the familia. Then the testator, taking the will in his hand, said: "*Hæc ita ut in his tabulis cerisque (or cerise) scripta sunt ita do ita lego ita testor itaque vos Quirites testimonium mihi perhibetote.*" This was called the nuncupatio or publishing of the will; in other words, the testator's general confirmation of all that he had written in his will.

As the familiæ emtio was supposed to be a real transaction between the emtor and the testator, the testimony of their several families was excluded, and, consequently, a person who was in the power of the familiæ emtor, or in the power of the testator, could not be a witness. If a man who was in the power of another was the familiæ emtor, it followed that his father could not be a witness, nor his brother, if the brother was in the power of the father. A filiusfamilias who, after his missio, disposed of his castrense peculium by testament, could not have his father as witness, nor any one who was in the power of his father. The same rules applied to the libripens, for he was a witness. A person who was in the power of the heres or of a legatee, or in whose power the heres or legatee was, or who was in the power of the same person as the heres or a legatee, and also the heres or a legatee, could all be witnesses; for, as Ulpian observes, there is no objection to any number of witnesses from the same family. But Gaius observes that this ought not to be considered as law with respect to the heres, and him who is in the power of the heres, and him in whose power the heres is.

According to Gaius, wills were originally made only at calata comitia and in procinctu. The comitia were held twice a year for the purpose of making wills, and a will not made there was invalid. It is sometimes assumed that these comitia were held in order that the gentes might consent to the testamentary disposition, in which it is implied that they might refuse their consent. But there is no direct evidence for this opinion, and it derives no support from a consideration of the mode of disposing of property per æs et libram. The form per æs et libram was a form introduced in cases when the will had not been made at the calata comitia nor in procinctu. It had effect because it was an alienation of property inter vivos without the consent of any parties except the buyer and seller, which alienation must be assumed to have been a legal transaction at the time when this new form of will was introduced. This new form was a sale, and the familiæ emtor undertook a trust: he resembled the heres fiduciarius of later times. It is probable enough that there were originally no means of compelling him to execute the trust, but opinion would be a sufficient guarantee that the testator's will would be observed, and thus would arise one of those parts of law which had its source in Mos. Now when the Romans introduced new legal forms, they always assimilated them to old forms, whence we have a probable conclusion that the form of mancipation was also observed at the calata comitia; and if so, the consent of the gentes was not necessary, unless it was necessary to every alienation of property, which in the absence of evidence must not be assumed, though such may have been the fact. The difference, then, between the will made at the calata comitia and the will per æs et libram, consisted in the greater solemnity and notoriety of the former, and the consequent greater security that the testator's intentions would

be observed. Written wills are not spoken of with reference to this time, nor is it probable that wills were written: it does not appear that a written will was ever required by law. The testator's disposition of his property would be short and simple in those early times, and easily remembered; but there would be greater security for an unwritten will made at the comitia than for an unwritten will made per æs et libram; whence, in course of time, tabulæ became a usual part of the ceremony of a will.

As we are ignorant of the true nature of private property among the Romans, viewed with respect to its historical origin, we cannot determine with certainty such questions as these respecting testamentary disposition, but it is of some importance to exclude conjectures which are devoid of all evidence. Rein¹ has referred to the modern writers who have discussed this subject: he has adopted the opinion of Niebuhr, according to which, "as the property of an extinct house escheated to the cury, that of an extinct cury to the publicum of the citizens at large, the consent of the whole populus was requisite; and this is the origin of the rule that testaments were to be made in the presence of the pontiff and the curies."² But there is no evidence of the assertion contained in the first part of this passage; and if this rule as to escheat is admitted to be a fact, the rule that testaments must be confirmed by the pontiff and curies is no necessary conclusion. Niebuhr farther observes that "the plebeian houses were not so connected, but the whole order had a public coffer in the Temple of Ceres; and when the army, being assembled in centuries, either on the field of Mars or before a battle, passed the last will of a soldier into a law, it thereby resigned the claims of the whole body to the property." This assertion, also, is not supported by evidence, and is therefore a mere conjecture, against the probability of which there are sufficient reasons.

The testamentum in procinctu is, for anything we know to the contrary, as old as the testament at the calata comitia. In this case the forms of the calata comitia were of necessity dispensed with, or the soldier would often have died intestate. This power of disposition in the case of a testamentum in procinctu could not depend on the consent of the whole populus in each particular instance, for the nature of the circumstances excluded such consent. He had, therefore, full power of disposition in procinctu, a circumstance which leads to the probable conclusion that the will made at the calata comitia differed only from the other will in its forms and not in its substance. Some writers assert that the testamentum in procinctu could only be made after the auspices were taken, which gave the testament the religious sanction, and that, when the auspices ceased to be taken in the field, this kind of testament ceased to be made; and that the military testaments mentioned about the latter part of the Republic (as by Cæsar³) were not the same kind of testaments, but purely military testaments made without any form, which in the imperial period became in common use, and of which J. Cæsar probably introduced the practice.⁴ Cicero, however, speaks of the will in procinctu⁵ as then in use, and he describes it as made "*sine libra et tabulis*," that is, without the forms which were used after the introduction of the testamentum per æs et libram. Thus the testamentum in procinctu always retained its characteristic of being exempted from legal forms, but as to the capacity of the testa-

1. (Das Röm. Privatrecht, p. 373, note.)—2. (Hist. of Rome, ii., p. 338.)—3. (Bell. Gall., i., 39.—Vell. Patern., ii., 5, &c.)—4. (Dig. 29, tit. i. De Testamento Militis.)—5. (De Cr., i., 53.)

tor, it was always subject to the same rules of law as other wills, so far as we know.

The form of *manipatio* owed its origin to positive enactments (*vid. USUCAPION*): it was a form of alienation accompanied with certain public ceremonies, the presumed object of which was to secure evidence of the transfer. The form of *manipatio* as applied to a will was exactly the same form as *manipatio* applied to any other purpose: it was an alienation of the property, and, according to strict principles, it must have been irrevocable. It is sometimes assumed that the five witnesses to the testament (*civēs Romani puberes*) were representatives of the five classes of Servius Tullus. If this is true (which is a mere assumption), the classes were represented as witnesses only, not as persons who gave their consent to the act. Engelbach states: "Manipation was originally a formal sale, in which the publicness of the transaction constituted the essential characteristic. When the seller had transferred to the buyer the ownership of a thing before the five representatives of the five classes of the Roman people, this was as valid as any other *lex* which was brought before the assembly of the people and passed into a *lex*."¹ The whole meaning of this is not clear, but so far as this is clear and true: the testamentum *per aes et libram* differed in no respects as to the capacity of the alienor from any other manipation. Now we must either suppose that the assumed consent of the populus to the testamentary disposition at the *calata comitia* was expressed by a special enactment, which should transfer the property according to the testator's wish, or that the consent only must have been given to the transfer, and the transfer must have been made in the usual way: the latter is the only conceivable case of the two. In assuming this original necessity of consent on the part of the populus to the testamentary disposition, we assume that Roman property was originally inalienable at the will of the owner. This may be true, but it is not yet shown to be so.

The Twelve Tables recognise a man's power to dispose of his property by will as he pleased: "*Uti legassit super pecunia tutelave suae rei ita ius esto*."² It is generally admitted, and the extant passages are consistent with the opinion, that the new testamentary form *per aes et libram* existed while the two original forms were still in use. Now in the testamentum *per aes et libram* there is no pretence for saying that any consent was required except that of the buyer and seller; and the Twelve Tables recognise the testator's power of disposition. If, then, the form of testament at the *comitia calata* subsisted after the Twelve Tables, we have, according to the views of some writers, a form of testamentum to which the consent of the testator was sufficient, and another form in which it was not. There still remains to those who support this opinion the power of saying that the consent of the sovereign people had become a form, and therefore it was indifferent, so far as concerns this consent, whether the will was made at the *comitia*, where it would be fully witnessed, or *per aes et libram*, where it would be witnessed by the five representatives. But it is easy to suggest possibilities; less easy to weigh evidence accurately, and to deduce its legitimate consequences.

As already observed, there seems to have been no rule of law that a testament must be written. The *manipatio* required no writing, nor did the institution of a heres, and the number of witnesses were probably required in order to secure evidence of the testator's intentions. Thus it is said³ that

the heres might either be made by oral declaration (*nuncupatio*) or by writing. Written wills, however, were the common form among the Romans, at least in the later republican and in the imperial periods. They were written on tablets of wood or wax, whence the word "*cera*" is often used as equivalent to "*tabella*;" and the expressions *prima, secunda cera*, are equivalent to *prima, secunda pagina*. The will might be written either by the testator or any other person with his consent, and sometimes it was made with the advice of a lawyer. It was written in the Latin language until A.D. 439, when it was enacted that wills might be in Greek.⁴ By the old law, a legacy could not be given in the Greek language, though a *fideicommissum* could be so given. It does not appear that there was originally any signature by the witnesses. The will was sealed, but this might be done by the testator in secret, for it was not necessary that the witnesses should know the contents of the will; they were witnesses to the formal act of *manipatio*, and to the testator's declaration that the *tabulae* which he held in his hand contained his last will. It must, however, have been in some way so marked as to be recognised, and the practice of the witnesses (*testes*) sealing and signing the will became common. It was necessary for the witnesses both to seal (*signare*), that is, to make a mark with a ring (*annulus*) or something else on the wax, and to add their names (*adscribere*). The five witnesses signed their names with their own hand, and their subscription also declared whose will it was that they sealed.⁵ The seals and subscriptions appear to have been on the outside. A *senatus consultum*, which applied to wills among other instruments, enacted that they should be witnessed and signed as follows: 'They were to be tied with a triple thread (*linum*) on the upper part of the margin, which was to be perforated at the middle part, and the wax was to be put over the thread and sealed. *Tabulae* which were produced in any other way had no validity. (Compare Paulus,⁶ where *impositae* seems to be the true reading, with Suetonius.)⁷ A man might make several copies of his will, which was sometimes done for the sake of caution.⁸ When sealed, it was deposited with some friend, or in a temple, or with the vestal virgins; and after the testator's death it was opened (*resignare*) in due form. The witnesses or the major part were present, and after they had acknowledged their signatures, the thread (*linum*) was broken, and the will was opened and read, and a copy was made; the original was then sealed with the public seal, and placed in the archium, whence a fresh copy could be got if the first copy should ever be lost.⁹ This practice, described by Paulus, may have been of considerable antiquity. The will of Augustus, which had been deposited with the vestal virgins, was brought into the senate after his death: none of the witnesses were admitted except those of senatorian rank; the rest of the witnesses acknowledged their signatures outside of the curia.¹⁰

A curious passage in a Novel of Theodosius II. (A.D. 439, *De Testamentis*) states the old practice as to the signature of the witnesses. "In ancient times a testator showed (*offerebat*) his written testament to the witnesses, and asked them to bear testimony that the will had so been shown to them (*oblatarum tabularum perhibere testimonium*)," which are almost the words of Gaius. The Novel goes on to state that the ignorant presumption of posterity had changed the cautious rule of the ancient law, and the witnesses were required to know the con-

tests of the will; the consequence of which was, that many persons preferred dying intestate to letting the contents of their wills be known. The Novel enacted what we may presume to have been the old usage, that the testator might produce his will sealed, or tied up, or only closed, and offer it to seven witnesses, Roman citizens and puberes, for their sealing and subscription, provided at the same time he declared the instrument to be his will, and signed it in their presence, and then the witnesses affixed their seals and signatures at the same time also.

A fragment of a Roman will, belonging to the time of Trajan, was published by Puggé in the *Rheinisches Museum*.¹

The penalties against fraud in the case of wills and other instruments were fixed by the *lex Cornelia*. (*Vid. FALSUM*.)

The Edict established a less formal kind of will, since it acknowledged the validity of a will when there had been no *mancipatio*, provided there were seven witnesses and seven seals, and the testator had the *testamentifacio* at the time of making the will and at the time of his death.² The terms of the edict are given by Cicero.³ The Edict only gave the *bonorum possessio*, which is the sense of *hereditas* in the passage of Cicero referred to, as well as in Gaius.⁴ This so-called *prætorian testament* existed in the republican period, and for a long time after. Thus a man had his choice between two forms of making his will; the civil form by *mancipatio*, and the *prætorian* with seven seals and seven witnesses, and without *mancipatio*.⁵

The *prætorian testament* prepared the way for the abolition of *mancipatio*, the essential character of a will made according to the *jus civile*, and in the legislation of Justinian the form of making a testament was simplified. It required seven male witnesses of competent age and legal capacity, and the act must be done in the presence of all, at the same place, and at the same time, that is, it must be continuous. The testator might declare his last will orally (*sine scriptis*) before seven witnesses, and this was a good will. If it was a written will, the testator acknowledged it before the witnesses as his last will, and put his name to it, and the witnesses then subscribed their names and affixed their seals. The testator might write his will or have it written by another person, but such other person could derive no advantage under the will. (*Vid. SENATUS CONSULTUM LIBONIANUM*.)

The cases in which a will was not valid, because the *heredes sui* were not expressly exheredated, are stated in *HERES (ROMAN)*.

A testament which was invalid from the first was *injunctum*, and never could become valid: it was non *jure factum* when the proper forms had not been observed; it was *nullius momenti*, as in the case of a *filiosfamilias* who is "*præteritus*." A testamentum *justum* might become either *ruptum* or *irritum* in consequence of subsequent events.⁶

A testament became *ruptum* if the testator made a subsequent testament in due form as required by law: and it made no matter whether or not there turned out to be a *heres* under the second will; the only question was whether there could have been one. If, then, the *heres* named in the second will refused the *hereditas*, or died either in the lifetime of the testator, or after his death, and before the *cretio*, or failed to comply with the conditions of the will, or lost the *hereditas* under the *lex Julia et Papia Poppæa*—in all these cases the *paterfamilias* died intestate.

A valid will became *irritum* if the testator sustained a *capitis diminutio* after the date of the will or if it failed of effect because there was no *heres*. Thus a prior will which was invalidated by a subsequent will was *ruptum*; and if there was no *heres* under the subsequent will, such will was *irritum*.

If a man who had made a will was taken prisoner by the enemy, his will was good *jure postliminii* if he returned home; if he died in captivity, it was made as valid by the *lex Cornelia* as if he had not been a captive.

Though a will might be *ruptum* or *irritum* by the *jus civile*, it was not always without effect; for the *bonorum possessio secundum tabulas* might be had by the *scriptus heres*, if the will was witnessed by seven witnesses, and if the testator had the *testamentifacio*. The distinction between the case of a will which was invalid *jure civili* for want of due forms, and one which was invalid for want of legal capacity to dispose of property by will, was well recognised in the time of Cicero.¹ A will also became *ruptum* by *adgnatio*, that is, if a *suus heres* was born after the making of the will, who was not either instituted *heres*, or exheredated as the law required. A quasi *adgnatio* also arose by adoption, or by the *in manum conventio*, or by succession to the place of a *suus heres*, as in the instance of a grandson becoming a *suus heres* in consequence of the death or the emancipation of a son: a will also became *ruptum* by the *manumission* of a son, that is, where the son, after a first and second *mancipatio*, returned into the power of his father. (*Vid. EMANCIPATIO*.)

A testament was called *inofficiosum* which was made in legal form, "*sed non ex officio pietatis*." For instance, if a man had exheredated his own children, or passed over his parents, or brothers or sisters, the will was in form a good will, but if there was no sufficient reason for this exheredation or *præteritio*, the persons aggrieved might have an *inofficiosi querela*. The ground of the complaint was the allegation that the testator was "*non sana mentis*," so as to have capacity to make a will. It was not alleged that he was *furiosus* or *demens*, for these were technical words which implied complete legal incapacity. The distinction was a fine one, and worthy of the subtlety of the jurists, to whom it may be presumed to owe its origin. By the legislation of Justinian, no person could maintain a *querela inofficiosi* beyond the degree of brothers and sisters; and brothers and sisters could only maintain their claim against "*scripti heredes*" who were "*turpes persone*." The complaint also could only be maintained in cases where the complaining parties had no other right or means of redress. If any portion, however small, was left by the will to the complaining party, he could not maintain a *querela inofficiosi*, and he was only entitled to so much as would make up his proper share. If the *judex* declared the testamentum to be *inofficiosum*, it was rescinded; but if there were several *heredes*, the testament would only be rescinded as to him or them against whose institution the *judex* had pronounced. The portion of an *hereditas* which might be claimed by the *querela inofficiosi* was one fourth, which was divided among the claimants *pro rata*.²

The *querela inofficiosi* is explained by Savigny with his usual perspicuity.³ When a testator passed over in his will any of his nearest kinsfolks, who in the case of intestacy would be his *heredes*, this gave rise to the opinion that the person thus passed over had merited this mark of the testator's disapprobation. If this opinion was unfounded, the

1. (i., 249, &c.)—2. (Gaius, ii., 147.)—3. (in Verr., c. i., 45.)—4. (ii., 119.)—5. (Savigny, *Beitrag zur Gesch. der Röm. Testam.*, Zeitschrift, i., 78.)—6. (Dig. 28, tit. 3, s. 1.)

1. (Top., 11.)—2. (Plin., Ep., v., 1.—Inst., ii., tit. 18.—Dig. 5, tit. 2. De *Inofficioso Testamento*.)—3. (System, &c., ii., 127)

testator had done an unmerited injury to the person, and his remedy was by getting the will set aside, as made under the influence of passion. If the will was set aside, the testator was thereby declared to have died intestate, and the complainant obtained the hereditas which was the immediate object of the querela, or his share of it. But the ultimate object of the querela was the public re-establishment of the injured honour of the complainant, who in this action appeared in a hostile position with respect to the testator who had brought his character in question. Consequently, this action had for its ultimate object vindicta, and the peculiarity of the action consisted in the difference between this ultimate object of the action and the immediate object of it (property), which was merely a means to the ultimate object. (*Vid. VINDICTA.*)

There is no evidence to show when the querela inofficiosa was introduced as a mode of setting aside a will. The phrase testamentum inofficiosum occurs in Cicero and in Quintilian.¹

Codicilli were an informal will: they may be defined to be a testamentary disposition of such a kind which does not allow the direct appointment or exheredation of a heres, even though the codicilli are confirmed by a testament; but he who was appointed heres by a testament might be requested by codicilli to give the hereditas to another altogether or in part, even though the codicilli were not confirmed by a testament. A legacy could not be given by codicilli unless the codicilli were confirmed by a will; and this must be the case to which Pliny refers.² Acilianus had made Pliny 'heres ex parte,' but he had also made codicilli in his own handwriting, which, as Pliny alleges, were void (*pro non scriptis habendi*), because they were not confirmed by the will. Now, as already observed, it appears from Gaius³ that a person who was appointed heres by a will might be required by codicilli to give the whole hereditas or a part to another, even though the codicilli were not confirmed by a will. But Pliny is speaking of codicilli which were void for want of a testamentary confirmation; and this, as we learn from Gaius, is the case of a legacy given by codicilli which have not been confirmed by a will. This confirmation might be either prospective or retrospective (*si in testamento caverit testator, ut quidquid in codicillis scriperit, id ratum sit; quos novissimos fecerit*). This passage of Pliny, as to the confirmation of codicilli by a testament, has sometimes been misunderstood. It is stated,⁴ "*Confiuntur codicilli quatuor modis: aut enim in futurum confirmantur aut in præteritum, aut per fideicommissum testamento facto aut sine testamento.*" These four modes are referred to in Gaius: the first two are contained in the words above quoted, "*si in testamento,*" &c.: the third is the case of the heres institutus being required to give the hereditas to another person by codicilli non confirmati; and the fourth is the case of a fideicommissum given by codicilli of a person who made no other testamentary disposition. It was a rule of law that codicilli, when duly made, were to be considered (except in a few cases) as incorporated in the will at the time when the will was made, a principle which led to various legal conclusions, which the Roman jurists deduced with their usual precision.⁵

Originally there was probably no particular form required for codicilli; but there must have been evidence of their containing the testator's intention. Subsequently witnesses were required, and five witnesses were sufficient for codicilli made in

writing, if the witnesses subscribed their names to the codicilli.¹ But a man could, without writing and in the presence of five witnesses, impose a fideicommissum on his heres. A testament which was defective as such, might be effectual as codicilli. The power to make codicilli was the same as the power to make a testament.²

The subject of Roman testaments can only be satisfactorily expounded in a large treatise, and it would require to be treated historically. The preceding sketch may be useful, and generally true, and it affects to be nothing more.

TESTIS. (*Vid. OATH, ROMAN, p. 670.*)

TESTUDO (*χελών*), a Tortoise, was the name given to several other objects.

1. To the Lyra, because it was sometimes made of a tortoise-shell. (*Vid. LYRA.*)

2. To an arched or vaulted roof.³ (*Vid. TEMPLUM, p. 959.*) Thus, in a Roman house, when the cavum ædium was roofed all over, and had no opening or compluvium in the centre, the cavum ædium was called testudo.⁴ (*Vid. HOUSE, ROMAN, p. 516, 517.*)

3. To a military machine moving upon wheels and roofed over, used in besieging cities, under which the soldiers worked in undermining the walls, or otherwise destroying them.⁵ It was usually covered with raw hides or other materials which could not easily be set on fire. The battering-ram (*vid. ARIES*) was frequently placed under a testudo of this kind, which was then called *Testudo arietaria*.⁶ Vitruvius also mentions and explains the construction of several other military machines to which the name of testudines was given.⁷

4. The name of testudo was also applied to the covering made by a close body of soldiers, who placed their shields over their heads to secure themselves against the darts of the enemy. The shields fitted so closely together as to present one unbroken surface, without any interstices between them, and were also so firm that men could walk upon them, and even horses and chariots be driven over them.⁸ A testudo was formed (*testudinem facere*) either in battle, to ward off the arrows and other missiles of the enemy, or, which was more frequently the case, to form a protection to the soldiers when they advanced to the walls or gates of a town for the purpose of attacking them.⁹ (See

1. (Cod., vi., tit. 36.)—2. (Dig. 29, tit. 7: De Jure Codicillorum.)—3. (Virg., *Æn.*, i., 505.—Cic., *Brut.*, 22.)—4. (Varr., *L.*, v., 161, ed. Müller.)—5. (Cæs., *B. G.*, v., 42, 43.—B. C., ii., 2.)—6. (Vitruv., x., 19, p. 322, Bip.)—7. (x., 20, 21.—Compare Polyb., ix., 41.)—8. (Dion Cass., xlix., 30.)—9. (Dion Cass., l c.—Liv., x., 43.—Cæs., *B. G.*, ii., 6.—Sall., *Jug.*, 94.)

1. (Inst. Or., ix., 2.)—2. (Ep., ii., 16.)—3. (ii., 273.)—4. (Gaius, ii., 270.)—5. (Dig. 29, tit. 7, s. 8.)—6. (Id. ib.)—7. (Dig. 27, tit. 7, s. 2.)

preceding cut, taken from the Antonine column.) Sometimes the shields were disposed in such a way as to make the testudo slope. The soldiers in the first line stood upright, those in the second stooped a little, and each line successively was a little lower than the preceding down to the last, where the soldiers rested on one knee. Such a disposition of the shields was called *Fastigatu testudo*, on account of their sloping like the roof of a building. The advantages of this plan were obvious: the stones and missiles thrown upon the shields rolled off them like water from a roof; besides which, other soldiers frequently advanced upon them to attack the enemy upon the walls. The Romans were accustomed to form this kind of testudo, as an exercise, in the games of the circus.¹

*II. (χέλυς and χελώνη), the Tortoise or *Testudo*. The Greek writers describe several species of both the Land and Sea Tortoise. Of the sea-turtle, they were, of course, best acquainted with those species which are found in the Mediterranean. Ælian, however, also makes mention of the Indian. The species which the ancients may be supposed to have known most familiarly are the *Testudo lyra*, *T. Græca*, and *T. geometrica*. (On the use of the turtle by the ancients as an article of food, consult Schweighæuser, *Ad Athen.*, viii., 7.—*Gesner, De Aquat.*—*Actuarius*, lib. iv.; and *Zenobius*, Cent., iv., 13.) The *ἔμυς* is the Speckled Tortoise, or *Emys Europæa*.²

TETRADRACHMUM. (Vid. DRACHMA.)

TETRARCHES or TETRARCHA (τετραρχία). This word was originally used, according to its etymological meaning, to signify the governor of the fourth part of a country (τετραρχία or τετραδρχία). We have an example in the ancient division of Thessaly into four tetrarchies, which was revived by Philip.³ (Vid. ΤΑΣΟΣ.) Each of the three Gallic tribes which settled in Galatia was divided into four tetrarchies, each ruled by a tetrarch.⁴ This arrangement subsisted till the latter times of the Roman Republic,⁵ but at last the twelve tetrarchs of Gallo-Græcia were reduced to one, namely, Deiotarus.⁶ Some of the tribes of Syria were ruled by tetrarchs, and several of the princes of the house of Herod ruled in Palestine with this title.⁷ Niebuhr⁸ remarks that the tetrarchs in Syria were zemindars, who occupied the rank of sovereigns, in the same way as the zemindars of Bengal succeeded under Lord Cornwallis in getting themselves recognised as dependant princes and absolute proprietors of the soil.

In the later period of the Republic and under the Empire, the Romans seem to have used the title (as also those of *ethnarch* and *phylarch*) to designate those tributary princes who were not of sufficient importance to be called kings.⁹

*TETRIX (τέτριξ, or -αξ, or -ών), a bird noticed by Aristotle, and supposed to be the *Otis Tetraz*, or Little Bustard.¹⁰

TETROBOLUS. (Vid. DRACHMA.)

TETTAPAKONTA, OI. (Vid. FORTY, THE.)

*TETIGOMETRA (τετιγομήτρα), a term meaning literally "the mother of the Tettix," or Cicada. In reality, however, it indicates merely

that intermediate condition of the *nympha* prior to the development of the organs of flight.¹

*TETTIX (τέτιξ), the Cicada. (Vid. CICADA.)

*TEUTHIS (τευθίς), a species of cuttle-fish, the *Loligo parva* of Rondelet. "Belon says its Italian name is *Calamato*, and hence Holland, in his translation of Pliny, calls it the Calamary, which name of it is still retained."²

*TEUTHOS (τευθος), a species of cuttle-fish akin to the preceding. It is the *Loligo magna* of Rondelet, or the *Sepia loligo*, L., called in English the Sleeve-fish. The late writers on Natural History give it the name of *Loligo vulgaris*.³

*TEUTLOS (τευλος, -ον, -ιον, -ις, or σεύλον), the Beet, or *Beta vulgaris*. (Vid. ΒΕΤΑ.)

TEXTOR, TEXTRINUM. (Vid. TELA, p. 953.)

THALAMITOI, THALAMIOI (θαλαμίτοι, θαλάμιοι). (Vid. ΣΠΗΣ, p. 893.)

*THALASSOCRAMBE (θαλασσοκράμβη), called by Dioscorides κράμβη θαλάσσια, the Sea Kail, or *Convolvulus soldanella*.⁴

*THALICTRON (θάλκτρον), a plant, the *Thalictrum minus*, or Lesser Meadow-rue. According to Hardouin, it is the *Thalictrum* of Pliny.⁵

THALYSIA (θαλύσια), a festival celebrated in honour of Dionysus and Demeter,⁶ or, according to others, of Demeter alone, as it is described by Theocritus in his seventh idyl, and by the grammarians who wrote the argumenta to the same. It was held in autumn, after the harvest, to thank the gods for the benefits they had conferred upon men.⁷

*THAPSIA (θανβία), a plant used to dye yellow, which some lexicographers make to be the Mullein, i. e., *Verbascum thapsus*, or the *Thapsia villosa* or *fœtida*, L. Dierbach holds it to be a species of deadly carrot, *Thapsia garganica*; but Sprengel prefers the *Thapsia asclepium*. Stackhouse is doubtful even as to that genus. "It appears to me highly probable," says Adams, "that the *Turbith* of the Arabians is the Thapsia root of the Greeks."⁸

THARGELIA (θαργήλια), a festival celebrated at Athens on the 6th and 7th of Thargelion, in honour of Apollo and Artemis,⁹ or, according to the scholiast on Aristophanes,¹⁰ in honour of Helios and the Horæ; the latter statement, however, is in substance the same as the former. The Apollo who was honoured by this festival was the Delian Apollo.¹¹

The real festival, or the Thargelia in a narrower sense of the word, appears to have taken place on the 7th, and on the preceding day the city of Athens, or rather its inhabitants, were purified.¹² The manner in which this purification was effected is very extraordinary, and is certainly a remnant of very ancient rites, for two persons were put to death on that day, and the one died on behalf of the men, and the other on behalf of the women of Athens. The name by which these victims were designated was *φάρμακοί*: according to some accounts, both of them were men, but according to others, the one dying on behalf of the women was a woman, and the other a man.¹³ On the day when the sacrifice was to be performed, the victims were led out of the city to a place near the sea, with the accompaniment of a peculiar melody, called *κραδής νόμος*, played on the flute.¹⁴ The neck of the one

who died for the men was surrounded with a garland of black figs, that of the other with a garland of white ones; and while they were proceeding to the place of their destiny, they were beaten with rods of fig-wood, and figs and other things were thrown at them. Cheese, figs, and cake were put into their hands that they might eat them. They were at last burned on a funeral pile made of wild fig-wood, and their ashes were thrown into the sea and scattered to the winds.¹ Some writers maintain, from a passage of Ammonius,² that they were thrown into the sea alive; but this passage leaves the matter uncertain. We are not informed whether this expiatory and purifying sacrifice was offered regularly every year, but from the name of the victims (*φαρμακοί*), as well as from the whole account of Tzetzes, which is founded on good authorities, it appears highly probable that this sacrifice only took place in case of a heavy calamity having befallen the city (*νοσούσης τῆς πόλεως*), such as the plague, a famine, &c. What persons were chosen as victims on such occasions is not mentioned, and we only learn from Suidas³ that they were kept at the public expense (*δημοσία τρεφόμενοι*). But they were in all probability criminals sentenced to death, and who were kept by the state from the time of their condemnation to be sacrificed at the Thargelia. In the earlier times, however, they were not criminals, but either cripples,⁴ or persons who offered to die voluntarily for the good of their country.⁵

The second day of the Thargelia was solemnized with a procession and an agon, which consisted of a cyclic chorus performed by men at the expense of a choragus.⁶ The prize of the victor in this agon was a tripod, which he had to dedicate in the Temple of Apollo which had been built by Pisistratus.⁷ On this day it was customary for persons who were adopted into a family to be solemnly registered, and received into the *genos* and the *phratría* of the adoptive parents. This solemnity was the same as that of registering one's own children at the *apaturia*.⁸ (*Vid. ADOPTION, GREEK.*)

Respecting the origin of the Thargelia there are two accounts. According to Istrus,⁹ the *φαρμακοί* derived their name from one Pharmacus, who, having stolen the sacred vials of Apollo, and being caught in the act by the men of Achilles, was stoned to death, and this event was commemorated by the awful sacrifice at the Thargelia. Helladius,¹⁰ on the other hand, states that at first these expiatory sacrifices were offered for the purpose of purifying the city of contagious diseases, as the Athenians, after the death of the Cretan Androgeus, were visited by the plague.¹¹

THEATRUM (*θέατρον*). The Athenians, before the time of Æschylus, had only a wooden scaffolding on which their dramas were performed. Such a wooden theatre was only erected for the time of the Dionysiac festivals, and was afterward pulled down. The first drama that Æschylus brought upon the stage was performed upon such a wooden scaffold, and it is recorded as a singular and ominous coincidence, that on that occasion (500 B.C.) the scaffolding broke down. To prevent the recurrence of such an accident, the building of a stone theatre was forthwith commenced on the southeastern de-

scend of the acropolis, in the Lenæa; for it should be observed that throughout Greece theatres were always built upon eminences, or on the sloping side of a hill. The new Athenian theatre was built on a very large scale, and appears to have been constructed with great skill in regard to its acoustic and perspective arrangements, but the name of the architect is not known. It is highly probable that dramas were performed in this new theatre as soon as it was practicable, and before it was completely finished, which did not take place till about B.C. 340, unless we adopt the untenable supposition that the completion of the Attic theatre at this time refers to a second theatre.¹ During this long interval of forty olympiads, theatres were erected in all parts of Greece and Asia Minor, although Athens was the centre of the Greek drama, and the only place which produced great master-works in this department of literature. It should also be borne in mind, that theatres are mentioned in several parts of Greece where the worship of Dionysus and the drama connected with it did not exist, so that these buildings were devoted to other public exhibitions. Thus, at Athens itself, there were, in later times, besides the theatre in the Lenæa, two others, viz., the *Ἀγρίππειον* and the *ἐπὶ Ῥηγάλλῃ θέατρον*, which were not destined for dramatic performances, but were only places in which the sophists held their declamations. At Sparta there was a theatre of white marble,² in which assemblies of the people were held, choral dances performed, and the like;³ for the festive joy of Dionysus and the regular drama were foreign to the Spartans. All the theatres, however, which were constructed in Greece, were probably built after the model of that of Athens, and, with slight deviations and modifications, they all resembled one another in the main points, as is seen in the numerous ruins of theatres in various parts of Greece, Asia Minor, and Sicily. Some of them were of prodigious dimensions. The theatre of Epidaurus, in the grove of Asclepius, of which considerable ruins are still extant, excelled in beauty the Roman theatres,⁴ and in size even that of Megalopolis, which was reckoned the largest theatre in Greece.⁵ The great number of ruins of theatres may enable us to form an idea of the partiality of the Greeks for such magnificent buildings, and of their gigantic dimensions. The ruins of the theatre of Argos encloses a space of 450 feet in diameter; the theatre of Ephesus is even 660 feet in diameter. Upon these ruins, see the works of Clarke, Dodwell, Leake, Hughes, Arundell, and the Supplement to Stuart's *Antiquities of Athens*.

The construction of the Greek theatres has been the subject of much discussion and dispute in modern times, and, although all the best writers agree on the great divisions of which a theatre consisted, the details are in many cases mere matters of conjecture. The Attic theatre was, like all the Greek theatres, placed in such a manner that the place for the spectators formed the upper or northwestern, and the stage, with all that belonged to it, the southeastern part, and between these two parts lay the orchestra. We shall consider each of the three divisions separately, together with its parts and subdivisions, referring the reader to the annexed plan, which has been made from the remains of Greek theatres still extant, and from a careful examination of the passages in ancient writers which describe the whole or parts of a theatre, especially in Vitruvius and Pollux.

1. The place for the spectators was, in a narrower sense of the word, called *θέατρον*. The seats

1. (Tzetzes, *Chil.*, v., 25.) — 2. (De Different. Vocab., p. 142, ed. Valart.) — 3. (a. v. *Φαρμακοί*.) — 4. (Tzetzes, l. c. — Schol. ad Aristoph., *Ran.*, 733.) — 5. (*Vid.* Meursius, *Græcia Feriata*, s. v. *Θαογῆλα*. — Bode, *Gesch. der Lyr. Dichtkunst der Hellen.*, i., p. 173, &c., where an account is also given of the *ἐκδοὺς νόμος*.)

1. (Paus., i., 29, § 16. — Plut., *Vit. x. Orat.*, p. 841, c.; 862 c.) — 2. (Paus., iii., 14, § 1.) — 3. (Athen., iv., p. 139; xiv., § 631.) — 4. (Paus., ii., 27, § 5.) — 5. (Paus., viii., 32, § 1.)

for the spectators, which were in most cases cut out of the rock, consisted of rows of benches rising one above another; the rows themselves (*a*) formed parts (nearly three fourths) of concentric circles, and were at intervals divided into compartments by one or more broad passages (*b*) running between them, and parallel with the benches. These passages were called *διαζώματα* or *καταμαί*, Latin *præcinctiones*,¹ and when the concourse of people was very great in a theatre, many persons might stand in them. One side of such a passage formed towards the upper rows of benches a wall, in which, in some theatres, though perhaps not at Athens, niches were excavated, which contained metal vessels (*ήχηα*) to increase the sounds coming from the stage and orchestra.² Across the rows of benches ran stairs, by which persons might ascend from the lowest to the highest. But these stairs ran in straight lines only from one præcinctio to another, and the stairs in the next series of rows were just between the two stairs of the lower series of benches. By this course of the stairs the seats were divided into a number of compartments resembling cones from which the tops are cut off; hence they were termed *κερκίδες*, and in Latin *cunei*. The whole of the place for the spectators (*θέατρον*) was sometimes designated by the name *κοίλον*, Latin *cavea*, it being in most cases a real excavation of the rock. Above the highest row of benches there rose a covered portico (*c*), which of course far exceeded in height the opposite buildings by which the stage was surrounded, and appears to have also contributed to increase the acoustic effect.³ The entrances to the seats of the spectators were partly underground, and led to the lowest rows of benches, while the upper rows must have been accessible from above.⁴

2. The orchestra (*ὀρχήστρα*) was a circular level space extending in front of the spectators, and somewhat below the lowest row of benches. But it was not a complete circle, one segment of it being appropriated to the stage. The orchestra was the place for the chorus, where it performed its ev-

olutions and dances, for which purpose it was covered with boards. As the chorus was the element out of which the drama rose, so the orchestra was originally the most important part of a theatre: it formed the centre round which all the other parts of the building were grouped. In the centre of the circle of the orchestra was the *θυμέλη*, that is, the altar of Dionysus (*d*), which was, of course, nearer to the stage than to the seats of the spectators, the distance from which was precisely the length of a radius of the circle. In a wider sense, the orchestra comprised the broad passages (*παροδοί*, *e*) on each side between the projecting wings of the stage and the seats of the spectators, through which the chorus entered the orchestra. The chorus generally arranged itself in the space between the thymele and the stage. The thymele itself was of a square form, and was used for various purposes, according to the nature of the different plays, such as a funeral monument, an altar, &c. It was made of boards, and surrounded on all sides with steps. It thus stood upon a raised platform, which was sometimes occupied by the leader of the chorus, the flute-player, and the rhapsodori.¹ The flute-player, as well as the prompter (*ὕποβολεύς*, *monitor*), were generally placed behind the thymele, so as to face the stage, and not to be seen by the spectators.² The orchestra, as well as the *θέατρον*, lay under the open sky: a roof is nowhere mentioned.

3. The stage. Steps led from each side of the orchestra to the stage, and by them the chorus probably ascended the stage whenever it took a real part in the action itself. The back side of the stage was closed by a wall called the *σκηνή* or *scena*, from which on each side a wing projected, which was called the *παροσκήνιον*. The whole depth of the stage was not very great, as it only comprised a segment of the circle of the orchestra. The whole space from the scena to the orchestra was termed the *προσκήνιον* (*proscenium*), and was what we should call the real stage. That part of it which was nearest to the orchestra, and where the actors stood when they spoke, was the *λογεῖον*, also called *ὀκρίδας* or *ὀκρίβαντες*, in Latin *pulpitum*, which was,

1. (Vitruv., v., 3 and 7. — Bekker, Anecd., p. 270. — Pollux, Onom., iv., 123. — Harpocrat. and Suidas, s. v. *Καταμαί*.) — 2. (Vitruv., i., 1, § 9; v., 4. — Stieglitz, Archæol. der Baukunst, &c., ii., 1, p. 150.) — 3. (Apuleius, Met., iii., p. 49, Bip.) — 4. (Pollux, Onom., iv., 123. — Athen., xiv., 622.)

1. (Müller, Dissert. on the Eumen. of Æschylus, p. 249, &c., transl.) — 2. (Plut., Reipubl. Gerend. Præc., p. 513, E. — Athen., xiv., p. 631.)

of course, raised above the orchestra, and probably on a level with the thymele. What the *ὑποσκήνιον* was is not clear; some think that it was a place to which the actors withdrew when they had acted their parts, others think that it was the same as the *κονίστρα*;¹ but, as it is stated that the *ὑποσκήνιον* was adorned with statues, it seems more probable that it was the wall under the *λογεῖον* which faced the orchestra and the spectators. The *σκήνῃ* or *scena* was, as we have already stated, the wall which closed the stage (*proscenium* and *logeum*) from behind. It represented a suitable background, or the locality in which the action was going on. Before the play began it was covered with a curtain (*παρεπέτασμα*, *προσκήνιον*, *αύλαία*, Latin *aula* or *siparium*).² When the play began this curtain was let down, and was rolled up on a roller underneath the stage. The *proscenium* and *logeum* were never concealed from the spectators. As regards the scenery represented on the *σκήνῃ*, it was different for tragedy, comedy, and the satyric drama, and for each of these kinds of poetry the scenery must have been capable of various modifications, according to the character of each individual play; at least that this was the case with the various tragedies, is evident from the scenes described in the tragedies still extant. In the latter, however, the background (*σκήνῃ*), in most cases, represented the front of a palace with a door in the centre (*i*), which was called the *royal door*. This palace generally consisted of two stories (*διωτεγία*),³ and upon its flat roof there appears to have been some elevated place, from which persons might observe what was going on at a distance.⁴ The palace presented on each side a projecting wing, each of which had its separate entrance. These wings generally represented the habitations of guests and visitors. All the three doors must have been visible to the spectators.⁵ The protagonists always entered the stage through the middle or royal door, the deuteragonists and tritagonists through those on the right and left wings. In tragedies like the *Prometheus*, the *Persians*, *Philoctetes*, *Edipus* at Colonus, and others, the background did not represent a palace. There are other pieces, again, in which the *scena* must have been changed in the course of the performance, as in the *Eumenides* of *Æschylus* and the *Ajax* of *Sophocles*. The dramas of *Euripides* required a great variety of scenery; and if, in addition to this, we recollect that several pieces were played in one day, it is manifest that the mechanical parts of stage performance, at least in the days of *Euripides*, must have been brought to great perfection. The *scena* in the satyric drama appears to have always represented a woody district, with hills and grottoes; in comedy the *scena* represented, at least in later times, the fronts of private dwellings or the habitations of slaves.⁶ The art of scene-painting must have been applied long before the time of *Sophocles*, although *Aristotle*⁷ ascribes its introduction to him. (*Vid.* PAINTING, p. 707.)

The machines in the Greek theatres were extremely numerous, but we are in many cases unable to form an exact idea of their nature and their effects. We shall only mention the most important among them. 1. The *περίακτοι* (*m*) stood near the two side entrances of the *scena*; their form was that of a *prisma*, and by a single turn they produced a change in the scenery.⁸ 2. The *Χαρόνιοι κλίμακες*, or the *Charonian steps*, by which the shades ascended from the lower world upon the stage.⁹ 3.

The *μηχανή, κράδη, or ἐώρημα*, a machine by which gods or heroes were represented passing through or floating in the air; hence the proverb, *Deus ex machina*.¹ 4. The *ἐξώστρα or ἐκκύκλημα*. (*Vid.* EXOSTRA.) 5. The *θεολογεῖον*, an especial elevated place above the *scena* for the Olympian gods when they had to appear in their full majesty.² 6. The *βροντεῖον*, a machine for imitating thunder. It appears to have been placed underneath the stage, and to have consisted of large brazen vessels in which stones were rolled.³ Respecting several other machines of less importance, see *Pollux*, iv., *περὶ μέρω θεάτρον*.

It is impossible to enter here upon the differences which are presented by many ruins of theatres still extant, from the description we have given above. It is only necessary to mention, that in the theatres of the great cities of the Macedonian time, the space between the thymele and the *logeum* was converted into a lower stage, upon which mimes, musicians, and dancers played, while the ancient stage (*proscenium* and *logeum*) remained destined, as before, for the actors in the regular drama. This lower stage was sometimes called *thymele* or *orchestra*.⁴

The Romans must have become acquainted with the theatres of the Italian Greeks at an early period, whence they erected their own theatres in similar positions upon the sides of hills. This is still clear from the ruins of very ancient theatres at *Tusculum* and *Fæstule*.⁵ The Romans themselves, however, did not possess a regular stone theatre until a very late period, and, although dramatic representations were very popular in earlier times, it appears that a wooden stage was erected when necessary, and was afterward pulled down again, and the plays of *Plautus* and *Terence* were performed on such temporary scaffolds. In the mean while many of the neighbouring towns of Rome had their stone theatres, as the introduction of Greek customs and manners was less strongly opposed in them than in the city of Rome itself. Wooden theatres, adorned with the most profuse magnificence, were erected at Rome even during the last period of the Republic. The first attempt to build a stone theatre was made a short time before the consulship of *P. Cornelius Scipio Nasica*. It was sanctioned by the censors, and was advancing towards completion, when *Scipio*, in 155 B.C., persuaded the senate to command the building to be pulled down, as injurious to public morality.⁶ Respecting the magnificent wooden theatre which *M. Æmilius Scaurus* built in his ædileship, 58 B.C., see *Pliny*.⁷ Its *scena* consisted of three stories, and the lowest of them was made of white marble, the middle one of glass, and the upper one of gilt wood. The *cavea* contained 80,000 spectators.⁸ In 55 B.C., *Cn. Pompey* built the first stone theatre at Rome, near the *Campus Martius*. It was of great beauty, and is said to have been built after the model of that of *Mytilene*: it contained 40,000 spectators.⁹ *C. Curio* built, in 50 B.C., two magnificent wooden theatres close by one another, which might be changed into one amphitheatre.¹⁰ After the time of *Pompey*, however, other stone theatres were erected, as the theatre of *Marcellus*, which was built by *Augustus*, and called after his nephew *Marcellus*,¹¹ and that of *Balbus*,¹² whence *Suetonius*¹³ uses the expression *per trina theatra*.

The construction of a Roman theatre resembled, on the whole, that of a Greek one. The principal differences are, that the seats of the spectators, which rose in the form of an amphitheatre around the orchestra, did not form more than a semicircle; and that the whole of the orchestra likewise formed only a semicircle, the diameter of which formed the front line of the stage. The Roman orchestra contained no thymele, and was not destined for a chorus, but contained the seats for senators and other distinguished persons, such as foreign ambassadors, which are called "*primus subselliorum ordo*." In the year 68 B.C., the tribune L. Roscius Otho carried a law which regulated the places in the theatre to be occupied by the different classes of Roman citizens: it enacted that fourteen ordines of benches were to be assigned as seats to the equites.¹ Hence these quatuordecim ordines are sometimes mentioned, without any farther addition, as the honorary seats of the equites. They were undoubtedly close behind the seats of the senators and magistrates, and thus consisted of the rows of benches

immediately behind the orchestra. Velleius² and Cicero³ speak of this law in a manner to lead us to infer that it only restored to the equites a right which they had possessed before. Another part of this law was, that spendthrifts, and persons reduced in their circumstances (*decoctores*), whether through their own fault or not, and whether they belonged to the senatorian or equestrian order, should no longer occupy the seats assigned to their order, but occupy a separate place set apart for them.⁴ In the reign of Augustus the senate made a decree, that foreign ambassadors should no longer enjoy the privilege mentioned above, as it sometimes happened that freedmen were sent to Rome as ambassadors. The soldiers also were separated from the people by the same decree: the same was the case with women, *prætextati* and *pædagogæ*.⁵ This separation consisted probably in one or more *cunei* being assigned to a particular class of persons. The following woodcut contains a probable representation of the plan of a Roman theatre.

For a fuller account of the construction of Greek

and Roman theatres, see the commentators on Vitruvius,² J. Chr. Genelli, *Das Theater zu Athen, hinsichtlich auf Architectur, Scenerie und Darstellungs Kunst überhaupt*, Berlin, 1818, 8vo. — G. C. W. Schneider, *Das Attische Theaterwesen, zum bessern Verstehen der Griech. Dramatiker*. — Stieglitz, *Archäologie der Baukunst der Griech. u. Römer*, ii., 1. — G. Ferrara, *Storia e descrip. de' princip. teatri ant. e moderni*, Milano, 1830. — The supplement to Stuart's *Antiq. of Athens*. A general outline is also given by Müller, *Hist. of Gr. Lit.*, i., p. 299, &c.; and by Bode, *Gesch. der dram. Dichtkunst d. Hellen.*, i., p. 156, &c.

It remains to speak of a few points respecting the attendance in the Greek theatres. Theatrical representations at Athens began early in the morning, or after breakfast;² and when the concourse of people was expected to be great, persons would even go to occupy their seats in the night. The sun could not be very troublesome to the actors, as they were, in a great measure, protected by the buildings surrounding the stage, and the spectators protected themselves against it by hats with broad brims.⁴ When the weather was fine, especially at the Dionysiac festivals in spring, the people appear-

ed with garlands on their heads; when it was cold, as at the Lenæa in January, they used to wrap themselves up in their cloaks.⁶ When a storm or a shower of rain came on suddenly, the spectators took refuge in the porticoes behind the stage, or in those above the uppermost row of benches. Those who wished to sit comfortably brought cushions with them.⁶ As it was not unusual for the theatrical performances to last from ten to twelve hours, the spectators required refreshments, and we find that in the intervals between the several plays they used to take wine and cakes.⁷

The whole of the cavea in the Attic theatre must have contained about 50,000 spectators. The places for generals, the archons, priests, foreign ambassadors, and other distinguished persons, were in the lowest rows of benches, and nearest to the orchestra,⁸ and they appear to have been sometimes covered with a sort of canopy.⁹ The rows of benches above these were occupied by the senate of 500, those next in succession by the *ephebi*, and the rest by the people of Athens. But it would seem that they did not sit indiscriminately, but that the better places were let at a higher price than the

others, and that no one had a right to take a place for which he had not paid.¹ The question whether in Greece, and more especially at Athens, women were present at the performance of tragedies, is one of those which have given rise to much discussion among modern scholars, as we have scarcely any passage in ancient writers in which the presence of women is stated as a positive fact. But Jacobs² and Passow³ have placed it almost beyond doubt, from the various allusions made by ancient writers, that women were allowed to be present during the performance of tragedies. This opinion is now perfectly confirmed by a passage in Athenæus,⁴ which has been quoted by Becker⁵ in corroboration of the conclusion to which the above-mentioned writers had come. In this passage we find that at Athens, and at the time of the Peloponnesian war, the spectators in the theatre consisted of men and women. We have, however, on the other hand, every reason to believe that women were not present at comedies, while boys might be present both at tragedy and comedy.⁶ The seats which women occupied in the Greek theatres appear to have been separated from those of the men.⁷

For the purpose of maintaining order and preventing excesses, the ancients had a sort of theatre-police; the persons who held this office were called in Greece *ῥαβδοφόροι* or *ῥαβδοῦχοι*, and at Rome *Præcones*.⁸

Respecting the attendance at the Greek theatres and the conduct of the people, see a very good dissertation of Becker, in his *Charikles*.⁹

*THEBATOUS LAPIS (Θηβαῖκος λίθος), a species of Porphyry, according to the more correct opinion, and not a kind of marble, as has been supposed by many writers. It was of a red colour, and was also called *Pyropæcilus*.¹⁰

*THEION (θεῖον), Sulphur. "Pliny and Isidorus," says Adams, "describe four kinds of sulphur. The ἄντρον of Dioscorides, or the *Sulphur vitrum* of the Latins, is native sulphur. The *Sulphur ignem expertum* (τὸ πεπυρωμένον) is sulphur which has been subjected to the action of fire." "Sulphur (θεῖον) was applied by the ancients," observes Dr. Moore, "to various uses in medicine and other arts. For the use of the physician was required translucent native sulphur, which the Greeks called ἄντρον. That which had been freed from impurities by an artificial process, which had passed the fire, was called πεπυρωμένον, and distinguished into various kinds, appropriated to various uses, according, probably, to their several degrees of purity. Thus, one kind was used for fumigating woollens, to render them whiter and softer; another for making matches: purposes to which sulphur yet continues to be applied. The employment of it in expiation and lustration, which was very common, we find referred to by many ancient authors."¹¹

THE'CAI (θηκαι). (Vid. FENUS, p. 457.)

*THELYCRANEIA (θηλυκρανεια), the *Cornus sanguinea*, or Dogberry.¹²

*THELYPTERIS (θηλυπτερίς), a plant. Stackhouse holds the *θηλυπτερίς* of Theophrastus to be the *Acrostichum Thelypteris*. Sprengel makes the *θηλυπτερίς* of Dioscorides to be the *Asplenium filix femina*, Bernh. *Polypodium*, L.).¹³

*THELYPHONON (θηλυφόνον), called also

SCORPION (σκορπίον), a plant, about which Stackhouse is quite undecided. "Sprengel suggests that it may be the *Doronicum pardalianches*, or Scorpion-rooted Leopard's-bane. This opinion is also supported by Bauhin."¹⁴

THENSÆ or TENSÆ (for the orthography and etymology of the word are alike doubtful, although the oldest MSS. generally omit the aspirate) were highly-ornamented sacred vehicles, which, in the solemn pomp of the Circensian games, conveyed the statues of certain deities, with all their decorations, to the pulvinaria, and, after the sports were over, bore them back to their shrines.¹⁵ We are ignorant of their precise form; for, although we find several representations upon ancient medals and other works of art, of gods seated in cars, and especially of the sun-chariot of Elagabalus,¹⁶ yet we have no means of deciding which, if any, of these are tensæ. We know that they were drawn by horses (Plutarch¹⁷ calls them *θήσας*), and escorted (*deducere*) by the chief senators in robes of state, who, along with *pueri patrimi* (vid. PATRIMI), laid hold of the brides and traces, or perhaps assisted to drag the carriage (for *ducere* is used as well as *deducere*), by means of thongs attached for the purpose (and hence the proposed derivation from *tendo*). So sacred was this duty considered, that Augustus, when labouring under sickness, deemed it necessary to accompany the tensæ in a litter. If one of the horses knocked up, or the driver took the reins in his left hand, it was necessary to recommence the procession, and for one of the attendant boys to let go the thong or to stumble was profanation.¹⁸

The only gods distinctly named as carried in tensæ are Jupiter and Minerva,¹⁹ to which number Mars is usually added on the authority of Dion Cassius,²⁰ but in the passage referred to he merely states that, at the Circensian games celebrated A.D. 216, the statue of Mars, which was in the procession (*πομπεῖον*), fell down; and it is very remarkable that Dionysius,²¹ in his minute description of the Pompa Circensis, takes no notice whatever of the tensæ, but represents the statues of the gods as carried on men's shoulders, i. e., on *fercula*. That a considerable number of deities, however, received this honour, seems probable from the expression of Cicero, in his solemn appeal at the close of the last Verrine oration, "*omnesque dii, qui vehiculis tensarum solennes cætus ludorum initis*," though we cannot determine who these gods were. We frequently hear, indeed, of the chariot of Juno,²² of Cybele,²³ and many others; but, as these are not mentioned in connexion with the Pompa Circensis, there is no evidence that they were tensæ. Among the impious flatteries heaped on Cæsar, it was decreed that his ivory statue should accompany the images of the gods to the circus in a complete chariot (*ἄρμα ὅλον*, that is, a *tensa*, in opposition to a mere *ferculum*), and that this chariot should stand in the Capitol immediately opposite to that of Jupiter.²⁴

Similar homage was paid upon high festivals to the images of their gods by other ancient nations. Thus, in the curious ceremonies performed at Pæpremis connected with the worship of the Egyptian deity, whom Herodotus²⁵ imagined to be identical

with Ares, the statue, enshrined in a chapel made of gilded wood, was dragged in a four-wheeled car by a body of priests. So also, in the account given by Athenæus,¹ after Callixenes of Rhodes, of the gorgeous pageant at Alexandria, during the reign of Ptolemy Philadelphus, we read of a car of Bacchus of prodigious size, most costly materials, and most elaborate workmanship, which was dragged by 180 men, and to such customs we may find a parallel in modern times in the usages which prevail at the festival of S. Agatha at Catania, and S. Rosolia at Palermo.

(Scheffer, *De Re Vehiculari*, c. 24.—Ginzrot, *Die Wagen und Fahrwerke der Griechen und Römer*, c. 55; but the latter author, both here and elsewhere, allows his imagination to carry him farther than his authorities warrant.)

THEODOSIA'NUS CODEX. (*Vid.* CODEX THEODOSIANUS.)

THEOPH'ANIA (Θεοφάνια), a festival celebrated at Delphi, on the occasion of which the Delphians filled the huge silver crater which had been presented to the Delphic god by Cræsus.² Valckenaer on Herodotus³ thought that the reading was corrupt, and that Θεοξένια should be read, as this festival is well known to have been celebrated by the Delphians.⁴ But both festivals are mentioned together by Pollux⁵ and Philostratus.⁶ An agon called theoxenia was also celebrated at Pellene in Achaia in honour of Hermes and Apollo.⁷ But no particulars of any of these festivals are known.

THEOR'IA (θεωρία). (*Vid.* THEOROI.)

THEOR'ICA (θεωρικά). Under this name, at Athens, were comprised the moneys expended on festivals, sacrifices, and public entertainments of various kinds, and also moneys distributed among the people in the shape of largesses from the state.

There were, according to Xenophon, more festivals at Athens than in all the rest of Greece.⁸ Besides those which were open to the whole body of the people, there were many confined to the members of each tribe, deme, and house. These last were provided for out of the funds of the community who celebrated them. At the most important of the public festivals, such as the Dionysia, Panathenæa, Eleusinia, Thargelia, and some others, there were not only sacrifices, but processions, theatrical exhibitions, gymnastic contests, and games, celebrated with great splendour and at a great expense. A portion of the expense was defrayed by the individuals upon whom the burden of λειτουργία devolved; but a considerable, and perhaps the larger part, was defrayed by the public treasury. Demosthenes complains that more money was spent on a single Panathenæic or Dionysiac festival than on any military expedition.⁹ The religious embassies to Delos and other places, and especially those to the Olympic, Nemean, Isthmian, and Pythian games, drew largely upon the public exchequer, though a part of the cost fell upon the wealthier citizens who conducted them.¹⁰

The largesses distributed among the people had their origin at an early period, and in a measure apparently harmless, though from a small beginning they afterward rose to a height most injurious to the commonwealth. The Attic drama used to be performed in a wooden theatre, and the entrance was free to all citizens who chose to go. It was found, however, that the eagerness to get in led to much confusion and even danger. On one occasion, about B.C. 500, the scaffolding which supported

the roof fell in, and caused great alarm. It was then determined that the entrance should no longer be gratuitous. The fee for a place was fixed at two obols, which was paid to the lessee of the theatre (called θεατρώνης, θεατροπώλης, or ἀρχιτέκτων), who undertook to keep it in repair and constantly ready for use on condition of being allowed to receive the profits. This payment continued to be exacted after the stone theatre was built. Pericles, to relieve the poorer classes, passed a law which enabled them to receive the price of admission from the state; after which, all those citizens who were too poor to pay for their places applied for the money in the public assembly, which was then frequently held in the theatre.¹ In process of time this donation was extended to other entertainments besides theatrical ones, the sum of two obols being given to each citizen who attended; if the festival lasted two days, four obols; and if three, six obols, but not beyond. Hence all theoric largesses received the name of δωδεδία. The sums thus given varied at different times, and, of course, depended on the state of the public exchequer. These distributions of money, like those of grain and flour, were called διανομαί or διαδόσεις. They were often made at the Dionysia, when the allies were present, and saw the surplus of their tribute distributed from the orchestra. The appetite of the people for largesses grew by encouragement, stimulated from time to time by designing demagogues; and in the time of Demosthenes they seem not to have been confined to the poorer classes.² Böckh calculates that from 25 to 30 talents were spent upon them annually.³

So large an expenditure of the public funds upon shows and amusements absorbed the resources which were demanded for services of a more important nature. By the ancient law, the whole surplus of the annual revenue which remained after the expense of the civil administration (τὰ περίοντα χρήματα τῆς διοικήσεως) was to be carried to the military fund, and applied to the defence of the commonwealth. Since the time of Pericles various demagogues had sprung up, who induced the people to divert all that could be spared from the other branches of civil expenditure into the theoric fund, which at length swallowed up the whole surplus, and the supplies needed for the purpose of war or defence were left to depend upon the extraordinary contributions or property-tax (εἰσφοραί). An attempt was made by the demagogue Eubulus, of whom Theopompus says that τὰς προσόδους καταμισθοφορῶν διετέλει,⁴ to perpetuate this system. He passed a law, which made it a capital offence to propose that the theoric fund should be applied to military service. In B.C. 553, Apollodorus carried a decree empowering the people to determine whether the surplus revenue might be applied to the purpose of war, for which he was indicted by a γραφή παρανόμων, convicted and fined, and the decree was annulled, as a matter of course.⁵ The law of Eubulus was a source of great embarrassment to Demosthenes, in the prosecutions of his schemes for the national defence; and he seems at last, but not before B.C. 339, to have succeeded in repealing it.⁶

In the earlier times there was no person or board of persons expressly appointed to manage the theoric fund. The money thus appropriated was disbursed by the hellenotamiae. After the anarchy, the largess system having been restored by Agryrius, a board of managers was appointed,

who were called ἀρχὴ ἐπὶ τῷ θεωρικῷ, οἱ ἐπὶ τῷ θεωρικῷ τεταγμένοι οἱ κεχειροτονημένοι, θεωρικὴ ἀρχή, &c. They were elected by show of hands at the period of the great Dionysia, one from each tribe. In the time of Eubulus many other branches of the administration were placed under the control of this board, as the management of the civil expenditure, the office of the apodectæ, the building of docks, arsenals, streets, &c. This was dictated by an anxiety on the part of the people that no part of the revenue should be improperly diverted from the theoric fund, which they thought would be prevented by increasing the powers of its managers. But these extraordinary powers appear not to have been of long continuance.¹

THEOROI (θεωροί) were persons sent on special missions (θεωρίαι) to perform some religious duty, as to consult an oracle, or to offer a sacrifice on behalf of the state. It is thus explained by the grammarians: θεωροί, ἡ οἱ θεύμενοι, ἡ οἱ φροντί-ζοντες περὶ τὰ θεῖα οἱ εἰς θυσίαν πεμπόμενοι καὶ ἐορτὰς καὶ πανηγύρεις καὶ χρηστήρια.² There were in some of the Dorian states, as the Æginetans, Træzenians, Messenians, and Mantineans, official priests called θεωροί, whose duty it was to consult oracles, interpret the responses, &c., as among the Spartans there were men called Pythii, chosen by the kings to consult the oracle at Delphi.³ At Athens there were no official persons called θεωροί, but the name was given to those citizens who were appointed from time to time to conduct religious embassies to various places; of which the most important were those that were sent to the Olympian, Pythian, Nemean, and Isthmian games, those that went to consult the god at Delphi, and those that led the solemn procession to Delos, where the Athenians established a quadriennial festival in revival of the ancient Ionian one, of which Homer speaks.⁴ The expense of these embassies was defrayed partly by the state and partly by wealthy citizens, to whom the management of them was intrusted, called ἀρχιθεωροί, chiefs of the embassy. This was a sort of λειτουργία, and frequently a very costly one, as the chief conductor represented the state, and was expected to appear with a suitable degree of splendour; for instance, to wear a golden crown, to drive into the city with a handsome chariot, retinue, &c. Nicias, who was very rich, is reported to have incurred great expenses on his embassy to Delos, beyond what was required of him; and Alcibiades astonished all the spectators at Olympia by the magnificence of his horses, chariots, &c., and the profuseness of his expenditure.⁵ (Vid. DELIA.)

The Salaminian or Delian ship was also called θεωρὸς ναὺς, and was principally used for conveying embassies to Delos, though, like the Paralus, it was employed on other expeditions besides.⁶

THEOXYENIA (θεοξένια). (Vid. THEOPHANIA.) THERAPEUTICA (τὸ θεραπευτικόν), one of the five branches into which, according to some authors, the whole art and science of medicine was divided among the ancients.⁷ It was defined to be that branch which was conversant with the healing of disease, or recalling and restoring ruined health,⁸ and was subdivided into three parts, DIÆTETICA, CHIRURGIA, PHARMACEUTICA.⁹ From the incidental mention that is made by Homer and the old Greek

writers of the nature of the remedies that were employed by medical practitioners in the earliest times, it would appear that their practice was principally surgical, and almost confined to the treatment of wounds; and that, with respect to internal diseases, these were, for the most part, conceived to be the immediate infliction of the Deity, and therefore abandoned as incurable, or, at least, were to be obviated only by charms and incantations, and that the arts of magic formed no inconsiderable part even of their surgical practice.¹

From the mode in which Hippocrates speaks of certain practices, such as bleeding, and the administration of emetics, purgatives, and other analogous medicinal agents, we may infer that they were in common use among his contemporaries, and probably had been so for a long time before him. The great principle which directed all his indications was the supposed operation of nature in superintending and regulating all the actions of the system. The chief business of the physician, in the opinion of Hippocrates, was to watch these operations, to promote or suppress them according to circumstances, and perhaps, in some rare cases, to attempt to counteract them. The tendency of this mode of practice would be to produce extreme caution, or rather inertness, on the part of the practitioner; and, accordingly, we find that Hippocrates seldom attempted to cut short any morbid action, or to remove it by any decisive or vigorous treatment. Another principle which very materially affected his practice was the doctrine of critical evacuations. As diseases were supposed to originate in the prevalence of some morbid humour, so, when they are suffered to run their course without interruption, they are relieved by the discharge of the humour; and, consequently, the promotion of this discharge becomes an important indication, which it is often easy to accomplish, and which proves very effectual. Hence an important part of his practice consisted in producing evacuations of various kinds, and especially by the employment of purgatives, of which he used a great variety, and administered them with great freedom. With the same intention he prescribed diuretics and sudorifics; he drew blood both by the lancet and the scarificator; he applied the cupping-glasses; he administered injections, and inserted issues. He made very frequent use of external applications, such as ointments, plasters, liniments, &c., and was familiarly acquainted with the effects of external temperature. The disputes of the DOGMATICI and EMPIRICI do not appear to have had so much influence on their mode of practice as we might have expected; and, indeed, whatever may have been the professed plan of the supporters of the two sects, we shall always find that the practice of the most eminent of either party actually proceeded upon a judicious combination of the two systems.

Celsus, the next physician of sufficient importance to require to be noticed here, adopted to a certain extent the Hippocratic method of observing and watching over the operations of nature, and regulating rather than opposing them: a method which with respect to acute diseases (as was hinted above), may frequently appear inert. But there are occasions on which he displays considerable decision and boldness, and particularly in the use of the lancet, which he employed with more freedom than any of his predecessors. His regulations for the employment of bloodletting and of purgatives are laid down with minuteness and precision; and although he was in some measure led astray by his hypothesis of the crudity and concoction of the

1. (Hom., II., xi., 636, &c.; Od., xix., 456, &c. — Vid. Gal., De Hom. Medic., tom. x., p. 573, ed. Chart., et ap. Alex. Trall., De Re Med., lib. ix., c. 4.)

humours, the rules which he prescribed were not very different from those which were generally adopted in the commencement of the present century. His description of the symptoms of fever, and of the different varieties which it assumes, either from the nature of the epidemic, or from the circumstances under which it takes place, are correct and judicious; his practice was founded upon the principle before referred to, of watching the operations of nature, conceiving that fever consists essentially in an effort of the constitution to throw off some morbid cause, and that, if not unduly interfered with, the process would terminate in a state of health.

Aretæus, also, in his practice followed, for the most part, the method of Hippocrates, but he paid less attention to what have been styled the natural actions of the system; and, contrary to the practice of the Father of Medicine, he did not hesitate to attempt to counteract them when they appeared to him to be injurious. The account which he gives of his treatment of various diseases indicates a simple and sagacious system, and one of more energy than that of the professed Methodici. Thus he more freely administered active purgatives; he did not object to narcotics; he was much less averse to bleeding; and, upon the whole, his materia medica was both ample and efficient. It may be asserted generally (says Dr. Bostock), that there are few of the ancient physicians since the time of Hippocrates who appear to have been less biased by attachment to any peculiar set of opinions, and whose account of the phenomena and treatment of disease has better stood the test of subsequent experience.

The most famous physician of antiquity after Hippocrates was Galen, who is also the last that can here be noticed. His practice in its general character appears to have been similar to his pathology (which depended on the four elements, the four humours, and the four qualities, connected in all the variety of combinations), and, indeed, to have been strictly deduced from it. His indications were in exact conformity to his theory, and the operation of medicines was reduced to their power of correcting the morbid states of the fluids, as depending upon their four primary qualities, or the various modifications of them. Many parts of his writings prove that he was a diligent observer of the phenomena of disease, and he possessed an acuteness of mind which well adapted him for seizing the most prominent features of a case, and tracing out the origin of the morbid affection. But his predilection for theory too frequently warped and biased his judgment, so that he appears more anxious to reconcile his practice to his hypothesis than to his facts, and bestows much more labour on subtle and refined reasoning, than on the investigation of morbid actions, or the generalization of his actual experience.¹

For the use of gymnastics, which formed an important part of the ancient system of therapeutics, the reader must consult the article on that subject. (Vid. GYMNASIUM, p. 484.) The subject of charms or amulets has been before alluded to, and this article would be incomplete without some farther notice of that very singular mode of cure. The instances that are to be found in the works of ancient authors (particularly Cato and Pliny) are very numerous, and the famous Abracadabra occurs for the first time in Serenus Samonicus.² This amulet was particularly recommended for the cure of the species of intermittent fever called by the Greeks *ἡμικριτικός* (or by the moderns *double-tertian*), and is described by him as follows:

"Inscribis chartæ, quod dicitur ABRACADABRA, Sapius: et subter repetis, sed detrahe summa, Et magis atque magis desint elementa figuris Singula, quæ semper rapies, et cetera figes, Donec in angustum redigatur litera conum. His lino nexis collum redimire memento."

Thus forming an equilateral triangle in this manner:

```

For farther information respecting this magical word, see Du Cange, *Glossar. Med. et Inf. Latin.*, ed. Paris, 1840.—Hofmann, *Lex. Univ.*—Sprengel, *Hist. de la Méd.*, tom. ii., p. 147.—C. Steph., *Dict. Hist.*, etc., p. 8, edit. N. Lloyd.—Ger. Jo. Voss., *Op.*, t. 5, p. 24.

One or two examples of this folly may be given from Alexander Trallianus, especially as it is surprising that an author who displays so much judgment in other matters should show so much weakness in this. For epilepsy he recommends a piece of an old sailcloth, taken from a shipwrecked vessel, to be tied to the right arm for seven weeks together;³ for the colic he orders the heart of a lark to be fastened to the left thigh;⁴ for a quartan ague, a few hairs taken from a goat's chin are to be carried about;⁵ several other equally ridiculous instances might be given. By way of excuse, he informs us that in his time many persons, particularly the rich, were very averse to medicine, and would by no means be persuaded to persist in a proper method, which forced them, he says, to have recourse to amulets, and such things as were fondly imagined to effect a cure in a more expeditious manner.⁶ (Vid. AMULETUM.)

The following is probably a complete list of the ancient treatises that remain on the subject of therapeutics: Hippocrates, *Ἐπιδημιῶν Βιβλία Ἑπτα*, *De Morbis Popularibus*, lib. vii., of which the first and third books are considered as undoubtedly genuine, the second, fourth, and sixth as doubtful, and the fifth and seventh as certainly spurious.—Id., *Ἀφορισμοί*, *Aphorismi*, considered so certainly genuine that Stephanus Atheniensis says they were the touchstone by which to try the authenticity of the other works that go under the name of Hippocrates.—Id., *Περὶ Φαρμάκων*, *De Remedis Purgantibus*, a spurious work.⁶—Aretæus, *Περὶ Θεραπείας Ὁσίων καὶ Χρονίων Παθῶν*, *De Curatione Acutorum et Diuturnorum Morborum*, in four books.—Galen, *Τέχνη Ἱατρικὴ*, *Art Medica*.—Id., *Θεραπευτικὴ Μέθοδος*, *Methodus Medendi*.—Id., *Τὰ πρὸς Γλαύκωνα Θεραπευτικά*, *Ad Glaucōnem de Medendi Methodo*.—Id., *Περὶ Φλεβοτομίας πρὸς Ἐρασίστρατον*, *De Venæsectione adversus Erasistratum*.—Id., *Περὶ Φλεβοτομίας πρὸς Ἐρασίστρατον τὴν ἐν Ρώμῃ*, *De Venæsectione adversus Erasistrateos Romæ Degentes*.—Id., *Περὶ Φλεβοτομίας Θεραπευτικὸν Βιβλίον*, *De Curandi Ratione per Venæsectionem*.—Id., *Περὶ Βδελλῶν*, *Ἀντιπάσεως*, *Σκύνος*, καὶ *Ἐγχαράξεως*, καὶ *Καταχασμοῦ*, *De Hirudinibus, Revulsione, Cucurbitula, Incisione, et Scarificatione*.—Alexander Aphrodisiensis, *Περὶ*

1. (Bostock's Hist. of Med.)—2. (De Medic., c. 52, v. 944, sq.)

ἡμερῶν, *De Febribus*.—Great part of the *Συναγωγὴ ἱατρικῇ*, *Collecta Medicinalia*, of Oribasius, and also of his *Σύνοψις*, *Synopsis ad Eustathium*, treat of this subject.—Palladius, *Περὶ Πυρετῶν Σύντομος Σύνοψις*, *De Febribus Concisa Synopsis*.—Aëtius, *Βιβλία ἱατρικὰ Ἑκκαίδεκα*, *Libri Medicinales Sedecim*.—Alexander Trallianus, *Βιβλία ἱατρικὰ Δωδεκάδεκα*, *Libri de Re Medica Duodecim*.—Paulus Ægineta, *Ἐπιτομὴ ἱατρικῆς Βιβλία Ἑπτα*, *Compendii Medici Libri Septem*, of which great part relates to this subject.—Theophrastus Nonnus, *Ἐπιτομὴ τῆς ἱατρικῆς Ἀπάσης Τέχνης*, *Compendium Totius Artis Medicæ*.—Synesius, *Περὶ Πυρετῶν, De Febribus*.—Joannes Actuarius, *Methodus Medendi*.—Demetrius Pepagomenus, *Περὶ Ποδᾶγρας, De Podagra*.—Celsus, *De Medicina*, in eight books, of which great part treat of this subject.—Cælius Aurelianus, *Celerum Passionum Libri* iii.—Id., *Tardarum Passionum Libri* v.—Serenus Samonicus, *De Medicina Præcepta Saluberrima*, a poem on the art of Healing.—Theodorus Priscianus, *Rerum Medicarum Libri* iv. To which list may be added (though somewhat later than the period treated of in this work) the celebrated *Regimen Sanitatis Salernitanum*, of which more than twenty editions were published in the fifteenth century, and more than forty in the sixteenth.

THERAPON (θεράπων). (*Vid.* HELOTES.)

THERIACA (θηριακή), a word properly applied, according to Galen,¹ to preparations that would cure the bite of wild beasts (θηρίων), as those which were meant as antidotes to other kinds of poisons (τοῖς δηλητηρίοις) were properly called ἀλεξίφάρμακα.² The most celebrated of these preparations was the Theriaca Andromachi, invented by the physician to the Emperor Nero, which was nearly the same as that which was composed by Mithradates, king of Pontus, the receipt for which was said to have been found among his papers, after his death, by Pompey. This was published at Rome, under the title of *Antidotum Mithradaticum*. But as the various receipts for the preparation of this famous remedy differ from each other very widely, the probability is, says Dr. Heberden, that Mithradates was as much a stranger to his own antidote as several eminent physicians have since been to the medicines that are daily advertised under their names. It was asserted that whoever took a proper quantity of this preparation in the morning was ensured against the effects of poison during the whole of that day, and this, we are told by Galen,³ was regularly done by the Emperor Marcus Aurelius. It was farther stated that Mithradates himself was so fortified against all baneful drugs, that none would produce any effect when he attempted to destroy himself.⁴ In the course of ages it underwent numerous alterations. According to Celsus, who first described it,⁵ it contained only thirty-six simples; Andromachus added the flesh of vipers,⁶ after cutting off the head and tail,⁷ and increased the number of ingredients to seventy-five. These, and the method of putting them together, he handed down to posterity in a Greek poem, consisting of one hundred and seventy-four hexameter and pentameter lines, which has been preserved by Galen,⁸ and has several times been published separately. When thus improved, Andromachus called it γαλήνη,⁹ but in Trajan's time it obtained the name of *Theriaca*, either from the

vipers in it, or rather κατ' ἐξοχὴν, from its supposed effects in curing the bites of venomous animals. Damocrates differed from Andromachus with respect to some of the proportions,¹ and gave a receipt for it in one hundred and sixty-five Greek iambics, which has also been preserved by Galen,² and has been published along with his other poetical fragments at Bonne, 1833, 4to, ed. C. F. Harless. The reputation which this medicine enjoyed was immense; it is mentioned by Abulfaraj,³ and several Arabic physicians wrote treatises in its praise. It even maintained its ground in quite modern times, and it is only within comparatively a few years that it has been dismissed from the British Pharmacopœia. This was effected chiefly by the persuasion of Dr. Heberden, who wrote a pamphlet on the subject, entitled *Antitheriaco*, 1745. It consisted latterly of seventy-two ingredients, which were arranged under thirteen heads: viz., *Acrida*, of which there were five species; *Amara*, of which there were eight; *Styptica* (vulgo *Astringentia*), five in number; *Aromatica Exotica*, fourteen; *Aromatica Indigena*, ten; *Aromatica ex Umbelliferis*, seven; *Resinosa et Balsama*, eight; *Gravcolentia*, six; *Virosa* (seu quæ *Narcosin inducunt*), under which head there was but one species, viz., *Opium*; *Terra Inispida et Inertia*, which comprised only the celebrated *Lemnian Earth*; *Gummosa, Amylacea*, &c., four species; *Dulcia*, viz., liquorice and honey; and *Vinum*, viz., Spanish (or *Sherry*). Upon no principle of combination could this heterogeneous farrago be vindicated; and the monstrous compound is well compared by Dr. Heberden to the numerous undisciplined forces of a barbarous king, made up of a dissonant crowd collected from different countries, mighty in appearance, but in reality an ineffective multitude, that only hinder each other.⁴

THERMÆ. (*Vid.* BATHS, p. 143.)

THERMOPOÏLUM. (*Vid.* CALIDA.)

*THERMOS (θερμός), a kind of pulse, referable to the genus *Lupinus*, L., or Lupine; about the species, however, there is great uncertainty. "Sprengel, in the first edition of his R. H. H., set down the θερμός of Theophrastus for the white lupine, or *Lupinus albus*; and in the second for the *L. pilosus*; but Schneider is not satisfied that the characters of the θερμός, as given by Theophrastus, agree with either of them. Sprengel remarks that the θερμός ἡμερος of Dioscorides may be either the *L. hirsutus* or *pilosus*. He joins Sibthorp and Smith in holding the *Lupinus angustifolius* to be the θερμός ἄγριος of Dioscorides."⁵

THESEIA (θησεΐα), a festival celebrated by the Athenians in honour of their national hero Theseus,⁶ whom they believed to have been the author of their democratical form of government. In consequence of this belief, donations of bread and meat were given to the poor people at the Theseia, which thus was for them a feast at which they felt no want, and might fancy themselves equal to the wealthiest citizens. We learn from Gellius⁷ that a contest also was held on this occasion, but we are not informed in what it consisted. The day on which this festival was held was the eighth of every month (ὀγδοῖα), but more especially the eighth of Pyanepsion,⁸ whence the festival was sometimes called ὀγδοῖον.⁹ From the passages above referred to, compared with Diodorus,¹⁰ it appears highly probable that the festival of the Theseia was not in-

stituted till B.C. 469, when Cimon brought the remains of Theseus from Scyrus to Athens.¹

THESMOPHORIA (Θεσμοφόρια), a great festival and mysteries celebrated in honour of Demeter in various parts of Greece, and only by women, though some ceremonies were also performed by maidens. The Attic Thesmophoria were held in the month of Pyanepsion, and began on the eleventh. Its introduction was ascribed by Demosthenes, Diodorus Siculus, and Plutarch² to Orpheus, while Herodotus³ states that it was introduced into Greece from Egypt by the daughters of Danaus, who made the Pelasgian women of Peloponnesus acquainted with the mysteries; that after the Dorian conquest they fell into disuse, and were only preserved by the Arcadians, who remained undisturbed in their ancient seats. Thus much appears certain from the name of the festival itself, that it was intended to commemorate the introduction of the laws and regulations of civilized life, which was universally ascribed to Demeter.⁴ Respecting the duration of the Attic Thesmophoria, various opinions are entertained both by ancient and modern writers. According to Hesychius,⁵ it lasted four days: it has been inferred from Aristophanes⁶ that it lasted for five days. Such discrepancies have undoubtedly arisen from the circumstance that the women spent several days before the commencement of the real festival in preparations and purifications, during which they were especially bound to abstain from sexual intercourse, and for this purpose they slept and sat upon particular kinds of herbs, which were believed to have a purifying effect.⁷ During this time the women of each demos appointed two married women from among themselves to conduct the solemnities (ἀρχαὶ εἰς τὰ Θεσμοφόρια⁸), and their husbands, who had received a dowry amounting to three talents, had to pay the expenses for the solemnity in the form of a liturgy.⁹ The festival itself, which, according to the most probable supposition, also adopted by Wellauer,¹⁰ lasted only for three days, began on the 11th of Pyanepsion, which day was called ἄνοδος or κάθοδος,¹¹ from the circumstance that the solemnities were opened by the women with a procession from Athens to Eleusis. In this procession they carried on their heads sacred laws (νόμοι βιβλοὶ or θεσμοί), the introduction of which was ascribed to Demeter Θεσμοφόρος, and other symbols of civilized life.¹² The women spent the night at Eleusis in celebrating the mysteries of the goddess.¹³ The second day, called νηστεία,¹⁴ was a day of mourning, during which the women sat on the ground around the statue of Demeter, and took no other food than cakes made of sesame and honey (σπαραγμοί¹⁵). On this day no meetings either of the senate or the people were held.¹⁶ It was probably in the afternoon of this day that the women held a procession at Athens, in which they walked barefooted behind a wagon, upon which baskets with mystical symbols were conveyed to the Thesmophoria.¹⁷ The third day, called καλλιγένεια from the circumstance that Demeter was invoked under this name,¹⁸ was a day of merriment and railery among the women themselves, in commemoration of lambe, who was said to have made the goddess

smile during her grief.¹ Hesychius mentions a sacrifice called ἄνμια, which was offered to the goddess as an atonement for any excess or error which might have been committed during the sacred days, and this sacrifice was probably offered at the close of the third day.

There are several other particulars mentioned by ancient writers as forming part of the Thesmophoria, but we are not able to ascertain in what manner they were connected with the festival, or on what day they took place.

Thesmophoria were also celebrated in many other parts of Greece, as mentioned above. The principal places where they are mentioned by ancient authors are the following: Sparta, where the festival lasted three days;² Drymæa in Phocis;³ Thebes in Boeotia;⁴ Miletus;⁵ Syracuse;⁶ Eretria in Eubœa;⁷ Delos;⁸ Ephesus;⁹ Agrigentum;¹⁰ and other places. But of their celebration in these towns we know no more than a few isolated particulars, which are mentioned in the passages referred to.¹¹

THESMOS (θεσμός). (Vid. Νόμος, p. 663.)

THESMOTHETAI (θεσμοβέται). (Vid. Αἵρεσις.)

THE'TES (θήτες). In earlier times this name denoted any freemen who worked for hire (οἱ ἐνεκα τροφῆς δουλεύοντες;¹² ἐλευθερῶν ὄνομα διὰ πέναν ἐπ' ἀργυρίῳ δουλεύοντων¹³). Homer¹⁴ speaks of θήτες ἡμιόες τε, the latter properly signifying those who became slaves by captivity. They are to be distinguished not only from all common slaves, but also from those persons who were in the condition of the Penestæ or Helots.¹⁵ The persons best known by the name of θήτες are the members of the fourth or lowest class at Athens, according to the political division of Solon (B.C. 594). Among other changes, he effected one of great importance, by abolishing, or at least abridging, the distinctions of caste or birth, and introducing in lieu of them distinctions of property. He distributed the people of Attica into four classes: the first consisting of those whose land afforded an annual income of 500 medimni of dry produce, or metretres of liquid, hence called πεντακισιμέδωνοι; the second of those whose annual profits were 380; the third, whose profits were 150; the fourth consisting of those whose incomes were less than 150. The fourth class, comprehending all the poor and labouring part of the citizens, were called θήτες. To each class were assigned certain rights and privileges on the one hand, and certain duties and liabilities on the other. As to the mode of taxation, see ΕΙΣΦΟΡΑ. The highest civil offices and military commands were reserved for the members of the first class. The second and third were appointed to form the national militia, the former constituting the cavalry, the latter the heavy-armed infantry; and certain minor civil offices were open to them. The lowest class was exempted from all direct taxation, and also excluded from all honours and dignities. In war they served as light troops (ψιλλοί), and, when naval service was required, as rowers in the ships. They, however, were admitted to vote in the ἐκκλησία, or general assembly, where magistrates were elected, and various other impor-

tant matters determined, though the business of the assembly was placed under the control of the senate of Four Hundred, and could not be held without its authority. Another important privilege conferred on the lowest class was the right of sitting as dicasts in the heliastic court, for which no farther qualification was requisite than that the party should be thirty years of age, and possessed of his full legal franchise. (*Vid.* DICASTES.) Before the time of Solon, all judicial power was vested in the superior magistrates. He first gave an appeal from their decisions to a court composed of a large number of citizens, which in process of time became the regular tribunal for the hearing of all civil causes, the superintendence or direction thereof (*ἡγεμονία δικαστηρίου*) being alone reserved to the magistrate. Such was the political condition of the lower classes at Athens as established by Solon. After his time a variety of causes operated to increase the power of the lower classes. Among these we may reckon, first, the reforms introduced by Clisthenes, who created the *δῆμοι*, altered the tribes, subdivided the heliastic court, broke the old aristocratical connexions, and increased the number of citizens by enfranchising aliens and slaves. Secondly, the Persian war caused the downfall of many wealthy families, who lost their possessions by the capture and sacking of the city; whereas the lower order of people, who served in the fleet, became elevated by their success, and rose in estimation by the value of the services they had rendered. This led to a measure which is said to have been passed by Aristides, which enabled the poorest citizen to aspire to the highest honours of the state; after which, all distinction of classes was gradually abolished; though a certain fortune appears to have been still requisite for the office of archon, if the question asked at the examination previous to his admission, *εἰ τὸ τίμημα αὐτῷ ἐστίν*, had not become a mere form.¹ Trade and commerce increased the number of operative citizens, brought large crowds of seamen and idlers into the Piræus and the city, who turned their attention to the public assemblies, where their numbers gave them a preponderance in the suffrage. The attendance of the poorer people in the ecclesia was still farther encouraged by a law which was introduced by Callistratus after the time of Pericles, by which every person who attended received a certain fee, first an obol, and afterward raised to three obols, called *μισθὸς ἐκκλησιαστικός*.² The remuneration given to the dicasts (an obol by the law of Pericles, but raised to three obols by Cleon) had the same effect as the assembly fee. The whole power of the state, judicial and administrative, which already resided in the multitude in theory, soon came to be exercised by them in practice, when (besides their natural love of power) they were stimulated to take upon themselves the performance of these duties by the prospect of immediate reward. The establishment of the theoric fund (*vid.* THEORICA) was another measure of democratic tendency, as it helped to maintain the idle poor at the public expense, and enabled them to interfere in state business. That the authority of the court of Areopagus, as well as that of the senate of Five Hundred, should be diminished, was the natural consequence of the measures and changes above mentioned. To trace the events, political and moral, which ensued from the democratic movements of the Athenians, belongs to history.³

The name of *θήσσα* was also given to a poor heiress at Athens, whom the next of kin was obliged to marry, or give her a suitable portion. (*Vid.* Suidas' and EPICLERUS.)

THIASOS (*θίασος*) signifies any company or assembly of persons met together for a religious purpose, such as a choir of bacchanals or dancers, a party met to celebrate a festival, &c. (*ἱερός χορός, ἀπὸ τοῦ θείου, ἢ ἀπὸ τοῦ ἐνθουσιᾶν· τὸ ἀθροίζεσθαι πλῆθος ἐπὶ τέλει καὶ τιμῇ θεοῦ.*¹ Compare DIONYSIA, p. 363.) The word appears to be derived from *σιός*, the Doric for *θεός*. Each member of a *θίασος* was called *θιασώτης*. In the democratic states of Greece there were religious associations called *θίασοι*, who clubbed together, kept a common fund, purchased land, &c., for religious purposes.² (*Vid.* ERANOS.)

THOLOS (*θόλος, ὁ* and *ἡ*, also called *οικίος*) is a name which was given to any round building which terminated at the top in a point, whatever might be the purpose for which it was used.³ At Athens the name was in particular applied to the new round Prytaneum near the senate-house, which should not be confounded with the old Prytaneum at the foot of the Acropolis.⁴ It was therefore the place in which the prytanes took their common meals and offered their sacrifices. It was adorned with some small silver statues,⁵ and near it stood the ten statues of the Attic *ἐπώνυμοι*. (*Vid.* EPONYMOI, PRYTANEION.)

Other Greek cities had likewise their public *θόλοι*: thus we find that Polyclethus built one of white marble at Epidaurus, the inside of which was adorned with paintings by Pausias. It was originally surrounded by columns, of which in the days of Pausanias six only were standing, and upon these were inscribed the names of such persons as had been cured of some disease by Asclepius, together with the name of the disease itself, and the manner in which they had obtained their recovery.⁶

THORAX. (*Vid.* LORICA.)

THORIA LEX. This agraria lex is the subject of a very elaborate essay by Rudorff, "Das Ackergesetz des Spurius Thorius, Zeitschrift, vol. x."

This lex was engraved on the back part of the same bronze tablet which contained the Servilia lex Judiciaria, and on Repetundæ. The tablet was broken at some unknown time, and the lower, which was perhaps the largest part, is now lost. Seven fragments of the upper part were preserved, which, as the tablet is written on both sides, make fourteen inscriptions, which were published by Fulvius Ursinus: the first five of the inscriptions, as they are numbered by him, belong to the lex Thoria, and the last seven to the lex Servilia. The largest and most important of the fragments are now in the Museo Borbonico. Their history is traced and their present condition described by Rudorff with great minuteness. Two of the fragments were copied by Sigonius when they were in the Museum of Cardinal Bembo; and the copy of the two fragments of the lex Thoria, and also the copy of the two fragments of the lex Servilia, are printed in the work of Sigonius, *De Antiquo Jure Populi Romani, Libri Undecim, Bononiæ, 1574*.

The title of this lex does not appear from the mutilated inscription, but Rudorff shows that the lex belongs to the period between the consulship of P. Cornelius Scipio Nasica and L. Calpurnius Piso Bestia, B.C. 111, and that of L. Julius Caesar, B.C. 90, within which space of twenty-two years five agrarian laws were enacted, Boria, Thoria, Marcia, Apuleia, and Titia. It farther appears, from com-

1. (l. c.)—2. (Suidas, Harpocr., and Hesych., s. v.)—3. (Böckh, Staatsh., &c., i., 204.—Schömann, Ant. Jur. Publ. Gr., 305.)—4. (Hesych. and Suidas, s. v. *Θόλος*.—Hom., Od., xxi., 442, 459, 466.)—5. (Paus., i., 5, § 1; 18, § 13.)—6. (Pollux, Onom., viii., 155.—Demosth., De Fals. Leg., p. 419.)—7. (Paus., ii., 17, § 3.)

paring two passages of Cicero,¹ in which he speaks of the lex Thoria, with the fragments of this lex whose title is lost, that the fragments are those of the lex Thoria. Now the date of the lex Thoria is fixed by Rudorff at the year of the city 643, or B.C. 111, which is, consequently, the date of the lex on the bronze tablet, thus identified with the lex Thoria. Proceeding on the assumption that the fragmentary lex was the plebiscitum called the lex Thoria, Sigonius restored the beginning of it according to the usual form of Roman plebiscita: Sp. Thorivs . . . F. Tr. Pl. Plehem ivre rog. Plebesque ivre scivit Trihvs . . . Principvm fvit pro trihv Q. Fabivs. Q. F. primvs scivit.

The history of this inscription is curious. It was not cut on the rough back of the bronze tablet till after the other side, which is smooth, had been occupied by the Servilia lex. The Servilia lex is certainly not of earlier date than the year of the city 648, or B.C. 106, and, consequently, the Thoria could not have been cut on this tablet before the year 648. It seems that the tablet was large enough for the lex Servilia, for which it was intended, but much too small for the agrarian law: "consequently, the characters of the agrarian side of the tablet are remarkably small, the lines narrow, the abbreviations numerous, and the chapters only separated by two or three points, whereas on the other side the letters are uniform, large, and well made, the lines wide, the words written at full length, and the chapters of the lex separated by superscriptions. Farther, the lines (of the Agraria lex) are often so oblique that they cross the straight lines on the opposite side, which are cut very deep, and, consequently, are visible on the side on which the agrarian lex is cut." (Rudorff.)

The subject-matter of this lex cannot be stated without entering into detail: the whole is examined by Rudorff with great care. The main subject of the lex, to which the first eighteen chapters or forty-three lines refer, is the public land in Italy as far as the rivers Rubico and Macra. The second part of the lex begins with the nineteenth chapter and the forty-fourth line, and extends to the fiftieth chapter and the ninety-sixth line: this part of the lex relates to the public and private land in the province of Africa. The third and last part of the lex, from the fiftieth chapter and the ninety-sixth line to the end of the inscription, relates to the Roman public land in the territory of Corinth.

Rudorff concludes that the lex applied to other land also, and for two reasons. First, the Roman agrarian laws of the seventh century of the city related to all the provinces of the Empire, of which we have an example in the case of the lex Servilia of Rullus. Secondly, the fragment of the lex Thoria which is preserved is so broad compared with the height, that we may conclude that the complete tablet contained three times as much as it does now; for nearly all the bronze tablets on which Roman laws are cut are of an oblong form, with the height much greater than their width. Of the two thirds of the tablet which it is concluded have been lost, not a trace has yet been discovered.

The essay of Rudorff contains a copy of the inscription, with his restoration of the passages that are defaced. The value of this attempt can only be estimated by an investigation as complete as that of the author.

*THOS (θῶς). "Hardouin," remarks Adams, "upon the authority of Bochart and others, holds the improbable opinion that the *Thos* was the *Papio* or Baboon. Buffon concludes, with greater probability, that it was the *Canis aureus*, L.; he maintains, however, that it is not the same as the *Lupus*

cervarius, although generally held to be so. The *Lupus cervarius* is, as he remarks, the same as the *Chaus* of Pliny, which is our lynx or stag-wolf, no character of which agrees with the *Thos*."²

THRANITAI (θρανῖται). (Vid. SHIPS, p. 893.)

THRACES. (Vid. GLADIATORES, p. 477.)

*THRAUPIS (θραυπίς), the name of a bird mentioned by Aristotle, and the same, probably, with the Goldfinch, or *Fringilla carduelis*.²

*THRAUPALUS (θραυπαλος), a plant, either the *Viburnum lantana*, Mealy Guelder-rose or Way-faring-tree according to Sprengel, or the *Viburnum opulus*, common Guelder-rose or Water-elder according to Stackhouse.²

*THRIDAX, the Lettuce. (Vid. LACTUCA.)

*THRIDACINE. (Vid. LACTUCA.)

*THRISSA (θρίσσα), a species of fish, the *Chupea alosa*, or Shad. Ausonius states that in his time it was used only by the lower ranks for food.⁴

THRONUS, the Greek θρόνος, for which the proper Latin term is *solium*, a Throne. This did not differ from a chair (καθέδρα) (vid. CATHEDRA, SELLA) except in being higher, larger, and in all respects more magnificent.⁵ On account of its elevation, it was always necessarily accompanied by a footstool (*subsellium*, ὑποπόδιον, Att. θρόνον, Ion. θρόνον). Besides a variety of ornaments, especially naöls or studs of silver, bestowed upon the throne itself, it was often covered with beautiful and splendid drapery.⁷ (Vid. TAPES.) The accompanying woodcut shows two gilded thrones, with

cushions and drapery, represented on paintings found at Resina.⁶ These were intended to be the thrones of Mars and Venus, which is expressed by the helmet on the one and the dove on the other.

All the greater gods were sometimes represented as enthroned, especially Jupiter, Juno, Mars, Venus, Minerva, Diana, Ceres, Cybele, Neptune, Æsculapius, and Apollo. This was in imitation of the practice adopted by mortals, and more particularly in Asia, as in the case of Xerxes⁸ and of the Parthians.¹⁰ When the sitting statue of the god was colossal, the throne was, of course, great in proportion, and consequently presented a very eligible field for the display of sculpture and painting. As early as the sixth century before Christ, Bathycles of Magnesia thus decorated the throne of the Amyclæan Apollo. Instead of legs, it was sustained both before and behind by four statues, representing two Graces and two Hours. It was elevated upon a basement (βάθρον). Being of the size of a considerable temple, and open all round so that persons might walk under it, it was covered with bas-reliefs both outside and inside. Not less than fifty or sixty mythological subjects were thus displayed in separate compartments, besides many distinct fig-

1. (Hardouin ad Plin., viii., 52.—Aristot., II. A., ii., 12.—Id. ib., vi., 29.—Adams, Append., s. v.)—2. (Aristot., H. A., viii., 5.)—3. (Theophrast., H. P., iii., 6.—Id. ib., iv., 1.—Adams, Append., s. v.)—4. (Aristot., H. A., ix., 35.—Elian, N. A., vi., 32.—Adams, Append., s. v.)—5. (Athen., v., p. 192, c.)—6. (Hom., II. xiv., 240.—Od., i., 131.—Id., x., 315.)—7. (Hom., Od., xx., 150.)—8. (Ant. d'Ercol., i., tav. 99.)—9. (Philostr., Imag., ii., 31.)—10. (Claud. in iv. Cons. Honor., 214.)

tres placed about it.¹ The throne of the Olympian Jupiter, the work of Phidias and Panæus, was constructed and ornamented in a similar manner, but was closed instead of being open all round, and consisted of the most valuable materials, viz., ivory, ebony, gold, and precious stones.² As a chair for common use was sometimes made to hold two persons,³ and a throne shared by two potentates (*διπρον*), so two divinities were sometimes supposed to occupy the same throne.⁴ Besides those belonging to the statues of the gods, the thrones of monarchs were sometimes deposited in the temples as DONARIA.⁵

The following woodcut, taken from a fictile vase

in the Museo Borbonico at Naples, represents Juno seated on a splendid throne, which is elevated, like those already described, on a basement. She holds in her left hand a sceptre, and in her right the apple, which Mercury is about to convey to Paris with a view to the celebrated contest for beauty on Mount Ida. Mercury is distinguished by his TALARRIA, his CADUCEUS, and his petasus thrown behind his back and hanging by its string. On the right side of the throne is the representation of a tigress or panther.

The elevated seat used by a schoolmaster was called his throne.⁷

*THUS. (*Vid. LIBANOTUS.*)

*THYA (*θύα, θύα, θυεία*), a species of tree, the timber of which was fragrant. "Botanical authorities agree in referring it to the *Arbor vitæ*; that is, either to the *Thya aphylla* according to Stackhouse, or the *Thya articulata* according to Sprengel. Most probably it is the *θύον* of Homer."⁸

*THYITES LAPIS. "Galen," says Adams, "describes the Thyites of Dioscorides as being of a greenish colour, like jasper. It would appear that it was a variety of *turquoise*, but not the kind in common use. It is the *callais* of Pliny, and hence the turquoise is called by Fisher and Jameson *callaites*."⁹

*THYMALLUS (*θύμαλλος*), a species of fish, the *Salmo Thymallus*, L., called in English the Grayling or Umber. "The *Umbra* of Ausonius would appear to have been a variety of it. Ardi makes the *θύμαλλος* to have been a species of *Coregonus*; but the learned writer of the article on Ichthyology in the *Encyclopédie Methodique*, and Schneider, in his commentary on *Ælian*, rank it as a species of *Salmo*. Daniell says that the name *Thymallus* is given to this fish on account of an imaginary scent proceeding from it, resembling thyme, and that it is

more appropriately called *Umbra*, from its being so swift in summer as to disappear like a passing shadow."¹

*THYMBRA (*θύμβρα*), a plant. "Stackhouse seems to be the only authority who refers it to the *Thymbra capitata*; all the others are satisfied that it is the *Satureia Thymbra*, or Savory. Aristophanes alludes to the use of savory as a condiment."²

*THYMELEA (*θυμελαία*). "Modern botanists," says Adams, "by a frequent change of names, have occasioned some difficulty in determining accurately to which genus and species the *θυμελαία* is to be referred. It was most probably the *Daphne Cnidium*, or Flax-leaved Daphne. Botanists call this tribe of plants *Thymelææ*. The fruit of the *θυμελαία* is usually named *κόκκος Κνιδίου*."³

THYMELE (*θυμέλη*). (*Vid. THEATRUM*, p. 968.

*THYMUS (*θύμος*), the *Thymus vulgaris*, or Common Garden Thyme, according to most authorities Matthioli alone suggests that it is the *Thymus Creticus*, which is the *Satureia capitata*, L.⁴

*THYNNUS (*θύννος*), a fish, the *Scomber Thynnus*, L., Spanish Mackerel, Albicore, or Tunny-fish. According to Coray, its French name is *Thorr*. "The tunny is one of the largest sea fishes. Aristotle speaks of an old individual which weighed fifteen talents, or twelve hundred pounds, and which measured two cubits and a palm from one point to another of the caudal fin. This measure, too, is a correction of Gaza's in his first editions, and after Pliny. The majority of the manuscripts of Aristotle say five cubits, and Hardouin, always prone to paradox, believed that it was Pliny who ought to have been corrected. Five cubits for this part would give a length of at least twenty or twenty-two feet for the entire fish. The fishery of the tunny dates from the highest antiquity. Euthydemus even attributes some verses to Hesiod, in which he describes the trade and exportation of it. But Athenæus, who quotes them, proves, at the same time, that they must of necessity have been the production of a much later poet. It was more especially at the two extremities of the Mediterranean, at the places where this sea contracts its channel, and where the migratory fishes are forced to come more closely in contact with each other, that the largest tunny-fisheries took place. In the East, the Black Sea presented these fish with an abundant degree of aliment, in consequence of the number of rivers which run into it. They repaired thither in crowds in the spring-time for the purpose of spawning, and Aristotle even believed that they did not multiply elsewhere. They remained there during the summer, and it was on their passage to the Bosphorus that such rich captures were made of them. According to the very detailed account of Strabo, their reproduction took place in the Palus Mæotis. They followed the coast of Asia Minor, and the first were taken at Trebizonde and Pharnacia; but they were then but small. At Sinope they had already attained a size large enough for salting; and that town, built upon an isthmus, and admirably situated for this fishery, derived immense profits from it. But it was more especially the city of Byzantium that was enriched by this fish. The shoals of them that entered into the Bosphorus, near Chalcedon, met with a white rock which terrified them, and induced them to turn on the side of Byzantium, and to enter into the bay which now forms the port of Constantinople. This prodigious quantity of fish still arrives at Constantinople at the present day, as in the time of the ancients. Gyllius

speaks of them in terms well calculated to excite astonishment. The tunny-fishery was still more ancient in the West. The Phœnicians had established it very early on the coasts of Spain, and prosecuted it with great activity, both without and within the columns of Hercules. Accordingly, we find the tunny appear on the Phœnician medals of Cadiz and Carteia. From that period this species of industry was extended and perpetuated along these coasts. The salted preparations of fish of Spain, as well as of Sardinia, were considered in the time of the Romans as much more tender and of a more agreeable flavour than those of Byzantium. These preparations, too, sold at a higher price. Their savoury quality was attributed to the quantity of acorns which fell from a small species of oak very common on these coasts; and the people were led to believe that it was at the bottom of the sea itself that the oaks grew which produced these acorns, but which, in all probability, are nothing but fucus. The tunnies which removed farther towards the Straits of Gibraltar became more and more thin, because they no longer found this sort of aliment. Strabo, in his Geography, carefully marks the places where men were stationed to give notice of the arrival of these fish, in the very same manner as is done in our own times. These stations were called *θυνοσκοπεῖα*, 'look-out places for tunnies.' The fishery was carried on very nearly in the same way as in our days. The description given us by Ælian of that which took place along the coasts of the Euxine entirely resembles what is reported by Duhamel of the tunny-fishery as practised at Collioure. Particular names were given to the tunnies of different ages. The *Scordyla*, or, as it was called at Byzantium, *Auzis*, was the young tunny, when it first issued from the Euxine Sea in autumn. The *Pelamys* was the tunny in a more advanced age, when it returned to that sea in the spring. The very large tunnies bore the name of *Oryzni*, and there were some so gigantic as to have been ranged among the cetacea. These large *oryzni*, according to Dorian in Athenæus, were considered to come from the ocean. This was the reason why there were more of them near the coasts of Spain and in the Tuscan Sea, and it was supposed that they did not return into the more Eastern seas. In modern times, the tunny-fishery, without having diminished in product, is almost concentrated in the interior of the Mediterranean. It is no longer carried on upon a grand scale at Constantinople, nor on the Black Sea, since the establishment of the Turks in those fine countries. The fisheries on the coast of Spain, without the Straits, were supported for a longer time. Those of Conil, near Cadiz, and of the castle of Sara, near Cape Spartel, were particularly celebrated, and produced great revenues to the Dukes of Medina and Sidonia, their privileged proprietors. More than five hundred men were employed in them; but they are now fallen into decay, partly through bad management, and partly, as is said, because the earthquake, which destroyed Lisbon in 1755, has changed the nature of the coast, and determined the tunnies to seek in preference the shores of Africa. At the present day, it is in Catalonia, in Provence, in Sicily, Sardinia, and Liguria, that this fishery is most actively carried on, and yields the most abundant results.¹

THYRSUS (*θύρσος*), a pole carried by Bacchus, and by Satyrs, Mænades, and others who engaged in Bacchic festivities and rites.² (Vid. DIONYSIA, p. 363.) It was sometimes terminated by the apple of the pine or fir-cone (*κωνοφόρος*), that tree (*πενκη*) being dedicated to Bacchus in consequence of the

use of the turpentine which flowed from it, and also of its cones in making wine.³ The monuments of ancient art, however, most commonly exhibit, instead of the pineapple, a bunch of vine or ivy leaves,⁴ with grapes or berries, arranged into the form of a cone. The annexed woodcut, taken from a marble

ornament,⁵ shows the head of a thyrsus composed of the leaves and berries of the ivy, and surrounded by acanthus-leaves. Very frequently, also, a white fillet was tied to the pole just below the head, in the manner represented in the woodcut on p. 96, where each of the figures holds a thyrsus in her hand. See also the woodcut to FUNAMBULUS.⁶ (Vid. INSTITA.) The fabulous history of Bacchus relates that he converted the thyrsi carried by himself and his followers into dangerous weapons, by concealing an iron point in the head of leaves.⁷ Hence his thyrsus is called "a spear enveloped in vine-leaves,"⁸ and its point was thought to incite to madness.⁹

TIA'RA or TIA'RAS (*τίαρα* or *τιάρας*, Att. *κυρβάσια*), a hat with a large high crown. This was the headdress which characterized the northwestern Asiatics, and more especially the Armenians,¹⁰ the Parthians, and the Persians,¹¹ as distinguished

from the Greeks and Romans, whose hats fitted the

head, or had only a low crown. The Mysian hat, or "Phrygian bonnet," as it is now called (*vid.* Prælus, p. 778), was a kind of tiara,¹ formed with lappets to be tied under the chin,² and dyed purple.³

The King of Persia wore an erect tiara, while those of his subjects were soft and flexible, falling on one side.⁴ He was also distinguished by the splendid colours of his tiara,⁵ and by a *DIADEMA* which encircled it, and which was variegated with white spots upon a blue ground. The Persian name for this regal headdress was *cidaris*⁶ (*κίδαρις* or *κίταρις*). The preceding woodcut shows the *cidaris* as represented on a gem in the Royal Cabinet at Paris, and supposed by Caylus to be worn by a sovereign of Armenia.⁷ From a very remote period⁸ down to the present day, the tiara of the King of Persia has been commonly adorned with gold and jewelry.

TIBIA (*αὐλός*), a Pipe, the commonest musical instrument of the Greeks and Romans. It was very frequently a hollow cane perforated with holes in the proper places.⁹ In other instances it was made of some kind of wood, especially box, and was bored with a gimlet (*τερεβρά βυζο*¹¹). The Phœnicians used a pipe, called *gingrus* or *αὐλός γιγγραῖνος*, which did not exceed a span in length, and was made of a small reed or straw.¹² The use of the same variety in Egypt is proved by specimens in the British Museum, which were discovered in an Egyptian tomb.

When a single pipe was used by itself, the performer upon it, as well as the instrument, was called *monaulos*.¹³ *μόναυλος*.¹⁴ Thus used, it was much in fashion at Alexandria.¹⁵ When its size became considerable, and it was both strengthened and adorned by the addition of metallic or ivory rings,¹⁶ it must have been comparable to the flageolet, or even to the clarinet of modern times. Among the varieties of the single pipe, the most remarkable were the bagpipe, the performer on which was called *utricularius*¹⁷ or *ὠσκαύλης*,¹⁸ and the *αὐλός πλάγιος* or *πλαγίανυλος*,¹⁹ which, as its name implies, had a mouthpiece inserted into it at right angles. Its form is shown in a restored terminal statue of Pan in the Townley collection of the British Museum. Pan was the reputed inventor of this kind of tibia,²⁰ as well as of the *fistula* or *Syrinx*.

But among the Greeks and Romans it was much more usual to play on two pipes at the same time. Hence a performance on this instrument (*tibicini*²¹), even when executed by a single person, was called *cane* or *cantare tibis*.²² This act is exhibited in very numerous works of ancient art, and often in such a way as to make it manifest that the two pipes were perfectly distinct, and not connected, as some have supposed, by a common mouthpiece. We see this more especially in two beautiful paintings, which were found at Resina and Civitā Vecchia, and which represent Marsyas teaching the young Olympus to play on the double pipe.²³ The *tibia pares* in the British Museum, which were found with a lyre in a tomb at Athens, appear to be of cedar. Their length is about 15 inches. Each of

them had a separate mouthpiece (*γλῶσσοι*), and, besides the hole at the end, it has five holes along the top and one underneath. The circumstance of these three instruments being found together is in accordance with the fact that they are very commonly mentioned together by ancient authors;²⁴ and the reason of this was, that performances on the double pipe were very frequently accompanied by the music of the lyre.²⁵ The mouthpieces of the two pipes often passed through a *CAPISTRUM*. (*Vid.* *PHORBEIA*.) (See woodcut, p. 454.)

Three different kinds of pipes were originally used to produce music in the Dorian, Phrygian, and Lydian modes. (*Vid.* *MUSIC*, p. 648.) About the third century B.C., Ptolemy, the Theban, invented adjustments (*ἀρμονίαι*) by which the same set of pipes might be fitted to all the modes.²⁶ In what these adjustments consisted we are not clearly informed. Probably stopples or plugs (*δύμοι*) were used for this purpose. (*Vid.* *AULOS*.) It appears also that, to produce the Phrygian mode, the pipe had only two holes above (*biforis*²⁷), and that it terminated in a horn bending upward.²⁸ It thus approached to the nature of a trumpet, and produced slow, grave, and solemn tunes. The Lydian mode was much quicker, and more varied and animating. Horace mentions "Lydian pipes" as a proper accompaniment when he is celebrating the praise of ancient heroes.²⁹ The Lydians themselves used this instrument in leading their troops to battle; and the pipes employed for the purpose are distinguished by Herodotus³⁰ as "male and female," i. e., probably bass and treble, corresponding to the ordinary sexual difference in the human voice. The corresponding Latin terms are *tibia dextra* and *sinistra* (*λαῖα*³¹): the respective instruments are supposed to have been so called, because the former was more properly held in the right hand, and the latter in the left. The "*tibia dextra*" was used to lead or commence a piece of music, and the "*sinistra*" followed it as an accompaniment. Hence the former was called *incitativa*, the latter *suicentiva*.³² The comedies of Terence having been accompanied by the pipe, the following notices are prefixed to explain the kind of music appropriate to each: *tibis paribus*, i. e., with pipes in the same mode; *tib. imparibus*, pipes in different modes; *tib. duabus dextris*, two pipes of low pitch; *tib. par. dextris et sinistris*, pipes in the same mode, and of both low and high pitch.

The use of the pipe among the Greeks and Romans was threefold, viz., at sacrifices (*tibia sacrificæ*), entertainments (*ludicræ*;³³ woodcut, p. 276), and funerals³⁴ (see p. 650). 1. A sacrifice was commonly attended by a pipe (*tibicen*;³⁵ woodcut, p. 897), who partook of the food offered, so that "to live like a piper" became a proverb applied to those who maintained themselves at the expense of other people.³⁶ 2. The worshippers of Bacchus,³⁷ and still more of Cybele, used the Phrygian pipe, the music of which was on this account denominated *τὸ Μητρῶον αὐλήμα*.³⁸ 3. At public entertainments the *tibicines* were tunes reaching down to their feet,³⁹ as is exemplified in the woodcut at p. 240. In conformity with the use of this kind of music at public festivals, a band of *tibicines* preceded a Roman general when he triumphed.⁴⁰ 4. The gravity and solemnity of the Phrygian pipes, which adapted them to the worship of Cybele, also caused them to be used at fu-

nerals.¹ The pipe was the instrument principally used to regulate the dance (*vid.* SALTATIO), whether at sacrifices, festivals, or private occasions in domestic life;² by means of it, also, the rowers kept time in a trireme.³

Notwithstanding the established use of the pipe for these important purposes, it was regarded, more especially by the Athenians, as an inelephant instrument, greatly inferior to the lyre.⁴ Horace, however, represents Clio as performing, according to circumstances, either on the lyre or the pipe;⁵ and it is certain that the pipe was by no means confined anciently, as it is with us, to the male sex, but that *αὐλητρίδες*, or female tibicines, were very common.⁶ The Thebans always esteemed this instrument, and excelled greatly in the use of it.⁷

TIBICEN. (*Vid.* TIBIA.)

TIGNI IMMITTENDI SERVITUS. (*Vid.* SERVITUDES, p. 878.)

*TIGRIS (τίγρις), the Tiger, or *Felis Tigris*, L. "The Greeks would appear to have got acquainted with the tiger during Alexander's expedition into Asia, for it is first mentioned by Aristotle. According to Varro, the word is borrowed from the Armenian language, and signifies an arrow or a rapid river."⁸

*TIKT'OI AIO'OI (τίκτοι λίθοι), Prolific Stones. "By prolific or pregnant stones," says Adams, "were meant stones containing a nucleus within, such as the eagle-stone. (*Vid.* ΑΕΤΙΤΕΣ.) Dioscorides describes it thus: *ἀετίτης λίθος ὡς ἑτέρον ἐγκύων λίθου ὑπάρχων*. These stones were at one time famous for their reputed powers in aiding delivery, preventing abortions, &c.; but this superstitious belief appears to have been of later origin than the age of Theophrastus."⁹

*TIL'IA. (*Vid.* PHYLIRA.)

TIMEMA (τίμημα). The penalty imposed in a court of criminal justice at Athens, and also the damages awarded in a civil action, received the name of *Τίμημα*, because they were *estimated* or *assessed* according to the injury which the public or the individual might respectively have sustained. The penalty was either fixed by the judge, or merely declared by him according to some estimate made before the cause came into court. In the first case the trial was called *ἀγὼν τιμητός*, in the second case, *ἀγὼν ἀτίμητος*, a distinction which applies to civil as well as to criminal trials.

It is obvious that, on a criminal charge, two inquiries have to be made: first, whether the defendant is guilty; secondly, if he be found guilty, what punishment ought to be inflicted upon him. It may be advisable to leave the punishment to the discretion of the judge, or it may not. In some cases the Athenian lawgiver thought that the judge ought to have no discretion. Thus, in cases of murder and high treason, sentence of death was imposed by the law and only pronounced by the judge (*vid.* ΦΟΝΟΣ, ΠΡΟΠΟΣΙΑ), and in many other cases the punishment was likewise fixed by the law. But where the exact nature of the offence could not be foreseen by the lawgiver, or it might so far vary in its character and circumstances as to admit of many degrees of culpability, it might be desirable or even necessary to leave the punishment to the discretion of the judge. The law then directed that the same court which passed sentence on the culprit should forthwith impose the penalty which his crime deserved.

Thus, in the νόμος ὕδρεως,¹ it is enacted: *δῶν δὲ καταγνῶ ἢ ἡλίαια, τιμῶτω περὶ αὐτοῦ παραχρήμα, δῶν ἂν δόξῃ ὕδιος εἶναι παθεῖν ἢ ἀποτίσαι*, where *ἀποτίσαι* refers to pecuniary penalties, *παθεῖν* to any other sort of penalty, as death, imprisonment, &c. Sometimes a special provision was made as to the means of enforcing the punishment; as in the law last cited, and also in the laws in Demosthenes,² it is declared that, if a fine be imposed, the party shall be imprisoned until it is paid.

In civil causes, the sentence by which the court awarded redress to the injured party would vary according to the nature of his complaint. Where he sought to recover an estate in land, or a house, or any specific thing, as a ring, a horse, a slave, nothing farther was required than to determine to whom the estate, the house, or the thing demanded, of right belonged. (*Vid.* HERES, GREEK; ΟΙΚΤΑΣ ΔΙΚΗ.) The same would be the case in an action of debt, *χρέους δίκη*, where a certain sum was demanded; as, for instance, where the plaintiff had lent a sum of money to the defendant, and at the trial no question was made as to the amount, but the dispute was whether it was a loan or a gift, or whether it had been paid or not. So, in an action for breach of contract, if, by the terms of the contract, a certain penalty had been attached to its violation, it would be unnecessary to have an inquiry of damages, they being already liquidated by the act of the parties themselves.³ In these and many other similar cases the trial was *ἀτίμητος*. On the other hand, wherever the damages were in their nature *unliquidated*, and no provision had been made concerning them either by the law or by the agreement of the parties, they were to be assessed by the dicasts.

The following was the course of proceeding in the *τιμητοὶ ἀγῶνες*.

Let us suppose that on a criminal prosecution the defendant had been found guilty. The superintending magistrate then called upon the prosecutor to say what punishment he proposed to be inflicted on him, and what he had to say thereupon. The bill of indictment (*ἐγκλημα*) was always superscribed with some penalty by the person who preferred it. He was said *ἐπιγράφειν τιμήμα*, and the penalty proposed is called *ἐπίγραμμα*.⁴ We find also the expressions *ἐπάγειν τιμήμα*, *τιμᾶσθαι τῷ φεύγοντι*, *τιμῆσιν ποιεῖσθαι*. When a charge was brought, not by a private individual, but by a magistrate *ex officio*, the law required him in like manner to write down the penalty which he thought the case merited.⁵ The prosecutor was now called upon to support the allegation in the indictment, and for that purpose to mount the platform and address the dicasts (*ἀναβαίνειν εἰς τιμήμα*).

Here he said whatever occurred to him as likely to aggravate the charge, or incense the dicasts against his opponents. He was not bound, however, to abide by the proposal made in the bill, but might, if he pleased (with the consent of the court), ask for a lower penalty than he had demanded before. This was often done at the request of the defendant himself or of his friends; sometimes from motives of humanity, and sometimes from prudential considerations. If the accused submitted to the punishment proposed on the other side, there was no farther dispute; if he thought it too severe, he made a counter proposition, naming the penalty (commonly some pecuniary fine) which he considered would satisfy the demands of justice. He was then said *ἀντιτιμᾶσθαι* or *ἐαυτῷ τιμᾶσθαι*.⁶ He was

1. (Statue, Thob., vi., 120.—Compare Joseph., B. J., iii., 8, 5.—St. Matth., ix., 23.)—2. (Herod., vi., 129.)—3. (Max. Tyr., 23.)—4. (Plutarch, Alcib., p. 351.—Gell., N. allowed to address the court in mitigation of punishment; to say what he could in extenuation of his offence, or to appeal to the mercy of his judges. This was frequently done for him by his relatives and friends; and it was not unusual for a man who thought himself in peril of life or freedom, to produce his wife and children in court to excite compassion.¹ After both parties had been heard, the dicasts were called upon to give their verdict.

Here occurs a question about which there has been much difference of opinion, and which it is impossible to determine with any certainty, viz., whether the dicasts, in giving this verdict, were confined to a choice between the estimates of the opposing parties, or whether they had a discretion to award what punishment they pleased. Without entering upon any controversial discussion, the following appears to the writer the most probable view of the matter.

The dicasts had no power of discussing among themselves, or agreeing upon the fine or penalty to be awarded. Such power was incompatible with their mode of voting by ballot. (*Vid. Psephos.*) At the same time, it would be absurd to suppose that the Athenian court had no means of controlling the parties in the exercise of that privilege which the law gave them, or that it was the common practice for the parties to submit widely different estimates to the dicasts, and leave them no alternative but the extreme of severity on the one side, and the extreme of mercy on the other. Many passages in the orators are opposed to such a view, and especially the words of Demosthenes.²

The course of proceeding seems to have been as follows. The prosecutor usually superscribed his indictment with the highest penalty which the law or the nature of the case would admit of. In the course of the trial, there might be various indications on the part of the dicasts of a disposition to favour one side or the other. They often exhibited their feelings by vehement gestures, clamour, interruption, and questioning of the parties. It was not unusual for the speakers to make allusions to the punishment before the first verdict had been given.³ All this enabled both parties to feel the pulse of the court before the time had arrived for the second verdict. If the prosecutor saw that the dicasts were greatly incensed against his opponent, and he himself was not mercifully inclined, he would persist in asking for the highest penalty. If he was himself disposed to be merciful, or thought that the dicasts were, he would relax in his demand. Similar views would prevent the defendant from asking for too small a penalty, or would induce him to effect a compromise (if possible) with his opponent. We may reasonably suppose that it was competent for the prosecutor to mitigate his demand at any time before the magistrate called on the dicasts to divide; but not after, without the consent of the court.⁴ If the parties were endeavouring to come to an arrangement, the court would give them a reasonable time for that purpose; and there is reason to believe that the petitions addressed by the defendant or his friends to the prosecutor were made aloud in the hearing of the dicasts. As to the suggested explanation of *τιμῶν τὴν μακράν*, see *Psephos*. We cannot doubt that in case of heinous offences, or those which immediately concerned the state, the court would not permit of a compromise between the opposing parties; but in ordinary

cases, a public prosecutor was looked on by the Athenians much in the light of a plaintiff, especially where his object was to obtain some penalty given by the law to an informer. When the parties could not come to terms, the dicasts, after hearing what each of them had to say, divided on their respective propositions, and the majority of votes determined the penalty.⁴

The course thus pursued at Athens must have led to injustice occasionally, but was, perhaps, the only course that could be adopted with so large a number of judges. Aristotle tells us that Hippodamus of Miletus (who no doubt perceived the evils of this system) proposed that the verdict should not be given by ballot (*διὰ ψηφοφορίας*), but that each judge should bring in a tablet with a special statement of his opinion; upon which proposal Aristotle remarks, that its effect would be to make each judge a *δικαιητής*: that it was an object with most of the ancient lawgivers that the judges should not confer with each other (*κοινολογῶνται*), and then he comments on the confusion that would arise if the judge were allowed to propose a penalty different from that submitted to him by the parties.⁵

As a general rule, only one penalty could be imposed by the court, though the law sometimes gave more than one.⁶ Sometimes the law expressly empowered the jury to impose an additional penalty (*προστιμῆμα*) besides the ordinary one. Here the proposition emanated from the jury themselves, any one of whom might move that the punishment allowed by the law should be awarded. He was said *προστιμᾶσθαι*, and the whole dicasts, if (upon a division) they adopted his proposal, were said *προστιμᾶν*.⁴ We may observe, that the preposition *πρός* in the verb *προστιμᾶν* does not always imply that a second penalty is imposed, but is sometimes used with reference to other matters, as in Demosthenes.⁶

In private actions, the course of proceeding with respect to the assessment of damages was much the same as described above. In some cases, where the plaintiff's demand was made up of several charges, or arose out of various matters, he would give in his bill of plaint a detailed account, specifying the items, &c., instead of including them in one gross estimate. This seems to have been considered the fairer method, and may be compared to our *bill of particulars*, which the plaintiff delivers to the defendant.⁶ The liability of the plaintiff to *ἐπιδέλεια*, which was calculated upon the sum demanded, operated as a check upon exorbitant demands, in addition to that which we have already noticed.⁷

The *προστιμῆσις* rarely occurred in private actions, except in those where the wrongful act complained of had the character of a public offence, as in the *δίκη ψευδομαρτυρίων*. (*Vid. Martyria.*)

As to *Τίμημα* in the sense of the rateable value of property with reference to the Athenian property-tax, see Eusebius.

TINTINNABULUM (*κῶδων*), a Bell. Bells were used for a great variety of purposes among the Greeks and Romans, which it is unnecessary to particularize here. One use, however, of them, for the purpose of keeping watch and ward in the fortified cities of Greece, deserves mention.⁹ A guard (*φύλαξ*) being stationed in every tower, a *περίπολος* (see p. 406) walked to and fro on the portion of the wall between two towers. It was his duty to carry

1. (Demosth., c. Mid., 573, 575; c. Aristocr., 793.—De Fals. Leg., 431, 434; c. Oretor., 878; c. Aprob., 834.—Aristoph., Vesp., 560.)—2. (c. Timocr., 737.)—3. (*Æsch.*, c. Timarch., 12; De Fals. Leg., 48, ed. Steph.—Demosth., c. Mid., 523; c. Boet. de Dot., 1022, 1024; c. Spud., 1033; c. Macart., 1060; c. Steph., 1128.—Platner, Proc. and Klag., i., 384.)—4. (Demosth., c. Nicost., 1252, 1254; c. Theocrin., 1343; c. Neem., 1347.)

1. (Platner, Proc. and Klag., i., 198–202.—Meier, Att. Proc., 178–182.)—2. (Aristot., Polit., ii., c. 5, s. 3, 8, 9.)—3. (Demosth., c. Lept., 504; c. Neem., 1363.)—4. (Id., c. Timocr., 735.—Meier, Att. Proc., 183, 725.)—5. (c. Aristot., 790.)—6. (Id., c. Aprob., 853.)—7. (Böckh, Staatsh. der Athen., i., 388.)—8. (Staatsh., etc., i., 402, &c.)—9. (Thucyd., iv., 135.—Aristoph., Aves, 843, 1150.—Schol. in loc.)

the bell, which he received from the guard at one tower, to deliver it to the guard at the next tower, and then to return, so that the bell, by passing from hand to hand, made the circuit of the city. By this arrangement it was discovered if any guard was absent from his post, or did not answer to the bell in consequence of being asleep. Hence, to prove or try a person was called *κωδωνίζεω*;¹ to perform the office of patrol was *κωδωνοφορεῖν*.

The forms of bells were various in proportion to the multiplicity of their applications. In the Museum at Naples are some of the form which we call bell-shaped; others are more like a Chinese gong. The bell fig. 1, in the annexed woodcut, is a simple disc of bell-metal; it is represented in a painting as hanging from the branch of a tree.² Figure 2 represents a bell of the same form, but with a circular hole in the centre, and a clapper attached to it by a chain. This is in the Museum at Naples, as well as the bell fig. 3, which in form is exactly like those still commonly used in Italy to be attached to the necks of sheep, goats, and oxen. Fig. 4 is represented on one of Sir W. Hamilton's vases,³ as carried by a man in the garb of Pan, and probably for the purpose of lustration.⁴ Figure 5 is a bell, or, rather, a collection of twelve bells, suspended in a

frame, which is preserved in the Antiquarium at Munich. This jingling instrument, as well as that represented by fig. 6,⁵ may have been used at sacrifices, in Bacchanalian processions, or for lustration. Fig. 7 is a fragment of ancient sculpture, representing the manner in which bells were attached to the collars of chariot-horses.⁶

*TIPPE (*ρίση*), a variety of the *Triticum spelta*, or Spelt. "It is to be borne in mind," says Adams, in his commentary on Paulus Ægineta, "that the *ζεῖα*, *ρίση*, and *ὄλυρα* of the Greeks, and *far* and *adoreum* of the Romans, were all varieties of spelt, a species of grain bearing some resemblance to wheat. Pliny, it is true, seems to distinguish the *ζεῖα* from the *ὄλυρα*, but from the account which Dioscorides and Galen give of them, they would appear decidedly to have been mere varieties of the same grain. Spelt, in this country, is known by the name of German wheat."⁷

TIRO·CINIUM. (Vid. TIRO.)

TIRO was the name given by the Romans to a newly-enlisted soldier, as opposed to *veteranus*, one who had experience in war.¹ The mode of levying troops is described under *ARMY*, p. 102. The age at which the liability to military service commenced was 17.

From their first enrolment, the Roman soldiers, when not actually serving against an enemy, were perpetually occupied in military exercises. They were exercised every day,² the *tirones* twice, in the morning and afternoon, and the *veterani* once. The exercises included not only the use of their weapons and tactics properly so called, but also whatever could tend to increase their strength and activity, and especially carrying burdens and enduring toil. Vegetius³ enumerates among the exercises of the *tirones* marching, running, leaping, swimming, carrying the shield, fighting at a post (*vid. PALUS*), thrusting with the sword in preference to striking, using their armour, hurling spears and javelins, shooting arrows, throwing stones and leaden bullets, leaping on and off their horses, carrying weights, fortifying the camp, and forming the line of battle.

Vegetius also gives rules for choosing *tirones* according to their country, their being rustics or townsmen, their age, stature, personal appearance, and previous occupation.⁴ But these rules refer almost exclusively to the state of things under the emperors, when the army was no longer recruited from the citizens of Rome, but from the inhabitants of the provinces.

At this period, the *tiro*, when approved as fit for the army, was branded or tattooed in the hand with a mark (*stigmata*; *puncta signorum*), which Lipsius conjectures to have been the name of the emperor.

The state of a *tiro* was called *tirocinium*; and a soldier who had attained skill in his profession was then said *tirocinium ponere*, or *deponere*.⁵

In civil life the terms *tiro* and *tirocinium* were applied to the assumption of the toga virilis, which was called *tirocinium fori* (*vid. TOGA*), and to the first appearance of an orator at the rostra, *tirocinium eloquentiæ*.⁶

TITHENIDIA (*τιθηνΐδια*), a festival celebrated at Sparta by the nurses who had the care of the male children of the citizens. On this occasion the nurses (*τιρβαί*) carried the little boys out of the city to the Temple of Artemis surnamed Corythalia, which was situated on the bank of the stream Tisassus, in the district of Cleia. Here the nurses sacrificed sucking pigs on behalf of the children, and then had a feast, probably of the meat of the victims, with which they ate bread baked in an oven (*ἱπνίτας ἄρτους*).¹

*TITHYMALLUS (*τιθύμαλλος*), a plant. "The *τιθύμαλλοι* are, without doubt, all referable to the genus *Euphorbia*, or Spurge. Miller, in his Gardener's Dictionary, describes 71 species of spurge. The *χαράκις* is either his 2d or 3d species, called by him Wood Spurge. The *μυρτινίτης* is his 5th species, or Myrtle-leaved Spurge. The *δενδροειδής* is the *T. arborescens*, or the *Euphorbia dendroidea*, L. The *πλατυφύλλος* is the *Euphorbia platyphylla*, L. The *κνυπιασσίας* is the Cypress Spurge, indigenous in Scotland. The *ἡλαιοσκοπίας* is the *Eup. Hel.*, or Sun Spurge. The *παράλιος* is the *Eup. Paral.* Besides these, the ancients have described various species of spurge under generic names, as *λίθυρις*, *πεπλῖς*, *θυμelaia*, &c. It is deserving of remark,

TITII SODA'LES, a sodalitas or college of priests at Rome, who represented the second tribe of the Romans, or the Titii, that is, the Sabines, who, after their union with the Ramnes or Latins, continued to perform their own ancient Sabine sacra. To superintend and preserve these, T. Tattius is said to have instituted the Titii Sodales.² In another passage,³ Tacitus describes this sacerdotium in a somewhat different manner, inasmuch as he says that it was instituted by Romulus in honour of King Tattius, who, after his death, was worshipped as a god. But this account seems only to mean that Romulus, after the death of Tattius, sanctioned the institution of his late colleague, and made the worship of Tattius a part of the Sabine sacra. From Varro,⁴ who derives the name Sodales Titii from Titii aves which were observed by these priests in certain auguries, it appears that these priests also preserved the ancient Sabine auguries distinct from those of the other tribes. During the time of the Republic the Titii Sodales are no longer mentioned, as the worship of the three tribes became gradually united into one common religion.⁵ Under the Empire we again meet with a college of priests bearing the name of Sodales Titii, or Titienses, or sacerdotes Titiales flaviales; but they had nothing to do with the sacra of the ancient tribe of the Titii, but were priests instituted to conduct the worship of an emperor, like the Augustales.⁶ (*Vid.* AUGUSTALES.)

TITIES or TITIENSES. (*Vid.* PATRICH, p. 743.)
TO'KOS. (*Vid.* INTEREST OF MONEY.)

TO'KOI NAYTIKOI. (*Vid.* INTEREST OF MONEY, p. 545.)

TOGA (*τήβενος*), a Gown, the name of the principal outer garment worn by the Romans, is derived by Varro from *tegere*, because it covered the whole body.⁷ Gellius⁸ states that at first it was worn alone without the tunic. (*Vid.* TUNICA.) Whatever may have been the first origin of this dress, which some refer to the Lydians, it seems to have been received by the Romans from the Etruscans, for it is seen on Etruscan works of art as the only covering of the body; and the *toga prætecta* is expressly said to have been derived from the Etruscans.⁹

The toga was the peculiar distinction of the Romans, who were thence called *togati* or *gens togata*.¹⁰ It was originally worn only in Rome itself, and the use of it was forbidden alike to exiles and to foreigners.¹¹ Gradually, however, it went out of common use, and was supplanted by the *PALLIUM* and *lacerna*, or else it was worn in public under the *lacerna*.¹² (*Vid.* LACERNA.) But it was still used by the upper classes, who regarded it as an honourable distinction,¹³ in the courts of justice, by clients when they received the *SPORTULA*,¹⁴ and in the theatre or at the games, at least when the emperor was present.¹⁵ Under Alexander Severus, guests at the emperor's table were expected to appear in the toga.¹⁶

The form of the toga, and the manner of wearing it, are matters which are much disputed, and about which, indeed, it seems almost impossible, with our present information, to arrive at certainty.

The form was undoubtedly, in some sense, *round*; *semicircular* according to Dionysius,³ who calls it *περιδόλαιον ἡμικύκλιον*. It seems, however, impossible, from the way in which it was worn, that it could have been always a semicircle. Such may perhaps have been its form as worn in the most ancient times, when it had no great fulness; but to account for the numerous folds in which it was afterward worn, we must suppose it to have had a greater breadth in proportion to its length, that is, to have been a smaller segment than a semicircle. Probably the size of the segment which the toga formed (on which its fulness depended) was determined by the fashion of the time or the taste of the wearer. This appears to be the true explanation of Quintilian's words,⁴ "*Ipsam togam rotundam, et apte easam velim*," which could have no meaning if nothing more were required than to give the garment the very simple form of a semicircle. The only other point to be noticed respecting the form of the toga is the question whether, when it came to be worn in many complicated folds, the art of the tailor may not have been employed to keep these folds in their position. This question, however, belongs more properly to the mode of wearing the toga.

On this subject our principal information is derived from Quintilian⁴ and Tertullian,⁵ whose statements, however, refer to the later and more complicated mode of wearing the garment, and from statues in Roman costume.

Frequent reference is made to the *sinus* of the toga. This was a portion of the garment, which hung down in front of the body like a sling; it will be more fully explained presently.

We must make a clear distinction between the more ancient and simpler mode of wearing the toga and the full form, with many complicated folds, in which it was worn at a later period.

Quintilian⁶ says that the ancients had no *sinus*, and that afterward the sinuses were very short. The passage in Livy⁷ (*sinu ex toga facto, iterum sinu effuso*) seems to refer not to the *sinus*, technically so called, but a *sinus* which Fabius made at the moment by gathering up some part of his toga.

The ancient mode of wearing the toga is shown in the following cut, which is taken from the *Au gusteum*,⁸ and represents a statue at Dresden.

Let the toga, which in this case was probably not far from an exact semicircle, be held behind the figure, with the curved edge downward. First, one corner is thrown over the left shoulder; then the

1. (Theophr., H. P., ix., 11.—Dioscor., iv., 162.—Adams, Append. s. v.)—2. (Tacit., Ann., i., 54.)—3. (Hist., ii., 95.)—4. (De Ling. Lat., v., 85, ed. Müller.)—5. (Ambrosch, Stud. und Andeut., p. 192, &c.)—6. (Gruter, Inscr., xix., 4; cccv., 9; cccxvii., 1.—Inscr. ap. Murator., 299, 5.—Compare Lucan, Phars., i., 602.)—7. (v., 144, ed. Müller.)—8. (vii., 12.)—9. (Liv., i., 8.—Plin., H. N., viii., 48 or 74.—Müller, Etrusker, i., p. 262.)—10. (Virg., Æn., i., 262.—Mart., xiv., 124.)—11. (Plin., Epist., iv., 11.—Suet., Claud., 15.)—12. (Suet., Octav., 40.)—13. (Cic., Philipp., ii., 30.)—14. (Mart., xiv., 125.)—15. (Suet., Claud., 6.—Lamprid., Commod., 16.)—16. (Lamprid., Sever., 1.)

Other part of the garment is placed on the right shoulder, thus entirely covering the back and the right side up to the neck. It is then passed over the front of the body, leaving very little of the chest uncovered, and reaching below nearly to the feet (in the figure, quite to one of them). The remaining end or corner is then thrown back over the left shoulder, in such a manner as to cover the greater part of the arm. By this arrangement the right arm is covered by the garment, a circumstance noticed by Quintilian;¹ but it was occasionally released by throwing the toga off the right shoulder, and leaving it to be supported on the left alone. The portion of the toga which, in the figure, hangs down from the chest, if it be a *sinus*, is certainly of the kind described by Quintilian as *perquam brevis*.

The next cut represents the later mode of wearing the toga, and is taken from an engraving in the *Musco Borbonico*² of a statue found at Herculaneum.

By comparing this and other statues with the description of Quintilian, we may conclude that the mode of wearing the toga was something like the following:

First, as above remarked, the form in this case was a segment less than a semicircle. As before, the curved side was the lower, and one end of the garment was thrown over the left shoulder, and hung down in front, but much lower than in the former case. This seems to be the part which Quintilian³ says should reach down half way between the knee and the ankle. In our figure it reaches to the feet, and in some statues it is even seen lying on the ground. The garment was then placed over the back, as in the older mode of wearing it; but, instead of covering the right shoulder, it was brought round under the right arm to the front of the body. This is the most difficult part of the dress to explain. Quintilian says: "*Sinus decentissimus, si aliquanto supra imam togam fuerit, nunquam certe sit inferior. Ille, qui sub humero dextro ad sinistram oblique ducitur velut balteus, nec strangulet nec fluat.*" Becker's explanation of this matter seems perfectly satisfactory. He supposes that the toga, when carried under the right arm, was then folded in two parts; one edge (namely, the lower or round edge) was then brought almost close under the arm, and drawn, but not tightly, across the chest to the left shoulder, forming the *velut balteus* of Quintilian, while the other part was allowed to fall gracefully over the lower part of the body, forming the *sinus*, and then the remaining end of the garment was thrown over the left shoulder, and hung down nearly as low as the other end, which was first put on. It is to this part that Quintilian seems

to refer when he says,¹ "*Pars togæ, quæ postea imponitur, sit inferior: nam ita et sedet melius, et conlineatur;*" but the true application of these words is very doubtful. By the bottom of the toga (*imam togam*) in the above quotation, he seems to mean the end of the toga first put on. The part last thrown over the left shoulder, as well as the end first put on, covered the arm, as in the older mode of wearing the garment. The outer edge (*extrema ora*) of this part ought not, says Quintilian,² to be thrown back. He adds,³ "*Super quod (i. e., sinist. trum brachium) ora ex toga duplex æqualiter sedeat.*" by which he probably means that the edge of this portion should coincide with the edge of the end which was first thrown over the left shoulder, and which is, of course, governed by this portion of the garment. He says⁴ that the shoulder and the whole of the throat ought not to be covered, otherwise the dress will become narrow, and lose that dignity which consists in width of chest. This direction appears to mean, that the part brought across the chest (*velut balteus*) should not be drawn too tight.

Tassels or balls are seen attached to the ends of the toga, which may have served to keep it in its place by their weight, or may have been merely ornaments.

There is one point which still remains to be explained. In the figure a mass of folds is seen in the middle of the part of the toga drawn across the chest (*velut balteus*). This is the *umbo* mentioned by Tertullian,⁵ and used by Persius for the toga itself.⁶ It was either a portion of the *balteus* itself, formed by allowing this part of the garment to hang loose (which perhaps it must have done, as it is the curved, and, therefore, longer edge that is thus drawn across the chest), and then gathering it up in folds and tucking these folds in, as in the figure, or else (which seems the better explanation) the folds which composed it were drawn out from the *sinus*, and either by themselves, or with the loose folds of the *balteus*, formed the *umbo*. It seems to have been secured by passing the end of it under the girdle of the tunic; and perhaps this is what Quintilian means by the words,⁷ "*Subducenda etiam pars aliqua tunice, ne ad lacertum in actu redeat.*"

The back of the figure, which is not seen in our engravings, was simply covered with the part of the garment which was drawn across it, and which, in the ancient mode of wearing it, reached down to the heels.⁸ Quintilian states how low it was worn in his time, but the meaning of his words is very obscure⁹ ("*pars ejus prior mediis cruribus optime terminatur, posterior eadem portione alius qua cinctura.*" See above).

A garment of the supposed shape of the toga, put on according to the above description, has been found by the writer of this article to present an appearance exactly like that of the toga as seen on statues; and Becker states that he has made similar experiments with equally satisfactory results.

Tertullian¹⁰ contrasts the simplicity of the pallium with the complication of the toga, and his remarks apply very well to the above description. It appears by his account that the folds of the *umbo* were arranged before the dress was put on, and fixed in their places by pins or hooks; but, generally speaking, it does not seem that the toga was held on by any fastening; indeed, the contrary may be inferred from Quintilian's directions to an orator for the management of his toga while speaking.¹¹

There is seen on many statues a mode of wearing the toga which resembles the more ancient fashion in having neither *sinus* nor *umbo*, and the modern

1. (§ 138.)—2. (vi., tav. 40.)—3. (§ 139.)—4. (§ 140.)

in having the garment carried under instead of over the right arm. This is, in fact, nothing more than the ancient fashion with the right arm put out of the garment, a mode of wearing it which would naturally be often adopted for convenience.

Another mode of wearing the toga was the *cinctus Gabinus*. It consisted in forming a part of the toga itself into a girdle, by drawing its outer edge round the body, and tying it in a knot in front, and at the same time covering the head with another portion of the garment. It was worn by persons offering sacrifices,¹ by the consul when he declared war,² and by devoted persons, as in the case of Decius.³ Its origin was Etruscan, as its name implies.⁴ Festus⁵ speaks of an army about to fight being girt with the *cinctus Gabinus*. Persons wearing this dress were said to be *procincti* (or *incincti*) *cinctu* (or *ritu*) *Gabino*.

The colour of the toga worn by men (*toga virilis*) was generally white, that is, the natural colour of white wool. Hence it was called *pura* or *vestimentum purum*, in opposition to the *prætexta* mentioned below. A brighter white was given to the toga of candidates for offices (*candidati*, from their *toga candida*) by rubbing it with chalk. There is an allusion to this custom in the phrase *crectata ambitio*.⁶ White togas are often mentioned as worn at festivals, which does not imply that they were not worn commonly, but that new or fresh-cleaned togas were first put on at festivals.⁷ The toga was kept white and clean by the fuller. (*Vid. Fullo*.) When this was neglected, the toga was called *sordida*, and those who wore such garments *sordidati*. This dress (with disarranged hair and other marks of disorder about the person) was worn by accused persons, as in the case of Cicero.⁸ The *toga pulla*, which was of the natural colour of black wool, was worn in private mourning, and sometimes also by artificers and others of the lower orders. (See the passages in Forcellini.)⁹ The *toga picta*, which was ornamented with Phrygian embroidery, was worn by generals in triumphs (*vid. Triumphus*), and under the emperors by the consuls, and by the prætors when they celebrated the games. It was also called *Capitolina*.¹⁰ The *toga palmata* was a kind of toga picta. The *toga prætexta* had a broad purple border. It was worn with the *BULLA*, by children of both sexes. It was also worn by magistrates, both those of Rome, and those of the colonies and municipia, by the sacerdotes, and by persons engaged in sacred rites or paying vows.¹¹ Among those who possessed the *jus togæ prætextæ habenda*, the following may be more particularly mentioned: the dictators, the consuls, the prætors (who laid aside the *prætexta* when about to condemn a Roman citizen to death), the augurs (who, however, are supposed by some to have worn the *trabea*), the *decemviri sacris faciundis* (*vid. Decemviri*), the *ædiles*, the *triumviri epulones*, the senators on festival days,¹² the *magistri collegii*, and the *magistri vicorum* when celebrating games. (*Vid. Magister*.) In the case of the *tribuni plebis*, censors, and *quæstors*, there is some doubt upon the subject. The *prætexta pulla* might only be worn at the celebration of a funeral.¹³

The toga *prætexta*, as has been above remarked, is said to have been derived from the Etruscans. It is said to have been first adopted, with the *latus clavus* (*vid. Clavus Latus*), by Tullius Hostilius, as

the royal robe, whence its use by the magistrates in the Republic.¹ According to Macrobius,² the *toga* introduced by Hostilius was not only *prætexta*, but also *picta*. Pliny states³ that the *toga regia undulata* (that is, apparently, embroidered with waving lines or bands) which had been worn by Servius Tullius, was preserved in the Temple of Fortune. The toga *prætexta* and the *bullæ aurea* were first given to boys in the case of the son of Tarquinius Priscus, who, at the age of fourteen, in the Sabine war, slew an enemy with his own hand. (Macrobius,⁴ where other particulars respecting the use of the toga *prætexta* may be found.) Respecting the leaving off of the toga *prætexta* and the assumption of the toga *virilis*, see *IMPUBES*, *BULLA*, *CLAVUS LATVS*. The occasion was celebrated with great rejoicings by the friends of the youth, who attended him in a solemn procession to the Forum and Capitol.⁵ This assumption of the toga *virilis* was called *tirocinium fori*, as being the young man's introduction to public life, and the solemnities attending it are called by Pliny⁶ *officium togæ virilis*, and by Tertullian⁷ *solemnitates togæ*. The toga *virilis* is called *libera* by Ovid.⁸ Girls wore the *prætexta* till their marriage.

The *trabea* was a toga ornamented with purple horizontal stripes. Servius⁹ mentions three kinds of *trabea*; one wholly of purple, which was sacred to the gods, another of purple and white, and another of purple and saffron, which belonged to augurs. The purple and white *trabea* was a royal robe, and is assigned to the Latin and early kings, especially to Romulus.¹⁰ It was worn by the consuls in public solemnities, such as opening the Temple of Janus.¹¹ The equites wore it at the *transvectio* and in other public solemnities.¹² Hence the *trabea* is mentioned as the badge of the equestrian order. Lastly, the toga worn by the Roman emperors was wholly of purple. It appears to have been first assumed by Julius Cæsar.¹³

The material of which the toga was commonly made was wool. It was sometimes thick and sometimes thin. The former was the *toga densa*, *pinguis*, or *hirta*.¹⁴ A new toga, with the nap neither worn off nor cut close, was called *pecca*, to which is opposed the *trita* or *rasa*, which was used as a summer dress.¹⁵ On the use of silk for togas, see *Sericum*.

It only remains to speak of the use of the toga. It was originally worn by both sexes; but when the *stola* came to be worn by matrons, the toga was only worn by the meretrices, and by women who had been divorced on account of adultery. (*Vid. Stola*.) Before the use of the toga became almost restricted to the upper classes, their toga was only distinguished from that of the lower classes by being fuller and more expensive. In war it was laid aside, and replaced by the *paludamentum* and *sagum*. Hence *togatus* is opposed to *miles*. The toga was, however, sometimes used by soldiers, but not in battle, nor as their ordinary dress, but rather as a cloak or blanket. It was chiefly worn in Rome, and hence *togatus* is opposed to *rusticus*. The toga was often used as a covering in sleeping, and, lastly, as a shroud for the corpse.¹⁶

gular interchange of ternus," observes Adams, "the topaz of the ancients is our *chrysolite*, and the ancient chrysolite our *topaz*. The prevailing colour of chrysolite is green, with a mixture of yellow or brown. The French chemists distinguish it by the name of *peridot*; it consists principally of alumina." The name of the stone we are now considering is derived from that of the island of Topazos, in the Red Sea, whence it was originally brought. "Pliny," says Dr. Moore, "styles his 'topazius' the largest of gems, and speaks of a statue of Arsinoë, queen of Ptolemy Philadelphus, made of it, four cubits high, which seems wholly inconsistent with its being chrysolite, although a variety of this mineral, called olive, has been found in masses of considerable size." Pliny's whole description of the topaz is thought by this writer as applicable to the mineral which we call prase and chrysoprase, as to any that we know. At the same time, however, he refers to the mention which Bruce makes of an island in the Red Sea, called Jibbel Seberget, or the Mountain of Emeralds, and where the latter says he met with a substance which was little harder than glass; and he also cites the query of Kidd, whether this substance may not have been chrysolite, and the island the Topaz island of Pliny.¹

TOPIARIUS. (*Vid.* HORTUS.)

TORALIA. (*Vid.* TORUS.)

TORCULUM or TORCULAR (*ληνός*), a press for making wine and oil. When the grapes were ripe (*σταφύλη*), the bunches were gathered, any which remained unripe (*δμφας*), or had become dry or rotten, were carefully removed² (*vid.* FORFEX), and the rest carried from the vineyard in deep baskets (*quali*,³ *ταλάροι*,⁴ *άρβιχοι*,⁵ *κοφίνοι*,⁶) to be poured into a shallow vat. In this they were immediately trodden by men, who had the lower part of their bodies naked,⁷ except that they wore drawers. (*Vid.* SUBLICACULUM.) At least two persons usually trod the grapes together. To "tread the wine-press alone" indicated desolation and distress.⁸ The Egyptian paintings⁹ exhibit as many as seven treading in the same vat, and supporting themselves by taking hold of ropes or poles placed above their heads. From the size of the Greek and Roman vats, there can be no doubt that the company of treaders was often still more numerous. To prevent confusion and to animate them in their labour, they moved in time or danced, as is seen in the ancient mosaics of the church of St. Constantia at Rome, sometimes also leaning upon one another. The preceding circumstances are illustrated in the following woodcut, taken from a bas-relief.¹⁰ An

antefixa in the British Museum¹ shows a person by the side of the vat performing during this act on the *scabellum* and *tibia pares*, for the purpose of aiding and regulating the movements of those in it. Besides this instrumental music, they were cheered with a song, called *μέλος ἐπιλήνιον*² or *ῥυμος ἐπιλήνιος*, specimens of which may be seen in Anacreon.³ After the grapes had been trodden sufficiently, they were subjected to the more powerful pressure of a thick and heavy beam (*vid.* PRELUM), for the purpose of obtaining all the juice yet remaining in them.⁴ Instead of a beam acted on by wedges, a press with a screw (*vid.* COCHLEA) was sometimes used for the same purpose.⁵ A strainer or colander (*vid.* COLUM) was employed to clear the must from solid particles, as it flowed from the vat.

The preceding woodcut shows the apertures at the bottom of the vat, by which the must (*mustum*, *γλεύκος*) was discharged, and the method of receiving it when the vat was small, in wide-mouthed jars, which, when full, were carried away to be emptied into casks (*δοκία*, *πίθοι*).⁶ (*Vid.* DOLIUM.) When the vineyard was extensive, and the vat large in proportion, the must flowed into another vat of corresponding size, which was sunk below the level of the ground, and therefore called *ὑπολήνιον*,⁷ in Latin *lacus*.⁸

From *ληνός* Bacchus was called *Lenæus* (*Ληναῖος*). The festival of the *Lenæa* was celebrated on the spot where the first Attic winepress was said to have been constructed. (*Vid.* DIONYSIA, p. 364.)

Olives as well as grapes were subjected to the *prelum* for the sake of their oil;⁹ but, instead of being trodden, they were first bruised, so as to express a great part of the oil, in a mill called *trapetum*, which resembled our cider-mill.

The building erected to contain all the vessels and other implements (*torcula vasa*)¹⁰ for obtaining both wine and oil was called *torcularium*¹¹ and *ληνεῶν*.¹² It was situated near the kitchen and the wine-cellar.¹³

*TORDYLION (*τορδύλιον*), the *Tordylium officinale*, or Hartwort.¹⁴

TOREUTICE (*τορευτική*). (*Vid.* BRONZE, p. 179.)

TORMENTUM (*ἀφειγρία ὄργανον*), a military engine. All the missiles used in war, except those thrown from the sling (*vid.* FUNDA), are projected either by the hand alone or with the aid of elastic substances. Of elastic instruments, the bow (*vid.* ACUS) is still used by many nations. But the *tormentum*, so called from the twisting (*torquendo*) of hairs, thongs, and vegetable fibres,¹⁵ has fallen into disuse through the discovery of gunpowder. The word *tormentum* is often used by itself to denote engines of various kinds.¹⁶ Often, also, these engines are specified separately under the names of *Balistæ* and *Catapultæ*, which names, however, most commonly occur together in the accounts of sieges and other military operations, because the two kinds of engines denoted by them were almost always used in conjunction. (*Vid.* HELEPOLIS.) The balista (*πετροβόλος*) was used to shoot stones,¹⁷ the catapulta (*καταπέλτης*, *καταπελτική*) to project darts, especially the falaria (*vid.* HASTA, p. 489),

(Varro, *De Re Rust.*, iii., 2.)—11. (Cato, *De Re Rust.*, 12, 13, 18.—Colum., *De Re Rust.*, xii., 18.)—12. (Geopon., vi., 1.)—13. (Vitruv., vi., 6.)—14. (Dioscor., iii., 56.—Nicand., *Ther.*, 841.—Adams, *Append.*, s. v.)—15. (Polyb., ii., 56.)—16. (Cic., *Ep. ad Div.*, xv., 4.—Cæsar, *B. Civ.*, iii., 44, 45.—Bell. Alex., 10.—Liv., xx., 11.—Veil. Patern., ii., 82.—Curt., iv., 9, 16.)—17. (Ovid, *Trist.*, i., 2, 48.—Lucan, vi., 198.—Nat. Marc., p. 555. *ed. Merceri.*)

and a kind of missile 4½ feet long, called *trifax*.¹ While, in besieging a city, the ram (*vid. Aris*) was employed in destroying the lower part of the wall, the balista was used to overthrow the battlements (*propugnacula*²), and the catapult to shoot any of the besieged who appeared between them.³ The forms of these machines being adapted to the objects which they were intended to throw, the catapult was long, the balista nearly square, which explains the following humorous enumeration by Plautus⁴ of the three *μηχαναί*, the application of which has just been explained.

"*Meus est balista pugnus, cubitus catapultæ est mihi, Humerus aris.*"

In the same armament the number of catapults was commonly much greater than the number of balistæ.⁵ Also, these two classes of machines were both of them distinguished into the greater and the less, the number of "the less" being much more considerable than the number of "the greater." When Carthago Nova, which had served the Carthaginians for an arsenal, was taken by the Romans, the following were found in it: 120 large and 281 small catapults; 23 large and 52 small balistæ.⁶ Three sizes of the balista are mentioned by historians, viz., that which threw stones weighing half a hundred weight (*τριακονταμναίους λίθους*⁷), a whole hundred weight (*balista centenaria*,⁸ *λιθοβόλος τετρακταίος*⁹), and three hundred weight (*πετροβόλος τριτάλαντος*¹⁰). Besides these, Vitruvius¹¹ mentions many other sizes, even down to the balista which threw a stone of only two pounds' weight. In like manner, catapults were denominated according to the length of the arrows emitted from them.¹² According to Josephus, who gives some remarkable instances of the destructive force of the balista, it threw stones to the distance of a quarter of a mile.¹³ Neither from the descriptions of authors, nor from the figures on the column of Trajan,¹⁴ are we able to form any exact idea of the construction of these engines. Still less are we informed on the subject of the *Scorpio* or *Onager*, which was also a tormentum.¹⁵ Even the terms *balista* and *catapultæ* are confounded by writers subsequent to Julius Cæsar, and Diodorus Siculus often uses *καταπέλτης* to include both balistæ and catapults, distinguishing them by the epithets *πετροβόλος* and *λιθοβόλος*.¹⁶

The various kinds of tormenta appear to have been invented shortly before the time of Alexander the Great. When horsehair and other materials failed, the women in several instances cut off their own hair, and twisted it into ropes for the engines.¹⁷ These machines, with those who had the management of them, and who were called *balistarum* and *ἀσπείροι*,¹⁸ were drawn up in the rear of an advancing army, so as to throw over the heads of the front ranks. (*Vid. Army*, p. 106.) In order to attack a maritime city, they were carried on the decks of vessels constructed for the purpose.¹⁹

The meaning of *tormentum*, as applied to the cordage of ships, is explained in p. 893. Compare Vegetius, *Mulom.*, ii., 46.

The torture or question (*questio*), as applied to criminals or witnesses, was called *tormentum* by

the Romans.¹ The executioner was called *tortor*, and among the instruments employed for the purpose were the wheel (*rota*, *τροχός*²) and the *eculeus*. The Lydians had an instrument of torture which, as we may infer from its name (*κνιάφος*³), was full of points, and applied to the body of the sufferer like the card used in combing wool. The Jews seem to have used the harrow or threshing-machine in the same manner;⁴ and the *κλίμαξ* mentioned by Aristophanes,⁵ if it resembled the ladder, which is still to be seen among the instruments of torture in the dungeons at Ratisbon, must have produced a similar effect. (*Vid. BASANOS*.)

TORQUES or TORQUIS (*σπειρώς*), an ornament of gold, twisted spirally and bent into a circular form, which was worn round the neck by men of distinction among the Persians,⁶ the Gauls,⁷ and other Asiatic and northern nations.⁸ *Torc* was the name of it among the Britons and ancient Irish. Virgil⁹ thus describes it as part of the attire of the Trojan youths:

"*It pectore summo
Flexilis obtorti per collum circulus auri.*"

Ornaments of this kind have been frequently found, both in France, and in many parts of Great Britain and Ireland,¹⁰ varying in size and weight, but almost always of the form exhibited in the annexed woodcut, which represents a torquis found in Brecknockshire, and now preserved in the British Museum. The same woodcut contains a section of this torquis of the size of the original. It

shows, as Mr. Petrie observes concerning some found in the county of Meath, "four equidistant radiations from a common centre." The torquis in the British Museum is four feet and a half in length. Its hooks correspond well to the following description of the fall of a Celtic warrior: "*Torquis ab incisa decidit unca gula.*"¹¹ A torquis, which, instead of being bent into a circular form, was turned into a spiral, became a bracelet, as is shown in the lowest figure of the woodcut to ARMILLA, p. 96. A torquis contrived to answer this purpose is called *torquis brachialis*.¹² Such bracelets and torques are often found together, having been worn by the same people.

An inscription found in France mentions a torquis, which was dedicated to Æsculapius, having been made by twisting together two golden snakes.¹³ In this respect, also, the torquis corresponded with the armilla, which was sometimes made in the form of a serpent. (See p. 96.) The head in the

preceding woodcut is that of a Persian warrior in the mosaic of the battle of Issus, mentioned in p. 520. It illustrates the mode of wearing the torquis, which in this instance terminates in two serpents' heads instead of hooks. Three other Persians in the same mosaic also wear the torquis, which is falling from the neck of one of them, who has been vanquished and thrown from his horse. It was by taking this collar from a Gallic warrior in similar circumstances that T. Manlius obtained the cognomen of *Torquatus*.¹

Torques, whether in the form of collars or bracelets, no doubt formed a considerable part of the wealth of those who wore them. Hence they were an important portion of the spoil, when any Celtic or Oriental army was conquered, and they were among the rewards of valour bestowed after an engagement upon those who had most distinguished themselves.² The monuments erected to commemorate Roman soldiers, and to enumerate the honours which they had obtained, often mention the number of torques conferred upon them.³ (*Vid. PHALERÆ.*)

TORUS, a Bed, originally made of straw,⁴ hay, leaves, woolly plants,⁵ seaweed (*de mollibus ulvis*), also stuffed with wool, and afterward with feathers⁷ or swans' down,⁸ so as to be as much raised and as soft as possible.⁹ It was sometimes covered with the hide of a quadruped¹⁰ (*vid. PELLIS*, p. 750), but more commonly with sheets or blankets, called *Toralia*.¹¹ The torus may be observed on the sofa in the first woodcut, p. 276; and its appearance there may suffice to explain the transference of its name to the larger semicircular mouldings in the base of columns. (*Vid. ATTICURGES*, SPIRÆ.)

ΤΟΞΟΤΑΙ (τοξόται). (*Vid. DEMOSIOI.*)

ΤΡΑΒΕΑ. (*Vid. ΤΟΒΑ*, p. 987.)

ΤΡΑΔΙΤΙΟ. (*Vid. DOMINIUM.*)

*ΤΡΑΓΑΚΑΝΘΑ (*τραγᾶκανθα*), a prickly shrub, which yields gum tragacanth. It is the *Astragalus Tragacantha*, Goat's-thorn or Milk-vetch. The name is derived from *τράγος* (a goat) and *ἄκανθα* (a thorn), in allusion to the fancied resemblance which the plant bears to the beard of a goat. In the London Pharmacopœia the plant is called *Astragalus verus*, on the authority of Olivier.¹¹²

*ΤΡΑΓΙΟΝ (*τράγιον*), a plant. One species, called by Dioscorides *τράγιον Κρητικόν*, is the kind of St. John's-wort called *Hypericum hircinum*, and has a fetid smell. A second sort, likewise described by Dioscorides, is named by Sprengel *Tragium columne*.¹³

TRAGÆDIA (*τραγωδία*), Tragedy.

I. GREEK TRAGEDY. The tragedy of the ancient Greeks, as well as their comedy, confessedly originated in the worship of the god Dionysus. It is proposed in this article, (1) to explain from what element of that worship Tragedy took its rise, and, (2) to trace the course of its development, till it reached its perfect form and character in the drama of the Attic tragedians, Æschylus, Sophocles, and Euripides.

The peculiarity which most strikingly distinguishes the Greek tragedy from that of modern times, is the lyrical or choral part. This was the offspring of the dithyrambic and choral odes, from which, as applied to the worship of Dionysus,

Greek tragedy took its rise. This worship, we may observe, was of a twofold character, corresponding to the different conceptions which were anciently entertained of Dionysus as the changeable god of flourishing, decaying, or renovated nature, and the various fortunes to which, in that character, he was considered to be subject at the different seasons of the year. Hence Müller observes, "the festivals of Dionysus at Athens and elsewhere were all solemnized in the months nearest to the shortest day, coincidently with the changes going on in the course of nature, and by which his worshippers conceived the god himself to be affected." His mournful or joyous fortunes (*πάθη*), his mystical death, symbolizing the death of all vegetation in winter, and his birth,² indicating the renovation of all nature in the spring, and his struggles in passing from one state to another, were not only represented and sympathized in by the dithyrambic singers and dancers, but they also carried their enthusiasm so far as to fancy themselves under the influence of the same events as the god himself, and in their attempts to identify themselves with him and his fortunes, assumed the character of the subordinate divinities, the Satyrs, Nymphs, and Pans (*nympharumque leves cum satyris chori*), who formed the mythological train of the god. Hence, as is explained under ΔΙΟΝΥΣΙΑ (p. 363), arose the custom of the disguise of satyrs being taken by the worshippers at the festivals of Dionysus, from the choral songs and dances of whom the Grecian tragedy originated, "being from its commencement connected with the public rejoicings and ceremonies of Dionysus in cities, while comedy was more a sport and merriment of the country festivals." In fact, the very name of Tragedy (*Τραγωδία*), far from signifying anything mournful or pathetic, is most probably derived from the goat-like appearance of the satyrs, who sang or acted, with mimetic gesticulations (*δρηχαις*), the old Bacchic songs, with Sthenus, the constant companion of Dionysus, for their leader.³ From their resemblance in dress and action to goats, they were sometimes called *τράγοι*, and their song *τραγωδία*. Thus Æschylus, in a fragment of the Prometheus *Πυρφόρος*, calls a satyr *Τράγος*, and the satyric chorus in the Cyclops of Euripides⁴ appears in the skin of a goat (*χλαῖνα τράγον*). The word *σάνυρος*, also, is apparently the same as *τίτυρος*, a kind of goat.⁵ According to another opinion, indeed, the "word tragedy was first coined from the goat that was the prize of it, which prize was first constituted in Thespis's time."⁶ This derivation, however, as well as another, connecting it with the goat offered on the altar of Bacchus,⁷ around which the chorus sang, is not equally supported either by the etymological principles of the language, or the analogous instance of *κωμῳδία*, the "revel-song."⁸

But the Dionysian dithyrambs were not always of a gay and joyous character: they were capable of expressing the extremes of sadness and wild lamentation as well as the enthusiasm of joy; and it was from the dithyrambic songs of a mournful cast, probably sung originally in the winter months, that the stately and solemn tragedy of the Greeks arose. That there were dithyrambs of such a character, expressive of the sufferings of Dionysus (*τὰ τοῦ Διονύσου πάθη*), appears from the statement in Herodotus,⁹ that at Sicily, in the time of Clisthenes (B.C. 600), it was customary to celebrate (*γεραίρειν*)

the sufferings of that god with "tragic choruses." But it must be remarked, that in the most ancient times the dithyrambic song was not executed by a regular chorus. Thus Archilochus says in trochaic verse, "I know how, when my mind is inflamed with wine, to lead off the dithyramb, the beautiful song of Dionysus" (*vid. Chorus*, p. 247), whence we may infer that in his time (B.C. 700) the dithyramb was sung by a band of revellers led by a flute-player. Lyrical choruses, indeed, had been even then established, especially in the Dorian states of Greece, in connexion with the worship of Apollo, the cithara, or *φάρμαγξ*, being the instrument to which the chorus sang and danced.¹ In fact, the connexion of the Dorian choral poetry with the worship of Apollo, the direct opposite to that of Dionysus, and its consequent subjection to established rules and forms, admitting, too, from the Dorian character, but little innovation, affords the most obvious explanation of the striking circumstance that nothing decidedly dramatic sprang from it, as from the dithyrambic performances.² Still there were some points in which the Dorian worship of Apollo resembled that of Dionysus, *e. g.*, the dances with which the former god was honoured, and the kind of mimicry which characterized them. Other circumstances also, on which we cannot here dwell, would probably facilitate the introduction of the Dionysian dithyramb among the Dorian states, especially after the improvements made in it by Arion (B.C. 600), which were so great, that even the invention of that species of poetry is ascribed to him, though it had been known in Greece for a century before his time. The worship of Dionysus was celebrated at his native place, Methymnæ in Lesbos, with music and orgiastic rites; and as Arion travelled extensively in the Dorian states of Hellas, he had ample opportunities of observing the varieties of choral worship, and of introducing any improvements which he might wish to make in it.³ He is said to have been the inventor of the "tragic turn" (*τραγικὸν τρόπον*), a phrase of doubtful signification, but which seems to mean, that he was the inventor of a grave and solemn style of music, to which his dithyrambs were danced and sung.⁴ (*Vid. Music, GREEK.*) Suidas⁵ adds of him, *λέγεται καὶ πρῶτος χορὸν στήσαι, καὶ διθυράμβον ᾄσαι καὶ δορυμᾶσαι τὸ ἀδόμενον ὑπὸ τοῦ χοροῦ, καὶ Σατύρους εἰσενεγκεῖν ἐμμετρα λέγοντας*. From the first clause, in connexion with other authorities,⁶ we learn that he introduced the cyclic chorus (a fact mythologically expressed by making him the son of *Cycleus*); *i. e.*, the dithyramb, instead of being sung, as before his time, in a wild, irregular manner, was danced by a chorus of fifty men around a blazing altar; whence, in the time of Aristophanes, a dithyrambic poet and a teacher of cyclian choruses were nearly synonymous.⁷ As the alteration was made at Corinth, we may suppose that the representation of the dithyrambic was assimilated in some respects to that of the Dorian choral odes. The clause to the effect that Arion introduced satyrs, *i. e.*, *τράγοι*, speaking in verse (*trochaic*), is by some thought another expression for the invention of the "tragic style." A simpler interpretation is, that he introduced the satyrs as an addition and contrast to the dance and song of the cyclic chorus of the dithyramb, thus preserving to it its old character as a part of the worship of Bacchus. The phrase *δορυμᾶσαι*⁸ alludes to the different titles given by him to his different dithyrambs, according to their subjects, for we need not suppose that they all related directly to Bacchus.⁹ As he

was the first cithara player of his age,¹ it is probable that he made the lyre the principal instrument in the musical accompaniment.

From the more solemn dithyrambs, then, as improved by Arion, with the company of satyrs, who probably kept up a juking dialogue, ultimately sprang the dramatic tragedy of Athens, somewhat in the following manner: The choruses which represented them were under the direction of a leader or exarchus, who, it may be supposed, came forward separately, and whose part was sometimes taken by the poet himself.² We may also conjecture that the exarchus in each case led off, by singing or reciting his part in a solo, and the chorus, dancing round the altar, then expressed their feelings of joy or sorrow at his story, representing the perils and sufferings of Dionysus, or some hero, as it might be. Accordingly, some scholars have recognised in such choral songs, or in a proximate deviation from them, what has been called a "lyrical tragedy," performed without actors distinct from the chorus, and conceived to be a transition step between the dithyramb and the dramatic tragedy. The tide, however, does not occur in ancient writers, and, therefore, if it means anything, can only refer to representations of the character we have just ascribed to the dithyrambs of Arion, modified from time to time, according to circumstances or the fancy of the writer. That the names *τραγῳδία* and *τράγωδος* are applied, indeed, to works and writers before the time of Thespis, and that the "tragedy" of that age was entirely choral, without any regular formal dialogue, is evident from many authorities. Thus Athenæus³ observes that the whole satirical poetry formerly consisted of choruses, as did the "tragedy" of old times (*ἡ τότε τραγῳδία*). Again, Diogenes Laertius⁴ states that formerly the chorus alone acted (*δεδραματίζεν*) or performed a drama, on which Hermianus⁵ observes, "after the dithyramb was sung, some of the chorus, in the guise of satyrs, came forward and improvised some ludicrous stories; but in exhibitions of this sort," he adds, "we see rather *dramaticæ tragediæ initia, quam ullum lyrici cujusdam generis vestigium*." Lyric poets also seem to have been spoken of as tragedians; thus, according to Suidas,⁶ Pindar wrote seventeen *δράματα τραγικά* ("but not lyrical tragedies"), and Simonides of Ceos wrote tragedies, or a tragedy, as some manuscripts have it. But, whatever may be inferred from this, it only proves that dithyrambic poets were also called tragedian, just as in the scholia on Aristophanes,⁷ a writer is described as *διθυράμβοποιός ἢ τραγῳδίασκαλος*. For the arguments on both sides, see Hermann, *l. c.*, and Böckh on the Orchomenian Inscriptions.⁸

The choral dithyrambic songs, accompanied with mimetic action (the lyrical tragedy!), prevailed to some extent, as all choral poetry did, among the Dorians of the Peloponnese;⁹ whence their derivative, the choral element of the Attic tragedy, was always written in the Dorian dialect, thus showing its origin. The lyrical poetry was, however, especially popular at Sicyon and in Corinth. In the latter city Arion made his improvements; in the former, "tragic choruses," *i. e.*, dithyrambs of a sad and plaintive character, were very ancient,¹⁰ and the Sicyonians are also said to have been the inventors of the *τραγῳδία* (*τραγῳδίας εὔρεται μὲν Σικωνῖοι, τελεσιουργοὶ δὲ Ἀττικοὶ ποιηταὶ*); but, of course, this can only mean that the dramatic tragedy was a derivative, through many changes, of the old sa-

τυνική τραγῳδία, *i. e.*, of the songs sung with mimetic dancing by the goat-like satyrs, or, as others would say, round the altar, on which lay the burned sacrifice of a goat. It appears, then, that there is a good and intelligible foundation for the claims which, according to Aristotle,¹ were made by the Peloponnesians, and especially by the Sicyonians, to the invention of "tragedy," understanding by it a choral performance, such as has been described above. Now the subjects of this dithyrambic tragedy were not always, even in ancient times, confined to Dionysus. Even Arion wrote dithyrambs relating to different heroes:² a practice in which he was followed by succeeding poets, who wrote dithyramb-like odes (whence they were classed among the *τραγικοί ποιηταί*), which they called Centaurs, Ajaces, or Memnons, as it might be.³ Thus Epigenes the Sicyonian is said to have written a tragedy, *i. e.*, a piece of dithyrambic poetry on a subject unconnected with Dionysus, which was consequently received with the cry of *οὐδὲν πρὸς τὸν Διόνυσον*, "this has nothing to do with Bacchus."⁴ If this anecdote be true, and Epigenes preceded Arion, the introduction of the satyrs into the dithyrambic chorus by the latter may possibly have been meant to satisfy the wishes of the people; but whether it was so or not, there is scarcely any doubt that, from the time of Arion, the tragic dithyramb gradually became less satyrical and sportive in its character, till the creation of the independent satyric drama and the Attic dramatic tragedy.⁵

As to the steps by which this was effected, Aristotle⁶ says, "Tragedy was at the first an extemporaneous effusion (*ἀπ' ἀρχῆς αὐτοσχεδιαστική*), and was derived *ἀπὸ τῶν ἐξαρχόντων τὸν Διθύραμβον*," *i. e.*, from the leaders or the chief singers of the dithyramb, who probably sung or recited their parts in the trochaic metre, while the main body of the ode was written in irregular verse. It is easy to conceive how the introduction of an actor or speaker, independent of the chorus, might have been suggested by the exarchs or coryphæi coming forward separately and making short off-hand speeches,⁷ whether learned by heart beforehand, or made on the spur of the moment. (*Vid. Chorus*, p. 247.) But it is also possible, if not probable, that it was suggested by the rhapsodical recitations of the epic and gnomic poets formerly prevalent in Greece: the gnomic poetry being generally written in iambic verse, the metre of the Attic dialogue, and which Aristotle⁸ says was used by Homer in his Margites, though its invention is commonly ascribed to Archilochus. In fact,⁹ the rhapsodists themselves are sometimes spoken of as actors (*ὑποκριταί*) of the pieces they recited, which they are also said to act (*ὑποκρινάσθαι*¹⁰). But if two or more rhapsodes were called upon to go through an episode of a poem, a regulation which obtained at the Panathenæa, and attributed to Solon or Hipparchus,¹¹ it is clear that they would present much of a dramatic dialogue. In fact, the principal scenes of the whole *Iliad* might in this way have been represented as parts of a drama. These recitations, then, being so common, it was natural to combine with the representation of the dithyramb, itself a mixture of recitative and choral song, the additional element of the dialogue, written in iambic verse, a measure suggested, perhaps, by the gnomic poetry, and used by Solon about the time of the origin of the dialogue,¹² more especially as it is the most colloquial of all Greek metres (*λεκτικόν*), and that into which common con-

versation most readily falls. It is, indeed, only a conjecture, that the dialogue, or the Ionian element of Attic tragedy, was connected with the rhapsodical recitations, but it is confirmed by the fact that Homeric rhapsodes were common at Sicyon,¹ the cradle of the Dorian tragedy, and also at Brauron in Attica, where the worship of Dionysus existed from ancient times.² This, however, is certain, that the union of the iambic dialogue with the lyrical chorus took place at Athens under Pisistratus, and that it was attributed to Thespis, a native of Icarus, one of the country demes or parishes of Attica, where the worship of Dionysus had long prevailed. The introduction of this worship into Attica, with its appropriate choruses, seems to have been partly owing to the commands of the Dorian oracle³ in very early times. Thus it is stated⁴ that tragedy (*i. e.*, the old dithyrambic and satyrical tragedy) was very ancient in Attica, and did not originate with Thespis or his contemporaries. The alteration made by him, and which gave to the old tragedy (*ἀρχαῖον τῶν περὶ Θεσπιν ἦδη τὴν Τράγῳδιαν κινεῖν*) a new and dramatic character (making it an *ignotum tragicæ genus*⁵), was very simple, but very important. He introduced an actor, as it is recorded, for the sake of giving rest to the chorus,⁶ and independent of it, in which capacity he probably appeared himself,⁷ taking various parts in the same piece, under various disguises, which he was enabled to assume by means of the linen masks, the invention of which is attributed to him. Now as a chorus, by means of its leader, could maintain a dialogue with the actor, it is easy to see how, with one actor only, "a dramatic action might be introduced, continued, and concluded, by the speeches between the choral songs expressive of the joy or sorrow of the chorus at the various events of the drama." Thus Müller observes that, in the play of Pentheus, supposed to have been composed by Thespis, "a single actor might appear successively as Dionysus, Pentheus, a messenger, Agave the mother of Pentheus, and in these characters express designs and intentions, or relate events which could not be represented, as the murder of Pentheus by her mother: by which means he would represent the substance of the fable, as it appears in the *Bacchæ* of Euripides."⁸ With respect to the character of the drama of Thespis there has been much doubt: some writers, and especially Bentley,⁹ have maintained that his plays were all satyrical and ludicrous, *i. e.*, the plot of them was some story of Bacchus, the chorus consisted principally of satyrs, and the argument was merry: an opinion, indeed, which is supported by the fact that, in the early part of his time, the satyric drama had not acquired a distinctive character. It may also appear to be confirmed by the statement¹⁰ that at first the tragedians made use of the trochaic tetrameter, as being better suited to the satyrical and saltatorial nature of their pieces. But perhaps the truth is, that, in the early part of his career, Thespis retained the satyrical character of the older tragedy, but afterward inclined to more serious compositions, which would almost oblige him to discard the satyrs from his choruses. That he did write serious dramas is intimated by the titles of the plays ascribed to him, as well as by the character of the fragments of iambic verse quoted by Plutarch as his,¹¹ and which, even if they are forgeries of Heracles Ponticus, at least prove what was the opinion of a scholar of Aristotle or the subject. Besides, the assertion

that Sophocles¹ wrote against the chorus of Thespis, seems to show that there was some similarity of character between the productions of the two poets.² A summary of the arguments in favour of the serious character of the tragedy of Thespis is given by Welcker.³ The invention of the prologus and rhesis of tragedy (an expression clearly, in some measure, identical with the introduction of an actor) is also ascribed to Thespis by Aristotle.⁴ By the former word is meant the first speech of the actor,⁵ or the proœmium with which he opened the piece; the chorus then sang the first ode, or *πάροδος*, after which came the *ῥῆσις*, or dialogue between the actor and the principal choreutæ. The invention of this dialogue is also alluded to in the phrase *λέξεως δὲ γενομένης*.⁶ It is evident that the introduction of the dialogue must also have caused an alteration in the management of the chorus, which could not remain cyclic or circular, but must have been drawn up in a rectangular form about the thymele, or altar of Bacchus in front of the actor, who was elevated on a platform or table (*ἐλῆός*), the forerunner of the stage. The statement in *Po. lux** that this was the case before Thespis seems incorrect.⁷ If we are right in our notion of the general character of the Thespian drama, the phrase *οὐδὲν πρὸς Διόνυσον*, which was certainly used in his time, was first applied to his plays at Athens, as being unconnected with the fortunes of Dionysus, and as deviations from the *μικροὶ μῦθοι καὶ λέξεις γελοία* of his predecessors. Plutarch, however,⁸ supposes that its first application was later: he says, "when Phrynichus and Æschylus continued to elevate tragedy to legends and tales of sufferings (*εἰς μῦθους καὶ πάθη προαγόντων*), the people, missing and regretting the old satyric chorus, said, 'What is this to Bacchus?'" Hence the expression was used to signify what was *mal-à-propos*, or beside the question.

The reader may have observed that we have not noticed the lines of Horace:¹⁰

"*Dicitur et plaustris vexisse poemata Thespis,
Quæ canerent agerentque peruncti fœcibus ora.*"

The fact is that they are founded on a misconception of the origin of the Attic tragedy, and that the tale about the wagons of Thespis probably arose out of a confusion of the wagon of the comedian Susion with the *platform* of the Thespian actor. The first representation of Thespis was in B.C. 535. His immediate successors were the Athenian Chœrilus and Phrynichus, the former of whom represented plays as early as B.C. 524. He is said by Suidas to have written 150 pieces: from the title of one of them, the "*Alope*," its subject seems to have been a legend of Attic origin.¹¹ That he excelled in the satyirical drama invented by Pratinas, is indicated by the line of an unknown author,

"*Ἡνίκα μὲν βασιλεὺς ἦν Χοιρίλος ἐν Σατόροις :*

and if he wrote anything like the number of dramas ascribed to him, it is also evident that the custom of contending with tetralogies must have been of early origin, for there were only two dramatic festivals during the year.

Phrynichus was a pupil of Thespis, and gained his first victory in the dramatic contests B.C. 511. In his works, the lyric or choral element still predominated over the dramatic, and he was distinguished for the sweetness of his melodies, which, in the time of the Peloponnesian war, were very popular with the admirers of the old style of music. The esteem in which his "ambrosial songs" were

then held is shown in several passages of Aristophanes,¹ and in the line² where the dicasts are made to chant the old Sidonian sweet songs of Phrynichus,

Καὶ μινυρίζοντες μέλη

Ἀρχαιομελισιδωνοφρονιχάρτα,

"Sidonian" being an allusion to the play which he wrote called the *Phœnissæ*. The first use of female masks is also attributed to him,³ and he so far deviated from the general practice of the Attic tragedians as to write a drama on a subject of cotemporary history, the capture of Miletus by the Persians, B.C. 494.⁴

We now come to the first writer of satyirical dramas, Pratinas of Phlius, a town not far from Sicyon, and which laid claim to the invention of tragedy as well as comedy.⁵ For some time previously to this poet, and probably as early as Thespis, tragedy had been gradually departing more and more from its old characteristics, and inclining to heroic fables, to which the chorus of satyrs was not a fit accompaniment. But the fun and merriment caused by them were too good to be lost, or displaced by the severe dignity of the Æschylean drama. Accordingly, the satyirical drama, distinct from the recent and dramatic tragedy, but suggested by the sportive element of the old dithyramb was founded by Pratinas, who, however, appears to have been surpassed in his own invention by Chœrilus. It was always written by tragedians, and generally three tragedies and one satyirical piece were represented together, which, in some instances at least, formed a collected whole, called a tetralogy (*τετραλογία*). The satyirical piece was acted last, so that the minds of the spectators were agreeably relieved by a merry afterpiece at the close of an earnest and engrossing tragedy. The distinguishing feature of this drama was the chorus of satyrs, in appropriate dresses and masks, and its subjects seem to have been taken from the same class of the adventures of Bacchus and of the heroes as those of tragedy; but, of course, they were so treated and selected that the presence of rustic satyrs would seem appropriate. In their jokes, and drollery, and naïveté consisted the merriment of the piece; for the kings and heroes who were introduced into their company were not of necessity thereby divested of their epic and legendary character (Horace⁶ speaks of the "*incolumi gravitate*"), though they were obliged to conform to their situation, and suffer some diminution of dignity from their position. Hence Welcker⁷ observes, the satyirical drama, which, so to speak, was "the Epos turned into prose, and interspersed with jokes made by the chorus," is well spoken of as a "playful tragedy" (*παίζουσα τραγωδία*), being, both in form and materials, the same as tragedy. Thus also Horace⁸ says,

"*Effutire leves indigna tragoedia versus*

Intererit satyris paulum pudibunda protervis,"

alluding in the first line to the mythic or epic element of the satyric drama, which he calls *tragedia*, and in the second representing it as being rather ashamed of its company. The scene was, of course, laid in the supposed haunts of the satyrs, as we learn from Vitruvius:⁹ "*Satyrice scenæ ornantur arboribus, montibus reliquisque agrestibus rebus,*" all in keeping with the incidents of the pieces, and reminding the spectators of the old dithyramb and the god Dionysus, in whose honour the dramatic contests were originally held. We must, however, observe, that there were some characters and legends which, as not presenting any serious or pa-

1. (Aves, 748.—Thesm., 164.)—2. (Vesp., 219.)—3. (Suid in vit.)—4. (Herod., vi., 21.)—5. (Bode, p. 35.)—6. (Ep. ad Pis., 222.)—7. (Nachtrag, p. 331.)—8. (Ep. ad Pis., 231.)—9 (v., 8.)

thetic aspects, were not adapted for tragedy, and, therefore, were naturally appropriated to the satyric drama. Such were Sisyphus, Autolycus, Circe, Callisto, Midas, Omphale, and the robber Skiron. Hercules also, as he appears in Aristophanes' and the Alcestis of Euripides, was a favourite subject of this drama, as being no unfit companion for a drunken Silenus and his crew.² The Odyssey also, says Lessing,³ was in general a rich storehouse of the satyric plays; but, though the Cyclops of Euripides, the only satyric play extant, was taken from it, the list of satyric pieces given by Welcker⁴ hardly confirms this assertion.

We now come to the improvements made in tragedy by Æschylus, of which Aristotle⁵ thus speaks: "He first added a second actor and diminished the parts of the chorus, and made the dialogue the principal part of the action" (*Τὸν λόγον πρωταγωνιστὴν παρεσκεύασε*). He also availed himself of the aid of Agatharchus the scene-painter, and improved the costume of his actors by giving them thick-soled boots (*ἐμβάρα*), as well as the masks, which he made more expressive and characteristic. Horace⁶ thus alludes to his improvements:

*"personæ pallaque repertor honestæ
Æschylus, et modicis intravit pulpitæ tignis
Et docuit magnumque loqui, nitique cothurno."*

The custom of contending with trilogies (*τριλογία*), or with three plays at a time, is said to have been also introduced by him. In fact, he did so much for tragedy, and so completely built it up to its "towering height," that he was considered the father of it. The subjects of his drama, as we have before intimated from Plutarch, were not connected with the worship of Dionysus, but rather with the great cycle of Hellenic legends and some of the myths of the Homeric Epos. Accordingly, he said of himself⁷ that his dramas were but scraps and fragments from the great feasts of Homer. Another instance of his departure from the spirit and form of the old tragedy, as connected with Dionysus, is shown in his treatment of the dithyrambic chorus of fifty men, which, in his trilogy of the *Oresteia*, he did not bring on the stage all at once, but divided it into separate parts, making a different set of choreutæ for each of the three pieces.⁸ In the latter part of his life Æschylus made use of one of the improvements of Sophocles, namely, the *τριταγωνιστής*, or third actor. This was the finishing stroke to the dramatic element of Attic tragedy, which Sophocles is said to have matured by farther improvements in costume and scene-painting. Under him tragedy appears with less of sublimity and sternness than in the hands of Æschylus, but with more of calm grandeur, and quiet dignity, and touching incident. His latter plays are the perfection of the Grecian tragic drama, as a work of art and poetic composition in a thoroughly-chastened and classic style, written when, as he says of himself, he had put away the boyish pomp of Æschylus (*τὸν Αἰσχύλου διαπεπαιχὸς ὄγκον*), and the harsh obscurity of his own too great refinements, and attained to that style which he thought the best, and most suited for portraying the characters of men.⁹ The introduction of the third actor enabled him to do this the more effectually, by showing the principal character on different sides and under different circumstances, both as excited by the opposition of one, and drawn out by the sympathies of another. (*Vid. HISTORI, p. 505.*) Hence, though the plays of Sophocles are longer than those of Æschylus, still

there is not a corresponding increase of action, but a more perfect delineation of character. Creon, for instance, in the *Antigone*, and Ajax, are more perfect and minutely drawn characters than any in Æschylus. The part of the chorus is, on the other hand, considerably diminished in his plays. Another distinguishing feature in them is their moral significance and ethical teaching. Though the characters in them are taken from the old subjects of national interest, still they do not always appear as heroes, or above the level of common humanity, but in such situations, and under the influence of such motives, passions, and feelings, as fall to the lot of men in general: so that "every one may recognise in them some likeness of himself."

In the hands of Euripides tragedy deteriorated, not only in dignity, but also in its moral and religious significance. He introduces his heroes in rags and tatters, and busies them with petty affairs, and makes them speak the language of every-day life. As Sophocles said of him,¹ he represented men, not as they ought to be, but as they are, without any ideal greatness or poetic character—thoroughly prosaic personages. His dialogues, too, were little else than the rhetorical and forensic language of his day cleverly put into verse: full of sophistry and quibbling distinctions. One of the peculiarities of his tragedies was the *πρόλογος*, an introductory monologue, with which some hero or god opens the play, telling who he is, what is the state of affairs, and what has happened up to the time of his address, so as to put the audience in possession of every fact which it might be necessary for them to know: a very business-like proceeding, no doubt, but a poor make-shift for artistical skill. The "*Deus ex machina*," also, though not always, in a "*nodus, tali vindice dignus*," was frequently employed by Euripides to effect the *dénouement* of his pieces. The chorus, too, no longer discharged its proper and high functions, either as a representative of the feelings of unprejudiced observers, or "as one of the actors and a part of the whole," joining in the development of the piece. Many of his choral odes, in fact, are but remotely connected in subject with the action of the play. Another novelty of Euripides was the use of "monodies" or lyrical songs, in which, not the chorus, but the principal persons of the drama, declare their emotions and sufferings. They were among the most brilliant parts of his pieces, and, being sung by persons on the stage, are sometimes described as *ὥδαι ἀπὸ σκηνῆς*.² Aristophanes often parodied them, and makes Euripides say of himself³ that he "nurtured tragedy with monodies, introducing Cephisophon," his chief actor, to sing them.

Εἰτ' ἀνέτρεφον μονωδίαις, Κηφισοφῶντα μὲνεις.

Euripides was also the inventor of *tragi-comedy*, which not improbably suggested, as it certainly resembled, the *ἱλαροτραγωδία* of the Alexandrian age, the latter being a half-tragic, half-comic drama, or, rather, a parody or travesty of tragical subjects. A specimen of the Euripidean *tragi-comedy* is still extant in the *Alcestis*, acted B.C. 438, as the last of four pieces, and therefore as a substitute for a satyric drama. Though tragic in its form and some of its scenes, it has a mixture of comic and satyric characters (*e. g.*, Hercules), and concludes happily.

It remains to make some remarks on the nature and object of Greek tragedy in general, and on the parts into which it is divided. According to Plato,⁴ the truest tragedy is an imitation of the noblest and best life: *μίμησις τοῦ καλλίστου καὶ ἀρίστου βίου*.

1. (Ranæ.)—2. (Müller, 295.)—3. (Leben des Sophocles, § 115.)—4. (Nachtrag, p. 284, 322.)—5. (Poet., iv., § 16.)—6. (Ep. ad Pis., 278.)—7. (Athen., viii., p. 347, c.)—8. (Müller, Eumenid.)—9. (Plut., De Pro V. S., p. 79, b.)

1. (Aristot., Poet., 25.)—2. (Phot., Lex., s. v.)—3. (Ranæ, 944.)—4. (Leg., vii., p. 817.)

Aristotle's definition is more comprehensive and perhaps perfect. "Tragedy is an imitation of an action that is important (*σπουδαία*), and entire, and of a proper magnitude, in pleasurable language, by means of action, not of narration, and effecting, through terror and pity, the refinement and correction of such passions" (*τὴν τοιούτων παθημάτων κάθαρσιν*). He then adds, Tragedy contains six parts: the story, *i. e.*, the combination of incidents or plot, manners, expression, sentiment, decoration, and music (*μῦθος καὶ ᾠή, καὶ λέξις, καὶ δianoia, καὶ ὄψις, καὶ μελοποιία*). Of these the story is the principal part, developing the character of agents, and being, in fact, the very soul of tragedy. The manners come next, and manifest the disposition of the speakers. The sentiments take the third place, and comprehend whatever is said, whether proving anything, or expressing some general reflection. Afterward he adds, Fables are of two sorts, simple and complicated (*οἱ μὲν ἅπλοιοι, οἱ δὲ πεπλεγμένοι*), the catastrophe of the former produced without a revolution or discovery, of the latter with one or both. Now a revolution (*περιπέτεια*) is a change to the reverse of what is expected from the circumstances of the action: a discovery (*ἀναγνώρισις*) is a change from known to unknown, happening between characters whose happiness or unhappiness forms the catastrophe of the drama. The best sort of discovery is accompanied by a revolution, as in the *Œdipus*. Aristotle next enumerates the parts of *quantity* (*κατὰ τὸ ποσόν*) or division in tragedy: these are, the prologue, episode, exode, and choral songs; the last divided into the parade and stasimon. The *πρόλογος* is all that part of a tragedy which precedes the parodos of the chorus, *i. e.*, the first act. The *ἐπεισόδιον* is all the part between whole choral odes. The *ἐξόδος* that part which has no choral ode after it. Of the choral part, the *πάροδος* is the first speech of the whole chorus (not broken up into parts): the stasimon is without anapests and trochees. These two divisions were sung by all the choreutæ (*κοινὰ πάντων*), but the "songs on the stage" and the *κόμμοι* by a part only (*ἴδια δὲ τὰ ἀπὸ τῆς σκηνῆς καὶ κόμμοι*). The *κομμός*, which properly means a wailing for the dead, was generally used to express strong excitement, or lively sympathy with grief and suffering, especially by *Æschylus*. It was common to the actors and a portion only of the chorus (*κομμός δὲ θῆνός, κοινὸς χορὸς, καὶ ἀπὸ σκηνῆς*), whence its derivative *κομματικά* is used to designate broken and interrupted songs sung either by individual choreutæ or divisions of the chorus.¹ Again, the *πάροδος* was so named as being the passage-song of the chorus, sung while it was advancing to its proper place in the orchestra, and therefore in anapestic or marching verse; the *στάσιμον*, as being chanted by the chorus when standing still in its proper position.²

With respect to the ends or purposes of tragedy, Aristotle observes that they are best effected by the representation of a change of fortune from prosperity to adversity, happening to a person neither eminently virtuous nor just, nor yet involved in misfortune by deliberate vice or villany, but by some error of human frailty, and that he should also be a person of high fame and eminent prosperity, like *Œdipus* or *Thyestes*. Hence, he adds, Euripides is not censurable, as is generally supposed; for tragedies with an unhappy termination, like his, have always the most *tragic* effect; and Euripides is the most tragic of all poets, *i. e.*, succeeds best in producing pity: an expression especially true of some scenes in the *Medea*. In *Æschylus*, the feelings of pity and melancholy interest are generally excited by the relation in which his heroes stand to desti-

ny. He mostly represents them as vainly struggling against a blind but irresistible fate, to whose power (according to the old Homeric notion) even the father of gods and men is forced to yield, and it is only occasionally, as in the splendid chorus of the *Eumenides* (522), that we trace in him any intimations of a moral and retributive government of the world. Hence there is a want of moral lessons in his works. In Sophocles, on the contrary, we see indications of a different tone of thought, and the superintendence of a directing and controlling power is distinctly recognised: "the great Zeus in heaven, who superintends and directs all things."³

The materials of Greek tragedy were the national mythology,

"Presenting Thebes, or Pelops' line,
Or the tale of Troy divine."

The exceptions to this were the two historical tragedies, the "Capture of Miletus," by Phrynichus, and the "Persians" of *Æschylus*; but they belong to an early period of the art. Hence the plot and story of the Grecian tragedy were, of necessity, known to the spectators, a circumstance which strongly distinguishes the ancient tragedy from the modern, and to which is owing, in some measure, the practical and quiet irony in the handling of a subject, described by Thirlwall⁴ as a characteristic of the tragedy of Sophocles.

The functions of the chorus in Greek tragedy were very important, as described by Horace:⁵

"*Actoris partes chorus officiumque virile
Defendat: neu quid medios intercinat actus,
Quod non proposito conducatur, et hæreat apte,*" &c.

We must conceive of it, says A. W. Schlegel, as the personification of the thought inspired by the represented action; in other words, it often expresses the reflections of a dispassionate and right-minded spectator, and inculcates the lessons of morality and resignation to the will of heaven, taught by the occurrence of the piece in which it is engaged. Besides this, the chorus enabled a poet to produce an image of the "council of elders," which existed under the heroic governments, and under whose advice and in whose presence the ancient princes of the Greek tragedy generally acted. This image was the more striking and vivid, inasmuch as the chorus was taken from the people at large, and did not at all differ from the appearance and stature of ordinary men; so that the contrast and relation between them and the actors was the same as that of the Homeric *λαοὶ* and *ἄνακτες*. Lastly, the choral songs produced an agreeable pause in the action, breaking the piece into parts, while they presented to the spectator a lyrical and musical expression of his own emotions, or suggested to him lofty thoughts and great arguments. As Schlegel says, the chorus was the spectator idealized. With respect to the number of the chorus, Müller⁶ thinks that, out of the dithyrambic chorus of 50, a quadrangular chorus of 48 persons was first formed, and that this was divided into sets of 12, one for each play of a tetralogy; but in the time of Sophocles the tragic chorus amounted to 15, a number which the ancient grammarians always presuppose in speaking of its arrangements, though it might be that the form of the *Æschylean* tragedy afterward became obsolete.

The preceding account should be read in connexion with the articles *CHORUS*, *DIONYSIA*, *HISTRIUM*, and *THEATRUM*.

The explanation of the following phrases may be useful:

Παραορήγημα: this word was used in case of a

1. (Electr., 174.—Thirlwall, Phil. Mus., vol. ii., p. 492.)—2. (Phil. Mus., ii., p. 483, &c.)—3. (Ep. ad Pis., 193.)—4. (Lit of Greece, 300.)

1. (Müller, Eumen., p. 54.)—2. (Suid. and Etymol. Mag.)

fourth actor appearing on the stage, probably because the choragus was required to be at an *extra* expense in supplying him with costume, &c.; sometimes actors so called spoke, as the character of Pylades does;¹ sometimes they were mutes.

Παραρχήμιον: this phrase was used when one of the choreutæ spoke in song instead of a fourth actor, probably near or behind the side-scenes. *Παρηγορητὰ* were voices off the stage, and not seen, as the frogs in the *Ranæ*.²

Παραρχήματα, persons who came forward but once, something like the *πρόσωπα προσωρικά*, or introductory persons who open a drama and never appear again; as the watchman in the *Agamemnon*, and Polydorus in the *Hecuba*. Terence also frequently uses the persona *protatica*.³

The *δύοχορη* was a double chorus, formed of the choruses of two separate plays: thus, at the end of the *Eumenides* of Æschylus, the Furies of one play and the festal train of another come on the stage together.⁴

The principal modern writers on the Greek tragedy are mentioned in the course of the article. The reader may also consult Wachsmuth, II., ii., p. 467 and 421.—Gruppe, *Adriane, Die Tragische Kunst der Griechen in ihrer Entwicklung und in ihrem Zusammenhang mit der Volkspoesie*, Berl., 1834.—*Museum Criticum*, ii., p. 69. &c.—Copleston, *Prælectiones Academicae*.—Schneider, *Ueber das Attische Theaterwesen*, an exceedingly valuable book.

II. ROMAN TRAGEDY. The tragedy of the Romans was, for the most part, an imitation of, or rather, a borrowing from the Greek, the more imperfect and unnatural as the construction of the Roman theatre afforded no appropriate place for the chorus, which was therefore obliged to appear on the stage instead of in the orchestra. The first tragic poet and actor at Rome⁵ was Livius Andronicus, a Greek by birth, who began to exhibit in B.C. 240. From the account in Livy,⁶ it would seem that in his monodies (or the lyrical parts sung, not by a chorus, but by one person) it was customary to separate the singing from the mimetic dancing, leaving the latter only to the actor, while the singing was performed by a boy placed near the flute-player (*ante tibicinem*), so that the dialogue only (*diverbia*) was left to be spoken by the actors. One of the plays written by him was an "Andromeda;" and he also made a Latin prose translation of the *Odyssey*. The next tragic poet at Rome was Nævius, who, however, appears to have written comedies as well as tragedies,⁷ and a history of the first Punic war: so that the writing of tragedies was not a distinct profession at Rome as at Athens. An "Alcestis" seems to have been written by him. To the same epoch as Livius Andronicus and Nævius belongs Ennius, who resembled the latter in being an epic poet as well as a tragedian. Among the plays written by him are mentioned a *Medea*, an *Ajax*, a *Phœnisæ*, an *Iphigenia*, an *Andromache*, and a *Hecuba*. The metre used by him and Nævius was iambic or trochaic in the dialogue, and anapæstic for the lyrical parts.⁸ The next distinguished tragedian was Pacuvius, a nephew of Ennius, and a painter also. His style was more remarkable for spirit and vigour of expression than polish or refinement, a deficiency attributable to his age and provincial origin, as he was born at Brundisium. Among his plays occur an *Antiope*, a *Chryses*, and a *Dulorestes*,⁹ and his tragedies found admirers even in the time of Persius.¹⁰ Cicero¹¹ quotes from

him a spirited translation of the concluding lines of the *Prometheus Vincens* of Æschylus. Attius or Accius the younger was junior to Pacuvius by about fifty years. His earlier plays were, as he himself admitted, harsh and obscure;¹ but his style probably altered with increasing years. Many fragments of his plays occur in Cicero and the Latin grammarians, Diomedes, Nonius, and Varro. He was also a writer of annals in hexameter verses.² The five poets mentioned above belong to the earlier epoch of Roman tragedy, in which little was written but translations and imitations of the Greek, with occasional insertions of original matter. How they imitated the structure of the choral odes is doubtful; perhaps they never attempted it. Ennius, Pacuvius, and Accius are contrasted by Cicero³ with Æschylus, Sophocles, and Euripides; and of the last two Quintilian⁴ says, "*Virium Accio plus tribuitur; Pacuvium videri doctorem, qui esse docti affectant, volunt.*"

In the age of Augustus, the writing of tragedies, whether original or imitations, seems to have been quite a fashionable occupation. The emperor himself attempted an *Ajax*, but did not succeed; and when his friends asked him, "*Quidnam Ajax ageret?*" his reply was "*Ajaceum suum in spongiam incubuisse.*"⁵ One of the principal tragedians of this epoch was Asinius Pollio, to whom the line⁶

"*Sola Sophocleo tua carmina digna coturno*"

is supposed to apply: he also excelled in other literary accomplishments.⁷ Ovid⁸ also wrote a tragedy, of which Quintilian⁹ says, "*Ovidii Medea videtur mihi ostendere, quantum ille vir præstare potuisset si ingenio suo temperare quam indulgere maluisset.*" His "*armorum iudicium*"¹⁰ between *Ajax* and *Ulysses*, on which Pacuvius and Accius also wrote dramas, proves that he might have rivalled Euripides in the rhetorical skill. Quintilian also says of Varius, who was distinguished in epic as well as tragic poetry,¹¹ that his *Thyestes* might be compared with any of the Greek tragedies. Some fragments of his *Thyestes* are extant, but we have no other remains of the tragedy of the Augustan age. The loss, perhaps, is not great; for the want of a national and indigenous mythology must have disabled the Roman poets from producing any original counterparts of the Greek tragedy; besides which, in the later days of the Republic, and under the Empire, the Roman people were too fond of gladiatorial shows, and beast-fights, and gorgeous spectacles, to encourage the drama. Moreover, it is also manifest that a tragedy like that of the Greeks could not have flourished under a despotism.

The only complete Roman tragedies that have come down to us are the ten attributed to the philosopher Seneca. But whether he wrote any of them or not is a disputed point. It is agreed that they are not all from the same hand, and it is doubtful whether they are all of the same age even. In one of them, the *Medea*, the author made his heroine kill her children on the stage, "*coram populo*," in spite of the precept of Horace. Schlegel¹ thus speaks of them: "To whatever age they belong, they are, beyond description, bombastic and frigid, utterly unnatural in character and action, and full of the most revolting violations of propriety, and barren of all theatrical effect. With the old Grecian tragedies they have nothing in common but the name, the exterior form, and the matter. Their persons are neither ideal nor real men, but misshapen giants of puppets, and the wire that moves them

as at one time an unnatural heroism, at another a passion alike unnatural, which no atrocity of guilt can call." Still they have had admirers: Heinsius calls the Hippolytus "divine," and prefers the Troades to the Hecuba of Euripides: even Racine has borrowed from the Hippolytus in his Phèdre.

Roman tragedians sometimes wrote tragedies on subjects taken from their national history. Pacuvius, e. g., wrote a *Paulus*, L. Accius a *Brutus* and a *Decius*.¹ Curiatius Maternus, also a distinguished orator in the reign of Domitian, wrote a *Domitianus* and a *Cato*, the latter of which gave offence to the rulers of the state (*potentium animos offendit*).² The fragments of the Thystes of Varius are given by Bothius, *Poet. Scen. Lat. Frag.*, p. 279.

*TRAGOPO'GON (*τραγοπόγων*), a plant, Goat's-head. According to Stackhouse, it is the *Tragopogon Orientalis*. Sprengel, however, prefers the *crucifolia*.³

*TRAGORIG'ANON (*τραγορίγανον*), a species of Thyme. The two kinds described by Dioscorides are held by Sprengel to be the *Thymus Tragoriganum* and the *Stachys glutinosa*.⁴

*TRAGOS (*τράγος*), the male of the *Capra hircus*, i. the *αἰς* being the female. "The ancients were laevissime acquainted with the Wild Goat, or *Capra Ibez*; it is supposed to be the *akko* of the Hebrews, and the *τραγέλαφος* of the Septuagint and Diodorus Siculus."⁵

*II. A plant mentioned by Dioscorides, and now called *Salsola Tragus*. III. Another plant, mentioned by the same writer, and with which Spikenard was adulterated. According to Clusius and Sprengel, it is the *Saxifraga hirculus*.⁶

ΤΡΑΥΜΑΤΟΣ ΕΚ ΠΡΟΝΟΙΑΣ ΓΡΑΦΗ (*τραύματος ἐκ προνοίας γραφή*). Our principal information respecting this action is derived from two speeches of Lysias, namely, *πρὸς Σίμωνα* and *περὶ τραύματος ἐκ προνοίας*, though they do not supply us with many particulars. It appears, however, that this action could not be brought by any person who had been wounded or assaulted by another, but that it was necessary to prove that there had been an intention to murder the person who had been wounded; consequently, the *πρόνοια* consisted in such an intention. Cases of this kind were brought before the Areiopagus: if the accused was found guilty, he was exiled from the state and his property confiscated.⁷

TREBONIA LEX. (*Vid. LEX*, p. 586.)

TRESVIRI. (*Vid. TRIUMVIRI*.)

TRIARI'II is the name of a class of soldiers belonging to the infantry of the Roman legion. Niebuhr⁸ supposes that the name was derived from their being formed of all the three heavy-armed classes, and not from their being placed in the third line of the battle array,⁹ so that the triarians formed thirty centuries, ten belonging to each class. Thus the triarians would have existed from the institution of the Servian centuries;¹⁰ but, so long as the battle array of a legion resembled that of a Macedonian phalanx, the triarians could not be in the line

of battle. They may, however, nevertheless have existed with their name as guards of the camp, where they defended the walls and palisades, for which purpose they were armed with javelins, spears, and swords. Their javelin also may have been the pilum at an early time, whence their name *Pilani*. If the camp did not require a guard, the triarii would of course stand by their comrades in the phalanx. In the military constitution ascribed to Camillus,¹ the triarii formed part of the third order, consisting of fifteen maniples, and were arrayed behind the principes.² In the time of Polybius, when the 170 centuries no longer existed, the soldiers of the infantry were drawn up in four ranks, according to their age and experience, and the triarii now were 600 of the oldest veterans of a legion, and formed the fourth rank, where they were a kind of reserve.³ Their armour was the same as that of the hastati and principes, and consisted of a square shield, a short Spanish sword, two pila, a brass helmet with a high crest, and metal plates for the protection of the legs.⁴ (*Vid. ARMY, ROMAN*, p. 103.)

TRI'BULA or TRIBULUM (*τρίβλος*), a corn-drag, consisting of a thick and ponderous wooden board, which was armed underneath with pieces of iron or sharp flints, and drawn over the corn by a yoke of oxen, either the driver or a heavy weight being placed upon it, for the purpose of separating the grain and cutting the straw.⁵ Together with the *tribula*, another kind of drag, called *traha*, was also sometimes used, which it is probable was either entirely of stone or made of the trunk of a tree.⁶ These instruments are still used in Greece, Asia Minor, Georgia, and Syria, and are described by various travellers in those countries, but more especially by Paul Lucas,⁷ Sir R. K. Porter,⁸ Jackson,⁹ and C. Fellows.¹⁰ The corn is threshed upon a circular floor (*area*, *ἀλών*), either paved, made of hardened clay, or of the natural rock. It is first heaped in the centre, and a person is constantly occupied in throwing the sheaves under the drag as the oxen draw it round. Lucas and Fellows have given prints representing the tribula as now used in the East. The verb *tribulare*¹¹ and the verbal noun *tribulatio* were applied in a secondary sense to denote affliction in general.

TRI'BULUS (*τρίβλος*), a caltrop, also called *mu-rex*.¹² When a place was beset with troops, the one

party endeavoured to impede the cavalry of the

other party, either by throwing before them caltrops, which necessarily lay with one of their four sharp points turned upward, or by burying the caltrops with one point at the surface of the ground.¹ The preceding woodcut is taken from a bronze caltrop figured by Caylus.²

*TRIBULUS (*tribollos*), an aquatic plant, producing a prickly nut having a triangular form, "Water-chestnut" or "Water-caltrops," the *Trapa natans*, called by some *tribollos ενυδρος*.³

*II. Another prickly plant, growing among corn, the *Tribulus tenestrus*, or Land-caltrops, called also *tribollos χερσαίος*.⁴

TRIBUNAL, a raised platform, on which the prætor and judges sat in the Basilica. It is described under BASILICA, (p. 141).

There was a tribunal in the camp, which was generally formed of turf, but sometimes, in a stationary camp, of stone, from which the general addressed the soldiers, and where the consul and tribunes of the soldiers administered justice. When the general addressed the army from the tribunal, the standards were planted in front of it, and the army placed round it in order. The address itself was called *Allocutio*.⁵ (*Vid. CASTRA*, p. 223.)

A tribunal was sometimes erected in honour of a deceased imperator, as, for example, the one raised to the memory of Germanicus.⁶

Pliny⁷ applies the term to embankments against the sea.

TRIBUNUNCIA LEX. (*Vid. TRIBUNUS*.)

TRIBUNUS. This word seems originally to have indicated an officer connected with a tribe (*tribus*), or who represented a tribe for certain purposes; and this is indeed the character of the officers who were designated by it in the earliest times of Rome, and may be traced, also, in the later officers of this name. We subjoin an account of all the Roman officers known under this name.

TRIBUNES OF THE THREE ANCIENT TRIBES. At the time when all the Roman citizens were contained in the three tribes of the Ramnes, Tities, and Luceres, each of them was headed by a tribune (*φύλαρχος*), and these three tribunes represented their respective tribes in all civil, religious, and military affairs; that is to say, they were in the city the magistrates of the tribes, and performed the sacra on their behalf, and in times of war they were their military commanders.⁸ Niebuhr⁹ supposes that the *tribunus celerum* was the tribune of the Ramnes, the oldest and noblest among the three tribes, and in this opinion he is followed by Götting,¹¹ though it is in direct contradiction to Dionysius¹² and Pomponius,¹³ according to whom the *tribunus celerum* was the commander of the *celeres*, the king's body-guard, a statement which is rejected by Niebuhr without any ancient authority, except that Dionysius, in one passage,¹⁴ vaguely speaks of *tribuni celerum* in the plural. That, however, the *tribunus celerum* was really distinct from the three tribunes of the tribes, is acknowledged by Niebuhr himself in a subsequent part of his work.¹⁵ In what manner the *tribunus celerum* was appointed is uncertain; but, notwithstanding the statement of Dionysius, that Tarquinius Superbus gave this office to L. Junius Brutus, it is much more probable that he was elected by the tribes; for we find that when the imperium was to be conferred upon the king, the comitia

were held under the presidency of the *tribunus celerum*, and in the absence of the king, to whom this officer was next in rank, he convoked the comitia: it was in an assembly of this kind that Brutus proposed to deprive Tarquinius of the imperium.¹ A law passed under the presidency of the *tribunus celerum* was called a *lex tribunitia*, to distinguish it from one passed under the presidency of the king (*Vid. REGIA LEX*.) The tribunes of the three ancient tribes ceased to be appointed when these tribes themselves ceased to exist as political bodies, and when the patricians became incorporated in the local tribes of Servius Tullius. (*Vid. TRIBUS, ROMAN.*)

TRIBUNES OF THE SERVIAN TRIBES.—When Servius Tullius divided the commonalty into thirty local tribes, we again find that at the head of these tribes there was a tribune, whom Dionysius calls *φύλαρχος*, like those of the patrician tribes.² He mentions them only in connexion with the city tribes, but there can be no doubt that each of the rustic tribes was likewise headed by a tribune. The duties of these tribunes, who were without doubt the most distinguished persons in their respective districts, appear to have consisted at first in keeping a register of the inhabitants in each district and of their property, for purposes of taxation, and for levying the troops for the armies. When, subsequently, the Roman people became exempted from taxes, the main part of their business was taken from them, but they still continued to exist. Niebuhr³ supposes that the *tribuni ærarii*, who occur down to the end of the Republic, were only the successors of the tribunes of the tribes. Varro⁴ speaks of *curatores omnium tribuum*, a name by which he probably means the tribunes of the tribes. When, in the year 406 B.C., the custom of giving pay (*stipendium*) to the soldiers was introduced, each of the *tribuni ærarii* had to collect the *tributum* in his own tribe, and with it to pay the soldiers;⁵ and in case they did not fulfil this duty, the soldiers had the right of *pignoris capio* against them.⁶ In later times their duties appear to have been confined to collecting the *tributum*, which they made over to the military quaestors who paid the soldiers. (*Vid. QUÆSTOR*.) The *lex Aurelia* (70 B.C.) called the *tribuni ærarii* to the exercise of judicial functions, along with the senators and equites, as these tribunes represented the body of the most respectable citizens.⁷ But of this distinction they were subsequently deprived by Julius Cæsar.⁸

TRIBUNI PLEBIS.—The ancient tribunes of the plebeian tribes had undoubtedly the right of convoking the meetings of their tribes, and of maintaining the privileges granted to them by King Servius, and subsequently by the Valerian laws. But this protection was very inadequate against the insatiable ambition and usurpations of the patricians. When the plebeians, impoverished by long wars, and cruelly oppressed by the patricians, at last seceded, in the year 494 B.C., to the Mons Sacer, the patricians were obliged to grant to the plebeians the right of appointing tribunes (*tribuni plebis*) with more efficient powers to protect their own order than those which were possessed by the heads of the tribes. The purpose for which they were appointed was only to afford protection against abuse on the part of the patrician magistrates; and that they might be able to afford such protection, their persons were declared sacred and inviolable, and it was agreed that whoever acted against this inviolability should

be an outlaw, and that his property should be forfeited to the Temple of Ceres.¹ This decree seems to contain evidence that the heads of the tribes, in their attempts to protect members of their own order, had been subject themselves to insult and maltreatment; and that similar things occurred even after the sanctity of the tribunes was established by treaty, may be inferred from the fact that, some time after the tribuneship was instituted, heavy punishments were again enacted against those who should venture to annoy a tribune when he was making a proposition to the assembly of the tribes. The law by which these punishments were enacted ordained that no one should oppose or interrupt a tribune while addressing the people, and that whoever should act contrary to this ordinance, should give bail to the tribunes for the payment of whatever fine they should affix to his offence in arraigning him before the commonalty; if he refused to give bail, his life and property were forfeited.² It should, however, be observed, that this law belongs to a later date than that assigned to it by Dionysius, as has been shown by Niebuhr;³ it was, in all probability, made only a short time before its first application in 461 B.C., in the case of Cæso Quinctius.⁴ The tribunes were thus enabled to afford protection to any one who appealed to the assembly of the commonalty, or required any other assistance. They were essentially the representatives and the organs of the plebeian order, and their sphere of action was the comitia tributa. With the patricians and their comitia they had nothing to do. The tribunes themselves, however, were not judges, and could inflict no punishments,⁵ but could only propose the imposition of a fine to the commonalty (*multam irrogare*). The tribunes were thus, in their origin, only a protecting magistracy of the plebs; but, in the course of time, their power increased to such a degree that it surpassed that of all other magistrates, and the tribunes then, as Niebuhr⁶ justly remarks, became a magistracy for the whole Roman people, in opposition to the senate and the oligarchical elements in general, although they had nothing to do with the administration of the government. During the latter period of the Republic they became true tyrants, and Niebuhr justly compares their college, such as it was in later times, to the National Convention of France during the first revolution. But, notwithstanding the great and numerous abuses which were made of the tribunitian power by individuals, the greatest historians and statesmen confess that the greatness of Rome and its long duration are in a great measure attributable to the institution of this office.

As regards the number of the tribunes of the people, all the ancient writers agree (see the passages in Niebuhr⁷) that at first they were only two, though the accounts differ as to the names of the first tribunes. Soon afterward, however, the number of tribunes was increased to five, one being taken from each of the five classes.⁸ When this increase took place is quite uncertain. According to Dionysius,⁹ three new tribunes were added immediately after the appointment of the first two. Cicero¹⁰ states, that the year after the institution of the tribunes their number was increased to ten; according to Livy,¹¹ the first two tribunes, immediately after their appointment, elected themselves three new colleagues; according to Piso,¹² there were only two tribunes down to the time of the Publilian laws. It would be hopeless to attempt to

ascertain what was really the case: thus much only is certain, that the number was not increased to ten till the year 457 B.C., and that then two were taken from each of the five classes.¹ This number appears to have remained unaltered down to the end of the Empire.

The time when the tribunes were elected was, according to Dionysius,² always on the 10th of December, although it is evident from Cicero³ that in his time, at least, the election took place *a. d. xvi. Kal. Sextil.* (17th of July). It is almost superfluous to state that none but plebeians were eligible to the office of tribune; hence, when, towards the end of the Republic, patricians wished to obtain the office, they were obliged first to renounce their own order and to become plebeians (*vid. PATRICII*, p. 743); hence, also, under the Empire, it was thought that the princeps should not be tribune because he was a patrician.⁴ But the influence which belonged to this office was too great for the emperors not to covet it. Hence Augustus was made tribune for life.⁵ During the Republic, however, the old regulations remained in force even after the tribunes had ceased to be the protectors of the plebs alone. The only instance in which patricians were elected to the tribuneship is mentioned by Livy,⁶ and this was probably the consequence of an attempt to divide the tribuneship between the two orders. Although nothing appears to be more natural than that the tribunes should originally have been elected by that body of the Roman citizens which they represented, yet the subject is involved in considerable obscurity. Cicero⁷ states that they were elected by the comitia of the curies; the same is implied in the accounts of Dionysius⁸ and Livy,⁹ according to whom the comitia of the tribes did not obtain this right till the lex Publilia (472 B.C.).¹⁰ Niebuhr thinks¹¹ that, down to the Publilian law, they were elected by the centuries, the classes of which they represented in their number, and that the curies, as Dionysius himself mentions in another place,¹² had nothing to do with the election except to sanction it. The election in the comitia of the centuries, however, does not remove the difficulties, whence Götting¹³ is inclined to think that the tribunes, before the expiration of their office, appointed their successors, after a previous consultation with the plebeians. The necessity of the sanction by the curies cannot be doubted, but it appears to have ceased even some time before the Publilian law.¹⁴ After this time it is never heard of again, and the election of the tribunes was left entirely to the comitia tributa, which were convoked and held for this purpose by the old tribunes previous to the expiration of their office.¹⁵ One of the old tribunes was appointed by lot to preside at the election.¹⁶ As the meeting could not be prolonged after sunset, and the business was to be completed in one day, it sometimes happened that it was obliged to break up before the election was completed, and then those who were elected filled up the legitimate number of the college by co-optatio.¹⁷ But, in order to prevent this irregularity, the tribune L. Trebonius, in 448 B.C., got an ordinance passed, according to which the college of the tribunes should never be completed by co-optatio, but the elections should be continued on the second day, if they were not completed on the first, till the number ten was made up.¹⁸ The place where the elec-

tion of the tribunes was held was originally and lawfully the Forum, afterward, also, the Campus Martius, and sometimes the area of the Capitol.

We now proceed to trace the gradual growth of the tribunitian power. Although its original character was merely auxilium or βοήθεια against patrician magistrates, the plebeians appear early to have regarded their tribunes also as mediators or arbitrators in matters among themselves. This statement of Lydus¹ has been pointed out by Walter.² The whole power possessed by the college of tribunes was designated by the name *tribunitia potestas*, and extended at no time farther than one mile beyond the gates of the city; at a greater distance than this they came under the imperium of the magistrates, like every other citizen.³ As they were the public guardians, it was necessary that every one should have access to them, and at any time; hence the doors of their houses were open day and night for all who were in need of help and protection, which they were empowered to afford against any one, even against the highest magistrates. For the same reason, a tribune was not allowed to be absent from the city for a whole day except during the *Feriae Latinae*, when the whole people were assembled on the Alban Mount.⁴

In the year 456 B.C., the tribunes, in opposition to the consuls, assumed the right to convoke the senate, in order to lay before it a rogation and discuss the same;⁵ for until that time the consuls alone had the right of laying plebiscita before the senate for approbation. Some years after, 452 B.C., the tribunes demanded of the consuls to request the senate to make a *senatus consultum* for the appointment of persons to frame a new legislation, and during the discussions on this subject the tribunes themselves were present in the senate.⁶ The written legislation which the tribunes then wished can only have related to their own order; but as such a legislation would only have widened the breach between the two orders, they afterward gave way to the remonstrances of the patricians, and the new legislation was to embrace both orders.⁷ From the second decemvirate the tribuneship was suspended, but was restored after the legislation was completed, and now assumed a different character from the change that had taken place in the tribes. (*Vid. TRIBUS, ROMAN.*) The tribunes now had the right to be present at the deliberations of the senate;⁸ but they did not sit among the senators themselves, but upon benches before the opened doors of the senate-house.⁹ The inviolability of the tribunes, which had before only rested upon a contract between the two estates, was now sanctioned and confirmed by a law of M. Horatius.¹⁰ As the tribes now also included the patricians and their clients, the tribunes might naturally be asked to interpose on behalf of any citizen, whether patrician or plebeian. Hence the patrician *ex-decemvir*, Appius Claudius, implored the protection of the tribunes.¹¹ About this time the tribunes also acquired the right of taking the auspices in the assemblies of the tribes.¹² They also assumed again the right, which they had exercised before the time of the decemvirate, of bringing patricians who had violated the rights of the plebeians before the comitia of the tribes, as is clear from several instances.¹³ Respecting the authority which a plebiscitum proposed to the tribes by a tribune

received through the *lex Valeria*, see *PLEBISCITUM*. While the college thus gained outwardly new strength every day, a change took place in its internal organization, which to some extent paralyzed its powers. Before the year 394 B.C., everything had been decided in the college by a majority;¹ but about this time, we do not know how, a change was introduced, which made the opposition (*intercessio*) of one tribune sufficient to render a resolution of his colleagues void.² This new regulation does not appear in operation till 394 and 393 B.C.;³ the old one was still applied in B.C. 421 and 415.⁴ From their right of appearing in the senate, and of taking part in its discussions, and from their being the representatives of the whole people, they gradually obtained the right of intercession against any action which a magistrate might undertake during the time of his office, and this even without giving any reason for it.⁵ Thus we find a tribune preventing a consul convoking the senate,⁶ preventing the proposal of new laws or elections in the comitia;⁷ and they interceded against the official functions of the censors,⁸ and even against a command issued by the prætor.⁹ In the same manner, a tribune might place his veto upon an ordinance of the senate,¹⁰ and thus either compel the senate to submit the subject in question to a fresh consideration, or to raise the session.¹¹ In order to propose a measure to the senate, they might themselves convoke a meeting,¹² or, when it had been convoked by a consul, they might make their proposal even in opposition to the consul, a right which no other magistrates had in the presence of the consuls. The senate, on the other hand, had itself, in certain cases, recourse to the tribunes. Thus, in 431 B.C., it requested the tribunes to compel the consuls to appoint a dictator, in compliance with the decree of the senate, and the tribunes compelled the consuls, by threatening them with imprisonment, to appoint A. Postumius Tubertus dictator.¹³ From this time forward we meet with several instances in which the tribunes compelled the consuls to comply with the decrees of the senate, *si non essent in auctoritate senatus*, and to execute its commands.¹⁴ In their relation to the senate, a change was introduced by the *Plebiscitum Atinium*, which ordained that a tribune, by virtue of his office, should be a senator.¹⁵ When this plebiscitum was made is uncertain, but we know that in 170 B.C. it was not yet in operation.¹⁶ It probably originated with C. Atinius, who was tribune in B.C. 132.¹⁷ But as the quaestorship, at least in later times, was the office which persons held previously to the tribuneship, and as the quaestorship itself conferred upon a person the right of a senator, the law of Atinius was in most cases superfluous.

In their relation to other magistrates we may observe, that the right of intercessio was not confined to stopping a magistrate in his proceedings, but they might even command their *viatores* (*vid. VIATOR*) to seize a consul or a censor, to imprison him, or to throw him from the Tarpeian Rock.¹⁸ It is mentioned by Labeo and Varro¹⁹ that the tribunes, when they brought an accusation against any one before the people, had the right of *prehen-*

no, but not the right of *vocatio*; that is, they might command a person to be dragged by their viatores before the comitia, but not to summon him. An attempt to account for this singularity is made by Gellius.¹ They might, as in earlier times, propose a fine to be inflicted upon the person accused before the comitia, but in some cases they dropped this proposal, and treated the case as a capital one.² The college of tribunes had also the power of making edicts, as that mentioned by Cicero.³ In cases in which one member of the college opposed a resolution of his colleagues, nothing could be done, and the measure was dropped; but this useful check was removed by the example of C. Tiberius Gracchus, in which a precedent was given for persisting to the people that a tribune obstinately persisting on his veto should be deprived of his office.⁴

From the time of the Hortensian law, the power of the tribunes had been gradually rising to such a height that there was no other in the state to equal it, whence Velleius⁵ even speaks of the imperium of tribunes. They had acquired the right of proposing to the comitia tributa, or the senate, measures on nearly all the important affairs of the state, and it would be endless to enumerate the cases in which their power was manifested. Their proposals were indeed usually made ex auctoritate senatus, or had been communicated to and approved by it;⁶ but cases in which the people themselves had a direct interest, such as a general legal regulation,⁷ the granting of the franchise,⁸ the alteration of the attributes of a magistrate,⁹ and others, might be brought before the people, without their having previously been communicated to the senate, though there are also instances of the contrary.¹⁰ Subjects belonging to the administration could not be brought before the tribes without the tribunes having previously received through the consuls the auctoritas of the senate. This, however, was done very frequently, and hence we have mention of a number of plebiscita on matters of administration. (See a list of them in Walter, p. 132, n. 11.) It sometimes even occurs that the tribunes brought the question concerning the conclusion of a peace before the tribes, and then compelled the senate to ratify the resolution as expressing the wish of the whole people.¹¹ Sulla, in his reform of the constitution on the early aristocratic principles, left to the tribunes only the jus auxiliandi, but deprived them of the right of making legislative or other proposals, either to the senate or the comitia, without having previously obtained the sanction of the senate. (*Vid. TRIBUS, ROMAN.*) But this arrangement did not last, for Pompey restored to them their former rights.¹²

During the latter period of the Republic, when the office of quæstor was in most cases held immediately before that of tribune, the tribunes were generally elected from among the senators, and this continued to be the same under the Empire.¹³ Sometimes, however, equites also obtained the office, and thereby became members of the senate,¹⁴ where they were considered of equal rank with the quæstors.¹⁵ Tribunes of the people continued to exist down to the fifth century of our æra, though their powers became naturally much limited, especially in the reign of Nero.¹⁶ They continued, however, to have the right of intercession

against decrees of the senate and on behalf of injured individuals.¹

TRIBUNI MILITUM CUM CONSULARI POTESSTATE.—When, in 445 B.C., the tribune C. Canuleius brought forward the rogation that the consulship should not be confined to either order,² the patricians evaded the attempt by a change in the constitution; the powers which had hitherto been united in the consulship were now divided between two new magistrates, viz., the *tribuni militum cum consulari potestate* and the censors. Consequently, in 444 B.C., three military tribunes, with consular power, were appointed, and to this office the plebeians were to be equally eligible with the patricians.³ In the following period, however, the people were to be at liberty, on the proposal of the senate, to decide whether consuls were to be elected according to the old custom, or consular tribunes. Henceforth for many years, sometimes consuls and sometimes consular tribunes were appointed, and the number of the latter varied from three to four, until, in 405 B.C., it was increased to six, and as the censors were regarded as their colleagues, we have sometimes mention of eight tribunes.⁴ At last, however, in 367 B.C., the office of these tribunes was abolished by the Licinian law, and the consulship was restored. These consular tribunes were elected in the comitia of the centuries, and undoubtedly with less solemn auspices than the consuls. Concerning the irregularity of their number, see Niebuhr, ii., p. 325, &c.; p. 389, &c.—Compare Götting, p. 326, &c.

TRIBUNI MILITARES were officers in the Roman armies. Their number in a legion was originally four, or, according to Varro, three, and they were appointed by the generals themselves. In the year 363 B.C., it was decreed that henceforth six of these military tribunes should always be appointed in the comitia, probably the comitia of the centuries.⁵ Those who were appointed by the consuls were distinguished from those elected by the people (*comitiati*) by the name of Ruffuli.⁶ The number of tribunes in each legion was subsequently increased to six, and their appointment was sometimes left altogether to the consuls and prætors,⁷ though subsequently we find again that part of them were appointed by the people.⁸ Their duties consisted in keeping order among the soldiers in the camp, in superintending their military exercises, inspecting outposts and sentinels, procuring provisions, settling disputes among soldiers, superintending their health, &c. Compare *ARMY, ROMAN.*

TRIBUNUS VOLUPTATUM was an officer who does not occur till after the time of Diocletian, and who had the superintendence of all public amusements, especially of theatrical performances.⁹

TRIBUS (GREEK) (Φύλον, Φυλή). In the earliest times of Greek history, mention is made of people being divided into tribes and clans. Homer speaks of such divisions in terms which seem to imply that they were elements that entered into the composition of every community. Nestor advises Agamemnon to arrange his army κατὰ φύλα, κατὰ φρήτρας, so that each may be encouraged by the presence of its neighbours.¹⁰ A person not included in any clan (ἀφρήτρας) was regarded as a vagrant or outlaw.¹¹ These divisions were rather natural than political, depending on family connexion, and arising out of those times when each head of a family ex-

exercised a patriarchal sway over its members. The bond was cemented by religious communion, sacrifices, and festivals, which all the family or clansmen attended, and at which the chief usually presided. The aggregate of such communities formed a political society.¹ In the ages succeeding, the heroic tribes and clans continued to exist, though, in the progress of civilization, they became more extended, and assumed a territorial or political rather than a fraternal character. The tribes were not, in general, distinctions between nobles and commons, unless the people were of different races, or unless there had been an accession of foreigners, who were not blended with the original inhabitants. It is true that, in the common course of things, nobles or privileged classes sprang up in various countries, by reason either of wealth, or of personal merit, or descent from the ancient kings; and that, in some cases, all the land was possessed by them, as by the Gamori of Syracuse;² sometimes their property was inalienable, as under our feudal law;³ and the Bacchiadæ are an instance of a noble family who intermarried only among themselves.⁴ Still, however, as a general rule, there was no decided separation of tribe, much less of caste, between nobles and commons of the same race. Nor was there any such distinction of a sacerdotal order. The priestly function was in early times united to that of the king;⁵ afterward the priesthood of particular deities became hereditary in certain families, owing either to a supposed transmission of prophetic power, as in the case of the Eumolpidæ, Branchidæ, Iamidæ, or to accidental circumstances, as in the case of Telines of Gela;⁶ but the priests were not separated, as an order, from the rest of the people.⁷ The most important distinctions of a class-like nature between people living under the same government, arose in those countries that were conquered by the migratory hordes of Thessalians, Bœotians, and Dorians, in the century subsequent to the heroic age. The revolutions which they effected, though varying in different places according to circumstances, had in many respects a uniform character. The conquering body took possession of the country, and became its lords; the original inhabitants, reduced to subjection, and sometimes to complete vassalage or servitude, remained a distinct people or tribe from the conquerors. The former built cities, usually at the foot of some citadel that had belonged to the ancient princes, where they resided, retaining their military discipline and martial habits; while a rural population, consisting principally of the former natives, but partly, also, of the less warlike of the invaders, and partly of fresh emigrants invited or permitted by them to settle, dwelt in the surrounding villages, and received the name of *Περίοικοι*. The condition of the Lacedæmonian *περίοικοι* is spoken of under *Περῖοκοι*. A similar class arose in most of the countries so colonized, as in Argos, Corinth, Elis, Crete, &c.⁸ But their condition varied according to the manner in which the invaders effected their settlement, and other circumstances and events prior or subsequent to that time. In many places the new-comer was received under a treaty, or upon more equitable terms, so that a union of citizenship would take place between them and the original inhabitants. This was the case in Elis, Messenia, Phlius, Træzen.⁹ So the Cretans, who invaded Miletus, min-

gled with the ancient Carians, and the Ionians with the Cretans and Carians of Colophon.¹ In Mægara, the ruling class, after a lapse of some time, amalgamated with the lower.² In other places the *περίοικοι* were more degraded. Thus in Sicily they were compelled to wear sheepskins, and called *κατωνακοφόροι*; in Epidaurus they were styled *κοῦτι-ποδες*, *dusty-footed*, a name which denoted their agricultural occupation, but was meant as a mark of contempt.⁴ But in general they formed a sort of middle order between the ruling people and the serf or slave. Thus in Argos there was a class of persons called *Gymnesii* or *Gymnetes*, corresponding to the Helots. (*Vid. GYMNESIOI*.) So in Thessaly, in the districts not immediately occupied by the Thessalian invaders, there dwelt a population of ancient Æolians, who were not serfs, like the *Penestæ* (*vid. PENESTAI*), but only tributary subjects, who retained their personal liberty, though not admitted to the rank of citizens.⁵ So also in Crete there were the Dorian freemen, the *περίοικοι*, or old inhabitants, similar to the Lacedæmonians, and the slaves (*vid. COSMI*, p. 316). We may observe that the term *περίοικοι* is sometimes used in rather a different sense; as when Xenophon gives that name to the Thespians, who were not the subjects of the Thebans, as the Achæans were of the Spartans.⁶ In some of the maritime states the condition of the subject classes was somewhat different; they were suffered to reside more in the town, as in Corinth, where they were artisans; at Tarentum, where they were fishermen.⁷

The ruling people, thus remaining distinct from the rest, were themselves divided into tribes and other sections. Of the Dorian race there were originally three tribes, traces of which are found in all the countries which they colonized. Hence they are called by Homer *Δωριεὺς τριχάικες*.⁸ These tribes were the *Ῥυλλεῖς*, *Πάμφυλοι*, and *Διμανάται* or *Δυμᾶνες*. The first derived their name from Hylus, son of Hercules, the last two from Pamphylus and Dymas, who are said to have fallen in the last expedition when the Dorians took possession of the Peloponnesus. The Hyllæan tribe was perhaps the one of highest dignity; but at Sparta there does not appear to have been much distinction, for all the freemen there were, by the constitution of Lycurgus, on a footing of equality. To these three tribes others were added in different places, either when the Dorians were joined by other foreign allies, or when some of the old inhabitants were admitted to the rank of citizenship or equal privileges. Thus the Cadmean Ægeids are said by Herodotus to have been a great tribe at Sparta, descended (as he says) from Ægeus, grandson of Theras,⁹ though others have thought they were incorporated with the three Doric tribes.¹⁰ At Argos, Ægina, and Epidaurus, there was an Hyethnæan tribe besides the three Doric.¹¹ In Sicily, Clisthenes, having changed the names of the Doric tribes to degrade and insult their members, and given to a fourth tribe, to which he himself belonged, the name of Archelai, sixty years after his death the Doric names were restored, and a fourth tribe added, called *Διγυλιεῖς*, from Ægialeus, son of the Argive hero Adrastus.¹² Eight tribes are mentioned in Corinth,¹³ four in Tegea.¹⁴ In Elis there were twelve tribes, that were afterward reduced to eight by a war with the Arcadians,¹⁵ from which they appear to have been geo-

graphical divisions.¹ Sometimes we find mention of only one of the Doric tribes, as of the Hylleans in Cydonia,² the Dymanes in Halicarnassus, which probably arose from colonies having been founded by the members of one tribe only.³

Of all the Dorian people, the Spartans kept themselves the longest unmixed with foreign blood. So jealous were they to maintain their exclusive privileges, that they had only admitted two men into their body before the time of Herodotus.⁴ Afterward their numbers were occasionally recruited by the admission of Laconians, Helots, and foreigners; but this was done very sparingly, until the time of Agis and Cleomenes, who created large numbers of citizens. But we cannot farther pursue this subject.⁵

The subdivision of tribes into *φρατρίαι* or *πάτραι*, *γένη*, *πρίτνες*, &c., appears to have prevailed in various places.⁶ At Sparta each tribe contained ten *δβαί*, a word, like *κῶμαι*, denoting a local division or district; each *οβς* contained ten *τριακάδες*, communities containing thirty families. But very little appears to be known of these divisions, how far they were local, or how far genealogical. After the time of Cleomenes the old system of tribes was changed; new ones were created corresponding to the different quarters of the town, and seem to have been five in number.⁷

The four Ionian tribes, Teleontes or Geleontes, Hopletes, Argadenses, Ægiorenses, who are spoken of below in reference to Attica, were found also in Cyzicum. In Samos a *φύλη* *Διαχρωνίη* is mentioned by Herodotus,⁸ which was probably a Carian race that mingled with the Ionians. In Ephesus five tribes are mentioned, of different races. With respect to these, the reader is referred to Wachsmuth, II., i., 16.

The first Attic tribes that we read of are said to have existed in the reign, or soon after the reign, of Cecrops, and were called *Cecropis* (*Κεκροπίς*), *Autochthon* (*Αὐτόχθων*), *Actæa* (*Ἀκταία*), and *Paralia* (*Παλαιά*). In the reign of a subsequent king, Cranaus, these names were changed to *Cranaus* (*Κραναίς*), *Aithis* (*Ἀθίς*), *Mesogæa* (*Μεσόγαια*), and *Diacris* (*Διακρίς*). Afterward we find a new set of names: *Dias* (*Διάς*), *Athenais* (*Ἀθηναίς*), *Posidonias* (*Ποσειδωνιάς*), and *Hephæstias* (*Ἡφαιστιάς*), evidently derived from the deities with whom they were worshipped in the country.⁹ Some of those secondly mentioned, if not all of them, seem to have been geographical divisions; and it is not improbable that, if not independent communities, they were at least connected by a very weak bond of union. But all these tribes were superseded by four others, which were probably founded soon after the Ionic settlement in Attica, and seem (as before observed) to have been adopted by other Ionic colonies out of Greece. The names *Geleontes* (*Γελέοντες*), *Hopletes* (*Ὀπλητῆς*), *Argades* (*Ἀργαδοίς*), *Ægiocores* (*Ἀιγιοκοροίς*), are said by Herodotus¹⁰ to have been derived from the sons of Ion, son of Xuthus.¹¹ Upon this, however, many doubts have been thrown by modern writers, who have suggested various theories of their own, more or less ingenious, to which reference will be found in the books cited below. It is impossible, within our limits, to discuss the question at any length. The etymology of the last three names would seem to suggest that the tribes were so called from the occupations which their respective members followed; the Hopletes being

the armed men or warriors; the Argades, labourers or husbandmen; the Ægiocores, goatherds or shepherds. It is difficult, however, to discover in the first name any such meaning, unless *Τελέοντες*, and not *Γελέοντες*, be the true reading, in which case it has been supposed that this tribe might be a sacerdotal order, from *τελεῖν*, used in its religious sense; or a peasantry who paid rent to the lords of the soil, from *τελεῖν*, in the sense to *pay*. Against the former of these interpretations it may be objected, that no trace of a priestly order is to be found in later times of Attic history; and against the latter, that the Argades and the Teleontes would denote a similar class of people, unless we resort to another interpretation of the word Argades, viz., *artisans*, who would hardly constitute a distinct tribe in so early a period of society. It may be observed, however, that Argades and Ægiocores may be taken to signify a local distribution of inhabitants, the former being the tillers of the ground, dwelling in the plains, the latter mountaineers; and this agrees very well not only with the known character of the country of Attica, but also with the division above mentioned as having existed in the reign of Cranaus, viz., Mesogæa and Diacris. There is no more difficulty in the one case than in the other in supposing that some of the tribes were denominated from their localities or occupations, while others owed their names to other circumstances. Argades and Ægiocores might be the old inhabitants, according to their previous division, while the other tribes might be the Ionic settlers, Hopletes, the most warlike portion of them, Geleontes, the great body, so called from a son of Ion; or the last might, as Schömann thinks, be the ancient nobility, as distinguished from the Ionic settlers. Whatever be the truth with respect to the origin of these tribes, one thing is more certain, that before the time of Theseus, whom historians agree in representing as the great founder of the Attic commonwealth, the various people who inhabited the country continued to be disunited and split into factions.

Theseus in some measure changed the relations of the tribes to each other, by introducing a gradation of ranks in each; dividing the people into *ἑν-πατρίδας*, *Γεωμόροι*, and *Δημοσθρογοί*, of whom the first were nobles, the second agriculturists or yeomen, the third labourers and mechanics. At the same time, in order to consolidate the national unity, he enlarged the city of Athens, with which he incorporated several smaller towns, made it the seat of government, encouraged the nobles to reside there, and surrendered a part of the royal prerogative in their favour. The tribes of Philæ were divided, either in the age of Theseus or soon after, each into three *φρατρίαι* (a term equivalent to fraternities, and analogous in its political relation to the Roman *curiæ*), and each *φρατρία* into thirty *γένη* (equivalent to the Roman *gentes*), the members of a *γένος* being called *γενῆται* or *ομογενῆται*. Each *γένος* was distinguished by a particular name of a patronymic form, which was derived from some hero or mythic ancestor. We learn from Pollux¹ that these divisions, though the names seem to import family connexion, were in fact artificial, which shows that some advance had now been made towards the establishment of a closer political union. The members of the *φρατρίαι* and *γένη* had their respective religious rites and festivals, which were preserved long after these communities had lost their political importance, and perhaps prevented them from being altogether dissolved.²

The relation between the four Ionic tribes and

1. (Onom., viii., 111.)—2. (Compare Niebuhr, Hist. of Rome, i., p. 311, &c.)

the three classes into which Theseus divided the nation, is a difficult and perplexing question. It would appear, from the statements of ancient writers on the subject, that *each* of the four tribes was divided into Eupatridæ, Geomori, and Demiurgi; which is confirmed by the fact that the four *φυλοβασίλεις*, who were the assessors of the sovereign, were all taken from the Eupatridæ, but, at the same time, one from each tribe. (*Vid.* *PHYLOBASILEIS*.) This, as Thirlwall¹ has remarked, can only be conceived possible on the supposition that the distinctions which originally separated the tribes had become merely nominal; but Malden,² who rejects the notion that the four Ionic tribes were castes deriving their name from their employment, supposes that the tribes or phylæ consisted of the Eupatridæ alone, and that the latter were divided into four phylæ, like the patricians at Rome into three. The Geomori and Demiurgi had therefore, according to his supposition, nothing to do with the tribes. This view of the subject would remove many difficulties, and is most in accordance with the subsequent history and political analogies in other states, but seems hardly supported by sufficient evidence to warrant us in receiving it.

After the age of Theseus, the monarchy having been first limited and afterward abolished, the whole power of the state fell into the hands of the *Eupatridæ* or nobles, who held all civil offices, and had, besides, the management of religious affairs, and the interpretation of the laws. Attica became agitated by feuds, and we find the people, shortly before the legislation of Solon, divided into three parties, *Πεδαιῖοι*, or lowlanders, *Διῶκριοι*, or highlanders, and *Πύραλοι*, or people of the seacoast. The first two remind us of the ancient division of tribes, *Mesogæa* and *Diacris*; and the three parties appear in some measure to represent the classes established by Theseus: the first being the nobles, whose property lay in the champaign and most fertile part of the country; the second, the smaller landowners and shepherds; the third, the trading and mining class, who had by this time risen in wealth and importance. To appease their discords, Solon was applied to, and thereupon framed his celebrated constitution and code of laws. Here we have only to notice that he retained the four tribes as he found them, but abolished the existing distinctions of *rank*, or, at all events, greatly diminished their importance, by introducing his property qualification, or division of the people into *Πεντακκοσιμέδμνοι*, *ἑπτακκοσιμέδμνοι*, and *ἑξήκοντες*. The enactments of Solon continued to be the *law* at Athens, though in a great measure suspended by the tyranny, until the democratic reform effected by Clisthenes. He abolished the old tribes, and created ten new ones, according to a geographical division of Attica, and named after ten of the ancient heroes: *Erechtheis*, *Egeis*, *Pandionis*, *Leontis*, *Acamantis*, *Æneis*, *Cecropis*, *Hippothontis*, *Æantis*, *Antiochis*. These tribes were divided each into ten *δημοί*, the number of which was afterward increased by subdivision; but the arrangement was so made, that several *δημοί* not contiguous or near to one another were joined to make up a tribe. (*Vid.* *DEMUS*.) The object of this arrangement was, that by the breaking of old associations, a perfect and lasting revolution might be effected in the habits and feelings, as well as the political organization of the people. He allowed the ancient *φρατρίαι* to exist, but they were deprived of all political importance. All foreigners admitted to the citizenship were registered in a phyle and *demus*, but not in a *phratría* or *genos*; whence Aristophanes³ says, as a taunting mode of designating new citi-

zens, that they have no *phratrors*, or only barbarous ones (quoted by Niebuhr⁴). The functions which had been discharged by the old tribes were now mostly transferred to the *δημοί*. Among others, we may notice that of the forty-eight *ναυκραρίαι* into which the old tribes had been divided for the purpose of taxation, but which now became useless, the taxes being collected on a different system. The reforms of Clisthenes were destined to be permanent. They continued to be in force (with some few interruptions) until the downfall of Athenian independence. The ten tribes were blended with the whole machinery of the constitution. Of the senate of Five Hundred, fifty were chosen from each tribe. The allotment of *δικασταί* was according to tribes; and the same system of election may be observed in most of the principal offices of state, judicial and magisterial, civil and military, as that of the *δισυτταί*, *λογισταί*, *πρωταῖ*, *ταμίαι*, *τεχνοποῖ*, *φύλαρχοι*, *στρατηγοί*, &c. In B.C. 307, Demetrius Poliorketes increased the number of tribes to twelve by creating two new ones, namely, *Antigonias* and *Demetrias*, which afterward received the names of *Ptolemæis* and *Attalis*; and a thirteenth was subsequently added by Hadrian, bearing his own name.⁵

The preceding account is only intended as a brief sketch of the subject, since it is treated of under several other articles, which should be read in connexion with this. (*Vid.* *CIVITAS*, *GREEK*; *DEMUS*, *PHYLARCHOI*, *PHYLOBASILEIS*, &c.)⁶

TRIBUS (ROMAN). The three ancient Roman tribes, the *Ramnes*, *Tities*, and *Luceres*, or the *Ramnenses*, *Titienses*, and *Lucerenses*, to which the patricians alone belonged, must be distinguished from the thirty plebeian tribes of Servius Tullius, which were entirely local, four for the city, and twenty-six for the country around Rome. The history and organization of the three ancient tribes are spoken of under *PATRICHII*. They continued of political importance almost down to the time of the decemviral legislation, but after this time they no longer occur in the history of Rome, except as an obsolete institution.

The institution and organization of the thirty plebeian tribes, and their subsequent reduction to twenty by the conquests of Porsenna, are spoken of under *PLEBES*, p. 782, 783. The four city tribes were called by the same name as the regions which they occupied, viz., *Suburana*, *Esquilina*, *Collina*, and *Palatina*.⁴ The names of the sixteen country tribes which continued to belong to Rome after the conquest of Porsenna, are in their alphabetical order as follow: *Æmilia*, *Camilia*, *Cornelia*, *Fabia*, *Galeria*, *Horatia*, *Lemonia*, *Mencia*, *Papiria*, *Polia* (which Niebuhr⁵ thinks to be the same as the *Publilia*, which was instituted at a later time), *Papiria*, *Pupinia*, *Romilia*, *Sergia*, *Veturia*, and *Volturna*.⁶ As Rome gradually acquired possession of more of the surrounding territory, the number of tribes also was gradually increased. When Appian Claudius, with his numerous train of clients, emigrated to Rome, lands were assigned to them in the district where the Anio flows into the Tiber, and a new tribe, the *tribus Claudia*, was formed. This tribe, which Livy⁷ (if the reading is correct) calls *vetus Claudia tribus*, was subsequently enlarged, and was then designated by the name *Crustumina* or *Clustumina*.⁸ This name is the first instance of a country tribe

being named after a place, for the sixteen older ones all derived their name from persons or heroes who were in the same relation to them, as the Attic heroes, called ἑκὼνμοι, were to the Attic phylæ. In B.C. 387, the number of tribes was increased to twenty-five by the addition of four new ones, viz., the *Stellatina*, *Tromentina*, *Sabatina*, and *Arniensis*.¹ In 358 B.C., two more, the *Pompina* and *Publia*, were formed of Volscians.² In B.C. 332, the censors Q. Publilius Philo and Sp. Postumius increased the number of tribes to twenty-nine, by the addition of the *Macia* and *Scaptia*.³ In B.C. 318, the *Ufentina* and *Falerina* were added.⁴ In B.C. 299, two others, the *Amiensis* and *Terentina*, were added by the censors;⁵ and at last, in B.C. 241, the number of tribes was augmented to thirty-five, by the addition of the *Quirina* and *Velina*. This number was never afterward increased, as none of the conquered nations were after this incorporated with the sovereign Roman state.⁶ When the tribes, in their assemblies, transacted any business, a certain order (*ordo tribuum*) was observed, in which they were called upon to give their votes. The first in the order of succession was the *Suburana*, and the last the *Arniensis*.⁷ Any person belonging to a tribe had, in important documents, to add to his own name that of his tribe, in the ablative case. (*Vid.* NOMEN, ROMAN, p. 661.)

Whether the local tribes, as they were established by the constitution of Servius Tullius, contained only the plebeians, or included the patricians also, is a point on which the opinions of modern scholars are divided. Niebuhr, Walter, and others, think that the patricians were excluded, as they had already a regular organization of their own; Wachsmuth, Gerlach, Rein, and others, on the contrary, maintain that the patricians also were incorporated in the Servian tribes; but they allow, at the same time, that by far the majority of the people in the assemblies of the tribes were plebeians, and that hence the character of these assemblies was essentially plebeian; especially as the patricians, being so few in numbers, and each of them having no more influence in them than a plebeian, seldom attended the meetings of the tribes. The passages, however, which are quoted in support of this opinion, are partly insufficient to prove the point (as *Liv.*, ii., 56, 60.—*Dionys.*, ix., 41), and partly belong to a later period, when it certainly cannot be doubted that the patricians belonged to the tribes. We must therefore suppose, with Niebuhr, that down to the decemviral legislation the tribes and their assemblies were entirely plebeian.

The assemblies of the tribes (*comitia tributa*), as long as they were confined to the plebeians, can scarcely have had any influence upon the affairs of the state: all they had to do was to raise the tributum, to hold the levies for the armies, and to manage their own local and religious affairs.⁸ (*Vid.* TRIBUNUS, PLEBES.) Their meetings were held in the Forum, and their sphere of action was not extended by the establishment of the Republic. The first great point they gained was through the *lex Valeria*, passed by Valerius Publicola. (*Vid.* VALERIÆ LEGES.) But the time from which the increase of the power of the comitia of the tribes must be dated, is that in which the *tribuni plebis* were instituted (494 B.C.). During the time of the decemviral legislation, the comitia were for a short time deprived of their influence, but we have every reason to believe that immediately after, probably

by this legislation itself, the comitia tributa, instead of a merely plebeian, became a national assembly inasmuch as henceforth patricians and freeborn clients were incorporated in the tribes, and thus obtained the right of taking part in their assemblies.¹ This new constitution of the tribes also explains the otherwise unaccountable phenomena mentioned in the article TRIBUNUS, that patricians sought the protection of the tribunes, and that on one occasion even two of the tribunes were patricians. From the latter fact it has been inferred, with great probability, that about that time attempts were made by the patricians to share the tribuneship with the plebeians. But, notwithstanding the incorporation of the patricians in the tribes, the comitia tributa remained essentially plebeian, as the same causes which would have acted had the patricians been included in the tribes by Servius Tullius were still in operation; for the patricians were now even fewer in number than two centuries before. Hence the old name of plebiscitum, which means originally a resolution of the plebes only, although in a strict sense of the word no longer applicable, was still retained, as a resolution of the comitia tributa was practically a resolution of the plebes, which the patricians, even if they had voted against it unanimously, could not have prevented. Moreover, owing to this, the patricians probably attended the comitia tributa very seldom.

In order to give a clear insight into the character and the powers which the comitia tributa gradually acquired, we shall describe them under separate heads, and only premise the general remark, that the influence of the comitia tributa was more directed towards the internal affairs of the state and the rights of the people, while the comitia centuriata exercised their power more in reference to the foreign and external relations of the state, although towards the end of the Republic this distinction gradually vanished.

I. *The Election of Magistrates.*—The comitia tributa had only the right of electing the magistratus minores.² The *tribuni plebis* were elected by them from the time of the Publilian law (*vid.* TRIBUNUS), and in like manner the *ædiles*, though the curule *ædiles* were elected under the presidency of the consuls, and also at different meetings from those in which the plebeian *ædiles* were elected.³ In later times the *questors* also, and a certain number of the *tribuni militares*, were elected by the tribes.⁴ It also frequently occurs that the proconsuls to be sent into the provinces were elected by the tribes, and that others, who were already on their posts, had their imperium prolonged by the tribes.⁵ In the course of time, the comitia tributa also assumed the right to elect the members of the colleges of priests. This custom, however, was, towards the end of the Republic, frequently modified. (*Vid.* PONTIFEX, p. 790, &c.)

II. *Legislative Powers.*—The legislation of the tribes was at first confined to making plebiscita on the proposal of the tribunes, which were only binding upon themselves, and chiefly referred to local matters. Such plebiscita did not, of course, require the sanction either of the *curiæ* or of the senate.⁶ But when the comitia tributa came to be an assembly representing the whole nation, it was natural that its resolutions should become binding upon the whole people; and this was the case, at first with,

and afterward without, the sanction of the *cuius*, the senate, or the centuries, which were originally the real legislative assembly. (*Vid.* PLEBISCITUM.) It should, however, be observed, that even after the time when plebiscita became binding upon the whole nation, there occur many cases in which a plebiscitum is based upon and preceded by a *senatus consultum*, and we have to distinguish between two kinds of plebiscita: 1. Those relating to the administration of the Republic, which constitutionally belonged to the senate, such as those which conferred the *imperium*, appointed extraordinary commissions and *quæstiones*, dispensed or exempted persons from existing laws, decided upon the fate of conquered towns and countries, and upon the affairs of provinces in general, &c. These were always based upon a *senatus consultum*, which was laid before the tribes by the tribunes. 2. Plebiscita relating to the sovereignty and the rights of the people naturally required no *senatus consultum*, and in general none is mentioned in such cases. Plebiscita of this kind are, for example, those which grant the *civitas* and the *suffragium*, and those which concern a great variety of subjects connected with social life and its relations. The tribes also had the power of abolishing old laws.¹ The permission to enter the city in triumph was originally granted to a general by the senate,² but the *comitia tributa* began in early times to exercise the same right, and at last they granted such a permission even without a *senatus consultum*.³ The right of deciding upon peace and war with foreign nations was also frequently usurped by the tribes, or permitted to them by a *senatus consultum*. In the time of Sulla, the legislative powers of the *comitia* were entirely abolished; but of this change we shall speak presently.

III. The jurisdiction of the tribes was very limited, as they had only jurisdiction over those who had violated the rights of the people, while all capital offences belonged to the *comitia centuriata*. In case of a violation of the popular rights, the tribunes or *ædiles* might bring any one, even patricians, before the *comitia tributa*, but the punishment which they inflicted consisted only in fines. In course of time, however, they became a court of appeal from the sentence of magistrates in any cases which were not capital. Magistrates also, and generals, were sometimes, after the term of their office had elapsed, summoned before the tribes to give an account of their conduct and their administration. Private individuals were tried by them in cases for which the laws had made no provisions.⁴ (Compare *ÆDILES, TRIBUNUS*.)

The place where the *comitia tributa* assembled might be either within or without the city, although in the latter case not more than a mile beyond the gates, as the power of the tribunes did not extend farther.⁵ For elections, the *Campus Martius* was the usual place of meeting,⁶ but sometimes also the Forum,⁷ the area of the Capitol,⁸ or the *Circus Flaminius*.⁹

The usual presidents at the *comitia tributa* were the tribunes of the people, who were assisted in their functions by the *ædiles*. No matter could be brought before the tribes without the knowledge and the consent of the tribunes,¹⁰ and even the

ædiles were not allowed to make any proposal to the *comitia* without the permission of the tribunes.¹ The college of tribunes appointed one of its members, by lot or by common consent, to preside at the *comitia*,² and the members of the college usually signed the proposal which their colleague was going to lay before the assembly.³ During the period when the *comitia tributa* were a national assembly, the higher magistrates, too, sometimes presided at their meetings, though probably not without the sanction of the tribunes. In legislative assemblies, however, the higher magistrates presided very seldom, and instances of this kind which are known were probably extraordinary cases.⁴ In the *comitia tributa* assembled for the purpose of electing tribunes, *ædiles*, *quæstors*, *sacerdotes*, and others, the consuls frequently appear as presidents.⁵ On one occasion the *pontifex maximus* presided at the election of tribunes.⁶ When the *comitia* were assembled for judicial purposes, *ædiles*, consuls, or *prætors* might preside as well as tribunes.⁷

The preparations preceding elective assemblies were very simple: the candidates were obliged to give notice to the magistrate who was to preside at the *comitia*, and the latter took their names and announced them to the people when assembled.⁸ For legislative assemblies, the preparations were greater and lasted longer. A tribune (*rogator* or *princeps rogationis*)⁹ announced the proposal (*rogatio*) which he meant to bring before the *comitia* three *nundines* before the general meeting. During this interval *conciones* were held, that is, assemblies of the people for considering and discussing the measure proposed, and any one might, at such meetings, canvass the people for or against the measure: but no voting took place in a *concio*.¹⁰ The auspices were at first not taken in the *comitia tributa*, as patricians alone had the right to take them;¹¹ but subsequently the tribunes obtained the same right, though commonly they only instituted the *specio*.¹²

As regards the convocation of the *comitia tributa*, the tribune who was appointed to preside at the meeting simply invited the people by his *viatores*, without any of the solemnities customary at the *comitia centuriata*.¹³ In the assembly itself the president took his seat upon a tribunal, was surrounded by his colleagues,¹⁴ and made the people acquainted with the objects of the meeting (*rogabat*). The *rogatio*, however, was not read by the tribune himself, but by a *præcon*.¹⁵ Then discussion took place, and private individuals as well as magistrates might, with the permission of the tribune, speak either for or against the proposal. At last the president requested the people to vote by the phrase *ite in suffragium*,¹⁶ or a similar one; and when they stood in disorder, they were first called upon to arrange themselves according to their tribes (*discedite*), which were separated by ropes until the time when the *septa* were built in the *Campus Martius*.¹⁷ The succession in which the tribes voted was decided by lot,¹⁸ and the one which

was to vote first was called *tribus prærogativa* or *principium*, the others *jure vocata*. In the *tribus prærogativa* some man of eminence usually gave his vote first, and his name was recorded in the resolution.¹ Out of the votes of each tribe a suffragium was made up, that is, the majority in each tribe formed the suffragium, so that, on the whole, there were thirty-five suffragia.² (Compare *DIRIBUITORES*.) When the counting of the votes had taken place, the *renuntiatio* followed, that is, the result of the voting was made known. The president then dismissed the assembly, and he himself had the obligation to see that the resolution was carried into effect. The business of the *comitia tributa*, like that of the *centuriata*, might be interrupted by a variety of things, such as *obvolutio*, sunset, a tempest, the intercession or veto of a tribune, the *morbus comitialis*, &c. In such cases the meeting was adjourned to another day.³ If the elections could not be completed in one day, they were continued on the day following; but if the assembly had met in a judicial capacity, its breaking up before the case was decided was, in regard to the defendant, equivalent to an acquittal.⁴ If everything had apparently gone on and been completed regularly, but the augurs afterward discovered that some error had been committed, the whole resolution, whether it was on an election, on a legislative or judicial matter, was invalid, and the whole business had to be done over again.⁵

What we have said hitherto applies only to the *comitia tributa* as distinct from and independent of the *comitia centuriata*. The latter assembly was, from the time of its institution by Servius Tullius, in reality an aristocratic assembly, since the equites and the first class, by the great number of their centuries, exercised such an influence that the votes of the other classes scarcely came into consideration.⁶ (*Vid. PLEBES*, p. 783.) Now, as patricians and plebeians had gradually become united into one body of Roman citizens, with almost equal powers, the necessity must sooner or later have become manifest that a change should be introduced into the constitution of the *comitia* of the centuries in favour of the democratical principle, which in all other parts of the government was gaining the upper hand. The object of this change was perhaps to constitute the two kinds of *comitia* into one great national assembly. But this did not take place. A change, however, was introduced, as is manifest from the numerous allusions in ancient writers, and as is also admitted by all modern writers. As this change was connected with the tribes, though it did not affect the *comitia tributa*, we shall here give a brief account of it. But this is the more difficult, as we have no distinct account either of the event itself, or of the nature of the change, or of the time when it was introduced. It is therefore no wonder that nearly every modern writer who has touched upon these points entertains his own peculiar views upon them. As regards the time when the change was introduced, some believe that it was soon after the establishment of the Republic, others that it was established by the laws of the Twelve Tables, or soon after the decemviral legislation; while from Livy,⁷ compared with Dionysius,⁸ it appears to be manifest that it did not take place till the time when the number of the thirty-five tribes was completed, that is, after the year B.C. 241, per-

haps in the censorship of C. Flaminius (B.C. 221...), who, according to Polybius,¹ made the constitution more democratical. This is also the opinion of Gerlach² and of Götting.³ In regard to the nature of the change, all writers agree that it consisted in an amalgamation of the centuries and the tribes; but in the explanation of this general fact, opinions are still more divided than in regard to the time when the change was introduced, and it would lead us much too far if we only attempted to state the different views of the most eminent modern writers. The question is one which still requires a careful and minute examination, but which will, perhaps, remain a mystery forever. In the mean while, we shall confine ourselves to giving the results of the latest investigations on the subject, which have been made by Götting.⁴

The five classes instituted by Servius Tullius continued to exist, and were divided into centuries of *seniores* and *juniores*;⁵ but the classes are in the closest connexion with the thirty-five tribes, while formerly the tribes existed entirely independent of the census. In this amalgamation of the classes and the tribes, the centuries formed subdivisions of both; they were parts of the tribes as well as of the classes.⁶ Götting assumes 350 centuries in the thirty-five tribes, and gives to the senators and equites their suffragium in the first class of each tribe as *seniores* and *juniores*. The centuries of *fabri* and *cornicines* are no longer mentioned, and the *capite censi* voted in the fifth class of the fourth city tribe. Each century in a tribe had one suffragium, and each tribe contained ten centuries, two (*seniores* and *juniores*) of each of the five classes.⁷ Götting farther supposes that the equites were comprised in the first class, and voted with it, and that they were even called the centuries of the first class.⁸ The mode of voting remained, on the whole, the same as in the former *comitia centuriata*. The equites voted with the senators, but the former usually among the *juniores*, and the latter among the *seniores*.⁹ The following particulars, however, are to be observed. We read of a *prærogativa* in these assemblies, and this might be understood either as a *tribus prærogativa*, or as a *centuria prærogativa*. If we adopt the former of these possibilities, which is maintained by some modern writers, the ten centuries contained in the *tribus prærogativa* would have given their suffrages one after the other, and then the *renuntiatio*, or the announcement of the result of their voting, would have taken place after it was ascertained. The inconsistency of this mode of proceeding has been practically demonstrated by Rein;¹⁰ and as we know, from the passages above referred to, that the votes were given according to centuries,¹¹ and according to tribes only in cases when there was no difference of opinion among the centuries of the same tribe, we are obliged to suppose that the *prærogativa* was a century taken by lot from all the seventy centuries of the first class, two of which were contained in each of the thirty-five tribes, and that all the centuries of the first class gave their votes first, that is, after the *prærogativa*. From the plural form *prærogativæ*, it is, moreover, inferred that it consisted of two centuries, and that the two centuries of the first class contained in the same tribe voted to-

gether.¹ If, as in the passage of Pseudo-Asconius, a *tribus prærogativa* is mentioned in the *comitia centuriata*, it can only mean the tribe from which the *prærogativa centuria* is taken by lot, for a real *tribus prærogativa* only occurs in the *comitia tributa*. The century of the first class drawn by lot to be the *prærogativa* was usually designated by the name of the tribe to which it belonged, *e. g.*, *Galeria juniorum*,² that is, the juniors of the first class in the *tribus Galeria*; *Aniensis juniorum*,³ *Veturia juniorum*,⁴ &c. C. Gracchus wished to make the mode of appointing the *centuria prærogativa* more democratical, and proposed that it should be drawn from all the five classes indiscriminately; but this proposal was not accepted.⁵ When the *prærogativa* had voted, the result was announced (*renuntiare*), and the other centuries then deliberated whether they should vote the same way or not. After this was done, all the centuries of the first class voted simultaneously, and not one after another, as the space of one day would otherwise not have been sufficient. Next voted, in the same manner, all the centuries of the second, then those of the third class, and so on, until all the centuries of the classes had voted. The simultaneous voting of all the centuries of one class is sometimes, for this very reason, expressed by *prima*, or *secunda classis vocatur*.⁶ When all the centuries of one class had voted, the result was announced. Respecting the voting of the centuries the following passages may also be consulted: Cic., *Pro Planc.*, 20; in *Verr.*, v., 15; *Post Red. in Senat.*, 11; *ad Quir.*, 7.—*Liv.*, x., 9, 22; xxiv., 7; xxvi., 22. It seems to have happened sometimes that all the centuries of one tribe voted the same way, and in such cases it was convenient to count the votes according to tribes instead of according to centuries.⁷

These *comitia* of the centuries, with their altered and more democratical constitution, continued to exist, and preserved a great part of their former power along with the *comitia tributa*, even after the latter had acquired their supreme importance in the Republic. During the time of the moral corruption of the Romans, the latter appear to have been chiefly attended by the populace, which was guided by the tribunes, and the wealthier and more respectable citizens had little influence in them. When the *libertini* and all the Italians were incorporated in the old thirty-five tribes, and when the political corruption had reached its height, no trace of the sedate and moderate character was left by which the *comitia tributa* had been distinguished in former times.⁸ Violence and bribery became the order of the day, and the needy multitude lent willing ears to any instigations coming from wealthy bribers and tribunes who were mere demagogues. Sulla, for a time, did away with these odious proceedings; since, according to some, he abolished the *comitia tributa* altogether, or, according to others, deprived them of the right of electing the sacerdotes, and of all their legislative and judicial powers.⁹ (Compare *TRIBUNUS*.) But the constitution, such as it had existed before Sulla, was restored soon after his death by Pompey and others, with the exception of the jurisdiction, which was forever taken from the people by the legislation of Sulla. The people suffered another loss in the dic-

tatorship of J. Cæsar, who decided upon peace and war himself in connexion with the senate.¹ He had also the whole of the legislation in his hands, through his influence with the magistrates and the tribunes. The people thus retained nothing but the election of magistrates; but even this power was much limited, as Cæsar had the right to appoint half the magistrates himself, with the exception of the consuls;² and as, in addition to this, he recommended to the people those candidates whom he wished to be elected: and who would have opposed his wish?³ After the death of Cæsar the *comitia* continued to be held, but were always, more or less, the obedient instruments in the hands of the rulers, whose unlimited powers were even recognised and sanctioned by them.⁴ Under Augustus the *comitia* still sanctioned new laws and elected magistrates, but their whole proceedings were a mere farce, for they could not venture to elect any other persons than those recommended by the emperor.⁵ Tiberius deprived the people of this delusive power, and conferred the power of election upon the senate.⁶ When the elections were made by the senate, the result was announced to the people assembled as *comitia centuriata* or *tributa*.⁷ Legislation was taken away from the *comitia* entirely, and was completely in the hands of the senate and the emperor. Caligula placed the *comitia* again upon the same footing on which they had been in the time of Augustus,⁸ but this regulation was soon abandoned, and everything was left as it had been arranged by Tiberius.⁹ From this time the *comitia* may be said to have ceased to exist, as all the sovereign power formerly possessed by the people was conferred upon the emperor by the *lex regia*. (*Vid. REGIA LEX*.) The people only assembled in the *Campus Martius* for the purpose of receiving information as to who had been elected or appointed as its magistrates, until at last even this announcement (*renuntiatio*) appears to have ceased.

TRIBUTA COMITIA. (*Vid. TRIBUS, ROMAN.*)
TRIBUTORIA ACTIO. (*Vid. SERVUS, ROMAN.*, p. 884.)

TRIBUTUM is a tax which, as Niebuhr¹⁰ supposes, was at first only paid by the plebeians, since the name itself is used by the ancients in connexion with the Servian tribes; for Varro¹¹ says "*tributum dictum a tribubus*," and Livy,¹² "*tribus appellata a tributo*." But this seems to be only partially correct, as Livy¹³ expressly states that the patres also paid the same tax. It is, indeed, true, that the patricians had little real landed property, and that their chief possessions belonged to the *ager publicus*, which was not accounted in the census as real property, and of which only the tithes had to be paid, until, at a late period, an alteration was attempted by the *lex Thoria*.¹⁴ But there is no reason for supposing that the patricians did not pay

the tributum upon their real property, although the greater part of it naturally fell upon the plebeians.¹ The impost itself varied according to the exigencies of the state, and was partly applied to cover the expenses of war, and partly those of the fortifications of the city.² The usual amount of tax was one for every thousand of a man's fortune,³ though in the time of Cato it was raised to three in a thousand. The tributum was not a property-tax in the strict sense of the word, for the accounts respecting the plebeian debtors clearly imply that the debts were not deducted in the valuation of a person's property, so that he had to pay the tributum upon property which was not his own, but which he owed, and for which he had, consequently, to pay the interest as well. It was a direct tax upon objects without any regard to their produce, like a land or house tax, which, indeed, formed the main part of it.⁴ That which seems to have made it most oppressive was its constant fluctuation. It was raised according to the regions or tribes instituted by Servius Tullius, and by the tribunes of these tribes, subsequently called *tribuni ærarii*.⁵ Dionysius, in another passage,⁶ states that it was imposed upon the centuries according to their census; but this seems to be a mistake, as the centuries contained a number of *juniores* who were yet in their fathers' power, and consequently could not pay the tributum. It was not, like the other branches of the public revenue, let out to farm, but, being fixed in money, it was raised by the tribunes, unless (as was the case after the custom of giving pay to the soldiers was introduced) the soldiers, like the knights, demanded it from the persons themselves who were bound to pay it. (*Vid. Æs EQUESTRE* and *HORDEARIUM*.) When this tax was to be paid, what sum was to be raised, and what portion of every thousand asses of the census, were matters upon which the senate had to decide alone. But when it was decreed, the people might refuse to pay it when they thought it too heavy or unfairly distributed, or hoped to gain some other advantage by the refusal.⁷ In later times the senate sometimes left its regulation to the censors, who often fixed it very arbitrarily. No citizen was exempt from it; but we find that the priests, augurs, and pontiffs made attempts to get rid of it, but this was only an abuse which did not last.⁸ In cases of great distress, when the tributum was not raised according to the census, but to supply the momentary wants of the Republic, it was designated by the name of *Tributum Temerarium*.⁹ After the war with Macedonia (B.C. 147), when the Roman treasury was filled with the revenues accruing from conquests and from the provinces, the Roman citizens became exempted from paying the tributum;¹⁰ and this state of things lasted down to the consulship of Hirtius and Pansa (43 B.C.¹¹), when the tributum was again levied on account of the exhausted state of the ærarium.¹² After this time it was imposed according to the discretion of the emperors.

Respecting the tributum paid by conquered countries and cities, see *VECTIGALIA*.¹³

TRIBON (*τρίβων*). (*Vid. PALLIUM*, p. 720.)

TRICLINIUM, the dining-room of a Roman house, the position of which, relatively to the other parts of the house, is explained in p. 519. It was of an oblong shape, and, according to Vitruvius,¹⁴

ought to be twice as long as it was broad. The same author¹ describes *triclinia*, evidently intended to be used in summer, which were open towards the north, and had on each side a window looking into a garden. The "house of the tragic poet" at Pompeii, and also that of Actæon, appear to have had summer dining-rooms opening to the *viridarium*. The woodcut at p. 462 shows the arrangement of the three couches (*lecti, κλιναι*), from which the *triclinium* derived its name. They also remain in the "house of Actæon," being built of stone.

The articles *LECTUS*, *TORUS*, *PULVINAR*, and *ACCUBITA*, contain accounts of the furniture used to adapt these couches for the *accubatio*, i. e., for the act of reclining during the meal. When so prepared for an entertainment they were called *triclinia strata*,² and they were made to correspond with one another in substance, in dimensions, and in shape.³ As each guest leaned during a great part of the entertainment upon his left elbow, so as to leave the right arm at liberty, and as two or more lay on the same couch, the head of one man was near the breast of the man who lay behind him, and he was therefore said to lie in the bosom of the other.⁴ Among the Romans, the usual number of persons occupying each couch was three, so that the three couches of a *triclinium* afforded accommodation for a party of nine. It was the rule of Varro,⁵ that the number of guests ought not to be less than that of the Graces, nor to exceed that of the Muses. Sometimes, however, as many as four lay on each of the couches.⁶ The Greeks went beyond this number: Cicero says they lay crowded by fives (see woodcut, p. 326), or packed even still more closely.⁷ The *οἶκος τριακοντάκλινος*⁸ may be supposed to have received about ninety guests at a time, there being ten *triclinia*, and nine guests to each.

In such works of ancient art as represent a symposium or drinking-party, we always observe that the couches are elevated above the level of the table. This circumstance throws some light upon Plutarch's mode of solving the problem respecting the increase of room for the guests as they proceeded with their meal.⁹ Each man, in order to feed himself, lay flat upon his breast, or nearly so, and stretched out his hand towards the table; but afterwards, when his hunger was satisfied, he turned upon his left side, leaning on his elbow. To this Horace alludes in describing a person sated with a particular dish, and turning in order to repose upon his elbow.¹⁰

We find the relative positions of two persons who lay next to one another commonly expressed by the prepositions *super* or *supra*, and *infra*. A passage of Livy,¹¹ in which he relates the cruel conduct of the consul L. Quintius Flamininus, shows that *infra aliquem cubare* was the same as *in sinu alicujus cubare*, and, consequently, that each person was considered as *below* him to whose breast his own head approached. On this principle we are enabled to explain the denominations both of the three couches and of the three places on each couch.

Supposing the annexed arrangement to represent the plan of a *triclinium*, it is evident that, as each guest reclined on his left side, the countenances of all, when in this position, were directed, first, from No. 1 towards No. 3, then from No. 4 towards No. 6, and, lastly, from No. 7 towards No. 9; that the guest No. 1 lay, in the sense explained, *above* No. 2, No. 3 *below* No. 2, and so of the rest; and that, going in the same direction, the couch to the right

1. (§ 10.)—2. (Cass., Bell. Civ., iii., 92.—Compare Athes., ii., p. 47, 48.)—3. (Varro, L. L., ix., 47, ed. Muller.)—4. (Plin., Epist., iv., 22.)—5. (Gell., xii., 11.)—6. (Hor., Sat., i., 4, 86.)—7. (in Pis., 27.)—8. (Plut., Symp., v., 5, p. 1207.)—9. (Id. ib., v., 6.)—10. (Sat., ii., 4, 39.)—11. (xxix., 43.)

hand was above the others, and the couch to the left hand below the others. Accordingly, the following fragment of Sallust¹ contains the denominations of the couches as shown on the plan: "*Igitur discubere: Sertorius (i. e., No. 6) inferior in medio; super sum L. Fabius Hispaniensis senator ex proscriptis (No. 5): in summo Antonius (No. 1); et infra scriba Sertorius Versius (No. 2): et alter scriba Mæcenas (No. 8) in imo, medius inter Tarquinium (No. 7) et dominum Perpernam (No. 9).*" On the same principle, No. 1 was the highest place (*locus summus*) on the highest couch; No. 3 was *locus imus in lecto summo*; No. 2 *locus medius in lecto summo*; and so on. It will be found that in the following passage² the guests are enumerated in the order of their accubation—an order exhibited in the annexed diagram.

Fundanius, one of the guests, who was at the top relatively to all the others, says,

"*Summus ego, et prape me Viscus Thurinus, et infra, Si memini, Varius: cum Servilio Balatrone Vibidius, quos Mæcenas adduxerat umbras. Nomenianus erat super ipsum, Porcius infra.*"

It is possible that Mæcenas ought to be in the place No. 4 instead of No. 5, since the entertainment was given more especially in honour of him, and No. 4 was an honourable place. The host himself, Nasidienus, occupies the place No. 8, which was usually taken by the master of the feast, and was a convenient situation for giving directions and superintending the entertainment. Unless there be an exception in the instance of No. 4, it is to be observed that at each table the most honourable was the middle place.³

The general superintendence of the dining-room in a great house was intrusted to a slave called *trichiaracha*, who, through the instrumentality of other slaves of inferior rank, took care that everything was kept and proceeded in proper order.

TRIDENS. (*Vid. FUSCINA.*)

TRIDRACHMON. (*Vid. DRACHMA.*)

TRIENS. (*Vid. As.* p. 110.)

TRIERARCHIA (*τριεραρχία*). This was one of the extraordinary war-services or liturgies (*vid. LEITOURGIA*) at Athens, the object of which was to provide for the equipment and maintenance of the ships of war belonging to the state. The persons who were charged with it were called *Τριεραρχοι*, or trierarchs, as being the captains of triremes, though the name was also applied to persons who bore the same charge in other vessels. It existed from very early time in connexion with the forty-

eight naucraries of Solon and the fifty of Cleisthenes, each of which corporations appears to have been obliged to equip and man a vessel. (Compare NAUCRARIA.) Under the constitution of Cleisthenes the ten tribes were at first severally charged with five vessels. This charge was, of course, superseded by the later forms of the trierarchy, explained in the course of this article.

1. *The services to which the trierarchs were liable.*—What these were previously to 358 B.C., there can be no doubt; the vessel was furnished by the state, though sometimes a wealthy and patriotic individual served in his own ship. Cleinias, for instance, did so at Artemisium;² but as it is particularly recorded that this ship was his own, we may infer that he supplied at his own cost what the state was bound to provide. The same custom prevailed during the Peloponnesian war also. The 100 ships prepared and reserved at the beginning of the war for any critical emergency, were supplied by the state.³ In the expedition against Sicily,⁴ the state furnished the hull of the vessel (*ναῦν κενόν*) and the pay of the crews, a drachma per day for each man; but the equipment of the ships was at the cost of the trierarchs, who also gave *ἐπιτροφαί*,⁵ or additional pay, to secure the best men. The same conclusions are also deducible from the credit which a trierarch takes to himself for saving his vessel, when the city lost her ships at Ægospotami;⁶ and from the farther statement, that he paid the sailors out of his own pocket. From the threat of Cleon,⁷ that he would (as *σπαρτηγός*) make an adversary a trierarch, and give him an old ship with a rotten mast (*ισχίον σαρρόν*), it appears that the state furnished the hull and mast also, but that the trierarch was bound to keep and return them in good repair: an obligation expressed in the inscriptions quoted by Böckh,⁸ by the phrase *δεῖ τὴν ναῦν δοκιμὰν καὶ ἐντελὴ παραδοῦναι*. Consequently, the statement in the oration against Midias,⁹ that when Demosthenes was quite young (B.C. 364) the trierarchs paid all the expenses themselves (*τὰ ἀναλώματα ἐκ τῶν ἰδίων*), only implies that they defrayed the expenses which were customary at that time, and which were afterward diminished by the regulation of the *symmoræ*; but not that they supplied the ship, or pay and provisions for the crew. The whole expenditure, says Böckh,¹⁰ means nothing more than the equipment of the vessel, the keeping it in repair, and the procuring the crew, which was attended with much trouble and expense, as the trierarchs were sometimes obliged to give bounties in order to induce persons to serve, foreign sailors not being admissible. From the oration of Demosthenes against Polycles (B.C. 361), we learn the following particulars about the trierarchy of that time. The trierarchs were obliged to launch their ship; the sailors were supplied from particular parishes (*δῆμαι*), through the agency of the *demarchi*; but those supplied to Apollodorus, the client of Demosthenes, were but few and inefficient, consequently he mortgaged his estate (*ὑπαθεῖναι τὴν οὐσίαν*), and hired the best men he could get, giving great bounties and premiums (*προδόσεις*). He also equipped the vessel with his own tackle and furniture, taking nothing from the public stores (*ἐκ τῶν δημοσίων οὐδὲν ἔλαβον*). Compare the Speech on the Crown of the Trierarchy¹¹). Moreover, in consequence of his sailors deserting when he was out at sea, he was put to additional and heavy expenses in hiring men at different ports. The provision-money for the sailors (*σιτηρέσιον*) was pro-

vided by the state and paid by the strategi, and so, generally speaking, was the pay for the marine (*ἐπιβάται*); but Demosthenes' client only received it for two months; and as he served for five months more than his time (from the delay of his successor elect), he was obliged to advance it himself for fifteen months, with but an uncertain prospect of repayment. Other circumstances are mentioned which made his trierarchy very expensive, and the whole speech is worth reading, as showing the unfairness and hardship to which a rich man was sometimes subjected as a trierarch. The observation that he took no furniture from the public stores proves that at that time (B.C. 361) the triremes were fitted out and equipped from the public stores, and consequently by the state; but, as we learn from other passages in Demosthenes and the inscriptions in Böckh,¹ the trierarchs were obliged to return in good condition any articles which they took; in default of doing so, they were considered debtors to the state.

That the ship's furniture was either wholly or in part supplied by the state, also appears from another speech:² but trierarchs did not always avail themselves of their privilege in this respect, that they might have no trouble in settling with the state. It is evident, then, that at the time referred to (about B.C. 360), the only expenses binding upon the trierarchs were those of keeping in repair the ship and the ship's furniture; but even these might be very considerable, especially if the ship were old, or exposed to hard service or rough weather. Moreover, some trierarchs, whether from ambitious or patriotic motives, put themselves to unnecessary expense in fitting out and rigging their ships, from which the state derived an advantage. Sometimes, on the other hand, the state suffered by the trierarchs performing their duties at the least possible expense, or letting out their trierarchy (*μισθώσαι τὴν λειτουργίαν*) to the contractor who offered the lowest tender.³ One consequence of this was, that the duties were inadequately performed; but there was a greater evil connected with it, namely, that the contractors repaid themselves by privateering on their own account, which led to reprisals and letters of marque being granted against the state. (*Vid. SYLLAB.*)⁴ It seems strange that the Athenians tolerated this, especially as they were sometimes inconsistent enough to punish the trierarchs who had let out their trierarchy, considering it as a desertion of post (*λειπότητον*).⁵

We may here observe, that the expression in Isæus,⁶ that a trierarch "had his ship made himself" (*τὴν ναὺν ποιῶμενον*), does not mean that he was at the cost of building it (*ναυπηγησάμενος*), but only of fitting it up and getting it ready for sea. That the ships always belonged to the state is farther evident from the fact that the senate was intrusted with the inspection of the ship-building,⁷ and is placed beyond all doubt by the "Athenian Navy List" of the inscriptions in Böckh.⁸ Some of the ships there mentioned are called *ἀνεπικλήρωτοι*, whence it appears that the public vessels were assigned by lot to the respective trierarchs. A *τρίρης ἐπιδοσῆμος* was a ship presented to the state as a free gift, just as *τρίρης ἐπιδοῦναι* means to present the state with a trireme.⁹ The duration of a trierarchy was a year, and if any trierarch served longer than his legal time, he could charge the extra expenses (*τὸ ἐπιτρίτην ἀρχήμα*) to his successor. To recover these expenses, an action (*ἐπιτρίτην ἀρχήματος*

δίκη) might be brought against the successor, of which we have an example in the speech of Apollodorus against Polycles, composed by Demosthenes for the former.

II. *On the expenses of the trierarchy.*—These would, of course, depend upon circumstances; but, except in extraordinary cases, they were not more than 60, nor less than forty minæ: the average was about 50. Thus, about the year B.C. 360, a whole trierarchy was let out for 40 minæ; in later times the general amount of a contract was 60.¹

III. *On the different forms of the trierarchy.*—In ancient times one person bore the whole charge, afterward it was customary for two persons to share it, who were then called syntrierarchs (*συντρίτηρχοι*). When this practice was first introduced is not known, but Böckh conjectures that it was about the year 412 B.C., after the defeat of the Athenians in Sicily, when the union of two persons for the choregia was first permitted. The most ancient account of a syntrierarchy is later than 410;² and we meet with one so late as B.C. 358, the year of the Athenian expedition into Eubœa.³ The syntrierarchy to which we allude was, indeed, a voluntary service (*ἐκιδούσα*), but there can be little doubt that it was suggested by the ordinary practice of that time; and even under the next form of the service, two trierarchs were sometimes employed for the immediate direction of the trierarchy. The syntrierarchy, however, did not entirely supersede the older and single form, being only meant as a relief in case of emergency, when there was not a sufficient number of wealthy citizens to bear the expense singly. Numerous instances, in fact, occur of single trierarchies between 410 and 358 B.C., and in two passages of Isæus,⁴ referring to this period, the single and double trierarchy are mentioned as contemporaneous. Apollodorus also was sole trierarch⁵ so late as B.C. 361. In the case of a syntrierarchy, the two trierarchs commanded their vessel in turn, six months each,⁶ according as they agreed between themselves.

The third form of the trierarchy was connected with or suggested by the syntrierarchy. In B.C. 358, the Athenians were unable to procure a sufficient number of legally-appointed trierarchs, and accordingly they summoned volunteers. This, however, was but a temporary expedient; and, as the actual system was not adequate to the public wants, they determined to manage the trierarchy somewhat in the same way as the property taxes (*vid. ΕΙΣΦΟΡΑ*), namely, by classes or symmoriae, according to the law of Pericles, passed, as Böckh shows, in the year 358, and which was the primary and original enactment on the subject. With this view, 1200 *συντελεῖς*, or partners,⁷ were appointed, who were probably the wealthiest individuals of the state, according to the census or valuation. These were divided into twenty *συμμορίαί*, or classes; out of which a number of persons (*σύματα*) joined for the equipment, or, rather, the maintenance and management of a ship, under the title of a *συντέλεια*,⁸ or union. Sometimes, perhaps, by special enactment, when a great number of ships was required, a synteleia of this kind consisted of four or five wealthy individuals, who bore jointly the expenses of one trireme;⁹ but generally to every ship there was assigned a synteleia of fifteen persons of different degrees of wealth, as we may suppose, so that four only were provided for by each symmoria of sixty persons.

1. (Urkunden, No. iii.)—2. (c. Euerget. et Mnesib., p. 1146.)—3. (Dem., De Coron. Trier., p. 1230.)—4. (Dem., ib., p. 1231.)—5. (Id., p. 1230.)—6. (De Apoll. hered., p. 67.)—7. (Dem., c. Androt., p. 599, 13.)—8. (Urkunden, &c.)—9. (Dem., c. Mid., 566 568.)

1. (Dem., c. Mid., 539, 564, 20.—De Coron., 260, 262.)—2. (Lys., c. Diogit., 907, 909.)—3. (Dem., c. Mid., 566, 24.)—4. (De Dicoeg. hered., 54.—De Apoll., p. 67.)—5. (Dem., c. Polycl., 6.)—6. (Id., 1219.)—7. (Dem., c. Mid., 564.)—8. (Harpocr., s. v.)—9. (Id., s. v. Συμμορία.)

These synteleiæ of fifteen persons each seem to have been also called symmoriæ by Hyperides.¹ It appears, however, that before Demosthenes carried a new law on this subject (B.C. 340), it had been customary for sixteen persons to unite in a syntelesia or company for a ship,² who bore the burden in equal shares. This being the case, it follows either that the members of the symmoriæ had been by that time raised from 1200 to 1280, or that some alterations had taken place in their internal arrangements, of which no account has come down to us.³ From the phrase *ἐκ τῶν ἐν τοῖς λόχοις συντελειῶν*, used in the *κατάλογος*,⁴ it would also seem that the word *λόχοι* was used of civil as well as military divisions, and, in this instance, of the symmoriæ. The superintendence of the whole system was in the hands of the 300 wealthiest members, who were therefore called the "leaders of the symmoriæ" (*ἡγεμόνες τῶν συμμοριῶν*), on whom the burdens of the trierarchy chiefly fell, or, rather, ought to have fallen.⁵ The services performed by individuals under this system appear to have been the same as before: the state still provided the ship's tackle (*i. e.*, the *ὄβονα καὶ στύππια καὶ σχοινία*, and other things), and some stringent enactments were made to compel the trierarchs to deliver it up according to the inventory taken of it (*τὸ διάγραμμα τῶν σκευῶν*), either at Athens or to their successors sent out by the symmoria. This conclusion, that the vessel was equipped by the state, is confirmed by Demosthenes,⁶ and in the oration against Midias⁷ he says, referring to the system of the symmoriæ, that the state provided the crews and the furniture. The only duty, then, of the trierarchs under this system was to keep their vessels in the same repair and order as they received them. But even from this they managed to escape: for the wealthiest members, who had to serve for their syntelesia, let out their trierarchies for a talent, and received that amount from their partners (*συντελεῖς*), so that, in reality, they paid next to nothing, or, at any rate, not what they ought to have done, considering that the trierarchy was a ground of exemption from other liturgies. It does not appear from the orators how the different synteleiæ appointed the trierarchs who were to take charge of their vessels; but it was probably left to themselves, without being regulated by any legal enactment. The evils and irregularities of the symmoriæ are thus (rhetorically perhaps) described by Demosthenes: "I saw your navy going to ruin, and the rich escaping with little cost, and persons of moderate income losing their property, and the city losing the opportunities of action, and the triremes not being equipped in sufficient time to meet an emergency, and therefore I proposed a law," &c. The changes he meant to effect by it are related in his oration concerning the symmoriæ (B.C. 354), and are as follows: he proposed to add 800 to the 1200 *συντελεῖς*, making the whole 2000, so that, subtracting all those who could claim exemption as minors, orphans, &c., there might always remain 1200 persons (*σώματα*) to serve. These were to be divided into 20 symmoriæ of 60 each, as under the old system: each of these was to be subdivided into five divisions of twelve persons each, one half rich and the other poor (*ἀντανάληρών*), so as to form altogether 100 smaller symmoriæ. The number of triremes, according to this scheme, was to be 300, classed in 20 divisions of 15 ships: each of these divisions was to be assigned to one of the 20 larger symmoriæ, so that

each of the smaller would receive three; and in case of 300 ships being required, four trierarchs would be appointed to each. Moreover, each of the greater symmoriæ was to receive the same amount of the public stores for equipment, in order that they might apportion it to the smaller classes. With a view to levying the crews, and for other purposes, the generals were to divide the dockyards into ten parts for 30 ships' stations (*νεώσταικος*) adjacent to each other, and to assign each of these parts to a tribe, or two large symmoriæ of 30 ships. These ten parts were to be subdivided into thirds, each of which was to be assigned to a third part (*τριττῆς*) of the tribe to whom the whole was allotted, so that each third would receive ten ships. Whether this scheme was put into practice does not appear, but it seems that it was not, for the mismanagement of the trierarchy appears to have continued till Demosthenes carried his law about the "Trierarchy according to the Valuation." One of the chief evils connected with it was, that the triremes were never equipped in time; and as Demosthenes¹ complains of this in B.C. 352, we may conclude that his proposal fell to the ground. But these evils were too serious to remain without a remedy; and therefore, when the orator was the *ἐπιστάτης τοῦ ναυτικοῦ*, or the superintendent of the Athenian navy, he brought forward and carried a law for altering and improving the system of the symmoriæ and companies, the members of which no longer called themselves trierarchs, but partners (*συντελεῖς*),² thereby introducing the "fourth form of the trierarchy." The naval services required from every citizen were to depend upon and be proportional to his property, or, rather, to his taxable capital (*τίμημα*: *vid. Εἰσφορά*), as registered for the symmoriæ of the property taxes, the rate being one trireme for every ten talents of taxable capital, up to three triremes and one auxiliary vessel (*ὑπηρεσίον*) for the largest properties; *i. e.*, no person, however rich, could be required to furnish more. Those who had not ten talents in taxable capital were to club together in synteleiæ till they had made up that amount; and if the valuation of the year of Nausimachus (B.C. 379) was still in force, the taxable capital (for the highest class) was one fifth of the whole. By this law great changes were effected. All persons paying taxes were rated in proportion to their property, so that the poor were benefited by it, and the state likewise: for, as Demosthenes³ says, those who had formerly contributed one sixteenth to the trierarchy of one ship were now trierarchs of two, in which case they must either have served by proxy, or done duty in successive years. He adds that the consequences were highly beneficial. During the whole war, carried on after the law was in force, no trierarch implored the aid of the people (*ἐκπηρίαν ἔθηκε*), or took refuge in a temple, or was put into prison by the persons whose duty it was to despatch the fleet (*οἱ ἀπαστολῆς*), nor was any trireme lost at sea, or lying idle in the docks for want of stores and tackle, as under the old system, when the service (*τὸ λειτουργεῖν*) fell on the poor. The duties and services to which the trierarchs were subject under the new law were probably the same as under the third form of the trierarchy, the symmoriæ.

On the relation which, in this system, the cost of a trierarchy bore to the property of a trierarch, Böckh makes the following remarks, which may be verified by a reference to *Εἰσφορά*: "If we reckon that, as formerly, it cost about a talent, the total expense of the trierarchs, for 100, 200, or 300 triremes, amounted to an equal number of talents, or a sixtieth, a thirtieth, and a twentieth of the valua-

1. (Harpocr., s. v.—Compare Dem., De Symmor., 163.)—2. (Dem., Pro Coron., 261.)—3. (Böckh, Publ. Econ. of Athens, ii., p. 346.—Urkunden, &c., 181.)—4. (De Coron., 261.)—5. (Dem., Pro Cor., 329; c. Euerget. et Mnesib., 1145.)—6. (De Symmor., 163, 17.)—7. (l. c.)

1. (Phil., 50.)—2. (Id., De Coron., 260.)—3. (De Coron., 261.)

tion of Attica; *i. e.*, for the first class one third, two thirds, and one per cent. of their property: for the poorer a proportionally less amount: and of the annual incomes, taken as a tenth part of the property, $3\frac{1}{2}$, $6\frac{1}{2}$ and ten per cent. for the most wealthy. But we may reckon that Athens at that time had not more than 100 or 200 triremes at sea, very seldom 300; so that this war-tax did not, for the richest class, amount, on an average, to more than one third, and two thirds per cent. of their property."

This arrangement of Demosthenes was calculated for 300 triremes, for which number 300 persons serving in person would be necessary, so that the chief burden must have fallen upon the leaders of the former symmoriae. The year of passing this law Böckh fixes at B.C. 340 or 339. How long it remained in force is uncertain. In the speech for the Crown (B.C. 330), where much is said on the subject of the trierarchy, it is neither mentioned that the law was in existence, nor that it was repealed; but Demosthenes¹ says that Æschines had been bribed by the leaders of the symmoriae to nullify it.

It appears, then, that the trierarchy, though the most expensive of the liturgies, was not of necessity oppressive, if fairly and economically managed, though this, as has been before observed, was not always the case.²

With respect to the amount of property which rendered a man liable to serve a trierarchy or syntriarchy, Böckh³ observes, "I am aware of no instance of liability arising from a property of less value than 500 minæ: and as an estate of one or two talents never obliged the possessor to the performance of any liturgy," the assertion of Isæus,⁴ that many had served the office of trierarch whose property was not more than 80 minæ, obliges us (if true) to suppose that public-spirited individuals were sometimes found to contribute to a trierarchy (rather, perhaps, to a syntriarchy) out of a very small property."

The disadvantages which in later times resulted from the trierarchs not being ready for sea by the time for sailing, were in early times prevented by their appointments being made beforehand, as was the case with the trierarchs appointed to the 100 ships which were reserved at the beginning of the Peloponnesian war against an attack upon Athens by sea.

The appointment to serve under the first and second forms of the trierarchy was made by the strategi;⁵ and in case any person was appointed to serve a trierarchy, and thought any one else (not called upon) was better able to bear it than himself, he offered the latter an exchange of his property (*vid. ANTIDOSIS*), subject to the burden of the trierarchy.

In cases of extreme hardship, persons became suppliants to the people, or fled to the altar of Artemis at Munychia. If not ready in time, they were sometimes liable to imprisonment (*ἐντοχοὶ δεσμῶν*). Thus, on one occasion,⁶ the trierarchs were, by a special decree, subjected to imprisonment if they were not off the pier (*χῶμα*) by the end of the month; on the contrary; whoever got his ship ready first was to be rewarded with the "crown of the trierarchy," so that, in this way, considerable emulation and competition were produced. Moreover, the trierarchs were *ὑπεύθυνοι*, or liable to be called to account for their expenditure, though they applied their own property to the service of the state.⁷

But they also received money out of the treasury for various disbursements, as the pay of the soldiers and sailors, and the extra hands (*ὑπηρεσία*): thus, on one occasion, each trierarch is stated to have received 30 minæ, *εἰς ἐπίπλουν*.¹ The trierarchs may also have been considered *ὑπεύθυνοι*, from being required to show that they had performed their duties properly. The sacred triremes, the Paralus and Salamis, had special treasures (*vid. ΤΑΜΙΑΙ*, p. 950) appointed to them;² and, on the authority of Ulpian,³ it has been believed that the state acted as trierarch for each of them; but in the inscriptions quoted by Böckh,⁴ no difference is made between the trierarchs of the Paralus and other vessels, and therefore it would seem that the state appointed trierarchs for them as well as for other vessels, and provided out of the public funds for those expenses only which were peculiar to them.

IV. *On the exemption from the trierarchy.*—By an ancient law, in force B.C. 355,⁵ no person (but minors and females) could claim exemption from the trierarchy who were of sufficient wealth to perform it, not even the descendants of Harmodius and Aristogiton. But from Isæus⁶ it appears that, in the time of the single trierarchy, no person could be compelled to serve a second time within two years after a former service (*δύο ἔτη διαλείπων*). The nine archons also were exempt, and the trierarchy was a ground of exemption from the other liturgies, any of which, indeed, gave an exemption from all the rest during the year next following that of its service.⁷

But all property was not subject to the service, as we learn from Demosthenes,⁸ who tells us that a person was exempt if *ἀδύνατος*, or unable to serve from poverty; so also were "wards, heiresses, orphans, cleruchi, and corporate bodies." Of course, an heiress could only claim exemption while unmarried. Wards, also, were free from *all liturgies* during their minority, and for a year after their *δοκιμασία*.⁹ By *κληρουχοί* are meant colonists, who, while absent by the command of the state, could not perform a trierarchy. The *τὰ κοινωνικά* admits of doubt, but it probably means the property of joint tenants, as brothers or co-heirs, which had not yet been apportioned to them,¹⁰ or it may refer to monies invested in partnership. Moreover, though the proper duration of a trierarchy was a year, it was legally dissolved if the general furnished no pay to the soldiers, or if the ship put into the Piræus, it being then impossible to keep the sailors together.¹¹

V. *On the legal proceedings connected with the trierarchy.*—These were either between individual trierarchs, or between trierarchs and the state, and therefore in the form of a *ΔΙΑΔΙΚΑΣΙΑ*. They generally arose in consequence of a trierarch not delivering up his ship and her rigging in proper order, either to his successor or to the state. If he alleged that the loss or damage of either happened from a storm, he was said *σκηπιάσθαι κατὰ χειμῶνα ἀπολωλένα*, and if his plea were substantiated, *ἔδοξεν ἐν τῷ δικαστηρίῳ κ. τ. λ.* Vessels or furniture on which a trial of this kind had been held, were said to be *διαδεδικασμένα*.

The presidency of the courts which tried matters of this sort was vested in the strategi, and sometimes in the superintendents of the dockyard, in conjunction with the *ἀποστολεῖς*. The senate also appears to have had a judicial power in these matters: *ε. g.*, we meet in various inscriptions with the phrase *οἶδε τῶν τριηράρχων, ὧν ἐδίπλωσεν ἡ βου-*

1. (p. 329.)—2. (Demosth., c. Polycl.)—3. (ii., 367.)—4. (Demosth., c. Aphob., p. 833.)—5. (De Dicægor. hered., p. 54.)—6. (Demosth., c. Lacr., p. 940, 16.)—7. (I. I., De Coron., 262, 15.)—8. (Id., De Coron. Trier., 1229, 6.)—9. (Id., c. Polycl., 1222, 11.)—Æschin., c. Ctesiph., 56.)

Lept., 459 and 464.)—8. (De Symm., 182, 14.)—9. (Lysias, c. Diogit., 908.)—10. (Pollux, Onom., viii., 184.)—11. (Dem., c. Polycl., 1209.)

ἀπὸ τὴν τριήρη. Böckh conjectures that the triarchs of whom this is said had returned their ships in such a condition that the state might have called upon them to put them in thorough repair or to rebuild them, at a cost for an ordinary trireme of 5000 drachmæ. Supposing that they were not released from this liability by any decree of a court of justice, and that the rebuilding was not completed, he conceives that it must have been competent (in a clear and flagrant case) for the senate to have inflicted upon them the penalty of twice 5000 drachmæ, the technical phrase for which was "doubling the trireme."¹

The phrase ὡμολογήσεν τριήρη καὶνὴν ὑποδόσσειν, which occurs in inscriptions, does not apply to an undertaking for giving a new trireme, but merely for putting one in a complete state of repair.

The phrase φαίνεται πλοῖον,² to lay an information against a vessel, is used, not of a public ship, but of a private vessel, engaged, perhaps, in smuggling or privateering.

TRIEROPOIOI (τριηροποιοί). (Vid. SHIPS, p. 891.)

*TRIGLA (τρίγλα), a fish, the red Surmullet, or *Mullus barbatus*, L. It is from six to nine inches long, and was a great favourite with the ancient epicures.³

TRIGON. (Vid. PILA.)

TRILIX. (Vid. TEIA, p. 956.)

TRINUNDINUM. (Vid. NUNDINÆ, p. 668.)

TRIOBOLON (τριώβολον), or τριώβολον ἡλιαστικόν, was the fee of three oboli which the Athenian citizens received for their attendance as dicasts in the courts of the *heliæa*, whence it is also called *μισθός δικαστικός*, or *τὸ δικαστικόν*. This pay had been first introduced by Pericles.⁴ It is generally supposed from Aristophanes,⁵ who makes Strepsiades say that for the first obolus he ever received as a dicast he bought a toy for his son, that at first the *δικαστικόν* was only one obolus. According to the scholiast on Aristophanes,⁶ the pay was subsequently increased to two oboli, but this seems to be merely an erroneous inference from the passage of his author. Three oboli, or the *τριώβολον*, occurs as early as B.C. 425 in the comedies of Aristophanes, and is afterward mentioned frequently.⁷ Böckh⁸ has inferred from these passages that the triobolon was introduced by Cleon about B.C. 421; but G. Hermann⁹ has disputed this opinion, at least so far as it is founded upon Aristophanes, and thinks that the pay of three oboli for the dicasts existed before that time. However this may be, thus much is certain, that the pay of the dicasts was not the same at all times, although it is improbable that it should ever have been two oboli.¹⁰ The payment was made after every assembly of a court of *heliastæ* by the *colacretæ*¹¹ in the following manner. After a citizen had been appointed by lot to act as judge in a particular court, he received, on entering the court, together with the staff (*βακτηρία* or *ῥάβδος*), a tablet or ticket (*σύμβολον*). After the business of the court was over, the dicast, on going out, delivered his ticket to the *prytanes*, and received his fee in return.¹² Those who had come too late had no claim to the triobolon.¹³ The annual amount of these fees is reckoned by Aristophanes¹⁴ at 150

talents, a sum which is very high, and can, perhaps only be applied to the most flourishing times of Athens.¹

TRIPOLITIO. (Vid. ACTIO, p. 19.)

*TRIPOL'ION (τριπόλιον), a plant. "Serapion and Avicenna call it *Turbith*, which, however, is said by Actuarius to be the root of the *Alypias*. Sprengel says the Arabians and their commentators committed a great mistake in confounding the *Turbith* with the *Tripolium*. He is disposed to think it the *Plumbago Europæa*, or Leadwort. Sibthorp, however, holds it to be the *Statice sinuala*; and, in short, there is a great diversity of opinion respecting it."²

TRIPOS (τρίπους), a Tripod, *i. e.*, any utensil or article of furniture supported upon three feet, more especially

I. A three-legged table (*vid. MENSA*, page 632.) The first woodcut at p. 276 shows such a table in use. Its three supports are richly and tastefully ornamented. Various single legs (*trapezophora*), wrought in the same style out of white marble, red porphyry, or other valuable materials, and consisting of a lion's head or some similar object at the top, and a foot of the same animal at the bottom, united by intervening foliage, are preserved in the British Museum,⁴ and in other collections of antiquities. The tripod used at entertainments to hold the CRATER (p. 319) had short feet, so that it was not much elevated. These tables were probably sometimes made to move upon castors.⁵

II. A pot or caldron used for boiling meat, and either raised upon a three-legged stand of bronze, as is represented in the woodcut, p. 678, or made with its three feet in the same piece. Such a utensil was of great value, and was sometimes offered as a prize in the public games.⁶

III. A bronze altar, not differing, probably, in its original form, from the tall tripod caldron already described. In this form, but with additional ornament, we see it in the annexed woodcut, which represents a tripod found at Frejus.⁷ That this was intended to be used in sacrifice may be inferred from the bull's head, with a fillet tied round the horns, which we see at the top of each leg.

All the most ancient representations of the sacrificial tripod exhibit it of the same general shape, together with three rings at the top to serve as handles (*σῦαρα*). Since it has this form on all the coins and other ancient remains which have any reference to the Delphic oracle, it has been with sufficient reason concluded that the tripod from which the Pythian priestess gave responses was of

1. (Böckh, Staatsk., &c., i., p. 250.—Meier, Att. Proc., p. 125, &c.)—2. (Dioscor., iv., 132.—Theophr., H. P., ix., 19.—Adams, Append., s. v.)—3. (Cic. ad Fam., vii., 23.)—4. (Combe, Ancient Marbles, i., 3; i., 13; iii., 38.)—5. (Hom., II., xviii., 375.)—6. (xiii., 264, 702, 703.)—7. (Spon, Misc. Erud. Aut., p. 118.)—8. (Hom., II., xviii., 378.)

this kind. The right-hand figure in the preceding woodcut is copied from one published by K. O. Müller,¹ founded upon numerous ancient authorities, and designed to show the appearance of the oracular tripod at Delphi. Besides the parts already mentioned, viz., the three legs, the three handles, and the vessel or caldron, it shows a flat, round plate, called *ἄλμος*, on which the Pythia seated herself in order to give responses, and on which lay a laurel leaf at other times. This figure also shows the position of the *CORTINA*, which, as well as the caldron, was made of very thin bronze, and was supposed to increase the prophetic sounds which came from underneath the earth.²

The celebrity of this tripod produced innumerable imitations of it,³ called "Delphic tripods."⁴ They were made to be used in sacrifice, and still more frequently to be presented to the treasury both in that place and in many other Greek temples.⁵ (*VID. DONARIA*.) Tripods were chiefly dedicated to Apollo⁶ and to Bacchus. Partly in allusion to the fable of the rape of a tripod from Apollo by Hercules, and the recovery of it by the former,⁷ the tripod was one of his usual attributes, and therefore occurs continually on coins and ancient marbles which have a relation to him. Of this we have an example in the bas-relief engraved on p. 78, which also exhibits two more of his attributes, the lyre and the plectrum. In conformity with the same ideas, it was given as a prize to the conquerors at the Pythian and other games, which were celebrated in honour of Apollo.⁸ On the other hand, the theatre at Athens being considered sacred to Bacchus, the successful *CHORAGUS* received a bronze tripod as the appropriate prize. The choragic monuments of *Thrasylus* and *Lysicrates*, the ornamental fragments of which are now in the British Museum, were erected by them to preserve and display the tripods awarded to them on such occasions. We find, also, that a tripod was sometimes consecrated to the Muses⁹ and to Hercules.¹⁰

A tripod, scarcely less remarkable than that from which the Pythia delivered oracles, and consecrated to Apollo in the same temple at Delphi, was that made from the spoils of the Persian army after the battle of *Platææ*. It consisted of a golden bowl, supported by a three-headed bronze serpent.¹¹ The golden bowl having been removed, the bronze serpent was taken to Constantinople, and is probably the one which was seen there by *Spon* and *Wheler* in 1675. The first figure in the following woodcut is copied from *Wheler's* engraving of it.¹² He says it was about fourteen or fifteen feet high.

The use of bronze tripods as altars evidently arose, in a great degree, from their suitability to be removed from place to place. We have an example of this mode of employing them in the scene which is represented in the woodcut on p. 897. To accommodate them as much as possible to this purpose, they were sometimes made to fold together into a small compass by a contrivance, which may be understood from an inspection of the following woodcut. The right-hand figure represents a tripod in the British Museum. A patera or plain metallic disk was laid on the top when there was occasion to offer incense. Many of these movable folding tripods may be seen in museums, proving how common they were among the Romans.

Another species of tripods deserving of notice

are those made of marble or hard stone. One was discovered in the villa of *Hadrian*, five feet high, and therefore unsuitable to be used in sacrifice. It is very much ornamented, and was probably intended merely to be displayed as a work of art.¹

TRIPUDIIUM. (*VID. AUSPICIIUM*, p. 130.)

TRIREMIS. (*VID. SHIPS*.)

TRITAGONISTES (τριταγωνιστής). (*VID. HISTORIOGRAPHUS*, p. 505.)

*TRITICUM (πυρρός), Wheat. "*Sprengel* remarks, that the *Triticum hybernum* and *aestivum* are indicated by the *πυρρός χειμωπορούμενος* and *τρίμηνος* of *Theophrastus*, &c. It is the *πυρρός σιτανίος* of *Dioscorides*. The finest kind of wheat was called *σιλιγγίτης* by the Greeks, and *siligo* by the Romans; the second sort in quality was called *σεμίδαλις* by the Greeks, and *similago* by the Romans; the third sort was called *συγκόμστος* and *αυτοπυρρίτης* by the Greeks, and *autopyrus* by the Romans; the last kind was called *πεπυρίας*."²

TRITTUA (τριττώ). (*VID. SACRIFICIUM*, p. 846.)

TRITTUS (τριττός). (*VID. TRIBUS*, GREEK, p. 1003.)

TRIUMPHUS, a solemn procession, in which a victorious general entered the city in a chariot drawn by four horses. He was preceded by the captives and spoils taken in war, was followed by his troops, and after passing in state along the *Via Sacra*, ascended the Capitol to offer sacrifice in the Temple of *Jupiter*.

Such displays have been so universal among all warlike tribes from the earliest times, and are so immediately connected with some of the strongest passions of the human heart, that it would be as useless as it is impossible to trace their origin historically. It is scarcely necessary to advert to the fancies of those ancient writers who refer their first institution to the mythic conquests of *Bacchus* in the East,³ nor need we attach much importance to the connexion between *triumphus* and *θρίαμβος*, according to the etymology doubtfully proposed by *Varro*.⁴ Rejoicings after a victory, accompanied by processions of the soldiery with their plunder, must have been coeval with the existence of the Romans as a nation; and, accordingly, the return of *Romulus* with *spolia opima*, after he had defeated the *Camnenses* and slain *Aero* their king, is described by *Dionysius*⁵ with all the attributes of a regular triumph. *Plutarch*⁶ admits that this event was the origin of and first step towards the triumph of after-times, but censures *Dionysius* for the state-

ment that Romulus made his entrance in a quadriga, which he considers disproved by the fact that all the triumphal (τρωπαιοφόρους) statues of that king, as seen in his day, represented him on foot. He adds, that Tarquinius Priscus, according to some, or Poplicola according to others, first triumphed in a chariot; and in corroboration of this, we find that the first triumph recorded by Livy¹ is that over the Sabines by Tarquinius, who, according to Verrius,² wore upon this occasion a robe of cloth or gold. Whatever conclusion we may form upon these points, it is certain that, from the first dawn of authentic history down to the extinction of liberty, a regular triumph (*justus triumphus*) was recognised as the summit of military glory, and was the cherished object of ambition to every Roman general. A triumph might be granted for successful achievements either by land or sea, but the latter were comparatively so rare that we shall for the present defer the consideration of the naval triumph.

After any decisive battle had been won, or a province subdued by a series of successful operations, the imperator forwarded to the senate a laurel-wreathed despatch (*littera laureatæ*), containing an account of his exploits. If the intelligence proved satisfactory, the senate decreed a public thanksgiving. (*Vid. SUPPLICATION.*) This supplication was so frequently the forerunner of a triumph, that Cato thinks it necessary to remind Cicero that it was not invariably so.⁴ After the war was concluded, the general, with his army, repaired to Rome, or ordered his army to meet him there on a given day, but did not enter the city. A meeting of the senate was held without the walls, usually in the Temple of Bellona⁵ or Apollo,⁶ that he might have an opportunity of urging his pretensions in person, and these were then scrutinized and discussed with the most jealous care. The following rules and restrictions were, for the most part, rigidly enforced, although the senate assumed the discretionary power of relaxing them in special cases.

1. That no one could be permitted to triumph unless he had held the office of dictator, of consul, or of prætor.⁷ Hence a triumph was not allowed to P. Scipio after he had expelled the Carthaginians from Spain, because he had commanded in that province "*sine ullo magistratu*."⁸ The honours granted to Pompey, who triumphed in his 24th year (B.C. 81), before he had held any of the great offices of state, and again ten years afterward, while still a simple eque, were altogether unprecedented.⁹

2. That the magistrate should have been actually in office both when the victory was gained and when the triumph was to be celebrated. This regulation was insisted upon only during the earlier ages of the commonwealth. Its violation commenced with Q. Publilius Philo, the first person to whom the senate ever granted a "prorogatio imperii" after the termination of a magistracy,¹⁰ and thenceforward proconsuls and prætors were permitted to triumph without question,¹¹ although for a considerable time the event was of rare occurrence. It was long held, however, that it was necessary for the "prorogatio imperii" to follow immediately upon the termination of the magistracy, for a triumph was refused to L. Lentulus, who succeeded P. Scipio in Spain, on the ground that, although he had been formerly prætor, his imperium had not been continued uninterruptedly from the period when the

command expired, but had been renewed "*extra ordinem*" after a lapse of some years.¹ But towards the close of the Republic this principle was entirely abandoned. Consuls and prætors seldom quitted the city until their term of office had ceased, and when, at any subsequent period, they entered upon the government of a province, either in regular rotation or "*extra ordinem*," they enjoyed the full status, and all the privileges of proconsuls and prætors. The position of Pompey when sent against the pirates, and afterward against Mithradates, and of Cicero when he went to Cilicia, will be sufficient to illustrate this, without multiplying examples.

3. That the war should have been prosecuted or the battle fought under the auspices, and in the province, and with the troops, of the general seeking the triumph;² and hence the triumph of the prætor Furius³ was considered irregular and imperfect. Thus, if a victory was gained by the legatus of a general who was absent from the army, the honour of it did not belong to the former, but to the latter, inasmuch as he had the auspices.

4. That at least 5000 of the enemy should have been slain in a single battle;⁴ that the advantage should have been positive, and not merely a compensation for some previous disaster;⁵ and that the loss on the part of the Romans should have been small compared with that of their adversaries.⁶ By a law of the tribunes L. Marius and M. Cato, penalties were imposed upon all imperatores who should be found guilty of having made false returns to the senate, and it was ordained that, so soon as they returned to the city, they should be required to attest the correctness of such documents upon oath before the city quæstor.⁷ It is clear that these provisions could never have existed during the petty contests with which Rome was fully occupied for some centuries; and even when wars were waged upon the most extensive scale, we find many instances of triumphs granted for general results, without reference to the numbers slain in any one engagement.⁸

5. That the war should have been a legitimate contest against public foes (*justis hostilibusque bellis*), and not a civil contest. Hence Catulus celebrated no triumph over Lepidus, nor Antonius over Catiline, nor Cinna and Marius over their antagonists of the Sullan party, nor Cæsar after Pharsalia; and when he did subsequently triumph after his victory over the sons of Pompey, it caused universal disgust. Hence the line in Lucan:¹⁰

"*Bella geri placuit nullos habitura triumphos*"¹¹

(*Vid. OVATIO.*)

6. That the dominion of the state should have been extended, and not merely something previously lost regained. Hence Fulvius, who won back Capua after its revolt to Hannibal, did not receive a triumph.¹² The absolute acquisition of territory does not appear to have been essential.¹³

7. That the war should have been brought to a conclusion, and the province reduced to a state of peace, so as to permit of the army being withdrawn, the presence of the victorious soldiers being considered indispensable in a triumph. In consequence of this condition not being fulfilled, an ovation only was granted to Marcellus after the capture of Syracuse,¹⁴ and to L. Manlius upon his return from Spain.¹⁵ We find an exception in Liv., xxxi., 48,

1. (i., 38.—Compare Flor., i., 5.—Eutrop., i., 6.)—2. (Plin., H. N., xxxiii., 19.)—3. (Zonar., vii., 21.—Liv., xlv., 1.—Plin., H. N., xv., 40.)—4. (Cic. ad Fam., xv., 5.)—5. (Liv., xxvi., 21.—Compare xxviii., 29; xxx., 48.)—17. (Liv., xxxiv., 20.)

49, but this and similar cases must be regarded as examples of peculiar favour.¹

The senate claimed the exclusive right of deliberating upon all these points, and giving or withholding the honour sought,² and they, for the most part, exercised the privilege without question, except in times of great political excitement. The sovereignty of the people, however, in this matter, was asserted at a very early date, and a triumph is said to have been voted by the tribes to Valerius and Horatius, the consuls of B.C. 446, in direct opposition to the resolution of the fathers,³ and in a similar manner to C. Marcus Rutilius, the first plebeian dictator,⁴ while L. Postumius Megellus, consul B.C. 294, celebrated a triumph although resisted by the senate and seven out of the ten tribunes.⁵ Nay, more, we read of a certain Appius Claudius, consul B.C. 143, who, having persisted in celebrating a triumph in defiance of both the senate and people, was accompanied by his daughter (or sister) Claudia, a vestal virgin, and by her interposition saved from being dragged from his chariot by a tribune.⁶ A disappointed general, however, seldom ventured to resort to such violent measures, but satisfied himself with going through the forms on the Alban Mount, a practice first introduced by C. Papirius Maso, and thus noticed in the Capitoline Fasti: C. PAPIRIUS MASO COS. DE CORSEIS PRIMUS IN MONTE ALBANO III. NONAS MART. AN. DXXXII.⁷ His example was followed by Marcellus,⁸ by Q. Minucius,⁹ and by many others; so that Livy,¹⁰ after mentioning that the senate had refused a triumph to Cicerius (prætor B.C. 173), adds, "*in monte Albano, quod jam in morem venerat, triumphavit.*"¹¹

If the senate gave their consent, they at the same time voted a sum of money towards defraying the necessary expenses,¹² and one of the tribunes "*ex auctoritate senatus*" applied for a plebiscitum to permit the emperor to retain his imperium on the day when he entered the city.¹³ This last form could not be dispensed with either in an ovation or a triumph, because the imperium conferred by the comitia curiata did not include the city itself; and when a general had once gone forth "*paludatus*," his military power ceased as soon as he re-entered the gates, unless the general law had been previously suspended by a special enactment; and in this manner the resolution of the senate was, as it were, ratified by the plebs. (*Vid. IMPERIUM, PALUDAMENTUM.*) For this reason, no one desiring a triumph ever entered the city until the question was decided, since by so doing he would ipso facto have forfeited all claim. We have a remarkable example of this in the case of Cicero, who, after his return from Cilicia, lingered in the vicinity of Rome day after day, and dragged about his lictors from one place to another, without entering the city, in the vain hope of a triumph.

Such were the preliminaries, and it only now remains to describe the order of the procession. This, in ancient days, was sufficiently simple. The leaders of the enemy and the other prisoners were led along in advance of the general's chariot; the military standards were carried before the troops, who followed laden with plunder; banquets were spread in front of every door, and the populace brought up the rear in a joyous band, filled with good cheer, chanting songs of victory, jeering and bantering as they went along with the pleasantries customary on

such occasions.¹ But in later times these pageants were marshalled with extraordinary pomp and splendour, and presented a most gorgeous spectacle. Minute details would necessarily be different according to circumstances, but the general arrangements were as follow. When the day appointed had arrived, the whole population poured forth from their abodes in holiday attire; some stationed themselves on the steps of the public buildings in the Forum and along the Via Sacra, while others mounted scaffolds erected for the purpose of commanding a view of the show. The temples were all thrown open, garlands of flowers decorated every shrine and image, and incense smoked on every altar.² Meanwhile the emperor called an assembly of his soldiers, delivered an oration commending their valour, and concluded by distributing rewards to the most distinguished, and a sum of money to each individual, the amount depending on the value of the spoils. He then ascended his triumphal car and advanced to the Porta Triumphalis (where this gate was a question which we cannot here discuss³), where he was met by the whole body of the senate, headed by the magistrates. The procession then defiled in the following order:

1. The senate, headed by the magistrates.⁴
2. A body of trumpeters.
3. A train of carriages and frames⁵ laden with spoils, those articles which were especially remarkable either on account of their beauty or rarity being disposed in such a manner as to be seen distinctly by the crowd.⁶ Boards were borne aloft on *fercula*, on which were painted, in large letters, the names of vanquished nations and countries. Here, too, models were exhibited, in ivory and wood,⁷ of the cities and forts captured,⁸ and pictures of the mountains, rivers, and other great natural features of the subjugated region, with appropriate inscriptions. Gold and silver in coin or bullion, arms, weapons, and horse-furniture of every description, statues, pictures, vases, and other works of art, precious stones, elaborately-wrought and richly-embroidered stuffs, and every object which could be regarded as valuable or curious.
4. A body of flute-players.
5. The white bulls or oxen destined for sacrifice, with gilded horns, decorated with *infulæ* and *serta*, attended by the slaughtering priests with their implements, and followed by the Camilli bearing in their hands *pateræ* and other holy vessels and instruments.
6. Elephants, or any other strange animals, natives of the conquered districts.
7. The arms and insignia of the leaders of the foe.
8. The leaders themselves, and such of their kindred as had been taken prisoners, followed by the whole band of inferior captives in fetters.
9. The coronæ and other tributes of respect and gratitude bestowed on the emperor by allied kings and states.
10. The lictors of the emperor in single file, their fasces wreathed with laurel.⁹
11. The emperor himself, in a circular chariot of a peculiar form,¹⁰ drawn by four horses, which were sometimes, though rarely, white.¹¹ The circular form of the chariot is seen in the following cut, copied from a marble formerly in the possession of the Duke d'Alcala at Seville,¹² and also in the next following cut, which represents the reverse of one of the coins of the Antonines. He was attired in a gold-embroidered robe (*toga picta*) and flowered tunic (*tunica palmata*); he bore in his right hand a laurel bough,¹³ and in his left a sceptre;¹⁴ his

brows were encircled with a wreath of Delphic laurel,¹ in addition to which, in ancient times, his body was painted bright red.² He was accompanied in his chariot by his children of tender years,³

and sometimes by very dear or highly-honoured friends,⁴ while behind him stood a public slave holding over his head a golden Etruscan crown ornamented with jewels.⁵ The presence of a slave in such a place, at such a time, seems to have been intended to avert "*invidia*" and the influence of the evil eye, and for the same purpose a fascinus, a little bell, and a scourge were attached to the vehicle.⁶ Tertullian tells us that the slave ever and anon whispered in the ear of the emperor the warning words "*Respice post te, hominem memento te*," and his statement is copied by Zonaras,⁷ but is not confirmed by any earlier writer. Isidorus,⁸ misunderstanding Pliny,⁹ imagines that the slave in question was a common executioner. 12. Behind the chariot, or on the horses which drew it,¹¹ rode the grown-up sons of the emperor, together with the legati, the tribuni,¹² and the equites, all on horseback. 13. The rear was brought up by the whole body of the infantry in marching order, their spears adorned with laurel,¹³ some shouting *Triumphe*,¹⁴ and singing hymns to the gods, while others proclaimed the praises of their leader, or indulged in keen sarcasms and coarse ribaldry at his expense, for the most perfect freedom of speech was granted and exercised.¹⁵

The arrangement of the procession, as given above, is taken, with some changes, from the treatise of Onuphrius Panvinus, *De Triumpho*, in the 9th volume of the *Thesaurus* of Grævius. The different particulars are all collected from the accounts transmitted to us of the most celebrated triumphs, such as that of Pompey in Appian,¹⁶ of Paulus Æmilius in Plutarch¹⁷ and in Livy,¹⁸ of Vespasian

and Titus in Josephus,¹ and of Camillus in Zonaras,² together with the remarks of Dionysius,³ Servius,⁴ and Juvenal.⁵

Just as the pomp was ascending the Capitoline Hill, some of the hostile chiefs were led aside into the adjoining prison and put to death, a custom so barbarous that we could scarcely believe that it existed in a civilized age were it not attested by the most unquestionable evidence.⁶ Pompey, indeed, refrained from perpetrating this atrocity in his third triumph,⁷ and Aurelian, on like occasion, spared Zenobia, but these are quoted as exceptions to the general rule. When it was announced that these murders had been completed,⁸ the victims were then sacrificed, an offering from the spoils was presented to Jupiter, the laurel wreath was deposited in the lap of the god,⁹ the emperor was entertained at a public feast along with his friends in the temple, and returned home in the evening preceded by torches and pipes, and escorted by a crowd of citizens.¹⁰ Plutarch¹¹ and Valerius Maximus¹² say that it was the practice to invite the consuls to this banquet, and then to send a message requesting them not to come, in order, doubtless, that the emperor might be the most distinguished person in the company.

The whole of the proceedings, generally speaking, were brought to a close in one day; but when the quantity of plunder was very great, and the troops very numerous, a longer period was required for the exhibition, and thus the triumph of Flaminius continued for three days in succession.¹³

But the glories of the emperor did not end with the show, nor even with his life. It was customary (we know not if the practice was invariable) to provide him, at the public expense, with a site for a house, such mansions being styled *triumphales domus*.¹⁴ After death, his kindred were permitted to deposit his ashes within the walls (such, at least, is the explanation given to the words of Plutarch¹⁵), and laurel-wreathed statues, standing erect in triumphal cars, displayed in the vestibulum of the family mansion, transmitted his fame to posterity.

A TRIUMPHUS NAVALIS appears to have differed in no respect from an ordinary triumph, except that it must have been upon a smaller scale, and would be characterized by the exhibition of beaks of ships and other nautical trophies. The earliest upon record was granted to C. Duillius, who laid the foundation of the supremacy of Rome by sea in the first Punic war;¹⁶ and so elated was he by his success, that during the rest of his life, whenever he returned home at night from supper, he caused flutes to sound and torches to be borne before him.¹⁷ A second naval triumph was celebrated by Lutatus Catulus for his victory off the Insulæ Ægates, B.C. 241;¹⁸ a third by Q. Fabius Laheo, B.C. 189, over the Cretans;¹⁹ and a fourth by C. Octavius over King Perseus,²⁰ without captives and without spoils.

TRIUMPHUS CASTRENSIS was a procession of the soldiers through the camp in honour of a tribunus, or some officer inferior to the general, who had performed a brilliant exploit.²¹

After the extinction of freedom, the emperor being considered as the commander-in-chief of all the armies of the state, every military achievement was understood to be performed under his auspices, and

hence, according to the forms of even the ancient constitution, he alone had a legitimate claim to a triumph. This principle was soon fully recognised and acted upon; for, although Antonius had granted triumphs to his legati,¹ and his example had been freely followed by Augustus² in the early part of his career, yet after the year B.C. 14³ he entirely discontinued the practice, and from that time forward triumphs were rarely, if ever, conceded to any except members of the imperial family. But to compensate in some degree for what was then taken away, the custom was introduced of bestowing what was termed *Triumphalia Ornamenta*, that is, permission to receive the titles bestowed upon, and to appear in public with the robes worn by the imperatores of the commonwealth when they triumphed, and to bequeath to their descendants triumphal statues. These *triumphalia ornamenta* are said to have been first bestowed upon Agrippa⁴ or upon Tiberius,⁵ and ever after were a common mark of the favour of the prince.⁶

The last triumph ever celebrated was that of Belisarius, who entered Constantinople in a quadriga, according to the fashion of the olden time, after the recovery of Africa from the Vandals. The total number of triumphs upon record down to this period, has been calculated as amounting to 350. Orosius⁷ reckons 320 from Romulus to Vespasian, and Pitscus⁸ estimates the number from Vespasian to Belisarius at 30.

TRIUMVIRI or TRESVIRI were either ordinary magistrates or officers, or else extraordinary commissioners, who were frequently appointed at Rome to execute any public office. The following is a list of the most important of both classes, arranged in alphabetical order.

TRIUMVIRI AGRO DIVIDUNDO. (*VID. TRIUMVIRI COLONIÆ DEDUCENDÆ.*)

TRIUMVIRI CAPIALES were regular magistrates, first appointed about B.C. 292.⁹ The institution of their office is said to have been proposed by L. Papirius, whom Festus¹⁰ calls tribune of the plebs, but whom Niebuhr¹¹ supposes to be L. Papirius Cursor, who was prætor in B.C. 292. They were elected by the people, the comitia being held by the prætor.¹² They succeeded to many of the functions of the quæstores paricidii.¹³ (*VID. QUÆSTOR*, p. 828.) It was their duty to inquire into all capital crimes, and to receive informations respecting such,¹⁴ and, consequently, they apprehended and committed to prison all criminals whom they detected.¹⁵ In conjunction with the ædiles, they had to preserve the public peace, to prevent all unlawful assemblies, &c.¹⁶ They enforced the payment of fines due to the state.¹⁷ They had the care of public prisons, and carried into effect the sentence of the law upon criminals.¹⁸ In these points they resembled the magistracy of the Eleven at Athens. (*VID. ELEVEN, THE.*) They had the power of inflicting summary punishment upon slaves and persons of lower rank: their court appears to have been near the Mænian column.¹⁹ Niebuhr,²⁰ who is followed by Arnold,²¹ supposes that they might inflict summary punishment on all offenders against the public peace who might be taken in the fact; but

the passage of Festus, which Niebuhr quotes, does not prove this, and it is improbable that they should have had power given them of inflicting summary punishment upon a Roman citizen, especially since we have no instances recorded of their exercising such a power.¹

TRIUMVIRI COLONIÆ DEDUCENDÆ were persons appointed to superintend the formation of a colony. They are spoken of under COLONIA, p. 280. Since they had, besides, to superintend the distribution of the land to the colonists, we find them also called *Triumviri Colonia Deducenda Agroque Dividundo*,² and sometimes simply *Triumviri Agro Dando*.³

TRIUMVIRI EPULONES. (*VID. EPULONES.*)

TRIUMVIRI EQUITUM TURMAS RECOGNOSCENDI, OR LEGENDIS EQUITUM DECURIIS, were magistrates first appointed by Augustus to revise the lists of the Equites, and to admit persons into the order. This was formerly part of the duties of the censors.⁴

TRIUMVIRI MENSARII. (*VID. MENSARII.*)

TRIUMVIRI MONETALES. (*VID. MONETA.*)

TRIUMVIRI NOCTURNI were magistrates elected annually, whose chief duty it was to prevent fires by night, and for this purpose they had to go round the city during the night (*vigilias circumare*). If they neglected their duty, they appear to have been accused before the people by the tribunes of the plebs.⁵ The time at which this office was instituted is unknown, but it must have been previously to the year B.C. 304.⁶ Augustus transferred their duties to the præfectus vigilum.⁷ (*VID. PRÆFECTUS VIGILUM.*)

TRIUMVIRI REFIICIENDIS ÆDIBUS, extraordinary officers elected in the comitia tributa in the time of the second Punic war, were appointed for the purpose of repairing and rebuilding certain temples.⁸

TRIUMVIRI REIPUBLICÆ CONSTITUENDÆ. Niebuhr⁹ supposes that magistrates under this title were appointed as early as the time of the Licinian rogations, in order to restore peace to the state after the commotions consequent upon those rogations.¹⁰ Niebuhr also thinks that these were the magistrates intended by Varro, who mentions among the extraordinary magistrates that had the right of summoning the senate, triumvirs for the regulation of the Republic, along with the decemvirs and consular tribunes.¹¹ We have not, however, any certain mention of officers or magistrates under this name till towards the close of the Republic, when the supreme power was shared between Cæsar (Octavianus), Antony, and Lepidus, who administered the affairs of the state under the title of *Triumviri Reipublicæ Constituendæ*. This office was conferred upon them in B.C. 43 for five years;¹² and on the expiration of the term in B.C. 38, was conferred upon them again in B.C. 37 for five years more.¹³ The coalition between Julius Cæsar, Pompey, and Crassus, in B.C. 60,¹⁴ is usually called the first triumvirate, and that between Octavianus, Antony, and Lepidus, the second; but it must be borne in mind, that the former never bore the title of triumviri, nor were invested with any office under that name, whereas the latter were recognised as regular magistrates under the above-mentioned title.

TRIUMVIRI SACRIS CONQUIRENDIS DONISQUE PERSIGNANDIS, extraordinary officers elected in the comitia tributa in the time of the second Punic war, seem to have had to take care that all property

given or consecrated to the gods was applied to that purpose.¹

ΤΡΙΟΥΜΦΑΙ ΣΕΝΑΤΟΥ ΛΕΓΕΝΔΙ were magistrates appointed by Augustus to admit persons into the senate. This was previously the duty of the censors.²

*ΤΡΟΧΙΛΟΣ (τροχίλος), the *Motacilla regulus*, or Golden-crested Wren. It has been supposed the same with the τράνωος of Aristotle.

ΤΡΟΧΟΣ (τροχός), a hoop. The Greek boys used to exercise themselves, like ours, with trundling a hoop. It was a bronze ring, and had sometimes bells attached to it.³ It was impelled by means of a hook with a wooden handle, called *clavis*⁴ and *ἐλατήρ*. From the Greeks this custom passed to the Romans, who consequently adopted the Greek term.⁵ The hoop was used at the GYMNASIUM;⁶ and, therefore, on one of the gems in the Stosch collection at Berlin, which is engraved in the annexed woodcut, it is accompanied by the jar of oil and the laurel branch, the signs of effort and of victory. On each side of this we have represented another gem from the same collection. Both of these exhibit naked youths trundling the hoop by means of the hook or key. These show the size of the hoop, which in the middle figure has also three small rings or bells on its circumference.⁷

In a totally different manner hoops were used in the performances of tumblers and dancers. Xenophon describes a female dancer who receives twelve hoops in succession, throwing them into the air and catching them again, her motions being regulated by another female playing on the pipe.⁸

On the use of τροχός to denote the potter's wheel, and the wheel applied in torture, see FICTILE and TORMENTUM.

*ΤΡΟΓΛΟΔΥΤΕΣ (τρογλοδύτης), a variety of the στρούθός, or *Passer*. (Vid. STROUTHUS.)

ΤΡΟΛΕ ΛΥΔΟΣ. (Vid. CIACUS, p. 256.)

ΤΡΟΠÆUM (τρόπαιον, Att. τροπαῖον), a trophy, a sign and memorial of victory, which was erected on the field of battle where the enemy had turned (τρέπω, τρόπη) to flight, and in case of a victory gained at sea, on the nearest land. The expression for raising or erecting a trophy is τροπαῖον στήσαι, or στήσασθαι, to which may be added ἀπὸ, or κατὰ τῶν πολεμίων.¹⁰

When the battle was not decisive, or each party considered it had some claims to the victory, both erected trophies.¹¹ Trophies usually consisted of the arms, shields, helmets, &c., of the enemy that were defeated; and from the descriptions of Virgil and other Roman poets, which have reference to the Greek rather than to the Roman custom, it appears that the spoils and arms of the vanquished were placed on the trunk of a tree, which was fixed on an elevation.¹² It was consecrated to some divinity, with an inscription (ἐπιγράμμα) recording the names of the victors and of the defeated party;¹³

whence trophies were regarded as inviolable, which even the enemy were not permitted to remove.¹ Sometimes, however, a people destroyed a trophy, if they considered that the enemy had erected it without sufficient cause, as the Milesians did with a trophy of the Athenians.² That rankling and hostile feelings might not be perpetuated by the continuance of a trophy, it seems to have been originally part of Greek international law that trophies should be made only of wood, and not of stone or metal, and that they should not be repaired when decayed.³ Hence we are told that the Lacedæmonians accused the Thebans before the Amphictyonic council, because the latter had erected a metal trophy.⁴ It was not, however, uncommon to erect such trophies. Plutarch⁵ mentions one raised in the time of Alcibiades, and Pausanias⁶ speaks of several which he saw in Greece.⁷

The trophies erected to commemorate naval victories were usually ornamented with the beaks or acroteria of ships (vid. ACROTERIUM, ROSTRUM), and were generally consecrated to Poseidon or Neptune. Sometimes a whole ship was placed as a trophy.⁸

The following woodcut, taken from a painting found at Pompeii,⁹ contains a very good representation of a tropæum, which Victory is engaged in erecting. The conqueror stands on the other side of the trophy, with his brows encircled with laurel.

The Macedonian kings never erected trophies, for the reason given by Pausanias,¹⁰ and hence the same writer observes that Alexander raised no trophies after his victories over Darius and in India. The Romans, too, in early times, never erected any trophies on the field of battle,¹¹ but carried home the spoils taken in battle, with which they decorated the public buildings, and also the private houses of individuals. (Vid. SPOLIA.) Subsequently, however, the Romans adopted the Greek practice of raising trophies on the field of battle: the first trophies of this kind were erected by Domitius Ahenobarbus and Fabius Maximus, B.C. 121, after their conquest of the Allobroges, when they built at the junction of the Rhone and the Isara towers of white stone, upon which trophies were placed adorned with the spoils of the enemy.¹² Pompey also raised

trophies on the Pyrenees after his victories in Spain;¹ Julius Cæsar did the same near Ziela, after his victory over Pharnaces,² and Drusus near the Elbe, to commemorate his victory over the Germans.³ Still, however, it was more common to erect some memorial of the victory at Rome than on the field of battle. The trophies raised by Marius to commemorate his victories over Jugurtha and the Cimbri and Teutoni, which were cast down by Sulla and restored by Julius Cæsar, must have been in the city.⁴ In the later times of the Republic and under the Empire, the erection of triumphal arches was the most common way of commemorating a victory, many of which remain to the present day. (*Vid. Arcus.*)

TROSSULI. (*Vid. Equites*, p. 415.)

TRUA, *dim.* TRULLA (*τρούλη*), derived from *τρῶω*, *τόρω*, &c., to perforate; a large and flat spoon or ladle pierced with holes; a trowel. The annexed woodcut represents such a ladle, adapted to stir vegetables or other matters in the pot,⁵ to act as a strainer when they were taken out of the water, or to dispel the froth from its surface.⁶ The ladle here drawn was found in the kitchen of "the house of Pansa" at Pompeii.

The *trulla vinaria*⁷ seems to have been a species of colander (*vid. Colum.*), used as a wine-strainer.⁸ Though generally applied to these domestic and culinary purposes,⁹ the trulla was found to be convenient for putting bees into a hive.¹⁰ It was also commonly used to plaster walls,¹¹ and thus gave rise to the verb *trullissare*. (*Vid. Pares*, p. 736.)

Mr. Fellows¹² explains the Eastern method of using a kind of colander in washing the hands. It is placed as a cover upon the jar (*vid. Olla*), which receives the dirty water. This may therefore be the *trulleum*, which the ancients used, together with the basin and ewer, to wash their hands.¹³

TRUTINA (*τρούτινα*), a general term including both *LIBRA*, a balance, and *statera*, a steelyard.¹⁴ Payments were originally made by weighing, not by counting. Hence a balance (*trutina*) was preserved in the Temple of Saturn at Rome.¹⁵ The balance was much more ancient than the steelyard, which, according to Isidore of Seville,¹⁶ was invented in Campania, and therefore called, by way of distinction, *Trutina Campana*. Consistently with this remark, steelyards have been found in great numbers among the ruins of Herculaneum and Pompeii. The construction of some of them is more elaborate and complicated than that of modern steelyards, and they are in some cases much ornamented. The annexed woodcut represents a remarkably beautiful *statera* which is preserved in the Museum of the Capitol at Rome. Its support is the trunk of a tree, round which a serpent is entwined. The equipose is a head of Minerva. Three other weights lie on the base of the stand, designed to be hung upon the hook when occasion required.¹⁷

Vitruvius¹⁸ explains the principle of the steelyard, and mentions the following constituent parts of it: the scale (*lancula*), depending from the head (*caput*), rear which is the point of revolution (*centrum*) and

the handle (*ansa*). On the other side of the centre from the scale is the beam (*scapus*), with the weight or equipose (*equipondium*), which is made to move along the points (*per puncta*) expressing the weights of the different objects that are put into the scale.

*TRYGON (*τρογών*), the Turtle-dove, or *Columba turtur*, L.¹

*II. A species of Skate or Ray, the Fire-flaire, or *Raja pastinaca*, L., the same as the *Trygon pastinaca*, Adanson.²

TUBA (*οὐλπιγξ*), a bronze trumpet, distinguished from the *cornu* by being straight, while the latter was curved: thus Ovid,³

"Non tuba directi non aris cornua flexi."⁴

Facciolati, in his Lexicon,⁵ is mistaken in supposing that Aulus Gellius and Macrobius,⁷ who copies him, intend to affirm that the tuba was crooked. The words of the former do not mean that both the lituus and the tuba were crooked, but that both that kind of trumpet which was called a lituus and also the staff of the augur were crooked, and that it was doubtful which of the two had lent its name to the other. (*Vid. Luvius.*)

The tuba was employed in war for signals of every description,⁸ at the games and public festivals,⁹ also at the last rites to the dead (*hinc tuba, candelæ*¹⁰), and Aulus Gellius¹¹ tells us, from Attæius Capito, that those who sounded the trumpet at funerals were termed *siticiænes*, and used an instrument of a peculiar form. The tones of the tuba are represented as of a harsh and fear-inspiring character (*fractos sonitus tubarum*;¹² *terribilem sonitum arc canoro*¹³), which Ennius¹⁴ endeavoured to imitate in the line

"At tuba terribili sonitu tarantantara dixit."

The invention of the tuba is usually ascribed by ancient writers to the Etruscans,¹⁵ and the epithet *ἡρσοσαλπικται* (i. e., robber-trumpeters¹⁶) would seem to indicate that they had made it famous by their piracies. It has been remarked that Homer never introduces the *σαλπικξ* in his narrative but in comparisons only,¹⁷ which leads us to infer that, although known in his time, it had been but recently introduced into Greece; and it is certain that, notwithstanding its eminently martial character, it

(Il., xviii., 219, xxi. 388.—Eustath. and Schol.)

was not until a late period used in the armies of the leading states. By the tragedians its Tuscan origin was fully recognised: Athena, in Æschylus, orders the deep-toned, piercing Tyrrhenian trumpet to sound; Ulysses, in Sophocles,² declares that the accents of his beloved goddess fell upon his ears like the tones of the brazen-mouthed Tyrrhenian bell (*κόδωνος*, i. e., the bell-shaped aperture of the trumpet), and similar epithets are applied by Euripides,³ and other Greek⁴ and Roman writers (*Tyrrhenus clangor*; *Tyrrhenæ clangore tubæ*). According to one account, it was first fabricated for the Tyrrhenians by Athena, who, in consequence, was worshipped by the Argives under the title of Σάλπιγξ,⁷ while at Rome the *tubilustrum*, or purification of sacred trumpets, was performed on the last day of the Quinquatrus. (*Vid. QUINQUATRUS*.) In another legend the discovery is attributed to a mythical king of the Tyrrhenians, Maleus, son of Hercules and Omphale;⁸ in a third to Pisæus the Tyrrhenian;⁹ and Silius has preserved a tradition,¹⁰ according to which the origin of this instrument is traced to Vetulonii.¹¹

There appears to have been no essential difference in form between the Greek and Roman or Tyrrhenian trumpets. Both were long, straight bronze tubes, gradually increasing in diameter, and terminating in a bell-shaped aperture. They pre-

sent precisely the same appearance on monuments of very different dates, as may be seen from the cuts annexed, the former of which is from Trajan's column, and the latter from an ancient fictile vase.¹²

The scholiast on the Iliad¹³ reckons six varieties of trumpets; the first he calls the Grecian *σάλπιγξ* which Athena discovered for the Tyrrhenians, and the sixth, termed by him *κατ' ἐξόχην*, the *τυρρηνική σάλπιγξ*, he describes as bent at the extremity (*κῶδωνα κεκλασμένον ἔχουσα*); but by this we must unquestionably understand the sacred trumpet (*ιερατική σάλπιγξ*), the *lituus* already noticed at the beginning of this article.¹⁶

TUBILUSTRÍUM. (*Vid. QUINQUATRUS*.)

TULLIANUM (*Vid. CARCER*.)

TUMBOS (*τύμβος*). (*Vid. FUNUS*, p. 457.)

TUMULTUARIÍ. (*Vid. TUMULTUS*.)

TUMULTUS was the name given to a sudden or dangerous war in Italy or Cisalpine Gaul, and the word was supposed by the ancients to be a contraction of *timor multus*¹ (*tumultus dictus, quasi timor multus*). It was, however, sometimes applied to a sudden or dangerous war elsewhere;² but this does not appear to have been a correct use of the word. Cicero⁴ says that there might be a war without a tumultus, but not a tumultus without a war; but it must be recollected that the word was also applied to any sudden alarm respecting a war; whence we find a tumultus often spoken of as of less importance than a war,⁵ because the results were of less consequence, though the fear might have been much greater than in a regular war.

In the case of a tumultus there was a cessation from all business (*justitium*), and all citizens were obliged to enlist, without regard being had to the exemptions (*vacationes*) from military service which were enjoyed at other times.⁶ As there was not time to enlist the soldiers in the regular manner, the magistrates appointed to command the army displayed two banners (*vexilla*) from the Capitol, one red, to summon the infantry, and the other green, to summon the cavalry, and said, "*Qui rempublicam salvam vult, me sequatur*." Those that assembled took the military oath together, instead of one by one, as was the usual practice, whence they were called *conjurati*, and their service *conjuratio*.⁷ Soldiers enlisted in this way were called *Tumultuarii* or *Subitarii*.⁸

TUNICA (*χιτών*, *dim. χιτωνίσκος, χιτώνιον*), an under-garment. The chiton was the only kind of *ἐνδύμα* or under-garment worn by the Greeks. Of this there were two kinds, the Dorian and Ionian. The Dorian chiton, as worn by males, was a short woollen shirt without sleeves; the Ionian was a long linen garment with sleeves. The under-garment, afterward distinguished as the Dorian, seems to have been originally worn in the whole of Greece. Thucydides⁹ speaks as if the long linen garment worn at Athens a little before his time was the most ancient kind, since he attributes the adoption of a simpler mode of dress to the Lacedæmonians, but we know with tolerable certainty that this dress was brought over to Athens by the Ionians of Asia.¹⁰ It was commonly worn at Athens during the Persian wars, but appears to have entirely gone out of fashion about the time of Pericles, from which time the Dorian chiton was the under-garment universally adopted by men through the whole of Greece.¹¹

The distinction between the Doric and Ionic chiton still continued in the dress of women. The Spartan virgins only wore this one garment, and had no upper kind of clothing, whence it is sometimes called *himation* (*vid. PALLIUM*) as well as *chiton*.¹² Euripides¹³ incorrectly calls this Doric dress *peplos*, and speaks of a Doric virgin as *μονόπτερος*. From the circumstance of their only wearing one garment, the Spartan virgins were called *γυμναί*¹⁴ (*vid. NUDUS*), and also *μονοχιτῶνες*.¹⁵ They appeared in the company of men without any farther covering, but the married women never did so without wearing an upper garment. This Doric chiton was made, as stated above, of woollen stuff; it was without sleeves, and was fastened over both shoulders.

ders by clasps or buckles (*πόρπαι*, *περόναι*), which were often of considerable size.¹ It was frequently so short as not to reach the knee,² as is shown in the figure of Diana on p. 245, who is represented as equipped for the chase. It was only joined together on one side, and on the other was left partly open or slit up (*σχιστός χίτων*³), to allow a free motion of the limbs: the two skirts (*πτέρυγες*) thus frequently flew open, whence the Spartan virgins were sometimes called *φαινομηρίδες*,⁴ and Euripides⁵ speaks of them as with

γυμνοῖσι μηροῖς καὶ πέπλοις ὑνεμένους.

Examples of this *σχιστός χίτων* are frequently seen in works of art: the following cut is taken from a bas-relief in the British Museum, which represents an Amazon with a chiton of this kind: some parts of the figure appear incomplete, as the original is mutilated.⁶

The Ionic chiton, on the contrary, was a long and loose garment, reaching to the feet (*ποδήρης*), with wide sleeves (*κόραι*), and was usually made of linen. The sleeves, however, appear usually to have covered only the upper part of the arm; for in ancient works of art we seldom find the sleeve extending farther than the elbow, and sometimes not so far. The sleeves were sometimes slit up, and fastened together with an elegant row of brooches,⁷ and it is to this kind of garment that Böttiger⁸ incorrectly gives the name of *σχιστός χίτων*. The Ionic chiton, according to Herodotus,⁹ was originally a Carian dress, and passed over to Athens from Ionia. The women at Athens originally wore the Doric chiton, but were compelled to change it for the Ionic after they had killed, with the buckles or clasps of their dresses, the single Athenian who had returned alive from the expedition against Ægina, because there were no buckles or clasps required in the Ionic dress. The Muses are generally represented with this chiton. The following woodcut, taken from a statue in the British Museum, represents the Muse Thalia wearing an Ionic chiton. The peplos has fallen off her shoulders, and is held up by the left hand. The right arm, holding a pedom, is a modern restoration.

Both kinds of dress were fastened round the middle with a girdle (*vid. Ζώνη*); and as the Ionic chiton was usually longer than the body, part of it was drawn up so that the dress might not reach farther than the feet, and the part which was so drawn up overhung or overlapped the girdle, and was called *κόλπος*.

There was a peculiar kind of dress, which seems to have been a species of double chiton, called *διπλοῖς*, *διπλοῖδιον*, and *ἡμιδιπλοῖδιον*. Some writers suppose that it was a kind of little cloak thrown over the chiton, in which case it would be an amic-

tus, and could not be regarded as a chiton; but Becker and others maintain that it was not a separate article of dress, but was merely the upper part of the cloth forming the chiton, which was larger than was required for the ordinary chiton, and was therefore thrown over the front and back. The following cuts¹ will give a clearer idea of the form of this garment than any description.

It seems impossible to determine with certainty whether the diploidion formed part of the chiton, or was a separate piece of dress. Those writers who maintain the former view think that it is quite proved by the left-hand figure in the preceding cut; but this is not conclusive evidence, since the chiton may have terminated at the waist. In the right-hand figure we see that the chiton is girdled round the middle of the body, as described above, and that the fold which overhangs (*κόλπος*) forms, with the end of the diploidion, a parallel line, which was always the case. This is also plainly seen in the woodcut to the article *UMBRACULUM*. Since the diploidion was fastened over the shoulders by means of buckles or clasps, it was called *ἐπώμις*, which Müller² supposes, from Euripides (*Hecub.*, 553) and Athenæus (xiii., p. 608, b.), to have been only the end of the garment fastened on the shoulder; but these passages do not necessarily prove this, and Pollux³ evidently understands the word as meaning a garment itself.

Besides the word *χιτών*, we also meet with the diminutives *χιτωνίσκος* and *χιτώνιον*, the former of which is generally applied to a garment worn by men, and the latter to one worn by women, though this distinction is not always preserved. A question arises whether these two words relate to a different garment from the chiton, or mean merely a smaller one. Many modern writers think that

1. (Herod. — Schol. ad Eurip., II. cc.)—2. (Clem. Alex., *Pæd.*, ii., 10, p. 258.)—3. (Pollux, *Onom.*, vii., 55.)—4. (Id., I. c.)—5. (Androm., I. c.)—6. (See also Mus. Borb., iv., t. 21.)—7. (Elian, V. H., i., 18.)—8. (Kleine Schr., iii., p. 56.)—9. (v., 87, 88.)

1. (Mus. Borbon., ii., t. 4, 6.)—2. (*Archæol. der Kunst*, § 339, 4.)—3. (vii., 49.)

the chiton was not worn immediately next the skin, but that there was worn under it a shirt (*χιτωνίσκος*) or chemise (*χιτώνιον*). In the dress of men, however, this does not appear to have been the case, since we find *χιτωνίσκος* frequently used as identical with *χιτών*, and spoken of as the only undergarment worn by individuals (*τὸ ἱμάτιον καὶ τὸν χιτωνίσκον*). It appears, on the contrary, that females were accustomed to wear a chemise (*χιτώνιον*) under their chiton, and a representation of such a one is given in p. 599.²

It was the practice among most of the Greeks to wear an himation, or outer garment, over the chiton, but frequently the chiton was worn alone. A person who wore only a chiton was called *μονοχίτων* (*οἰοχίτων*), an epithet given to the Spartan virgins, as explained above. In the same way, a person who wore only an himation, or outer garment, was called *ἀχίτων*.³ The Athenian youths, in the earlier times, wore only the chiton; and when it became the fashion, in the Peloponnesian war, to wear an outer garment over it, it was regarded as a mark of effeminacy.⁴

Before passing on to the Roman under garment, it remains to explain a few terms which are applied to the different kinds of chiton. In later times, the chiton worn by men was of two kinds, the *ἑμφυμάχος* and the *ἐτερομάχος*, the former the dress of freemen, the latter that of slaves.⁵ The *ἑμφυμάχος* appears to have signified not only a garment which had two sleeves, but also one which had openings for both arms; while the *ἐτερομάχος*, on the contrary, had only a sleeve, or, rather, an opening for the left arm, leaving the right, with the shoulder and a part of the breast, uncovered, whence it is called *ἐξωμῆς*, a representation of which is given on page 426. When the sleeves of the chiton reached down to the hands, it seems to have been properly called *χειρῶδες*,⁷ though this word seems to have been frequently used as equivalent to *ἑμφυμάχος*.⁸ (*Vid.* CHIRIOOTA.)

A *χιτών ὀρθοστάδιος* was one which was not fastened round the body with a girdle;⁹ a *χιτών στολιδωτός* seems to have had a kind of founce at the bottom.¹⁰

On the subject of the Greek chiton in general, see Muller, *Dorians*, iv., 2, § 3, 4. — *Archäologie der Kunst*, § 337, 339. — Becker, *Charikles*, ii., p. 309, &c.

The *tunica* of the Romans, like the Greek chiton, was a woollen under garment, over which the toga was worn. It was the *indumentum* or *indutus*, as opposed to the *amictus*, the general term for the toga, pallium, or any other outer garment. (*Vid.* AMICTUS.) The Romans are said to have had no other clothing originally but the toga; and when the tunic was first introduced, it was merely a short garment without sleeves, and was called *calobium*.¹¹ It was considered a mark of effeminacy for men to wear tunics with long sleeves (*manicata*) and reaching to the feet (*talares*).¹² Julius Cæsar, however, was accustomed to wear one which had sleeves, with fringes at the wrist (*ad manus fimbriata*);¹³ and in the later times of the Empire, tunics with sleeves, and reaching to the feet, became common.

The tunic was girded (*cincta*) with a belt or girdle around the waist, but was usually worn loose, without being girded, when a person was at home, or

wisened to be at his ease.¹ Hence we find the terms *cinctus*, *præcinctus*, and *succinctus* applied, like the Greek *εὐζώνος*, to an active and diligent person, and *discinctus* to one who was idle or dissolute.²

The form of the tunic, as worn by men, is represented in many woodcuts in this work. In works of art it usually terminates a little above the knee; it has short sleeves, covering only the upper part of the arm, and is girded at the waist (see cuts, p. 54, 667): the sleeves, sometimes, though less frequently, extend to the hands (cuts, p. 112, 132.)

Both sexes usually wore two tunics, an outer and an under, the latter of which was worn next the skin, and corresponds to our shirt and chemise. Varro³ says that when the Romans began to wear two tunics, they called them *subcula* and *indusium*, the former of which Böttiger⁴ supposes to be the name of the under tunic of the men, and the latter of that of the women. But it would appear from another passage of Varro⁵ referred to by Becker,⁶ as if Varro had meant to give the name of *subcula* to the under tunic, and that of *indusium* or *intusium* to the outer, though the passage is not without difficulties. It appears, however, that *subcula* was chiefly used to designate the under tunic of men.⁷ The word *intusula* was of later origin, and seems to have applied equally to the under tunic of both sexes.⁸ The *supparus* or *supparum* is said by Festus⁹ to have been a linen vest, and to have been the same as the *subcula*; but Varro,¹⁰ on the contrary, speaks of it as a kind of outer garment, and contrasts it with *subcula*, which he derives from *subtus*, while *supparus* he derives from *supra*. The passage of Lucan¹¹ in which it is mentioned does not enable us to decide whether it was an outer or under garment, but would rather lead us to suppose that it was the former. Persons sometimes wore several tunics, as a protection against cold: Augustus wore four in the winter, besides a *subcula*.¹²

As the dress of a man usually consisted of an under tunic, an outer tunic, and the toga, so that of a woman, in like manner, consisted of an under tunic (*tunica intima*), an outer tunic, and the palla. The outer tunic of the Roman matron was properly called *stola* (*vid.* STOLA), and is represented in the woodcut on page 926; but the annexed woodcut, which represents a Roman empress in the character of Concordia, or Abundantia, gives a better idea of

'ts form.¹ Over the tunic or stola the palla is thrown in many folds, but the shape of the former is still distinctly shown.

The tunics of women were larger and longer than those of men, and always had sleeves; but in ancient paintings and statues we seldom find the sleeves covering more than the upper part of the arm. An example of the contrary is seen in the *Museo Borbonico*.² Sometimes the tunics were adorned with golden ornaments called *leria*.³

Poor people, who could not afford to purchase a toga, wore the tunic alone, whence we find the common people called *Tunicati*.⁴ Persons at work laid aside the toga; thus, in the woodcut on p. 667, a man is represented ploughing in his tunic only. A person who wore only his tunic was frequently called *Nudus*.

Respecting the *clavus latus* and the *clavus angustus*, worn on the tunics of the senators and equites respectively, see *CLAVUS LATVS*, *CLAVVS ANGVSTVS*.

When a triumph was celebrated, the conqueror wore, together with an embroidered toga (*toga picta*), a flowered tunic (*tunica palmata*), also called *tunica Jovis*, because it was taken from the Temple of Jupiter Capitolinus.⁵ (*Vid. TRIUMPHVS*, p. 1017.) Tunics of this kind were sent as presents to foreign kings by the senate.⁶

**TYMPHATICA TERRA* (*Τυμφαϊκὴ γῆ*), a species of earth, which would appear, from the account of Theophrastus, to have been a kind of gypsum.⁷

**TYPHE* (*τύφη*), according to most authorities, the *Τυpha latifolia*, or Reed Mace. It is different from the *τύφη*, though often confounded with it.⁸

TYRANNUS (*τύραννος*). In the heroic age all the governments in Greece were monarchical, the king uniting in himself the functions of the priest, the judge, and military chief. These were the *παρικαὶ βασιλείαι* of Thucydides.⁹ In the first two or three centuries following the Trojan war, various causes were at work which led to the abolition, or, at least, to the limitation of the kingly power. Emigrations, extinctions of families, disasters in war, civil dissensions, may be reckoned among these causes. Hereditary monarchies became elective; the different functions of the king were distributed; he was called *ἄρχων*, *κόσμος*, or *πρῶτανις*, instead of *βασιλεὺς*, and his character was changed no less than his name. Noble and wealthy families began to be considered on a footing of equality with royalty; and thus, in process of time, sprang up oligarchies or aristocracies, which most of the governments that succeeded the ancient monarchies were in point of fact, though not as yet called by such names. These oligarchies did not possess the elements of social happiness or stability. The principal families contended with each other for the greatest share of power, and were only unanimous in disregarding the rights of those whose station was beneath their own. The people, oppressed by the privileged classes, began to regret the loss of their old paternal form of government, and were ready to assist any one who would attempt to restore it. Thus were opportunities afforded to ambitious and designing men to raise themselves by starting up as the champions of popular right. Discontented nobles were soon found to prosecute schemes of this sort, and they had a greater chance of success if descended from the ancient royal family. Pisistratus is an example; he was the more

acceptable to the people of Athens as being a descendant of the family of Codrus.¹ Thus in many cities arose that species of monarchy which the Greeks called *τυραννίς*, which meant only a *despotism*, or irresponsible dominion of one man, and which frequently was nothing more than a revival of the ancient government, and, though unaccompanied with any recognised military title, or the reverence attached to old name and long prescription, was hailed by the lower orders of people as a good exchange, after suffering under the domination of the oligarchy. All *tyrannies*, however, were not so acceptable to the majority; and sometimes we find the nobles concurring in the elevation of a despot to farther their own interests. Thus the Syracusan *Gomori*, who had been expelled by the populace, on receiving the protection of Gelon, sovereign of Gela and Camarina, enabled him to take possession of Syracuse, and establish his kingdom there.² Sometimes the conflicting parties in the state, by mutual consent, chose some eminent man, in whom they had confidence, to reconcile their dissensions, investing him with a sort of dictatorial power for that purpose, either for a limited period or otherwise. Such a person they called *αἰσωνήτης*. (*Vid. ΑΙΣΩΝΗΤΗΣ*.) A similar authority was conferred upon Solon when Athens was torn by the contending factions of the *Δάκριοι*, *Πεδαιῖοι*, and *Πάραλοι*, and he was requested to act as mediator between them. Solon was descended from Codrus, and some of his friends wished him to assume the sovereignty; this he refused to do, but, taking the constitutional title of archon, framed his celebrated form of polity and code of laws.³ The legislative powers conferred upon Draco, Zaleucus, and Charondas were of a similar kind, investing them with a temporary dictatorship.

The *τύραννος* must be distinguished, on the one hand, from the *αἰσωνήτης*, inasmuch as he was not elected by general consent, but commonly owed his elevation to some *coup d'état*, some violent movement or stratagem, such as the creation of a body-guard for him by the people, or the seizure of the citadel;⁴ and, on the other hand, from the ancient king, whose right depended, not on usurpation, but on inheritance and traditional acknowledgment. The power of a king might be more absolute than that of a *tyrant*; as Phidon of Argos is said to have made the royal prerogative greater than it was under his predecessors; yet he was still regarded as a king, for the difference between the two names depended on title and origin, and not on the manner in which the power was exercised.⁵ The name of *tyrant* was originally so far from denoting a person who abused his power, or treated his subjects with cruelty, that Pisistratus is praised by Thucydides⁶ for the moderation of his government; and Herodotus says he governed *οὔτε τιμὰς τὰς εἰσίας συνταρᾶς, οὔτε θέσμια μεταλλάξας, ἐπὶ τε τοῖσι κατεστειώσι ἐνεμε τὴν πόλιν κοσμεῖν καλῶς τε καὶ εὖ*.⁷ Therefore we find the words *βασιλεὺς* and *τύραννος* used promiscuously by the Attic tragedians *passim*,⁸ and even by prose authors. Thus Herodotus calls the Lydian Candaules *τύραννος*,⁹ the kingdom of Macedonia *τυραννίς*,¹⁰ and Periander of Corinth *βασιλεὺς*.¹¹ Afterward, when *tyrants* themselves had become odious, the name also grew to be a word of reproach, just as *rex* did among the Romans.¹²

Among the early *tyrants* of Greece, those most worthy of mention are Clisthenes of Sicyon, grand-

father of the Athenian Cuthenes, in whose family the government continued for a century after its establishment by Orthagoras about B.C. 672;¹ Cypselus of Corinth, who expelled the Bacchiadæ, B.C. 655, and his son Periander, both remarkable for their cruelty; their dynasty lasted between seventy and eighty years;² Procles of Epidaurus;³ Pantaleon of Pisa, who celebrated the thirty-fourth Olympiad, depriving the Eleans of the presidency;⁴ Theagenes of Megara, father-in-law to Cylon the Athenian;⁵ Pisistratus, whose sons were the last of the early tyrants on the Grecian continent. In Sicily, where tyranny most flourished, the principal were Phalaris of Agriguntum, who established his power in B.C. 568, concerning whose supposed epistles Bentley wrote his famous treatise; Theron of Agriguntum; Gelon, already mentioned, who, in conjunction with Theron, defeated Amilcar the Carthaginian on the same day on which the battle of Salamis was fought; and Hiero, his brother: the last three celebrated by Pindar.⁶ In Grecian Italy we may mention Anaxilaus of Rhegium, who reigned B.C. 496;⁷ Clinias of Croton, who rose after the dissolution of the Pythagorean league (as to which, see Polybius,⁸ Athenæus,⁹ Thirlwall¹⁰). The following, also, are worthy of notice: Polycrates of Samos;¹¹ Lygdamis of Naxos;¹² Histieus and Aristagoras of Miletus.¹³ Perhaps the last mentioned can hardly be classed among the Greek tyrants, as they were connected with the Persian monarchy.¹⁴

The general characteristics of a tyrant were, that it was bound by no laws, and had no recognised limitation to its authority, however it might be restrained in practice by the good disposition of the tyrant himself, or by fear, or by the spirit of the age. It was commonly most odious to the wealthy and noble, whom the tyrant looked upon with jealousy as a check upon his power, and whom he often sought to get rid of by sending them into exile or putting them to death. The advice given by Thrasylus of Miletus to Periander affords an apt illustration of this.¹⁵ The tyrant usually kept a body-guard of foreign mercenaries, by aid of whom he controlled the people at home; but he seldom ventured to make war, for fear of giving an opportunity to his subjects to revolt. The Sicilian sovereigns form an exception to this observation.¹⁶ He was averse to a large congregation of men in the town, and endeavoured to find rustic employments for the populace, but was not unwilling to indulge them with shows and amusements. A few of the better sort cultivated literature and the arts, adorned their city with handsome buildings, and even passed good laws. Thus Pisistratus commenced building the splendid temple of Jupiter Olympius, laid out the garden of the Lyceum, collected the Homeric poems, and is said to have written poetry himself. Tribute was imposed on the people to raise a revenue for the tyrant, to pay his mercenaries, and maintain his state. Pisistratus had the tithe of land, which his sons reduced to the twentieth. (*Vid. TELOS.*)

The causes which led to the decline of tyranny among the Greeks were partly the degeneracy of the tyrants themselves, corrupted by power, indolence, flattery, and bad education; for even where the father set a good example, it was seldom followed by the son; partly the cruelties and excesses of particular men, which brought them all into dis-

repute; and partly the growing spirit of inquiry among the Greek people, who began to speculate upon political theories, and soon became discontented with a form of government which had nothing in theory, and little in practice, to recommend it. Few dynasties lasted beyond the third generation. Most of the tyrannies which flourished before the Persian war are said to have been overthrown by the exertions of Sparta, jealous probably of any innovation upon the old Doric constitution, especially of any tendency to ameliorate the condition of the Perioeci, and anxious to extend her own influence over the states of Greece by means of the benefits which she conferred.¹ Upon the fall of tyranny, the various republican forms of government were established, the Doric states generally favouring oligarchy, the Ionian democracy.²

As we cannot in this article pursue any historical narrative, we will shortly refer to the revival of tyranny in some of the Grecian states after the end of the Peloponnesian war. In Thessaly, Jason of Pheræ raised himself, under the title of *Tayós*, B.C. 374, to the virtual sovereignty of his native city, and exercised a most extensive sway over most of the Thessalian states; but this power ceased with Lycophron, B.C. 353. (*Vid. TAGOS.*) In Sicily, the corruption of the Syracusans, their intestine discords, and the fear of the Carthaginian invaders, led to the appointment of Dionysius to the chief military command, with unlimited powers; by means of which he raised himself to the throne, B.C. 406, and reigned for 38 years, leaving his son to succeed him. The younger Dionysius, far inferior in every respect to his father, was expelled by Dion, afterward regained the throne, and was again expelled by Timoleon, who restored liberty to the various states of Sicily. (For their history the reader is referred to Xenophon, *Hell.*, ii., 2, § 24.—Diodor., xiv., 7, 46, 66, 72, 109; xv., 73, 74; xvi., 5, 16, 36, 68, 69, &c.—Plut., *Dion.* and *Timol.*—Wachsmuth, I., ii., 316–326.) With respect to the dynasty of the Archæactidæ in the Cimmerian Bosphorus, and some of the towns on the coast of the Euxine, see Wachsmuth, I., ii., 329. Lastly, we may notice Evagoras of Cyprus, who is panegyriized by Isocrates; Plutarch of Eretria, Callias and Tauros-thenes of Chalcis, who were partisans of Philip against the Athenians.³ The persons commonly called the thirty tyrants at Athens do not fall within the scope of the present subject. With respect to the Athenian laws against tyranny, and the general feelings of the people, see PRONOSIA.

ient painting, shows the performance of both of these acts at the same time. Winckelmann¹ supposes it to represent Livia, the wife, and Octavia, the sister of Augustus, sacrificing to Mars in gratitude for his safe return from Spain.² The censor here represented has two handles, for the purpose of carrying it from place to place, and it stands upon feet, so that the air might be admitted underneath, and pass upward through the fuel.

As the censor was destined for the worship of the gods, it was often made of gold or silver,³ and enriched with stones and gems.⁴ We find a silver censor in the official enumerations of the treasures presented to the Parthenon at Athens: its bars (*δισείσματα*) were of bronze.⁵

TURMA. (*Vid. ARMY, ROMAN*, p. 104.)

TURRIS (πύργος), a Tower. The word *τῦρρις*, from which comes the Latin *turris*, signified, according to Dionysius,⁶ any strong building surrounded by walls; and it was from the fact of the Pelasgians in Italy dwelling in such places that the same writer supposes them to have been called Tyrsenians or Tyrrhenians, that is, the inhabitants of towns or castles. *Turris*, in the old Latin language, seems to have been equivalent to *urbs*.⁷ The use of towers by the Greeks and Romans was various.

1. *Stationary Towers*.—1. Buildings of this form are frequently mentioned by ancient authors, as forming by themselves places of residence and defence. This use of towers was very common in Africa.⁸ We have examples in the tower of Hannibal, on his estate between Acholla and Thapsus,⁹ the *turris regia* of Jugurtha,¹⁰ the tower of a private citizen without the walls of Carthage, by the help of which Scipio took the city;¹¹ and in Spain, the tower in which Cn. Scipio was burned.¹² Such towers were common in the frontier provinces of the Roman Empire.¹³

2. They were erected within cities, partly to form a last retreat in case the city should be taken, and partly to overawe the inhabitants. In almost all Greek cities, which were usually built upon a hill, rock, or some natural elevation, there was a kind of tower, a castle, or a citadel, built upon the highest part of the rock or hill, to which the name of *Acropolis* was given. Thus we read of an Acropolis at Athens, Corinth, Argos, Messene, and many other places. The Capitulum at Rome answered the same purpose as the Acropolis in the Greek cities; and of the same kind were the tower of Agathocles at Utica,¹⁴ and that of Antonia at Jerusalem.¹⁵

3. The fortifications both of cities and camps were strengthened by towers, which were placed at intervals on the murus of the former and the vallum of the latter; and a similar use was made of them in the lines (*circumvallatio*) drawn round a besieged town. (*Vid. VALLUM*.) They were generally used at the gates of towns and of static camps. (*Vid. PORTA*.) The use of temporary towers on walls to repel an attack will be noticed below.

II. *Movable Towers*.—These were among the most important engines used in storming a fortified place. They were of two kinds. Some were made so that they could be taken to pieces and carried to the scene of operation: these were called folding towers (πύργοι πτύκτοι or ἐκτυγμένοι, *turres plicatiles*, or portable towers, φορητοὶ πύργοι) The other

sort were constructed on wheels, so as to be driven up to the walls; and hence they were called *turres ambulatoriæ* or *subrotatæ*. But the *turres plicatiles* were generally made with wheels, so that they were also *ambulatoriæ*.

The first invention or improvement of such towers is ascribed by Athenæus, the mechanician (quoted by Lipsius¹), to the Greeks of Sicily in the time of Dionysius I. (B.C. 405). Diodorus² mentions towers on wheels, as used by Dionysius at the siege of Motya. He had before³ mentioned towers as used at the siege of Selinus (B.C. 409), but he does not say that they were on wheels. According to others, they were invented by the engineers in the service of Philip and Alexander, the most famous of whom were Polydus, a Thessalian, who assisted Philip at the siege of Byzantium, and his pupils Chæreas and Diades.⁴ Heron⁵ ascribes their invention to Diades and Chæreas, Vitruvius⁶ to Diades alone, and Athenæus⁷ says that they were improved in the time of Philip at the siege of Byzantium. Vitruvius states that the towers of Diades were carried about by the army in separate pieces.

Appian mentions the *turres plicatiles*,⁸ and states that at the siege of Rhodes Cassius took such towers with him in his ships, and had them set up on the spot.⁹

Besides the frequent allusions in ancient writers to the movable towers (*turres mobiles*), we have particular descriptions of them by Vitruvius¹¹ and Vegetius.¹²

They were generally made of beams and planks, and covered, at least on the three sides which were exposed to the besieged, with iron, not only for protection, but also, according to Josephus, to increase their weight, and thus make them steadier. They were also covered with raw hides and quilts, moistened, and sometimes with alum, to protect them from fire. The use of alum for this purpose appears to have originated with Sulla at the siege of Athens.¹³ Their height was such as to overtop the walls, towers, and all other fortifications of the besieged place.¹⁴ Vitruvius,¹⁵ following Diades, mentions two sizes of towers. The smallest ought not, he says, to be less than 60 cubits high, 17 wide, and one fifth smaller at the top; and the greater, 120 cubits high and 23½ wide. Heron,¹⁶ who also follows Diades, agrees with Vitruvius so far, but adds an intermediate size, half way between the two, 90 cubits high. Vegetius mentions towers of 30, 40, and 50 feet square. They were divided into stories (*tabulata* or *tecta*), and hence they are called *turres contabulata*.¹⁷ Towers of the three sizes just mentioned consisted respectively of 10, 15, and 20 stories. The stories decreased in height from the bottom to the top. Diades and Chæreas, according to Heron, made the lowest story seven cubits and 12 digits, those about the middle five cubits, and the upper four cubits and one third.

The sides of the towers were pierced with windows, of which there were several to each story.

These rules were not strictly adhered to in practice. Towers were made of six stories, and even fewer.¹⁸ Those of 10 stories were very common,¹⁹ but towers of 20 stories are hardly, if ever, mentioned. Plutarch²⁰ speaks of one of 100 cubits high, used by Mithradates at the siege of Cyzicus. The use of the stories was to receive the engines of war (*tormenta*). They contained balistæ and catapults,

and slingers and archers were stationed in them and on the tops of the towers.¹ In the lowest story was a battering-ram (*vid. ARIES*), and in the middle, one or more bridges (*pontes*) made of beams and planks, and protected at the sides by hurdles. Scaling-ladders (*scales*) were also carried in the towers, and when the missiles had cleared the walls, these bridges and ladders enabled the besiegers to rush upon them.

These towers were placed upon wheels (generally six or eight), that they might be brought up to the walls. These wheels were placed, for security, inside of the tower.

The tower was built so far from the besieged place as to be out of the enemy's reach, and then pushed up to the walls by men stationed inside of and behind it.² The attempt to draw them forward by beasts of burden was sometimes made, but was easily defeated by shooting the beasts.³ They were generally brought up upon the *agger*,⁴ and it not unfrequently happened that a tower stuck fast or fell over on account of the softness of the *agger*.⁵ They were placed on the *agger* before it was completed, to protect the soldiers in working at it.⁶ When the tower was brought up to the walls without an *agger*, the ground was levelled before it by means of the *MUSCULUS*.

These towers were accounted most formidable engines of attack. They were opposed in the following ways:

1. They were set on fire, either by sallies of the besieged, or by missiles carrying burning matter, or by letting men down from the walls by ropes, close to the towers, while the besiegers slept.⁷

2. By undermining the ground over which the tower had to pass, so as to overset it.⁸

3. By pushing it off, by main force, by iron-shod beams, *asseres* or *trabes*.⁹

4. By breaking or overturning it with stones thrown from catapults when it was at a distance, or, when it came close to the wall, by striking it with an iron-shod beam hung from a mast on the wall, and thus resembling an *Aries*.

5. By increasing the height of the wall, first with masonry, and afterward with beams and planks, and also by the erection of temporary wooden towers on the walls.¹⁰ This mode of defence was answered by the besiegers in two ways. Either the *agger* on which the tower stood was raised, as by Cæsar at the siege of Avaricum,¹¹ or a smaller tower was constructed within the upper part of the tower, and, when completed, was raised by screws and ropes.¹² On these towers in general, see Lipsius.¹³

III. Cæsar¹⁴ describes a peculiar sort of tower, which was invented at the siege of Massilia, and called *turris latericia* or *laterculum*. It partook somewhat of the character both of a fixed and of a besieging tower. It was built of masonry near the walls of the town to afford the besiegers a retreat from the sudden sallies of the enemy; the builders were protected by a movable cover, and the tower was pierced with windows for shooting out missiles.

IV. Towers in every respect similar to the *turres ambulatrix* (excepting, of course, the wheels) were constructed on ships, for the attack of fortified places by sea.¹⁵

V. Small towers carrying a few armed men were placed on the back of elephants used in battle.¹⁶

VI. The words *πύργος* and *turris* are applied to an army drawn up in a deep oblong column.¹ (*Vid. ARMY, GREEK, p. 101.*)

TUTE/LA. (*Vid. TUTOR.*)

TUTE/LÆ ACTIO. (*Vid. TUTOR, p. 1030.*)

TUTOR. The difference between a tutor and tutela, and curator and curatela, is explained in the article CURATOR.

A tutor derived his name a "*tuendo*" from protecting another (*quasi tutor*). His power and office were "*tutela*," which is thus defined by Servius Sulpicius:² "*Tutela est vis ac potestas in capite libero ad tuendum eum qui propter aetatem suam (sua) sponte se defendere nequit jure civili data ac permessa.*" After the word "*suam*" it has been suggested by Rudorff that something like what follows has been omitted by the copyists: "*eamque quæ propter ætatem*," a conjecture which seems very probable. The word tutela implies, of course, the existence of an object, and hence tutela expresses both the status of the tutor and that of the person who was in tutela.

As to the classification of the different kinds (*genera*) of tutela, the jurists differed. Some made five genera, as Quintus Mucius; others three, as Servius Sulpicius; and others two, as Labeo. The most convenient division is into two genera, the tutela of IMPUBERES (*pupilli, pupillæ*), and the tutela of women.

Every paterfamilias had power to appoint by testament a tutor for his children who were in his power: if they were males, only in case they were impuberes; if they were females, also in case they were marriageable (*nubiles*), that is, above twelve years of age. Therefore, if a tutor was appointed for a male, he was released from the tutela on attaining puberty (fourteen years of age), but the female still continued in tutela, unless she was released from it by the *jus liberorum* under the *lex Julia et Papia Poppæa*. A man could only appoint a tutor for his grandchildren in case they would not, upon his death, come into the power of their father. A father could appoint a tutor for postumi, provided they would have been in his power if they had been born in his lifetime. A man could appoint a tutor for his wife in manu, and for his daughter-in-law (*nurus*) who was in the manus of his son. The usual form of appointing a tutor was this: "*Lucium Titium liberis meis tutorem do.*" A man could also give his wife in manu the power of choosing a tutor (*tutoris optio*); and the optio might be either plena or angusta. She who had the plena optio might choose (and consequently change) her tutor any number of times; she who had the angusta optio was limited in her choice to the number of times which the testator had fixed. (*Vid. TESTAMENTUM.*)

The power to appoint a tutor by will was either given or confirmed by the Twelve Tables. The earliest instance recorded of a testamentary tutor is that of Terquinius Priscus being appointed by the will of Ancus,³ which may be taken to prove this much at least, that the power of appointing a tutor by will was considered by the Romans as one of their oldest legal institutions. The nearest kinsmen were usually appointed tutores; and if a testator passed over such, it was a reflection on their character,⁴ that is, we must suppose, if the testator himself was a man in good repute. Persons named and appointed tutores by a will were tutores dativi; those who were chosen under the power given by a will were tutores optivi.⁵

1. (Liv., xxi., 11.)—2. (Cæsar, B. G., ii., 30, 31.—Q. Curt., viii., 10.)—3. (Procop., Goth., i., ap. Lips., p. 298.)—4. (Hirt., l. c.)—5. (Liv., xxi., 17.—Q. Curt., iv., 6, § 9.)—6. (Sall., Jug., 76.—Cæsar, B. G., vii., 22.)—7. (Veget., iv., 18.—Sil. Ital., xiv., 305.)—8. (Veget., iv., 20.)—9. (B. G., l. c.)—10. (Cæsar, B. G., vii., 22.—Veget., iv., 19.)—11. (B. G., l. c.)—12. (Veget., l. c.)—13. (Folior. in Oper., iii., 296, 356.)—14. (B. C., ii., 9, 9.)—15. (Amm. Marcell., xxi., 12.—Liv., xiv., 34.—Appian, Mithr., 73.—Bell. Civ., v., 106.)—16. (Liv., xxxvii., 40.)

1. (Gell., x., 9.—Cato, De Re Milit. ap. Fest., s. v. *Serre preliari*, p. 344, Müller.—Eustath. ad Hom. il., xii., 43.)—2. (Dig. 26, tit. 1, § 1.)—3. (Liv., i., 34.)—4. (Cic., Pro P. Sextio 52.)—5. (Gaius, i., 154.)

If the testator appointed no tutor by his will, the tutela was given by the Twelve Tables to the nearest agnati, and such tutores were called legitimi. The nearest agnati were also the heredes in case of the immediate heredes of the testator dying intestate and without issue, and the tutela was, therefore, a right which they claimed as well as a duty imposed on them. Persius¹ alludes to the claim of the tutor as heres to his pupillus. A son who was pubes was the legitimus tutor of a son who was impubes; and if there was no son who was pubes, the son who was impubes had his father's brother (*patruus*) for his tutor. The same rule applied to females also, till it was altered by a lex Claudia. If there were several agnati in the same degree, they were all tutores. If there were no agnati, the tutela belonged to the gentiles, so long as the jus gentilitium was in force.² The tutela in which a freedman was with respect to his patronus was also legitima; not that it was expressly given by the words (*lex*) of the Twelve Tables, but it flowed from the *lex* as a consequence (*per consequentiam*); for as the hereditates of intestate liberti and libertæ belonged to the patronus, it was assumed that the tutela belonged to him also, since the Twelve Tables allowed the same persons to be tutores in the case of an ingenuus, to whom they gave the hereditas in case there was no suus heres.⁴

If a free person had been mancipiated to another either by the parent or coemptionator, and such other person manumitted the free person, he became his tutor fiduciarius by analogy to the case of freedman and patron.⁵ (*Vid. EMANCIPATIO, FIDUCIA.*)

If an impubes had neither a tutor dativus nor legitimus, he had one given to him, in Rome, under the provisions of the *lex Atilia*, by the prætor urbanus and the major part of the tribuni plebis; in the provinces, in such cases, a tutor was appointed by the præsides under the provisions of the *lex Julia et Titia*. (*Vid. JULIA LEX ET TITIA.*) If a tutor was appointed by testament either sub condicione or ex die certo, a tutor might be given under these leges so long as the condition had not taken effect or the day had not arrived: and even when a tutor had been appointed absolutely (*pure*), a tutor might be given under these leges so long as there was no heres; but the power of such tutor ceased as soon as there was a tutor under the testament, that is, as soon as there was a heres to take the hereditas. If a tutor was captured by the enemy, a tutor was also given under these leges, but such tutor ceased to be tutor as soon as the original tutor returned from captivity, for he recovered his tutela jure postliminii.

Before the passing of the *lex Atilia*, tutores were given by the prætor in other cases, as, for instance, when the legis actiones were in use, the prætor appointed a tutor if there was any action between a tutor and a woman or ward, for the tutor could not give the necessary authority (*auctoritas*) to the acts of those whose tutor he was in a matter in which his own interest was concerned. Other cases in which a tutor was given are mentioned by Ulpian.⁶

Ulpian's division of tutores is into legitimi, senatus consultis constituti, moribus introducti. His legitimi tutores comprehend all those who become tutores by virtue of any *lex*, and specially by the Twelve Tables: accordingly, it comprises tutores in the case of intestacy, tutores appointed by testament, for they were confirmed by the Twelve Tables, and tutores appointed under any other *lex*, as the *Atilia*. Various senatus consulta declared in what cases a tutor might be appointed: thus the

lex Julia de maritandis ordinibus (*Papia et Poppæa*), enacted that the prætor should appoint a tutor for a woman or a virgin, who was required to marry by this law, "*ad dotem dandam, dicendam, promittendam*," if her legitimus tutor was himself a pupillus: a senatus consultum extended the provision to the provinces, and enacted that in such case the præsides should appoint a tutor, and also that, if a tutor was mutus or furiosus, another should be appointed for the purposes of the *lex*. The case above mentioned of a tutor being given in the case of an action between a tutor and his ward, is the case of a tutor moribus datus. In the imperial period, from the time of Claudius, tutores extra ordinem were appointed by the consuls also.

Only those could be tutores who were sui juris, a rule which excluded women among other persons. A person could not be named tutor in a testament unless he had the testamentifactio with the testator, a rule which excluded such persons as peregrini. The Latini Juniani were excluded by the *lex Junia*.¹ Many persons who were competent to be tutores might excuse themselves from taking the office; these grounds of excuse (*excusationes*) were, among others, age, absence, the being already tutor in other cases, the holding of particular offices, and other grounds, which are enumerated in the *Fragmenta Vaticana*.²

The power of the tutor was over the property, not the person of the pupillus; and the passage of the Twelve Tables, which gives or confirms to a testator the power of disposing of his property, uses the phrase, *Ut legasset super pecunia tutelave sua rei*, that is, the tutela of the property. It might happen that the tutores, from their nearness of blood and other causes, might have the guardianship of the impubes; but then the protection of the property of the impubes was the special office of the tutor, and the care of the infant belonged to the mother, if she survived (*custodia matrum*).³ In a case mentioned by Livy,⁴ where the mother and the tutores could not agree about the marriage of the mother's daughter, the magistratus decided in favour of the mother's power (*secundum parentis arbitrium*).

A pupillus could do no act by which he diminished his property, but any act to which he was a party was valid, so far as concerned the pupillus, if it was for his advantage. Consequently, a pupillus could contract obligationes which were for his advantage without his tutor.⁵ The tutor's office was "*negotia gerere et auctoritatem interponere*."⁶ The negotiorum gestio, in which the tutor acted alone, took place when the pupillus was an infans, or absent, or furiosus: it was his duty to preserve and improve the property, and to do all necessary acts for that purpose. When the pupillus was no longer infans, he could do various acts with the auctoritas of his tutor: the auctoritas was the consent of the tutor to the act of the pupillus, which was necessary in order to render it a legal act. Thus it was a rule of law that neither a woman nor a pupillus could alienate a res mancipi without the auctoritas of a tutor: a woman could alienate a res nec mancipi without such consent, but a pupillus could not.⁷ The incapacity of the pupillus is best shown by the following instance: if his debtor paid a debt to the pupillus, the money became the property of the pupillus, but the debtor was not released, because a pupillus could not release any duty that was due to himself without the auctoritas of his tutor, for he could alienate nothing without such auctoritas, and to release his debtor was equivalent to parting with a right. Still, if the money really became a

1. (ii., 12.)—2. (Compare Gaius, iii., 17, and i., 164.)—3. (Ulp., Frag., tit. 11.)—4. (Gaius, i., 165.)—5. (Compare Gaius, i., 166, with Ulp., Frag., tit. 11, s. 5.)—6. (Frag., tit. 11.)

1. (Gaius, i., 23.)—2. (123-247.)—3. (Ilor, Ep., i., 1, 22.)—4. (iv., 9.)—5. (Gaius, iii., 107.)—6. (Ulp., Frag., tit. 11, s. 25.)—7. (Gaius, ii., 80.)

part of the property of the pupillus, or, as it was expressed according to the phraseology of the Roman law, *si ex ea pecunia locupletior factus sit*, and he afterward sued for it, the debtor might answer his demand by an *exceptio doli mali*.¹ The subject of the incapacity of impuberes, and the consequent necessity of the auctoritas of a tutor, is farther explained in the articles *IMPUBES* and *INFANS*.

The tutela was terminated by the death or capitis diminutio maxima and media of the tutor. The case of a tutor being taken prisoner by the enemy has been stated.² A legitimus tutor became disqualified to be tutor legitimus if he sustained a capitis diminutio minima, which was the case if he allowed himself to be adopted;³ but this was not the case with a testamentary tutor. The tutela ceased by the death of the pupillus or pupilla, or by a capitis diminutio, as, for instance, the pupilla coming in manum viri. It also ceased when the pupillus or pupilla attained the age of puberty, which in the male sex was fourteen, and in the female was twelve. (*Vid. IMPUBES*.) The tutela ceased by the abdication of the testamentary tutor, that is, when he declared "*nolle se tutorem esse*." The tutor legitimus could not get rid of the tutela in this manner, but he could effect it by in jure cessio, a privilege which the testamentary tutor had not. The person to whom the tutela was thus transferred was called cessionarius tutor. If the cessionarius tutor died, or sustained a capitis diminutio, or transferred the tutela to another by the in jure cessio, the tutela reverted to the legitimus tutor. If the legitimus tutor died, or sustained a capitis diminutio, the cessionarius became extinguished. Ulpian adds,⁴ "as to what concerns agnati, there is now no cessionaria tutela, for it was only permitted to transfer by the in jure cessio the tutela of females, and the legitima tutela of females was done away with by a lex Claudia, except the tutela patronorum." The power of the legitimus tutor to transfer the tutela is explained when we consider what was his relation to the female. (*Vid. TESTAMENTUM*.)

The tutela of a tutor was terminated when he was removed from the tutela as *suspectus*, or when his excusatio was allowed to be justa; but in both of these cases a new tutor would be necessary.⁵

The tutor, as already observed, might be removed from his office if he was misconducting himself: this was effected by the *accusatio suspecti*, which is mentioned in the Twelve Tables.⁶

The Twelve Tables also gave the pupillus an action against the tutor in respect of any mismanagement of his property, and if he made out his case, he was entitled to double the amount of the injury done to his property. This appears to be the action which in the Pandect is called *rationibus distrahendis*, for the settlement of all accounts between the tutor and his pupillus. There was also the *judicium tutelæ*, which comprehended the *actio tutelæ directa* and *contraria*, and, like the *actio distrahendis rationibus*, could only be brought when the tutela was ended. The *actio tutelæ directa* was for a general account of the property managed by the tutor, and for its delivery to the pupillus, now become pubes. The tutor was answerable not only for loss through *dolus malus*, but for loss occasioned by want of proper care. This was an action *bonæ fidei*, and, consequently, in *incertum*.⁷ If the tutor was condemned in such a *judicium*, the consequence was *infamia*. (*Vid. INFAMIA*.) The tutor was entitled to all proper allowances in respect of what he had expended or done during his management of the property of the pupillus. The tutor had

the *actio tutelæ contraria* against the pupillus for all his proper costs and expenses; and he might have also a *calumniae judicium*, in case he could show that the pupillus had brought an action against him from malicious motives.

In order to secure the proper management of the property of a pupillus or of a person who was in *curatio*, the prætor required the tutor or curator to give security; but no security was required from testamentary tutores, because they had been selected by the testator; nor, generally, from *curatores* appointed by a consul, prætor, or præses, for they were appointed as being fit persons.⁸

The tutela of women who are puberes requires a separate consideration, in which it will not be possible to avoid some little repetition.

It was an old rule of Roman law that a woman could do nothing "*sine auctore*," that is, without a tutor to give to her acts a complete legal character.⁹ The reasons for this rule are given by Cicero,¹⁰ by Ulpian,¹¹ and by Gaius;¹² but Gaius considers the usual reasons as to the rule being founded on the inferiority of the sex as unsatisfactory; for women who are puberes (*perfectæ ætatis*), manage their own affairs, and, in some cases, a tutor must interpose his auctoritas (*dicis causa*), and frequently he is compelled to give his auctoritas by the prætor.¹³ Ulpian also observes: "in the case of pupilli and pupillæ, tutores both manage their affairs and give their auctoritas (*et negotia gerunt et auctoritatem interponunt*); but the tutores of women (*mulieres*, that is, women who are puberes) only give their auctoritas." There were other cases, also, in which the capacity of a mulier was greater than that of a pupillus or pupilla. The object of this rule seems to have been the same as the restriction on the testamentary power of women, for her agnati, who were a woman's legitimi tutores, were interested in preventing the alienation of her property.

A mulier might have a tutor appointed by her father's testament, or by the testament of her husband, in whose hand she was. She might also receive from her husband's will the *tutoris optio*. Women who had no testamentary tutor were in the tutela of their agnati, until this rule of law was repealed by a lex Claudia, which Gaius¹⁴ illustrates as follows: "a masculus impubes has his frater pubes or his patruus for his tutor; but women (*femine*) cannot have such a tutor." This old tutela of the Twelve Tables (*legitima tutela*) and that of manumissores (*patronorum tutela*) could be transferred by the in jure cessio, while that of pupilli could not, "being," as Gaius observes, "not onerous, for it terminated with the period of puberty." But, as already suggested, there were other reasons why the agnati could part with the tutela, which in the case of patroni are obvious. The tutela of patroni was not included within the lex Claudia. The tutela *fiduciaria* was apparently a device of the lawyers for releasing a woman from the tutela legitima,¹⁵ though it seems to have been retained after the passing of the lex Claudia, as a general mode by which a woman changed her tutor.¹⁶ To effect this, the woman made a "*coemptio fiducia causa*;" she was then remancipated by the *coemptor* to some person of her own choice: this person manumitted her *vi dicta*, and thus became her tutor *fiduciarius*. Thus the woman passed from her own familia to another, and her agnati lost all claims upon her property, and her tutor *fiduciarius* might be compelled by the prætor to give his auctoritas to her acts.¹⁷

A tutor dativus was given to women under the

lex Atia when there was no tutor, and in other cases which have been already mentioned.¹ The vestal virgins were exempt from all tutela; and both *ingenue* and *libertine* were exempted from tutela by the *jus liberorum*.² The tutela of *fœminæ* was determined by the death of the tutor or that of the woman, and by her acquiring the *jus liberorum*, either by bearing children or from the imperial favour. The abdication of the tutor and the *in jure cessio* (so long as the *in jure cessio* was in use) merely effected a change of tutor.

Mulieres differed from pupilli and pupillæ in having a capacity to manage their affairs, and only requiring in certain cases the auctoritas of a tutor. If the woman was in the legitima tutela of patroni or parentes, the tutores could not be compelled, except in certain very special cases, to give their auctoritas to acts which tended to deprive them of the woman's property, or to diminish it before it might come to their hands.³ Other tutores could be compelled to give their auctoritas. The special cases in which the auctoritas of a tutor was required were, if the woman had to sue "lege," or in a legitimum iudicium, if she was going to bind herself by a contract, if she was doing any civil act, or permitting her freedwoman to be in contubernium with the slave of another person, or alienating a *res mancipi*. Among civil acts (*civilia negotia*) was the making of a testament, the rules as to which are stated in the article *TESTAMENTUM*. Libertæ could not make a will without the consent of their patroni, for the will was an act which deprived the patron of his rights⁴ as being a legitimus tutor. Gaius mentions a rescript of Antoninus, by which those who claimed the *bonorum possessio secundum tabulas non jure factas* could maintain their right against those who claimed it as intestato. He adds, this rescript certainly applies to the wills of males, and also of *fœminæ* who had not performed the ceremony of mancipatio or nuncupatio; but he does not decide whether it applies to the testaments of women made without the auctoritas of a tutor; and by tutor he means not those who exercised the legitima tutela of parents or patroni, but tutors of the other kind (*alterius generis*), who could be compelled to give their auctoritas. It would be a fair conclusion, however, that a woman's will made without the auctoritas of such tutores ought to be valid under the rescript.

A payment made to a mulier was a release to the debtor, for a woman could part with *res nec mancipi* without the auctoritas of a tutor; if, however, she did not receive the money, but affected to release the debtor by acceptilatio, this was not a valid release to him.⁵ She could not manumit without the auctoritas of a tutor.⁷ Gaius⁸ states that no alienation of a *res mancipi* by a mulier in agnatorum tutela was valid unless it was delivered with the auctoritas of a tutor, which he expresses by saying that her *res mancipi* could not otherwise be the object of usucapion, and that this was a provision of the Twelve Tables.⁹ In other cases, if a *res mancipi* was transferred by tradition, the purchaser acquired the Quiritarian ownership by usucapion (*vid. USUCAPIO*); but in the case of a woman's *res mancipi*, the auctoritas of the tutor was required in order that usucapion might be effected. In another passage¹⁰ Gaius observes that a woman cannot alienate her *res mancipi* without the auctoritas of her tutor, which means that the formal act of mancipatio is null without his auctoritas;

and such act could not operate as a *traditio* for want of his auctoritas, as appears from the other passage. The passage of Cicero² is in accordance with Gaius; but another³ is expressed so vaguely, that, though the explanation is generally supposed to be clear, it seems exceedingly doubtful, if it can be rightly understood. The possibility of usucapion, when there was the auctoritas of the tutor, appears from Gaius; but it does not appear why Cicero should deny, generally, the possibility of usucapion of a woman's property when she was in legitima tutela. The passage, however, is perfectly intelligible on the supposition of there having been a transfer without the auctoritas of a tutor, and on the farther supposition of Cicero thinking it unnecessary to state the particular facts of a case which must have been known to Atticus.⁴

The auctoritas of a tutor was not required in the case of any obligatio by which the woman's condition was improved, but it was necessary in cases where the woman became bound.⁵ If the woman wished to promise a *dos*, the auctoritas of a tutor was necessary.⁶ By the *lex Julia*, if a woman was in the legitima tutela of a pupillus, she might apply to the prætor urbanus for a tutor who should give the necessary auctoritas in the case of a *dos constituenda*.⁷ As a woman could alienate *res nec mancipi* without the consent of a tutor, she could contract an obligation by lending money, for by delivery the money became the property of the receiver. A *senatus consultum* allowed a woman to apply for a tutor in the absence of her tutor, unless the tutor was a patronus; if he was a patronus, the woman could only apply for a tutor in order to have his auctoritas for taking possession of an hereditas (*ad hereditatem adeundam*) or contracting a marriage.

The tutela of a woman was terminated by the death of the tutor or that of the woman; by a marriage, by which she came in *manum viri*; by the privilege of children (*jus liberorum*); by abdication, and also by the *in jure cessio*, so long as the agnatorum tutela was in use: but in these last two cases there was only a change of tutor.

A woman had no right of action against her tutor in respect of his tutela, for he had not the *negotiorum gestio*, but only interposed his auctoritas.⁸

(The most recent and the most complete work on the Roman tutela is said to be by Rudorff, the substance of which appears to be given by Rein, *Das Röm. Privatrecht*, p. 239, &c., Dig. 26 and 27).

TUTULUS was the name given to a pile of hair on a woman's head. Great pains were taken by the Roman ladies to have this part of the hair dressed in the prevailing fashion, whence we read in an inscription of an *ornatrix a tutulo*.⁹ Sometimes the hair was piled up to an enormous height.¹⁰ The tutulus seems to have resembled very much the Greek *κόρυμβος*, of which a representation is given in the woodcut on p. 314.

The flaminica always wore a tutulus, which was formed by having the hair plaited up with a purple band in a conical form.¹¹

TWELVE TABLES. In the year B.C. 462, the tribune C. Terentillus Arsa proposed a rogation that five men should be appointed for the purpose of preparing a set of laws to limit the imperium of the consuls.¹² The patricians opposed the measure, but it was brought forward by the tribunes in the following year with some modifications: the new

rogation proposed, that ten men should be appointed (*legum latores*) from the plebs and the patricii, who were to make laws for the advantage of both ranks, and for the "equalizing of liberty," a phrase the import of which can only be understood by reference to the disputes between the two ranks.¹ According to Dionysius,² in the year B.C. 454 the senate assented to a plebiscitum, pursuant to which commissioners were to be sent to Athens and the Greek cities generally, in order to make themselves acquainted with their laws. Three commissioners were appointed for the purpose. On the return of the commissioners, B.C. 452, it was agreed that persons should be appointed to draw up the code of laws (*decemviri legibus scribundis*), but they were to be chosen only from the patricians, with a provision that the rights of the plebeians should be respected by the decemviri in drawing up the laws.³ In the following year (B.C. 451) the decemviri were appointed in the comitia centuriata, and during the time of their office no other magistratus were chosen. The body consisted of ten patricians, including the three commissioners who had been sent abroad; Appius Claudius, consul designatus, was at the head of the body. The Ten took the administration of affairs in turn, and the insignia of office were only used by him who for the time being directed the administration.⁴ Ten tables of laws were prepared during the year, and after being approved by the senate, were confirmed by the comitia centuriata. As it was considered that some farther laws were wanted, decemviri were again elected B.C. 450, consisting of Appius Claudius and his friends; but the second body of decemviri comprised three plebeians, according to Dionysius,⁵ but Livy⁶ speaks only of patricians. Two more tables were added by these decemviri, which Cicero⁷ calls "*Dua tabula iniquarum legum*." The provision which allowed no connubium between the patres and the plebs is referred to the eleventh table.⁸ The whole Twelve Tables were first published in the consulship of L. Valerius and M. Horatius, after the downfall of the decemviri, B.C. 449.⁹ This, the first attempt to make a code, remained also the only attempt for near one thousand years, until the legislation of Justinian. The Twelve Tables are mentioned by the Roman writers under a great variety of names: *Leges Decemvirales*, *Lex Decemviralis*, *Leges XII.*, *Lex XII. Tabularum* or *Duodecim*, and sometimes they are referred to under the names of *leges* and *lex* simply, as laws pre-eminently The Law.

The laws were cut on bronze tablets and put up in a public place.¹⁰ Pomponius¹¹ states that the first Ten Tables were on ivory (*tabula ebone*): a note of Zimmern¹² contains references to various authorities which treat of this disputed matter. After the burning of the city by the Gauls, it was necessary to reconstruct the tables.¹³ It is not said that there had been two or more original copies, though, if the custom of placing laws in the *ædium* was then in use, there may have been two copies at least. But whether there was only one copy, or whether that was found after the conflagration, the twelve were in some way restored, and the Romans of the age of Cicero had never any doubt as to the genuineness of the collection which then existed.

The legislation of the Twelve Tables has been a fruitful matter of speculation and inquiry to modern historians and jurists, who have often handled the

subject in the most uncritical manner, and with utter disregard to the evidence. As to the mission to the Greek cities, the fact rests on as much and as good evidence as most other facts of the same age, and there is nothing in it improbable, though we do not know what the commissioners brought back with them. It is farther said that Hermodorus, an Ephesian exile, aided the decemviri in drawing up the Twelve Tables, though his assistance would probably be confined to the interpretation of Greek laws, as it has been suggested.¹ This tradition was confirmed by the fact of a statue having been erected in the comitum at Rome in memory of Hermodorus; but it did not exist in the time of Pliny.²

The Twelve Tables contained matters relating both to the *jus publicum* and the *jus privatum* (*fontes publici privatiq. juris*).³ The *jus publicum* underwent great changes in the course of years, but the *jus privatum* of the Twelve Tables continued to be the fundamental law of the Roman state. Cicero speaks of learning the laws of the Twelve Tables (*ut carmen necessarium*) when a boy;⁴ but he adds that this practice had fallen into disuse when he wrote, the *Edict* having then become of more importance. But this does not mean that the fundamental principles of the Twelve Tables were ever formally repealed, but that the *jus pratorum* grew up by the side of them, and mitigated their rigour. There is, indeed, an instance in which positive legislation interfered with them, by the abolition of the *legis actionis*; but the Twelve Tables themselves were never repealed. The Roman writers speak in high terms of the precision of the enactments contained in the Twelve Tables, and of the propriety of the language in which they were expressed.⁵ That many of their provisions should have become obscure in the course of time, owing to the change which language undergoes, is nothing surprising; nor can we wonder if the strictness of the old law should often have seemed unnecessarily harsh in a later age.⁶ So far as we can form a judgment by the few fragments which remain, the enactments were expressed with great brevity and archaic simplicity.

Sextus Ælius Pætus Catus, in his *Tripartita*, commented on the Twelve Tables, and the work existed in the time of Pomponius. (*Vid. Jus ÆLIANUM.*) Antistius Labeo also wrote a comment on the Tables, which is mentioned several times by Gellius.⁷ Gaius also wrote a comment on the Tables in six books (*ad legem xii. tabularum*), twenty fragments of which are contained in the Digest, and collected by Hommelius in his *Palingenesia*.⁸ There were also other commentaries or explanations of the laws of the Twelve Tables.⁹

The notion which has sometimes been entertained, that the Twelve Tables contained a body of rules of law entirely new, is not supported by any evidence, and is inconsistent with all that we know of them and of Roman institutions. It is more reasonable to suppose that they fixed in a written form a large body of customary law, which would be an obvious benefit to the plebeians, inasmuch as the patricians were the expounders of the law. One of the last two tables contained a provision which allowed no connubium between patricians and plebeians; but it is uncertain whether this was a new rule of law or a confirmation of an old rule. The latter seems the more probable supposition; but in either case it is clear that it was not one of the ob-

1. (Strab., p. 642, Casaub.—Pompon., De Orig. Juris, Dig. i., tit. 2, s. 2, § 4.)—2. (H. N., xxiv., 5.)—3. (Liv., iii., 34.)—4. (De Leg., ii., 4, 23.)—5. (Cic., De Rep., iv., 8.—Diodor., xii., 76.)—6. (Gell., xvi., 10.)—7. (ii., 12; vii., 15.)—8. (ii., 117.)—9. (Cic., De Leg., ii., 23, 25.)

jects of this legislation to put the two classes on the same footing. Modern writers often speak inaccurately of the decemviral legislation, and of the decemviri as enacting laws, as if the decemviri had exercised sovereign power; but they did not even affect to legislate absolutely, for the Ten Tables were confirmed by the comitia centuriata, or the sovereign people, or, as Niebuhr expresses it, "when the decemviri had satisfied every objection they deemed reasonable, and their work was approved by the senate, they brought it before the centuries, whose assent was ratified by the curies, under the presidency of the colleges of priests and the sanction of happy auspices."¹ The two new tables were confirmed in the same way, as we may safely conclude from the circumstances of the case.² It makes no difference that the sovereign people did not vote on the several laws included in the Tables: such a mode of legislation would have been impracticable, and, as Niebuhr observes, was not conformable to the usage of ancient commonwealths. How far the decemviri really were able, by intrigue or otherwise, to carry such particular measures as they wished to insert in the Tables, is a different question: but in form their so-called legislation was confirmed, as a whole, by the sovereign, that is, the Roman people, and consequently the decemviri are improperly called legislators: they might be called code-makers.

It is consistent with the assumption that the Twelve Tables had mainly for their object the embodying of the customary law in writing, to admit that many provisions were also introduced from the laws of other states. Indeed, where the Roman law was imperfect, the readiest mode of supplying the defects would be by adopting the rules of law that had been approved by experience among other people. Thus Gaius, in his Commentary on the Twelve Tables, where he is speaking of Collegia,³ says that the members of collegia may make what terms they please among themselves, if they thereby violate no publica lex; and he adds, this lex seems to be taken from one of Solon's, which he quotes. And in another passage, when he is speaking of the actio finium regundorum,⁴ he refers to a law of Solon as the source of certain rules as to boundaries. It is a possible case that the Romans had no written law before the enactment of the Twelve Tables, except a few leges, and, if this is so, the prudence of applying to those states which had bodies of written law, if it were only as samples and patterns of the form of legislation, is obvious.

The fragments of the Twelve Tables have often been collected, but the most complete essay on their history, and on the critical labours of scholars and jurists, is by Dirksen, *Uebersicht der bisherigen Versuche zur Kritik und Herstellung des Textes der Zwölf-Tafel-Fragmente*, Leipzig, 1824. Zimmermann's *Geschichte*, &c., contains references to all the authorities on this subject.

TYMPANUM (*τύμπανον*), a small drum carried in the hand. Of these, some resembled in all respects a modern tambourine with bells. Others presented a flat, circular disk on the upper surface, and swelled out beneath like a kettle-drum, a shape which appears to be indicated by Pliny when he describes a particular class of pearls in the following terms: "*Quibus una tantum est facies, et ab ea rotunditas, aversis planities, ob id tympania vocantur.*"⁵ Both forms are represented in the cuts below. That upon the left is from a painting found at Pompeii,⁶ that on the right from a fictile vase;⁷ and here the

convexity on the under side is distinctly seen. Tympana were covered with the hides of oxen⁸ or of asses,⁹ were beaten³ with a stick⁴ or with the hand⁵ (see cuts), and were much employed in all wild, enthusiastic religious rites,⁶ especially the orgies of Bacchus and of Cybele,⁷ and hence Plautus characterizes an effeminate coxcomb as "*Machum malacum, cincinnatum, umbraticolam, tympanotribum.*" According to Justin,⁹ they were used by the Parthians in war to give the signal for the onset.

2. A solid wheel without spokes for heavy wagons,¹⁰ such as is shown in the cut on page 781. These are to this day common in the rude carts of southern Italy and Greece, and Mr. Fellows,¹¹ from whose work the figure below is copied, found them attached to the farm vehicles of Mysia. "The wheels are of solid blocks of wood or thick planks, generally three, held together by an iron hoop or tire; a loud creaking noise is made by the friction of the galled axle," a satisfactory commentary on the "*stridentia plaustra*" of Virgil.¹²

3. Hence wheels of various kinds, a sort of crane worked by a wheel for raising weights,¹³ a wheel for drawing water,¹⁴ a solidtoothed wheel forming part of the machinery of a mill,¹⁵ and the like.

4. An ancient name for round plates or chargers, such as were afterward called *lances* and *statera*.¹⁶

5. An architectural term, signifying the flat surface or space within a pediment, and also the square panel of a door.¹⁷

6. A wooden cudgel for beating malefactors, and also a beating-post to which they were tied when flogged; hence the Greek verbs *τυμπανίζειν* and *ἀποτυμπανίζειν* are formed.¹⁸

to be scourged, or to be fined, should possess the right of appeal (*provocatio*) to the people.¹ Niebuhr² has pointed out that the patricians possessed previously the right of appeal from the sentence of a magistrate to their own council the curies, and that, therefore, this law of Valerius only related to the plebeians, to whom it gave the right of appeal to the plebeian tribes, and not to the centuries. This seems to be proved by a passage of Dionysius,³ and also by the fact that the laws proposed by the Valerian family respecting the right of appeal are spoken of as one of the chief safeguards of the liberty of the plebs.⁴ The right of appeal did not extend beyond a mile from the city,⁵ where the unlimited imperium began, to which the patricians were just as much subject as the plebeians.

VALERIE ET HORATIE LEGES were three laws proposed by the consuls L. Valerius and M. Horatius, B.C. 449, in the year after the decemvirate. 1. The first law is said to have made a plebiscitum binding on the whole people, respecting the meaning of which expression see *PLEBISCITUM*. 2. The second law enacted that whoever should procure the election of a magistrate without appeal should be outlawed, and might be killed by any one with impunity.⁶ 3. The third law renewed the penalty threatened against any one who should harm the tribunes and the aediles, to whom were now added the judges and decemvirs (*"Ut qui tribunis plebis, aedilibus, iudicibus, decemviris nocisset, ejus caput Jovi sacrum esset, familia ad eadem Cereis liberi liberique venum iret"*).⁷ There has been considerable dispute as to who are meant by the "judices" and "decemviri" in this passage. Arnold⁸ supposes that they refer to two new offices, which were to be shared equally between the two orders, the "judices" being two supreme magistrates, invested with the highest judicial power, and discharging also those duties afterward performed by the censors, and the "decemviri" being ten tribunes of the soldiers, to whom the military power of the consuls was transferred. Niebuhr⁹ supposes the centumviri to be meant by the judices, and that the decemviri were the supreme magistrates, who were again to take the place of the consuls, as soon as it should be settled what share the commonalty ought to have in the curule dignities; only he imagines that it was the plebeian decemvirs alone that are meant in this passage.

VALERIA LEX, proposed by the consul M. Valerius, B.C. 300, re-enacted for the third time the celebrated law of his family respecting appeal (*provocatio*) from the decision of a magistrate. The law specified no fixed penalty for its violation, leaving the judges to determine what the punishment should be.¹⁰ We do not know why this law was re-enacted at this particular time.

VALLUM, a term applied either to the whole or a portion of the fortifications of a Roman camp. It is derived from *vallus* (a stake), and properly means the palisade which ran along the outer edge of the agger, but it very frequently includes the agger also. The *vallum*, in the latter sense, together with the *fossa* or ditch which surrounded the camp outside of the *vallum*, formed a complete fortification. (*Vid. AGGER*.)

The *valli* (*χάρακες*), of which the *vallum*, in the former and more limited sense, was composed, are described by Polybius¹¹ and Livy,¹² who make a comparison between the *vallum* of the Greeks and that of the Romans, very much to the advantage of the

latter. Both used for *valli* young trees, or arms of larger trees, with the side branches on them; but the *valli* of the Greeks were much larger, and had more branches than those of the Romans, which had either two or three, or, at the most, four branches, and these generally on the same side. The Greeks placed their *valli* in the agger at considerable intervals, the spaces between them being filled up by the branches; the Romans fixed theirs close together, and made the branches interlace, and sharpened their points carefully. Hence the Greek *vallus* could easily be taken hold of by its large branches and pulled from its place, and when it was removed a large opening was left in the *vallum*. The Roman *vallus*, on the contrary, presented no convenient handle, required very great force to pull it down, and, even if removed, left a very small opening. The Greek *valli* were cut on the spot; the Romans prepared theirs beforehand, and each soldier carried three or four of them when on a march.¹ They were made of any strong wood, but oak was preferred.

The word *vallus* is sometimes used as equivalent to *vallum*.²

A fortification like the Roman *vallum* was used by the Greeks at a very early period.³

Varro's etymology of the word is not worth much.⁴

In the operations of a siege, when the place could not be taken by storm, and it became necessary to establish a blockade, this was done by drawing defences similar to those of a camp round the town, which was then said to be *circumvallatum*. Such a circumvallation, besides cutting off all communication between the town and the surrounding country, formed a defence against the sallies of the besieged. There was often a double line of fortifications, the inner against the town, and the outer against a force that might attempt to raise the siege. In this case the army was encamped between the two lines of works.

This kind of circumvallation, which the Greeks called *ἀποτειχισμός* and *περιτειχισμός*, was employed by the Peloponnesians in the siege of Plataeae.⁵ Their lines consisted of two walls (apparently of turf) at the distance of 16 feet, which surrounded the city in the form of a circle. Between the walls were the huts of the besiegers. The walls had battlements (*ἐπάλξεις*), and at every tenth battlement was a tower, filling up by its depth the whole space between the walls. There was a passage for the besiegers through the middle of each tower. On the outside of each wall was a ditch (*ρύσπος*). This description would almost exactly answer for the Roman mode of circumvallation, of which some of the best examples are that of Carthage by Scipio,⁶ that of Numantia by Scipio,⁷ and that of Alesia by Cæsar.⁸ The towers in such lines were similar to those used in attacking fortified places, but not so high, and, of course, not movable.⁹ (*Vid. TURRIS*.)

VALLUS. (*Vid. VALLUM*.)

VALVE. (*Vid. JANUA*, p. 525.)

VANNUS (*λίκμος, λικνόν*), a winnowing-van, i. e., a broad basket, into which the corn mixed with chaff (*acus, ἀχυρά*) was received after thrashing, and was then thrown in the direction of the wind.¹⁰ It thus performed with greater effect and convenience the office of the *pala lignea*, or winnowing-shovel. (*Vid. PALA*, p. 715.) Virgil¹¹ dignifies this simple implement by calling it *mystica vannus lac-*

chi. The rites of Bacchus, as well as those of Ceres, having a continual reference to the occupations of rural life, the vannus was borne in the processions celebrated in honour of both these divinities. Hence *Δικνίτης*¹ was one of the epithets of Bacchus. In an ANTEPIKA in the British Museum (see the annexed woodcut) the infant Bacchus is carried in a vannus by two dancing bacchantes clothed in skins (*vid. PELLIS*), the one male and carrying a *THYRSUS*, the other female and carrying a torch. *VID. FAX*.) Other divinities were sometimes con-

ceived to have been cradled in the same manner.² The vannus was also used in the processions to carry the instruments of sacrifice and the first-fruits or other offerings, those who bore them being called the *δικνοφόροι*.³

VARIA LEX. (*VID. MAJESTAS*.)

VAS. (*VID. PRÆS.*)

VATINIA LEX. (*VID. LEX*, p. 536.)

UDO, a sock of goat's-hair or felt.⁴ Hesiod⁵ advises countrymen to wear brogues (*perones*, *καρβαρίναι*) made of ox-hide, with socks of the above description within them. Socks of a finer felt were sometimes worn by the Athenians.⁶

VECTIGALIA is the general term for all the regular revenues of the Roman state.⁷ The word is derived from *veho*, and is generally believed to have originally signified the duties paid upon things imported and exported (*quæ vehébantur*). If this were true, it would necessarily imply that these duties were either the most ancient or the most important branch of the Roman revenues, and that, for either of these reasons, the name was subsequently used to designate all the regular revenues in general. But neither point is borne out by the history of Rome, and it seems more probable that vectigal means anything which is brought (*vehitur*) into the public treasury, like the Greek *φόρος*. The earliest regular income of the state was, in all probability, the rent paid for the use of the public land and pastures. This revenue was called *pascua*, a name which was used as late as the time of Pliny,⁸ in the tables or registers of the censors, for all the revenues of the state in general.

The senate was the supreme authority in all matters of finance; but, as the state itself did not occupy itself with collecting the taxes, duties, and tributes, the censors were intrusted with the actual business. These officers, who in this respect may not unjustly be compared to modern ministers of finance, used to let the various branches of the revenue to the publicani for a fixed sum and for a certain number of years. (*VID. CENSOR, PUBLICAN.*)

As most of the branches of the public revenues

of Rome are treated of in separate articles, it is only necessary to give a list of them here, and to explain those which have not been treated of separately.

1. The tithes paid to the state by those who occupied the ager publicus. (*VID. DECUMÆ, AGRARIÆ LEGES.*)

2. The sums paid by those who kept their cattle on the public pastures. (*VID. SCRIPTURA.*)

3. The harbour duties raised upon imported and exported commodities. (*VID. PORTORUM.*)

4. The revenue derived from the salt-works (*salinæ*). Ancus Marcius is said to have first established salt-works at Ostia;¹ and as they were public property, they were probably let out to farm. The publicani appear, however, at times to have sold this most necessary of all commodities at a very high price, whence, during the war with Porsenna, the Republic itself undertook the direct management of the *salinæ* of Ostia, in order that the people might obtain salt at a more moderate price.² Subsequently the *salinæ* were again farmed by the publicani, but the censors M. Livius and C. Claudius fixed the price at which those who took the lease of them were obliged to sell the salt to the people. At Rome the modius was, according to this regulation, sold for a sextans, while in other parts of Italy the price was higher and varied.³ The salt-works in Italy and in the provinces were very numerous; in conquered countries, however, they were sometimes left in the possession of their former owners (per sons or towns), who had to pay to Rome only a fixed rent. Others, again, were worked, and the produce sold in the name of the state, or were, like those of Ostia, farmed by the publicani.⁴

5. The revenues derived from the mines (*metalla*). This branch of the public revenue cannot have been very productive until the Romans had become masters of foreign countries. Until that time the mines of Italy appear to have been worked, but this was forbidden by the senate after the conquest of foreign lands.⁵ The mines of conquered countries were treated like the *salinæ*, that is, they were partly left to individuals or towns, on condition of a certain rent being paid,⁶ or they were worked for the direct account of the state, or were farmed by the publicani. In the last case, however, it appears always to have been fixed by the *lex censoria* how many labourers or slaves the publicani should be allowed to employ in a particular mine, as otherwise they would have been able to derive the most enormous profits.⁷ Among the most productive mines belonging to the Republic, we may mention the rich gold-mines near Aquileia,⁸ the gold-mines of Ictimuli, near Vercelli, in which 25,000 men were constantly employed,⁹ and, lastly, the silver-mines in Spain, in the neighbourhood of Carthago Nova, which yielded every day 25,000 drachmas to the Roman ærarium.¹⁰ Macedonia, Thrace, Illyricum, Africa, Sardinia, and other places, also contained very productive mines, from which Rome derived considerable income.

6. The hundredth part of the value of all things which were sold (*centesima rerum venalium*). This tax was not instituted at Rome until the time of the civil wars; the persons who collected it were called *coactores*.¹¹ Tiberius reduced this tax to a two hundredth (*ducentesima*), and Caligula abolished it for Italy altogether, whence upon several coins of this emperor we read R. C. C., that is, *Remissa*

1. (Liv., i., 33. — Plin., H. N., xxxi., 41.) — 2. (Gronovius ad Liv., ii., 9.) — 3. (Liv., xxix., 37.) — 4. (Burmman, Vectig. Pop. Rom., p. 90, &c.) — 5. (Plin., H. N., xxxiii., 4; xxxvii., 13.) — 6. (Id. ib., xxxiv., 1.) — 7. (Id. ib., xxxiii., 4.) — 8. (Polyb., xxxiv., 10.) — 9. (Plin., H. N., xxxiii., 4 — Strab., v., p. 151.) — 10. (Polyb., xxxiv., 9 — Compare Liv., xxxix., 21.) — 11. (Cic., Ep. ad Brut., i., 18; Pro Rab. Post., 11.)

1. (Hesych., s. v.) — 2. (Callim., Jov., 48. — Schol. in loc. — Hom., Hymn. in Merc., 254.) — 3. (Callim. in Cer., 127.) — 4. (Mart., xiv., 140.) — 5. (Op. et Dies, 542.) — 6. (Cratrus, p. 19, ed. Runkel.) — 7. (Cic., Pro Leg. Manii., 6.) — 8. (H. N., xviii., 3.)

Ducentesima.¹ According to Dion Cassius,² Tiberius restored the centesima, which was afterward abolished by Caligula.³ Respecting the tax raised upon the sale of slaves, see *QUINGAGESIMA*.

7. The *vicesima hereditatium et manumissionum*. (*Vid. VICESIMA*.)

8. The tribute imposed upon foreign countries was by far the most important branch of the public revenue during the time of Rome's greatness. It was sometimes raised at once, sometimes paid by instalments, and sometimes changed into a poll-tax, which was in many cases regulated according to the census.⁴ In regard to Cilicia and Syria, we know that this tax amounted to one per cent. of a person's census, to which a tax upon houses and slaves was added.⁵ In some cases the tribute was not paid according to the census, but consisted in a land-tax.⁶

9. A tax upon bachelors. (*Vid. UXORIUM*.)

10. A door-tax. (*Vid. OSTIARIUM*.)

11. The *octavæ*. In the time of Cæsar, all liberti living in Italy, and possessing property of 200 sestertertia and above it, had to pay a tax consisting of the eighth part of their property.⁷

It would be interesting to ascertain the amount of income which Rome at various periods derived from these and other sources, but our want of information renders it impossible. We have only the general statement that, previously to the time of Pompey, the annual revenue amounted to fifty millions of drachmas, and that it was increased by him to eighty-five millions.⁸ Respecting the sums contained at different times in the *ærarium* at Rome, see Pliny.⁹

VEHES (*ὄχημα*), a load of hay, manure, or anything which was usually conveyed in a cart. (*Vid. PLAUSTRUM*.) Pliny speaks of "a large load of hay" (*vehem feni large onustam*¹⁰), which shows that this term did not always denote a fixed quantity. With the Romans, however, as with us, the *load* was likewise used as a measure, a load of manure being equal to eighty modii, which was about twenty bushels.¹¹ The trunk of a tree, when squared, was also reckoned a load, the length varying according to the kind of timber, viz., 20 feet of oak, 25 of fir, &c.¹² A load was also called *CARPENTUM*.

VELARIUM. (*Vid. VELUM*.)

VELATI was a name given to the *Accensi* in the Roman army, who were only supernumerary soldiers ready to supply any vacancies in the legion. (*Vid. ACCENSI*.) They were called *Velati*, because they were only clothed (*velati*) with the *saga*, and were not regularly armed.¹³

VELITES. (*Vid. ARMY, ROMAN*, p. 104.)

VELLEIANUM SENATUS CONSULTUM.

(*Vid. INTERCESSIO*, p. 542.)

VELUM (*ἀνλία*,¹⁴ *παρεπέτασμα*,¹⁵ *καταπέτασμα*¹⁶), a curtain, (*ιστίον*) a sail. In private houses curtains were either hung as coverings over doors,¹⁷ or they served in the interior of the house as substitutes for doors.¹⁸ (*Vid. HOUSE*, p. 515; *JANUA*, p. 526.) In the palace of the Roman emperor, a slave, called *velarius*, was stationed at each of the principal doors to raise the curtain when any one passed

through.¹ Window-curtains were used in addition to window-shutters.² Curtains sometimes formed partitions in the rooms,³ and, when drawn aside, they were kept in place by the use of large *brooches*. (*Vid. FIBULA*, p. 439.) Iron curtain-rods have been found extending from pillar to pillar in a building at Herculaneum.⁴

In temples curtains served more especially to veil the statue of the divinity. They were drawn aside occasionally, so as to discover the object of worship to the devout.⁵ (*Vid. PASTOPHORUS*.) Antiochus presented to the Temple of Jupiter at Olympia a woollen curtain of Assyrian manufacture, dyed with the Tyrian purple, and interwoven with figures. When the statue was displayed, this curtain lay upon the ground, and it was afterward drawn up by means of cords; whereas, in the Temple of Diana at Ephesus, the corresponding curtain or veil was attached to the ceiling, and was let down in order to conceal the statue.⁶ The annexed woodcut is from a bas-relief representing two females engaged

in supplication and sacrifice before the statue of a goddess. The altar is adorned for the occasion (*vid. SERTUM*), and the curtain is drawn aside and supported by a *terminus*.⁷

In the theatres there were hanging curtains to decorate the scene.⁸ The *SIPARIUM* was extended in a wooden frame. The *velarium* was an awning stretched over the whole of the *cavea* to protect the spectators from the sun and rain.⁹ These awnings were in general either woollen or linen; but cotton was used for this purpose a little before the time of Julius Cæsar, and was continued in use by him.¹⁰ This vast extent of canvass was supported by masts (*malis*¹¹) fixed into the outer wall. The annexed woodcut shows the form and position of

the great rings, cut out of lava, which remain on the inside of the wall of the Great Theatre at Pompeii, near the top, and which are placed at regular

distances, and one of them above another, so that each mast was fixed into two rings. Each ring is of one piece with the stone behind it. At Rome we observe a similar contrivance in the Coliseum; but the masts were in that instance ranged on the outside of the wall, and rested on 240 consoles, from which they rose so as to pass through holes cut in the cornice. The holes for the masts are also seen in the Roman theatres at Orange and other places.

Velum, and much more commonly its derivative *velamen*, denoted the veil worn by women.¹ That worn by a bride was specifically called *flammeum* (*vid. MARRIAGE*, p. 625): another special term was *Rica*. Greek women, when they went abroad, often covered their heads with the shawl (*vid. PERIPLUM*), thus making it serve the purpose of a veil. But they also used a proper headdress, called *καλύπτρα*,² which, besides serving to veil their countenances whenever they desired it, was graceful and ornamental, and was therefore attributed to Venus³ and Pandora.⁴ The veil of Ilione, the eldest daughter of Priam, was one of the seven objects preserved at Rome as pledges of the permanency of its power.⁵

Velum also meant a sail (*ιστίον* (*vid. SHIPS*, p. 93), *λαϊφός*). Sailcloth was commonly linen, and was obtained in great quantities from Egypt; but it was also woven at other places, such as Tarquinii in Etruria.⁷ But cotton sailcloth (*carbasa*) was also used, as it is still in the Mediterranean. The separate pieces (*lintea*) were taken as they came from the loom, and were sewed together. This is shown in ancient paintings of ships, in which the seams are distinct and regular.

VENA'BULUM, a hunting-spear. This may have been distinguished from the spears used in warfare by being barbed; at least it is often so formed in ancient works of art representing the story of Meleager⁸ and other hunting-scenes. It was seldom, if ever, thrown, but held so as to slant downward, and to receive the attacks of the wild boars and other beasts of chase.⁹

VENALICIA'RII. (*VID. SERVUS, ROMAN*, p. 886.)

VENA'TIO, hunting, was the name given among the Romans to an exhibition of wild beasts, which fought with one another and with men. These exhibitions originally formed part of the games of the circus. Julius Cæsar first built a wooden amphitheatre for the exhibition of wild beasts, which is called by Dion Cassius¹⁰ *θέατρον κνηγετικόν*, and the same name is given to the amphitheatre built by Statilius Taurus,¹¹ and also to the celebrated one of Titus;¹² but, ever after the erection of the latter, we frequently read of venationes in the circus.¹³ The persons who fought with the beasts were either condemned criminals or captives, or individuals who did so for the sake of pay, and were trained for the purpose. (*VID. BESTIARIUM*.)

The Romans were as passionately fond of this entertainment as of the exhibitions of gladiators, and during the latter days of the Republic and under the Empire an immense variety of animals was collected from all parts of the Roman world for the gratification of the people, and many thousands were frequently slain at one time. We do not know on what occasion a venatio was first exhibited at Rome, but the first mention we find of anything of the kind is in the year B.C. 251, when L. Metellus exhibited in the circus 142 elephants, which he had brought from Sicily after his victory over the Car-

thaginians, and which were killed in the circus according to Verrius, though other writers do not speak of their slaughter.¹ But this can scarcely be regarded as an instance of a venatio, as it was understood in later times, since the elephants are said to have been only killed because the Romans did not know what to do with them, and not for the amusement of the people. There was, however, a venatio in the latter sense of the word in B.C. 186, in the games celebrated by M. Fulvius in fulfilment of the vow which he had made in the Ætolian war; in these games lions and panthers were exhibited.² It is mentioned as a proof of the growing magnificence of the age, that in the ludi circenses exhibited by the curule ædiles P. Cornelius Scipio Nasica and P. Lentulus, B.C. 168, there were 63 African panthers, and 40 bears and elephants.³ From about this time combats with wild beasts probably formed a regular part of the ludi circenses, and many of the curule ædiles made great efforts to obtain rare and curious animals, and put in requisition the services of their friends.⁴ Elephants are said to have first fought in the circus in the curule ædileship of Claudius Pulcher, B.C. 99, and, twenty years afterward, in the curule ædileship of the two Luculli, they fought against bulls.⁵ A hundred lions were exhibited by Sulla in his prætorship, which were destroyed by javelin-men sent by King Bocchus for the purpose. This was the first time that lions were allowed to be loose in the circus; they were previously always tied up.⁶ The games, however, in the curule ædileship of Scaurus, B.C. 58, surpassed anything the Romans had ever seen; among other novelties, he first exhibited an hippopotamus and five crocodiles in a temporary canal or trench (*euripus*). At the venatio given by Pompey in his second consulship, B.C. 55, upon the dedication of the Temple of Venus Victrix, and at which Cicero was present,⁸ there was an immense number of animals slaughtered, among which we find mention of 600 lions, and 18 or 20 elephants: the latter fought with Gætulians, who hurled darts against them, and they attempted to break through the railings (*clathri*) by which they were separated from the spectators.⁹ To guard against this danger, Julius Cæsar surrounded the arena of the amphitheatre with trenches (*euripi*).

In the games exhibited by J. Cæsar in his third consulship, B.C. 45, the venatio lasted for five days, and was conducted with extraordinary splendour. Camelopards or giraffes were then for the first time seen in Italy.¹⁰ Julius Cæsar also introduced bull-fights, in which Thessalian horsemen pursued the bulls round the circus, and, when the latter were tired out, seized them by the horns and killed them. This seems to have been a favourite spectacle; it was repeated by Claudius and Nero.¹¹ In the games celebrated by Augustus, B.C. 29, the hippopotamus and the rhinoceros were first exhibited, according to Dion Cassius;¹² but the hippopotamus is spoken of by Pliny, as mentioned above, in the games given by Scaurus. Augustus also exhibited a snake 50 cubits in length,¹³ and thirty-six crocodiles, which are seldom mentioned in the spectacles of later times.¹⁴

The occasions on which venationes were exhibited have been incidentally mentioned above. They seem to have been first confined to the ludi circen-

ses, but during the later times of the Republic and under the Empire they were frequently exhibited on the celebration of triumphs, and on many other occasions, with the view of pleasing the people. The passion for these shows continued to increase under the Empire, and the number of beasts sometimes slaughtered seems almost incredible. At the consecration of the great amphitheatre of Titus, 5000 wild beasts and 4000 tame animals were killed,¹ and in the games celebrated by Trajan, after his victories over the Dacians, there are said to have been as many as 11,000 animals slaughtered.² Under the emperors we read of a particular kind of venatio, in which the beasts were not killed by bestiarii, but were given up to the people, who were allowed to rush into the area of the circus and carry away what they pleased. On such occasions a number of large trees, which had been torn up by the roots, was planted in the circus, which thus resembled a forest, and none of the more savage animals were admitted into it. A venatio of this kind was exhibited by the elder Gordian in his ædileship, and a painting of the forest, with the animals in it, is described by Julius Capitolinus.³ One of the most extraordinary venationes of this kind was that given by Probus, in which there were 1000 ostriches, 1000 stags, 1000 boars, 1000 deer, and numbers of wild goats, wild sheep, and other animals of the same kind.⁴ The more savage animals were slain by the bestiarii in the amphitheatre, and not in the circus. Thus, in the day succeeding the venatio of Probus just mentioned, there were slain in the amphitheatre 100 lions and the same number of lionesses,

100 Libyan and 100 Syrian leopards, and 300 bears. It is unnecessary to multiply examples, as the above are sufficient to give an idea of the numbers and variety of animals at these spectacles; but the list of beasts which were collected by the younger Gordian for his triumph, and were exhibited by his successor Philip at the secular games, deserve mention on account of their variety and the rarity of some of them. Among these we find mention of 32 elephants, 10 elk, 10 tigers (which seem to have been very seldom exhibited), 60 tame lions, 30 tame leopards, 10 hyænas, a hippopotamus and rhinoceros, 10 archoleontes (it is unknown what they were), 10 camelopards, 20 onagri (wild asses, or, perhaps, zebras), 40 wild horses, and an immense number of similar animals.⁵

How long these spectacles continued is uncertain, but they were exhibited after the abolition of the shows of gladiators. There is a law of Honorius and Theodosius, providing for the safe convoy of beasts intended for the spectacles, and inflicting a penalty of five pounds of gold upon any one who injured them.⁶ They were exhibited at this period at the prætorian games, as we learn from Symmachus.⁷ Wild beasts continued to be exhibited in the games at Constantinople as late as the time of Justinian.⁸

In the bas-reliefs on the tomb of Scaurus at Pompeii, there are representations of combats with wild beasts, which are copied in the following woodcuts from Mazois.⁹ On the same tomb gladiatorial combats are represented, which are figured on p. 477 of this work.

The first represents a man naked and unarmed between a lion and a panther. Persons in this defenceless state had, of course, only their agility to trust to in order to escape from the beasts. In the second cut we see a similar person, against whom

a wild boar is rushing, and who appears to be preparing for a spring to escape from the animal. In the same relief there is a wolf running at full speed, and also a stag with a rope tied to his horns, who has been pulled down by two wolves or dogs. The

third relief is supposed by Mazois to represent the

training of a bestiarius. The latter has a spear in

each hand; his left leg is protected by greaves, and he is in the act of attacking a panther, whose movements are hampered by a rope, which fastens him to the bull behind him, and which accordingly places the bestiarius in a less dangerous position, though more caution and activity are required than if the beast were fixed to a certain point. Behind the bull another man stands with a spear, who seems to be urging on the animal. The fourth woodcut represents a man equipped in the same way as the matador in the Spanish bullfights in the present day, namely, with a sword in one hand and a veil in the

other. The veil was first employed in the arena in the time of the Emperor Claudius.⁷

VENEFICIUM, the crime of poisoning, is frequently mentioned in Roman history. Women

were most addicted to it; but it seems not improbable that this charge was frequently brought against females without sufficient evidence of their guilt, like that of witchcraft in Europe in the Middle Ages. We find females condemned to death for this crime in seasons of pestilence, when the popular mind is always in an excited state, and ready to attribute the calamities under which they suffer to the arts of evil-disposed persons. Thus the Athenians, when the pestilence raged in their city during the Peloponnesian war, supposed the wells to have been poisoned by the Peloponnesians;¹ and similar instances occur in the history of almost all states. Still, however, the crime of poisoning seems to have been much more frequent in ancient than in modern times; and this circumstance would lead persons to suspect it in cases when there was no real ground for the suspicion. Respecting the crime of poisoning at Athens, see ΦΑΡΜΑΚΩΝ ΤΡΑΦΗ.

The first instance of its occurrence at Rome in any public way was in the consulship of M. Claudius Marcellus and C. Valerius, B.C. 331, when the city was visited by a pestilence. After many of the leading men of the state had died by the same kind of disease, a slave-girl gave information to the curule ediles that it was owing to poisons prepared by the Roman matrons. Following her information, they surprised about twenty matrons, among whom were Cornelia and Sergia, both belonging to patrician families, in the act of preparing certain drugs over a fire; and being compelled by the magistrates to drink these in the Forum, since they asserted that they were not poisonous, they perished by their own wickedness. Upon this farther informations were laid, and as many as a hundred and seventy matrons were condemned.² We next read of poisoning being carried on upon an extensive scale as one of the consequences of the introduction of the worship of Bacchus.³ (Vid. DIONYSIA, p. 365.) In B.C. 184, the prætor Q. Nævius Matho was commanded by the senate to investigate such cases (*de veneficiis querere*): he spent four months in the investigation, which was principally carried on in the municipia and conciliabula, and, according to Valerius of Antium, he condemned 2000 persons.⁴ We again find mention of a public investigation into cases of poisoning by order of the senate in B.C. 180, when a pestilence raged at Rome, and many of the magistrates and other persons of high rank had perished. The investigation was conducted in the city and within ten miles of it by the prætor C. Claudius, and beyond the ten miles by the prætor C. Mænius. Hostilia, the widow of the consul C. Calpurnius, who had died in that year, was accused of having poisoned her husband, and condemned on what appears to have been mere suspicion.⁵ Cases of what may be called private poisoning, in opposition to those mentioned above, frequently occurred. The speech of Cicero in behalf of Cluentius supplies us with several particulars on this subject. Under the Roman emperors it was carried on to a great extent, and some females, who excelled in the art, were in great request. One of the most celebrated of these was Locusta, who poisoned Claudius at the command of Agrippina, and Britannicus at that of Nero, the latter of whom even placed persons under her to be instructed in the art.⁶

The first legislative enactment especially directed against poisoning was a law of the dictator Sulla—lex Cornelia de Sicariis et Veneficiis—passed in B.C. 82, which continued in force, with some alterations, to the latest times. It contained provisions

against all who made, bought, sold, possessed, or gave poison for the purpose of poisoning.¹ The punishment fixed by this law was, according to Marcian, the deportatio in insulam and the confiscation of property; but it was more probably the interdictio aquæ et ignis, since the deportatio under the emperors took the place of the interdictio, and the expression in the Digest was suited to the time of the writers or compilers. (Vid. CORNELIA LEX DE SICARIIS, &c., p. 308.) By a senatus consultum passed subsequently, a female who gave drugs or poison for the purpose of producing conception, even without any evil intent, was banished (*relegatus*), if the person to whom she administered them died in consequence. By another senatus consultum, all druggists (*pigmentarii*) who administered poisons carelessly, "*purgationis causa*," were liable to the penalties of this law. In the time of Marcian (that of Alexander Severus) this crime was punished capitally in the case of persons of lower rank (*humiliores*), who were exposed to wild beasts, but persons of higher rank (*altiores*) were condemned to the deportatio in insulam.²

The word *veneficium* was also applied to potions, incantations, &c.,³ whence we find *veneficus* and *venefica* used in the sense of a sorcerer and sorceress in general.

VER SACRUM (ἔρος ἱερὸν). It was a custom among the early Italian nations, especially among the Sabines, in times of great danger and distress, to vow to the deity the sacrifice of everything born in the next spring, that is, between the first of March and the last day of April, if the calamity under which they were labouring should be removed.⁴ This sacrifice, in the early times, comprehended both men and domestic animals, and there is little doubt that in many cases the vow was really carried into effect. But in later times it was thought cruel to sacrifice so many innocent infants, and, accordingly, the following expedient was adopted. The children were allowed to grow up, and in the spring of their twentieth or twenty-first year they were, with covered faces, driven across the frontier of their native country, whereupon they went whithersoever fortune or the deity might lead them. Many a colony had been founded by persons driven out in this manner; and the Mamertines in Sicily were the descendants of such devoted persons.⁵ In the two historical instances in which the Romans vowed a ver sacrum, that is, after the battle of Lake Trasimene and at the close of the second Punic war, the vow was confined to domestic animals, as was expressly stated in the vow.⁶

VESTALES, the virgin priestesses of Vesta, who ministered in her temple and watched the eternal fire. Their existence at Alba Longa is connected with the earliest Roman traditions, for Silvia, the mother of Romulus, was a member of the sisterhood;⁷ their establishment in the city, in common with almost all matters connected with state religion, is generally ascribed to Numa,⁸ who se-

1. (Thucyd., ii., 46.)—2. (Liv., viii., 18.—Compare Val. Max., ii., 5, § 3.—Augustin., De Civ. Dei, iii., 17.)—3. (Liv., xxxix., 8.)—4. (Id., xxxix., 38, 41.)—5. (Id., xl., 37.)—6. (Tacit., Ann., xii., 66; xiii., 15.—Suet., Ner., 33.—Juv., i., 71.)

ected four (their names are given in Plutarch), two from the Titienses and two from the Rarnes,¹ and two more were subsequently added from the Luce-res by Tarquinius Priscus according to ore authori-ty,² by Servius Tullius according to another.³ This number of six remained unchanged at the time when Plutarch wrote, and the idea that it was af-terward increased to seven rests upon very unsatis-factory evidence.⁴

They were originally chosen (*capere* is the tech-nical word) by the king,⁵ and during the Republic and Empire by the pontifex maximus. It was ne-cessary that the maiden should not be under six nor above ten years of age, perfect in all her limbs, in the full enjoyment of all her senses, patrima et ma-ritima (*vid. PATRIMI*), the daughter of free and free-born parents who had never been in slavery, who followed no dishonourable occupation, and whose home was in Italy.⁶ The lex Papia ordained that, when a vacancy occurred, the pontifex maximus should name at his discretion twenty qualified dam-sels, one of whom was publicly (*in concione*) fixed upon by lot, an exemption being granted in favour of such as had a sister already a vestal, and of the daughters of certain priests of a high class.⁷ The above law appears to have been enacted in conse-quence of the unwillingness of fathers to resign all control over a child; and this reluctance was mani-fested so strongly in later times, that in the age of Augustus *libertina* were declared eligible.⁸ The casting of lots, moreover, does not seem to have been practised if any respectable person came for-ward voluntarily and offered a daughter who ful-filled the necessary conditions. As soon as the election was concluded, the pontifex maximus took the girl by the hand and addressed her in a solemn form, preserved by Aulus Gellius from Fabius Pictor: SACERDOTE. VESTALEM. QUÆ. SACRA. FACIAT. QUÆ. IOUÆ. SIET. SACERDOTE. VESTALEM. FACERE. PRO. POPULO. ROMANO. QUIRITUM. UTEL. QUÆ. OPTIMA. LEGE. FOVIT. ITA. TE. AMATA. CAPIO., where the title AMATA seems simply to signify "beloved one," and not to refer, as Gellius supposes, to the name of one of the original vestals; at least no such name is to be found in the list of Plutarch alluded to above. Af-ter these words were pronounced she was led away to the atrium of Vesta, and lived thenceforward with-in the sacred precincts, under the special superin-tendence and control of the pontifical college.⁹

The period of service lasted for thirty years. During the first ten the priestess was engaged in learning her mysterious duties, being termed *discipu-la*;¹⁰ during the next ten in performing them; dur-ing the last ten in giving instructions to the novi-ces;¹¹ and so long as she was thus employed, she was bound by a solemn vow of chastity. But after the time specified was completed, she might, if she thought fit, throw off the emblems of her office,¹² unconsecrate herself (*exaugurare*),¹³ return to the world, and even enter into the marriage state.¹⁴ Few, however, availed themselves of these privi-leges; those who did were said to have lived in sorrow and remorse (as might, indeed, have been expected from the habits they had formed); hence such a proceeding was considered ominous, and the priestesses, for the most part, died as they had lived, in the service of the goddess.¹⁵

The senior sister was entitled *Vestalis Maxima*, or *Virgo Maxima* (*ἡ πρεσβύτατα, ἡ ἀρχαία*)¹⁶ and we find also the expressions *Vestaliū vetustissi-mam*¹⁷ and *tres maxima*.¹⁸

Their chief office was to watch by turns, night and day, the everlasting fire which blazed upon the altar of Vesta (*VIRGINESQUE VESTALES IN URBE CUS-TODIUNTO IGNEM POCI PUBLICI SEMPERNUM*),¹⁹ its ex-tinction being considered as the most fearful of all prodigies, and emblematic of the extinction of the state.²⁰ If such misfortune befell, and was caused by the carelessness of the priestess on duty, she was stripped and scourged by the pontifex maximus, in the dark and with a screen interposed, and he re-kindled the flame by the friction of two pieces of wood from a *felix arbor*.²¹ Their other ordinary du-ties consisted in presenting offerings to the goddess at stated times, and in sprinkling and purifying the shrine each morning with water, which, according to the institution of Numa, was to be drawn from the Egerian fount, although in later times it was considered lawful to employ any water from a living spring or running stream, but not such as had pass-ed through pipes. When used for sacrificial purpo-ses it was mixed with *muries*, that is, salt which had been pounded in a mortar, thrown into an earthen jar, and baked in an oven.²² They assisted, moreover, at all great public holy rites, such as the festivals of the Bona Dea,²³ and the consecration of temples;²⁴ they were invited to priestly banquets;²⁵ and we are told that they were present at the sole-mn appeal to the gods made by Cicero during the conspiracy of Catiline.²⁶ They also guarded the sa-cred relics which formed the *fatale pignus imperii*, the pledge granted by fate for the permanency of the Roman sway, deposited in the inmost adytum (*penus Vestæ*),²⁷ which no one was permitted to en-ter save the virgins and the chief pontifex. What this object was no one knew: some supposed that it was the palladium; others, the Samothracian gods carried by Dardanus to Troy, and transported from thence to Italy by Æneas; but all agreed in believing that something of awful sanctity was here preserv-ed, contained, it was said, in a small earthen jar closely sealed, while another exactly similar in form, but empty, stood by its side.²⁸

We have seen above that supreme importance was attached to the purity of the vestals, and a terrible punishment awaited her who violated the vow of chastity. According to the law of Numa, she was simply to be stoned to death,²⁹ but a more cruel torture was devised by Tarquinius Priscus,³⁰ and inflicted from that time forward. When con-demned by the college of pontifices, she was strip-ped of her vitta and other badges of office, was scourged,³¹ was attired like a corpse, placed in a close litter, and borne through the Forum, attended by her weeping kindred, with all the ceremonies of a real funeral, to a rising ground called the *Campus Sceleratus*, just within the city walls, close to the Colline gate. There a small vault underground had been previously prepared, containing a couch, a lamp, and a table with a little food. The pontifex maximus, having lifted up his hands to heaven and

Comp.*, p. 143, or p. 259, ed. Bek-ker.)—17. (*Dionys.*, iii., 67.—*Zonaras*, vii., 8.)—18. (*Dionys.*, ix., 40.)

uttered a secret prayer, opened the litter, led forth the culprit, and placing her on the steps of the ladder which gave access to the subterranean cell, delivered her over to the common executioner and his assistants, who conducted her down, drew up the ladder, and having filled the pit with earth until the surface was level with the surrounding ground, left her to perish, deprived of all the tributes of respect usually paid to the spirits of the departed. In every case the paramour was publicly scourged to death in the Forum.¹

But if the labours of the vestals were unremitting, and the rules of the order rigidly and pitilessly enforced, so the honours they enjoyed were such as in a great measure to compensate for their privations. They were maintained at the public cost, and from sums of money and land bequeathed from time to time to the corporation.² From the moment of their consecration, they became, as it were, the property of the goddess alone, and were completely released from all parental sway without going through the form of *emancipatio* or suffering any *capitis diminutio*.³ They had a right to make a will, and to give evidence in a court of justice without taking an oath,⁴ distinctions first conceded by a Horatian law to a certain Caia Tarratia or Fufetia, and afterward communicated to all.⁵ From the time of the triumph, each was preceded by a lictor when she went abroad;⁶ consuls and prætors made way for them, and lowered their fasces;⁷ even the tribunes of the plebs respected their holy character,⁸ and if any one passed under their litter, he was put to death.⁹ Augustus granted to them all the rights of matrons who had borne three children,¹⁰ and assigned them a conspicuous place in the theatre,¹¹ a privilege which they had enjoyed before at the gladiatorial shows.¹² Great weight was attached to their intercession on behalf of those in danger and difficulty, of which we have a remarkable example in the entreaties which they addressed to Sulla on behalf of Julius Cæsar;¹³ and if they chanced to meet a criminal as he was led to punishment, they had a right to demand his release, provided it could be proved that the encounter was accidental. Wills, even those of the emperors, were committed to their charge,¹⁴ for when in such keeping they were considered inviolable;¹⁵ and in like manner, very solemn treaties, such as that of the triumvirs with Sextus Pompeius, were placed in their hands.¹⁶ That they might be honoured in death as in life, their ashes were interred within the pomerium.¹⁷

They were attired in a stola, over which was an upper vestment made of linen;¹⁸ and in addition to the infula and white woollen vitta, they wore, when sacrificing, a peculiar headress called *suffibulum*, consisting of a piece of white cloth bordered with purple, oblong in shape, and secured by a clasp.¹⁹ In dress and general deportment they were required to observe the utmost simplicity and decorum, any

fanciful ornaments in the one or levity in the other being always regarded with disgust and suspicion.¹ We infer from a passage in Pliny² that their hair was cut off, probably at the period of their consecration; whether this was repeated from time to time does not appear, but they are never represented with flowing locks. The first of the following cuts, copied from a gem,³ represents the vestal Tuccia, who, when wrongfully accused, appealed to the goddess to vindicate her honour, and had power given to her to carry a sieve full of water from the Tiber to the temple.⁴ The form of the upper garment is here well seen. The second is from a denarius of the gens Clodia, representing upon the reverse a female priestess with a simpulum in her hand, and bearing the legend VESTALIS; on the obverse is a head of Flora, with the words C. CLODIVS C. F. Two vestals belonging to this gens were celebrated in the Roman Annals.⁵ (*Vid. TRIUMPHUS*, p. 1017.) The coin seems to have

been struck to commemorate the splendour of the Floralia as exhibited during the famous ædileship of C. Clodius Pulcher, B.C. 99.⁶

(Lipsius, *De Vesta et Vestalibus Syntagma*, and Næhden "On the worship of Vesta, &c., Classical Journal, vol. xv., 123, vol. xvi., 321," have collected most of the authorities on this subject.—Göttling, *Geschichte der Röm. Staatsverf.*, p. 189.)

VIÆ. Three words are employed by the Roman jurists to denote a road, or a right of road, *iter, actus, via*. Strictly speaking, *iter* was applicable to a footpath only, *actus* to a bridle-way, *via* to a carriage-road.¹ (Compare *SERVITUDES*, p. 879.)

We next find *viæ* divided into *private* or *agraria* and *publica*, the former being those the use of which was free while the soil itself remained private prop-

city, the latter those of which the use, the management, and the soil were alike vested in the state. *Via Vicinales* (*quæ in vicis sunt vel quæ in vicis ducunt*), being country cross-roads merging in the great lines, or, at all events, not leading to any important terminus, might be either *publica* or *privata*, according as they were formed and maintained at the cost of the state or by the contributions of private individuals.¹ The *via publica* of the highest class were distinguished by the epitheta *militares*, *consulares*, *prætoriae*, answering to the terms *δοκοί βασιλικαί* among the Greeks, and king's highway among ourselves.

That public roads of some kind must have existed from the very foundation of the city is manifest, but as very little friendly intercourse existed with the neighbouring states for any length of time without interruption, they would, in all probability, not extend beyond the narrow limits of the Roman territory, and would be mere muddy tracks used by the peasants in their journeys to and from market. It was not until the period of the long-protracted Samnite wars that the necessity was strongly felt of securing an easy, regular, and safe communication between the city and the legions, and then, for the first time, we hear of those famous paved roads, which in after ages, keeping pace with the progress of the Roman arms, connected Rome with her most distant provinces, constituting not only the most useful, but the most lasting of all her works.² The excellence of the principles upon which they were constructed is sufficiently attested by their extraordinary durability, many specimens being found in the country around Rome, which have been used without being repaired for more than a thousand years, and are still in a high state of preservation.

The Romans are said to have adopted their first ideas upon this subject from the Carthaginians,³ and it is extremely probable that the latter people may, from their commercial activity, and the sandy nature of their soil, have been compelled to turn their attention to the best means of facilitating the conveyance of merchandise to different parts of their territory. It must not be imagined, however, that the Romans employed from the first the elaborate process which we are about to describe. The first step would be from the *Via Terrena*,⁴ the mere track worn by the feet of men and beasts and the wheels of wagons across the fields, to the *Via Glarea*, where the surface was hardened by gravel; and even after pavement was introduced, the blocks seem originally to have rested merely on a bed of small stones.⁵

Livy has recorded⁶ that the censorship of Appius Cæcus (B.C. 312) was rendered celebrated in after ages from his having brought water into the city and paved a road (*quod viam munivit et aquam in urbem perduxit*), the renowned *Via Appia*, which extended, in the first instance, from Rome to Capua, although we can scarcely suppose that it was carried so great a distance in a single lustrum.⁷ We undoubtedly hear, long before this period, of the *Via Latina*,⁸ the *Via Gabina*,⁹ and the *Via Salaria*,¹⁰ &c.; but even if we allow that Livy does not employ these names by a sort of prolepsis, in order to indicate conveniently a particular direction (and that he does speak by anticipation when he refers to milestones in some of the above passages is certain), yet we have no proof whatever that they were laid down according to the method afterward adopted with so much success.¹¹

Vitruvius enters into no details with regard to road-making, but he gives most minute directions for pavements; and the fragments of ancient pavements still existing, and answering to his description, correspond so exactly with the remains of the military roads, that we cannot doubt that the processes followed in each case were identical, and thus Vitruvius,¹ combined with the poem of Statius² on the *Via Domitiana*, will supply all the technical terms.

In the first place, two shallow trenches (*sulci*) were dug parallel to each other, marking the breadth of the proposed road; this, in the great lines, such as the *Via Appia*, the *Via Flaminia*, the *Via Valeria*, &c., is found to have been from 13 to 15 feet; the *Via Tusculana* is 11, while those of less importance, from not being great thoroughfares, such as the *via* which leads up to the temple of Jupiter Latiaris, on the summit of the Alban Mount, and which is to this day singularly perfect, seem to have been exactly 8 feet wide. The loose earth between the *sulci* was then removed, and the excavation continued until a solid foundation (*gremium*) was reached, upon which the materials of the road might firmly rest; if this could not be attained, in consequence of the swampy nature of the ground, or from any peculiarity in the soil, a basis was formed artificially by driving piles (*fistulationibus*). Above the *gremium* were four distinct strata. The lowest course was the *statumen*, consisting of stones not smaller than the hand could just grasp; above the *statumen* was the *rudus*, a mass of broken stones cemented with lime (what masons call *rubble-work*), rammed down hard, and nine inches thick; above the *rudus* came the *nucleus*, composed of fragments of bricks and pottery, the pieces being smaller than in the *rudus*, cemented with lime, and six inches thick. Uppermost was the *pavimentum*, large polygonal blocks of the hardest stone (*silex*), usually, at least in the vicinity of Rome, basaltic lava, irregular in form, but fitted and jointed with the greatest nicety (*apta jungitur arte silex*), so as to present a perfectly even surface, as free from gaps or irregularities as if the whole had been one solid mass, and presenting much the same external appearance as the most carefully built polygonal walls of the old Pelasgian towns. The general aspect will be understood from the cut given below of a portion of the street at the entrance of Pompeii.⁴

The centre of the way was a little elevated, so as to permit the water to run off easily, and hence

1. (vii., 1.)—2. (Sylv., iv., 3.)—3. (Til ull. i., 7, 60.)—4. (Mazois, Les Ruines de Pompéi, vol. i. pl. xxviii.)

(Compare Liv., vii., 39.)

the terms *agger viæ*¹ and *sumum dorsum*,² although both may be applied to the whole surface of the pavimentum. Occasionally, at least in cities, rectangular slabs of softer stone were employed instead of the irregular polygons of silex, as we perceive to have been the case in the Forum of Trajan, which was paved with travertine, and in part of the great forum under the column of Phocas, and hence the distinction between the phrases *silece sternere* and *saxo quadrato sternere*.³ It must be observed, that while, on the one hand, recourse was had to piling when a solid foundation could not otherwise be obtained, so, on the other hand, when the road was carried over rock, the statumen and the rudus were dispensed with altogether, and the nucleus was spread immediately on the stony surface previously smoothed to receive it. This is seen to have been the case, we are informed by local antiquaries, on the Via Appia, below Albano, where it was cut through a mass of volcanic peperino.

Nor was this all. Regular footpaths (*margines*,⁴ *crepidines*,⁵ *umbones*⁶) were raised upon each side and strewn with gravel, the different parts were strengthened and bound together with *gomphi* or stone wedges,⁷ and stone blocks were set up at moderate intervals on the side of the footpaths, in order that travellers on horseback might be able to mount without the aid of an *ἀναβολεὺς* to hoist them up.⁸ (*Vid. SPURTORES.*)

Finally, Caius Gracchus⁹ erected milestones along the whole extent of the great highways, marking the distances from Rome, which appear to have been counted from the gate at which each road issued forth; and Augustus, when appointed inspector of the viæ around the city, erected in the Forum a gilded column (*χρυσὸν μίλον—χρυσὸς κίων, milliarius aureum*¹⁰), on which were inscribed the distances of the principal points to which the viæ conducted. Some have imagined, from a passage in Plutarch,¹¹ that the distances were calculated from the milliarius aureum, but this seems to be disproved both by the fact that the roads were all divided into miles by C. Gracchus nearly two centuries before, and also by the position of various ancient milestones discovered in modern times.¹²

It is certain that, during the earlier ages of the Republic, the construction and general superintendence of the roads without, and the streets within the city, were committed, like all other important works, to the censors. This is proved by the law quoted in Cicero,¹³ and by various passages, in which these magistrates are represented as having first formed and given their names to great lines, such as the Via Appia and the Via Flaminia, or as having executed important improvements and repairs.¹⁴ These duties, when no censors were in office, devolved upon the consuls, and in their absence on the prætor urbanus, the ædiles, or such persons as the senate thought fit to appoint.¹⁵ But during the last century of the Commonwealth, the administration of the roads, as well as of every other department of public business, afforded the tribunes a pretext for popular agitation. Caius Gracchus, in what capacity we know not, is said to have exerted himself in making great improvements, both from a conviction of their utility, and with a view to the

acquisition of popularity;¹ and Cæpio, when tribune, introduced a *lex Viaria* for the construction and restoration of many roads, and the appointment of himself to the office of inspector (*ἐπιστάτης*) for five years.² We learn from Cicero³ that Thermus, in the year B.C. 65, was *curator* of the Flaminian Way, and from Plutarch,⁴ that Julius Cæsar held the same office (*ἐπιμελητής*) with regard to the Appian Way, and laid out great sums of his own money upon it, but by whom these appointments were conferred we cannot tell. During the first years of Augustus, Agrippa, being ædile, repaired all roads at his own proper expense; subsequently the emperor, finding that the roads had fallen into disrepair through neglect, took upon himself the restoration of the Via Flaminia as far as Ariminum, and distributed the rest among the most distinguished men in the state (*triumphalibus viris*), to be paid out of the money obtained from spoils (*ex manubiali pecunia sternendas*).⁵ In the reign of Claudius we find that this charge had fallen upon the quaestors, and that they were relieved of it by him, although some give a different interpretation to the words.⁶ Generally speaking, however, under the Empire, the post of inspector-in-chief (*curator*)—and each great line appears to have had a separate officer with this appellation—was considered a high dignity,⁷ inasmuch that the title was frequently assumed by the emperors themselves, and a great number of inscriptions are extant, bearing the names of upward of twenty princes from Augustus to Constantine, commemorating their exertions in making and maintaining public ways.⁸

These *curatores* were at first, it would appear, appointed upon special occasions, and at all times must have been regarded as honorary functionaries rather than practical men of business. But from the beginning of the sixth century of the city there existed regular commissioners, whose sole duty appears to have been the care of the ways, four (*quatuor viri viarum*) superintending the streets within the walls, and two the roads without.⁹ When Augustus remodelled the inferior magistracies, he included the former in the vigintivirate, and abolished the latter; but when he undertook the care of the viæ around the city, he appointed under himself two *road-makers* (*ὁδοποιούς*¹⁰), persons of prætorian rank, to whom he assigned two lictors. These were probably included in the number of the new superintendents of public works instituted by him,¹¹ and would continue from that time forward to discharge their duties, subject to the supervision and control of the *curatores* or inspectors-general.

Even the contractors employed (*manicipes*¹²) were proud to associate their names with these vast undertakings, and an inscription has been preserved¹³ in which a wife, in paying the last tribute to her husband, inscribes upon his tomb *MANCIPES VIÆ APPIÆ*. The funds required were of course derived, under ordinary circumstances, from the public treasury,¹⁴ but individuals also were not unfrequently found willing to devote their own private means to these great national enterprises. This, as we have already seen, was the case with Cæsar and Agrippa, and we learn from inscriptions that the example was imitated by many others of less note.¹⁵ The *Viæ Vicinales* were in the hands of the rural authorities (*magistri pagorum*), and seem to have been main-

tained by voluntary contribution or assessment, like our parish roads,¹ while the streets within the city were kept in repair by the inhabitants, each person being answerable for the portion opposite to his own house.²

Our limits preclude us from entering upon so large a subject as the history of the numerous military roads which intersected the Roman dominions. We shall content ourselves with simply mentioning those which issued from Rome, together with their most important branches within the bounds of Italy, naming, at the same time, the principal towns through which they passed, so as to convey a general idea of their course. For all the details and controversies connected with their origin, gradual extension, and changes, the various stations upon each, the distances, and similar topics, we must refer to the treatises enumerated at the close of this article, and to the researches of the local antiquaries, the most important of whom, in so far as the southern districts are concerned, is Romanelli.

Beginning our circuit of the walls at the Porta Capena, the first in order, as in dignity, is,

I. The VIA APPIA, the *Great South Road*. It was commenced, as we have already stated, by Appius Claudius Cæcus, when censor, and has always been the most celebrated of the Roman Ways. It was the first ever laid down upon a grand scale and upon scientific principles; the natural obstacles which it was necessary to overcome were of the most formidable nature, and, when completed, it well deserved the title of *Queen of Roads* (*regina viarum*). We know that it was in perfect repair when Procopius wrote,⁴ long after the devastating inroads of the northern barbarians; and even to this day the cuttings through hills and masses of solid rock, the filling up of hollows, the bridging of ravines, the substructions to lessen the rapidity of steep descents, and the embankments over swamps, demonstrate the vast sums and the prodigious labour that must have been lavished on its construction. It issued from the *Porta Capena*, and, passing through *Aricia*, *Tres Tabernæ*, *Appii Forum*, *Tarracina*, *Fundi*, *Farmia*, *Minturnæ*, *Sinuessæ*, and *Casilinum*, terminated at *Capua*, but was eventually extended through *Calatia* and *Caudium* to *Beneventum*, and finally from thence through *Venusia*, *Tarentum*, and *Uria*, to *Brundisium*.

The ramifications of the *Via Appia* most worthy of notice are,

(1.) The VIA SETINA, which connected it with *Setia*. Originally, it would appear that the *Via Appia* passed through *Velitra* and *Setia*, avoiding the marshes altogether; and travellers, to escape this circuit, embarked upon the canal, which, in the days of Horace, traversed a portion of the swamps.

(2.) The VIA DOMITIANA struck off at *Sinuessæ*, and, keeping close to the shore, passed through *Liternum*, *Cumæ*, *Puteoli*, *Neapolis*, *Herculaneum*, *Oppidum*, *Pompeii*, and *Stabia* to *Sorrentum*, making the complete circuit of the Bay of Naples.

(3.) The VIA CAMPANA or CONSULARIS, from *Capua* to *Cumæ*, sending off a branch to *Puteoli*, and another through *Atella* to *Neapolis*.

(4.) The VIA AQUILLIA began at *Capua*, and ran south through *Nola* and *Nucerina* to *Salernum*; from thence, after sending off a branch to *Pestum*, it took a wide sweep inland through *Eburi* and the region of the *Mons Alburnus* up the valley of the *Tanager*; it then struck south through the very heart of *Lucania* and *Bruttium*, and, passing *Nerulum*, *Interamna*, and *Consentia*, returned to the sea at *Vibo*, and thence through *Medma* to *Rhegium*. This road sent off a branch near the sources of the

Tanager, which ran down to the sea at *Blanda* or the *Laus Sinus*, and then continued along the whole line of the Bruttian coast through *Laus* and *Terina* to *Vibo*, where it joined the main stem.

(5.) The VIA EGNATIA began at *Beneventum*, struck north through the country of the Hirpini to *Equotuticum*, entered *Apulia* at *Æcae*, and, passing through *Herdania*, *Cunusium*, and *Rubi*, reached the Adriatic at *Barium*, and followed the coast through *Egnatia* to *Brundisium*. This was the route followed by Horace. It is doubtful whether it bore the name given above in the early part of its course.

(6.) The VIA TRAJANA began at *Venusia*, and ran in nearly a straight line across *Lucania* to *Heraclæa* on the *Sinus Tarentinus*; thence following, southward, the line of the east coast, it passed through *Thurri*, *Croto*, and *Scyllacium*, and completed the circuit of *Bruttium* by meeting the *Via Aquilia* at *Rhegium*.

(7.) A VIA MINUCIA is mentioned by Cicero,¹ and a VIA NUMICIA by Horace,² both of which seem to have passed through *Samnium* from north to south, connecting the *Valerian* and *Aquillian*, and cutting the *Appian* and *Latin* Ways. Their course is unknown. Some believe them to be one and the same.

Returning to Rome, we find issuing from the *Porta Capena*, or a gate in its immediate vicinity,

II. The VIA LATINA, another great line leading to *Beneventum*, but keeping a course farther inland than the *Via Appia*. Soon after leaving the city, it sent off a short branch (*VIA TUSCULANA*) to *Tusculum*, and, passing through *Comptium*, *Anagninum*, *Ferentium*, *Frusina*, *Fregella*, *Fabrateria*, *Aquinum*, *Casinum*, *Venafrum*, *Teanum*, *Allifæ*, and *Telesia*, joined the *Via Appia* at *Beneventum*.

A cross-road, called the VIA HADRIANA, running from *Minturnæ* through *Suessæ Aurunca* to *Teanum*, connected the *Via Appia* with the *Via Latina*.

III. From the *Porta Esquilina* issued the VIA LABICANA, which, passing *Labicum*, fell into the *Via Latina* at the station *ad Bivium*, 30 miles from Rome.

IV. The VIA PRÆNESTINA, originally the VIA GABINA, issued from the same gate with the former. Passing through *Gabii* and *Præneste*, it joined the *Via Latina* just below *Anagnina*.

V. Passing over the VIA COLLATINA as of little importance, we find the VIA TIBURTINA, which issued from the *Porta Tiburtina*, and, proceeding N.E. to *Tibur*, a distance of about 20 miles, was continued from thence, in the same direction, under the name of the VIA VALERIA, and, traversing the country of the Sabines, passed through *Carseoli* and *Corfinium* to *Aternum* on the Adriatic, thence to *Adria*, and so along the coast to *Castrum Truentinum*, where it fell into the *Via Salaria*.

A branch of the *Via Valeria* led to *Sublaquæum*, and was called VIA SUBLACENSIS. Another branch extended from *Adria* along the coast southward through the country of *Frentani* to *Larinum*, being called, as some suppose, VIA FRENTANA APFULA.

VI. The VIA NOMENTANA, anciently FICULNENSIS, ran from the *Porta Collina*, crossed the *Anio* to *Nomentum*, and, a little beyond, fell into the *Via Salaria* at *Eretum*.

VII. The VIA SALARIA, also from the *Porta Collina* (passing *Fidene* and *Crustumærium*), ran north and east through *Sabinum* and *Picenum* to *Reate* and *Asculum Picenum*. At *Castrum Truentinum* it reached the coast, which it followed until it joined the *Via Flaminia* at *Ancona*.

VIII. Next comes the VIA FLAMINIA, the *Great North Road*, commenced in the censorship of C. Flaminus, and carried ultimately to *Ariminum*. It

1. (Sicul. Flacc., p. 9.)—2. (Dig. 43, tit. 10, s. 3.)—3. (Stat., *Sylv*, ii., 2, 12.)—4. (Bell. Goth., i., 14.)

issued from the *Porta Flaminia*, and proceeded nearly north to *Oriculum* and *Narnia* in Umbria. Here a branch struck off, making a sweep to the east through *Interamna* and *Spolegium*, and fell again into the main trunk (which passed through *Mœvania*) at *Fulgina*. It continued through *Fanum Flamini* and *Nuceria*, where it again divided, one line running nearly straight to *Fanum Fortunæ* on the Adriatic, while the other, diverging to *Ancona*, continued from thence along the coast to *Fanum Fortunæ*, where the two branches, uniting, passed on to *Ariminum* through *Pisaurum*. From thence the *Via Flaminia* was extended under the name of the *Via Æmilia*, and traversed the heart of Cisalpine Gaul through *Bononia*, *Mutina*, *Parma*, *Placentia* (where it crossed the Po), to *Mediolanum*. From this point branches were sent off through *Bergomum*, *Brizia*, *Verona*, *Vicentia*, *Patavium*, and *Aquileia* to *Tergeste* on the east, and through *Novaria*, *Vercelli*, *Epedia*, and *Augusta Prætoria* to the *Alpis Graia* on the west, besides another branch in the same direction through *Ticinum* and *Industria* to *Augusta Taurinorum*. Nor must we omit the *Via Postumia*, which struck from *Verona* right down across the Apennines to *Genoa*, passing through *Mantua* and *Cremona*, crossing the Po at *Placentia*, and so through *Iria*, *Dertona*, and *Libarna*, sending off a branch from *Dertona* to *Asta*.

Of the roads striking out of the *Via Flaminia* in the immediate vicinity of Rome, the most important is the *Via Cassia*, which, diverging near the *Pons Mulvius*, and passing not far from *Veii*, traversed Etruria through *Baccanæ*, *Sutrium*, *Vulsinii*, *Clusium*, *Arretium*, *Florentia*, *Pistoria*, and *Luca*, joining the *Via Aurelia* at *Luna*.

(a.) The *Via Amerina* broke off from the *Via Cassia* near *Baccanæ*, and held north through *Fulerii*, *Tuder*, and *Perusia*, reuniting itself with the *Via Cassia* at *Clusium*.

(β.) Not far from the *Pons Mulvius* the *Via Claudia* separated from the *Via Cassia*, and, proceeding to *Sabate* on the *Lacus Sabatinus*, there divided into two, the principal branch passing through central Etruria to *Rusellæ*, and thence due north to *Florentia*, the other passing through *Tarquinii*, and then falling into the *Via Aurelia*.

(γ.) Beyond *Baccanæ* the *Via Cimina* branched off, crossing the *Mons Ciminus*, and rejoining the *Via Cassia* near *Fanum Volturnæ*.

IX. The *Via Aurelia*, the *Great Coast Road*, issued originally from the *Porta Janiculensis*, and subsequently from the *Porta Aurelia*. It reached the coast at *Alisum*, and followed the shore of the lower sea, along Etruria and Liguria, by *Genoa*, as far as *Forum Julii* in Gaul. In the first instance it extended no farther than *Pisa*.

X. The *Via Portuensis* kept the right bank of the Tiber to *Portus Augusti*.

XI. The *Via Ostiensis* originally passed through the *Porta Trigemina*, afterward through the *Porta Ostiensis*, and kept the left bank of the Tiber to *Ostia*. From thence it was continued, under the name of *Via Severiana*, along the coast southward through *Laurentum*, *Antium*, and *Circæi*, till it joined the *Via Appia* at *Tarracina*. The *Via Laurentina*, leading direct to *Laurentum*, seems to have branched off from the *Via Ostiensis* at a short distance from Rome.

XII. Lastly, the *Via Ardeatina*, from Rome to *Ardea*. According to some, this branched off from the *Via Appia*, and thus the circuit of the city is completed.

Alphabetical Table of the Via described above.

The most elaborate treatise upon Roman roads is *Bergier, Histoire des Grands Chemins de l'Empire Romain*, published in 1622. It is translated into Latin in the tenth volume of the *Thesaurus* of Grævius, and, with the notes of Hemninius, occupies more than 800 folio pages. In the first part of the above article, the essay of Nibby, *Delle Vie degli Antichi dissertazione*, appended to the fourth volume of the fourth Roman edition of Nardini, has been closely followed. Considerable caution, however, is necessary in using the works of this author, who, although a profound local antiquary, is by no means an accurate scholar. To gain a knowledge of that portion of the subject so lightly touched upon at the close of the article, it is necessary to consult the various commentaries upon the *Tabula Peutingeriana* and the different ancient itineraries, together with the geographical works of Cellarius, Cluverius, and D'Anville.

VIA'RIA LEX. (*Vid. Lex*, p. 596; *V1Æ*, 1043.)

VIA'TICUM is, properly speaking, everything necessary for a person setting out on a journey, and thus comprehends money, provisions, dresses, vessels, &c.¹ When a Roman magistrate, prætor, proconsul, or quæstor went to his province, the state provided him with all that was necessary for his journey. But as the state, in this as in most other cases of expenditure, preferred paying a sum at once to having any part in the actual business, the state engaged contractors (*redemptores*), who, for a stipulated sum, had to provide the magistrates with the viaticum, the principal parts of which appear to have been beasts of burden and tents (*muli et tabernacula*). Augustus introduced some modification of this system, as he once for all fixed a certain sum to be given to the proconsuls (probably to other provincial magistrates also) on setting out to their provinces, so that the *redemptores* had no more to do with it.²

VIA'TOR was a servant who attended upon and executed the commands of certain Roman magistrates, to whom he bore the same relation as the lictor did to other magistrates. The name *viatores* was derived from the circumstance of their being chiefly employed on messages either to call upon senators to attend the meeting of the senate, or to summon people to the comitia, &c.³ In the earlier times of the Republic, we find *viatores* as ministers of such magistrates also as had their lictors: *viatores* of a dictator and of the consuls are mentioned by Livy.⁴ In later times, however, *viatores* are only mentioned with such magistrates as had only potestas and not imperium, such as the tribunes of the people, the censors, and the ædiles.⁵ How many *viatores* attended each of these magistrates is not known; one of them is said to have had the right, at the command of his magistrate, to bind persons (*ligare*), whence he was called lictor.⁶ It is

not improbable that the ancient writers sometimes confounded viatores and lictores.¹

VICARII SERVI. (*Vid.* SERVUS, ROMAN, p. 884.)

*VICIA. (*Vid.* APHACE.)

VICTIMA. (*Vid.* SACRIFICIUM.)

VICESIMA, a tax of five per cent. Every Roman, when he manumitted a slave, had to pay to the state a tax of one twentieth of his value, whence the tax was called *vicesima manumissionis*. This tax appears to have been levied from the earliest times, and was not abolished when all other imposts were done away with in Rome and Italy.² Caracalla raised this tax to a *decima*, that is, ten per cent., but Macrinus again reduced it to the old standard.³ The persons employed in collecting it were called *vicesimarii*.⁴

A tax called *vicesima hereditarium et legatorum*, was introduced by Augustus (*lex Julia Vicesimaria*): it consisted of five per cent., which every Roman citizen had to pay to the *erarium militare*, upon any inheritance or legacy left to him, with the exception of such as were left to a citizen by his nearest relatives, and such as did not amount to above a certain sum.⁵ Peregrini and Latini who had become Roman citizens had, in a legal sense, no relatives, and were therefore obliged in all cases to pay the *vicesima hereditarium*.⁶ As only citizens had to pay this tax, Caracalla, in order to make it more productive, granted the franchise to all the subjects of the Empire, and at the same time raised it to ten per cent. (*decima*), but Macrinus again reduced it to five,⁷ and at last it was abolished entirely. It was levied in Italy and the provinces by procurators appointed for the purpose, and who are mentioned in many inscriptions as PROCURATORES XX. HEREDITARIUM, OR AD VECTIGAL XX. HEREDIT. But these officers generally sold it for a round sum to the publicani, which the latter had to pay in to the præfects of the *erarium militare*.⁸

VICOMAGISTRI. (*Vid.* VICUS.)

VICUS is the name of the subdivisions into which the four regions occupied by the four city tribes of Servius Tullius were divided, while the country regions, according to an institution ascribed to Numa, were subdivided into pagi.⁹ This division, together with that of the four regions of the four city tribes, remained down to the time of Augustus, who made the vici subdivisions of the fourteen regions into which he divided the city.¹⁰ In this division each vicus consisted of one main street, including several smaller by-streets; their number was 424, and each was superintended by four officers, called *vicomagistri*, who had a sort of local police, and who, according to the regulations of Augustus, were every year chosen by lot from among the people who lived in the vicus.¹¹ On certain days, probably at the celebration of the Compitalia, they wore the prætexta, and each of them was accompanied by two lictors.¹² These officers, however, were not a new institution of Augustus, for they had existed during the time of the Republic, and had had the same functions as a police for the vici of the Servian division of the city.¹³

VICTORIATUS. (*Vid.* DENARIUS.)

VIGILES. (*Vid.* ARMY, ROMAN, p. 106; PRÆFECTOS VIGILUM.)

VIGILLÆ. (*Vid.* CASTRA, p. 222.)

Trugr., 65.—Orelli, Inscript., n. 333, &c.)—5. (Dion Cass., iv., 25; lvi., 28.—Plin., Paneg., 37, &c.—Capitol., M. Antonin., ii., 25; lvi., 28.—Plin., Paneg., i., c.)—7. (Dion Cass., lxxvii., 9; lxxviii., 12.)—8. (Plin., Epist., vii., 14.—Paneg., 37.)—9. (Dionys., ii., 76.)—10. (Suet., Octav., 30.)—11. (Suet., l. c.—Dion Cass., v., 8.)—12. (Dion Cass., l. c.—Ascen. ad Cic. in Pison., p. 7, ed. Orelli.)—13. (Liv., xxvii., 7.—Festus, s. v. Magistrare.—Compare Soxus Rufus, Brev. de Reg. Urbis Romæ, and P. Victor, De Reg. Urbis Romæ.)

VIGINTISEXVIRI were twenty-six magistratus minores, among whom were included the triumviri capitales, the triumviri monetales, the quatuorviri viarum curandarum for the city, the two curatores viarum for the roads outside the city, the decemviri litibus (*silitibus*) judicandis, and the four præfects who were sent into Campania for the purpose of administering justice there. Augustus reduced the number of officers of this college to twenty (*vigintiviri*), as the two curatores viarum for the roads outside the city and the four Campanian præfects were abolished.¹ Down to the time of Augustus, the sons of senators had generally sought and obtained a place in the college of the vigintisexviri, it being the first step towards the higher offices of the Republic; but in A.D. 13 a senatus consultum was passed, ordaining that only equites should be eligible to the college of the vigintiviri. The consequence of this was, that the vigintiviri had no seats in the senate, unless they had held some other magistracy which conferred this right upon them.² The age at which a person might become a vigintivir appears to have been twenty.³

An account of the magistrates forming this college has been given in separate articles, with the exception of the *decemviri litibus judicandis*, of whom we accordingly subjoin a brief account. These magistrates, consisting, as the name imports, of ten men, formed a court of justice, which took cognizance of civil cases. From Pomponius⁴ it would appear that they were not instituted till the year B.C. 292, the time when the triumviri capitales were first appointed. Livy,⁵ however, mentions decemvirs as a plebeian magistracy very soon after the legislation of the Twelve Tables; and while Niebuhr⁶ refers these decemvirs to the decemviral magistrates, who had shortly before been abolished, and thus abides by the account of Pomponius, Götting⁷ believes that the decemvirs of Livy are the decemviri litibus judicandis, and refers their institution, together with that of the centumviri, to Servius Tullius. (*Vid.* CENTUMVIRI.) But the history as well as the peculiar jurisdiction of this court during the time of the Republic are involved in inextricable obscurity. In the time of Cicero it still existed, and the proceedings in it took place in the ancient form of the sacramentum.⁸ Augustus transferred to these decemvirs the presidency in the courts of the centumviri.⁹ During the Empire this court had jurisdiction in capital matters, which is expressly stated in regard to the decemvirs.¹⁰

VIGINTIVIRI. (*Vid.* VIGINTISEXVIRI.)

VILLA, a farm or country-house. The Roman writers mention two kinds of villa, the *villa rustica* or farmhouse, and the *villa urbana* or *pseudo-urbana*, a residence in the country or in the suburbs of a town. When both of these were attached to an estate, they were generally united in the same range of buildings, but sometimes they were placed at different parts of the estate. The part of the *villa rustica* in which the produce of the farm was kept is distinguished by Columella by a separate name, *villa fructuaria*. Varro¹¹ derives the name from *echo* ("quo fructus convehbantur, villæ").

1. The *villa rustica* is described by Varro,¹² Vitruvius,¹³ and Columella.¹⁴

2. That villa, which must be of a size corresponding to that of the farm, is best placed at the foot of a

(iii., 55.)—6. (Hist. of Rome, iii., 324, &c.)—7. (Gesch. der Röm. Staatsv., p. 241, &c.)—8. (Cic. Pro Cæcia, 33; Pro Domn., 29.)—9. (Suet., Octav., 36.—Dion Cass., liv., 26.)—10. (Böckh, Corp. Inscr., i., n. 1133, 1327.—Compare Weiler, Gesch. des Röm. Rechts, p. 721, and p. 864, n. 96.)—11. (I. l., v., 35, ed. Müller.)—12. (R. R., i., 11, 13.)—13. (vi., 9.)—14. (i., 4, 5.)

wooded mountain, in a spot supplied with running water, and not exposed to severe winds, nor to the effluvia of marshes, nor (by being close to a public road) to a too frequent influx of visitors. The villa attached to a large farm had two courts (*cohortes*, *hortes*, *cortes*).¹ At the entrance to the outer court was the abode of the *villicus*, that he might observe who went in and out, and over the door was the room of the *procurator*.² Near this, in as warm a spot as possible, was the kitchen, which, besides being used for the preparation of food, was the place where the slaves (*familia*) assembled after the labours of the day, and where they performed certain in-door work. Vitruvius places near the kitchen the baths, and the press (*torcular*) for wine and oil, but the latter, according to Columella, though it requires the warmth of the sun, should not be exposed to artificial heat. In the outer court were also the cellars for wine and oil (*cella vinaria et olearia*), which were placed on the level ground, and the granaries, which were in the upper stories of the farm-buildings, and carefully protected from damp, heat, and insects. These storerooms form the separate *villa fructuaria* of Columella; Varro places them in the *villa rustica*, but Vitruvius recommends that all produce which could be injured by fire should be stored without the villa.

In both courts were the chambers (*cellae*) of the slaves, fronting the south; but the *ergastulum* for those who were kept in chains (*vincti*) was under ground, being lighted by several high and narrow windows.

The inner court was occupied chiefly by the horses, cattle, and other livestock, and here were the stables and stalls (*bubilia*, *equilia*, *ovilia*).

A reservoir of water was made in the middle of each court, that in the outer court for soaking pulse and other vegetable produce, and that in the inner, which was supplied with fresh water by a spring, for the use of the cattle and poultry.

2. The *villa urbana* or *pseudo-urbana* was so called because its interior arrangements corresponded for the most part to those of a town-house. (*Vid. House*.) Vitruvius³ merely states that the description of the *atrium* will apply to the former also, except that in the town the atrium is placed close to the door; but in the country the peristyle comes first, and afterward the atrium, surrounded by paved porticoes, looking upon the palaestra and ambulation.

Our chief sources of information on this subject are two letters of Pliny, in one of which⁴ he describes his Laurentine villa, in the other⁵ his Tuscan, with a few allusions in one of Cicero's letters,⁶ and, as a most important illustration of these descriptions, the remains of a suburban villa at Pompeii.⁷

The clearest account is that given by Pliny in the first of the two letters mentioned above, from which, therefore, the following description is for the most part taken.

The villa was approached by an avenue of plane-trees leading to a portico, in front of which was a *xystrus* divided into flower-beds by borders of box. This *xystrus* formed a terrace, from which a grassy slope, ornamented with box-trees cut into the figures of animals, and forming two lines opposite to one another, descended till it was lost in the plain, which was covered with acanthus.⁸ Next to the portico was an atrium, smaller and plainer than the corresponding apartment in a town-house. In this respect Pliny's description is at variance with the rule of Vitruvius, and the villa at Pompeii also has no atrium. It would appear from Cicero⁹ that both ar-

rangements were common. Next to the atrium in Pliny's Laurentine villa was a small elliptic peristyle (*porticus in O litera similitudinem circumacta*, where, however, the readings D and Δ are also given instead of O). The intervals between the columns of this peristyle were closed with tale windows (*specularibus*: *vid. House*, p. 521), and the roof projected considerably, so that it formed an excellent retreat in unfavourable weather. The open space in the centre of this peristyle seems often to have been covered with moss and ornamented with a fountain. Opposite to the middle of this peristyle was a pleasant *cavadium*, and beyond it an elegant triclinium, standing out from the other buildings, with windows or glazed doors in the front and sides, which thus commanded a view of the grounds and of the surrounding country, while behind there was an uninterrupted view through the *cavadium*, peristyle, atrium, and portico into the *xystrus* and the open country beyond.

Such was the principal suite of apartments in Pliny's Laurentine villa. In the villa at Pompeii the arrangement is somewhat different. The entrance is in the street of the tombs. The portico leads through a small vestibule into a large square peristyle paved with *opus signinum*, and having an impluvium in the centre of its uncovered area. Beyond this is an open hall, resembling in form and position the *tablinum* in a town-house. Next is a long gallery extending almost across the whole width of the house, and beyond it is a large *cyziene oecus*, corresponding to the large triclinium in Pliny's villa. This room looks out upon a spacious court, which was, no doubt, a *xystrus* or garden, and which is surrounded on all sides by a colonnade supported by square pillars, the top of which forms a terrace. In the farthest side of this court is a gate leading out to the open country. As the ground slopes downward considerably from the front to the back of the villa, the terrace just spoken of is on a level with the *cyziene oecus*, the windows of which opened upon it; and beneath the *oecus* itself is a range of apartments on the level of the large court, which were probably used in summer on account of their coolness.

The other rooms were so arranged as to take advantage of the different seasons and of the surrounding scenery. Of these, however, there is only one which requires particular notice, namely, a state bedchamber, projecting from the other buildings in an elliptic or semicircular form, so as to admit the sun during its whole course. This apartment is mentioned by Pliny, and is also found in the Pompeian villa. In Pliny's Laurentine villa its wall was fitted up as a library.

The villa contained a set of baths, the general arrangement of which was similar to that of the public baths. (*Vid. Baths*.)

Attached to it were a garden, *ambulation*, *gestatio*, *hippodromus*, *sphaeristerium*, and, in short, all necessary arrangements for enjoying different kinds of exercise. (*Vid. Hortus, Gymnasium*.)

(Becker's *Gallus*, i., p. 258, Schneider's notes on Columella and Varro, and Gierig's on Pliny, contain many useful remarks.)

VILLA ANNA'LIS LEX. (*Vid. Aediles*, p. 25.)

VILLICUS, a slave who had the superintendence of the *villa rustica*, and of all the business of the farm except the cattle, which were under the care of the *magister pecoris*.¹ The duties of the *villicus* were to obey his master implicitly, and to govern the other slaves with moderation; never to leave the villa except to go to market; to have no intercourse with soothsayers; to take care of the cattle and the implements of husbandry; and to manage

1. (Varro, R. R., i., 2.)

all the operations of the farm.¹ His duties are described at great length by Columella,² and those of his wife (*villica*) by the same writer³ and by Cato.⁴

The word was also used to describe a person to whom the management of any business was intrusted. (See the passages quoted in Forcellini's Lexicon.)

VINALIA. There were two festivals of this name celebrated by the Romans: the *Vinalia urbana* or *priora*, and the *Vinalia rustica* or *altera*. The *vinalia urbana* were celebrated on the 23d of April (*IX. Calend. Mai.*). This festival answered to the Greek *πρωγία*, as on this occasion the wine-casks which had been filled the preceding autumn were opened for the first time, and the wine tasted.⁵ But before men actually tasted the new wine, a libation was offered to Jupiter,⁶ which was called *calpar*.⁷

The rustic *vinalia*, which fell on the 19th of August (*XIV. Calend. Sept.*), and was celebrated by the inhabitants of all Latium, was the day on which the vintage was opened. On this occasion the *flamen dialis* offered lambs to Jupiter, and while the flesh of the victims lay on the altar, he broke with his own hands a bunch of grapes from a vine, and by this act he, as it were, opened the vintage (*vindemiam auspicari*), and no must was allowed to be conveyed into the city until this solemnity was performed.⁸ This day was sacred to Jupiter, and Venus too appears to have had a share in it.¹⁰ An account of the story which was believed to have given rise to the celebration of this festival is given by Festus¹¹ and Ovid.¹²

VINDEMIALIS FERIA. (*Vid. FERIAE*, p. 437.)

VINDEX. (*Vid. ACTIO*, p. 18; *MANUS INJECTIO*.)

VINDICATIO. Actiones in rem were called vindicationes. Actiones in personam were called condictiones.¹³ Vindicationes, therefore, were actions about property and about jura in re.¹⁴ The distinction between vindicationes and condictiones was an essential distinction, which was not affected by the change in the form of procedure from the *legis actiones* to that of the *formulae*. The *legis actiones* fell into disuse,¹⁵ except in the case of *damnum infectum* and a *judicium centumvirale*, and from this time both vindicationes and condictiones were prosecuted by the *formulae*, which is described in a general way in the article *ACTIO*. The peculiar process of the *vindicatio* which belonged to the period of the *legis actiones* remains to be described.

The five modes of proceeding *lege*¹⁶ were *sacramento*, *per iudices postulationem*, *per condictionem*, *per manus iniectionem*, *per pignoris capionem*.

A man might proceed *sacramento* either in the case of an actio in personam or an actio in rem. If it was an actio in rem, that is, a vindicatio, movable things and moving things (*mobilia et moventia*) which could be brought before the praetor (*in jus*), were claimed before the praetor (*in iure vindicabantur*) thus: he who claimed the things as his property (*qui vindicabat*) held a rod in his hand, and, laying hold of the thing, it might be a slave or other thing, he said, "*Hunc ego hominem ex jure Quiritium meum esse aio secundum causam sicut dixi. Ecce tibi vindictam imposui*," and, saying this, he placed the rod on the thing. The other claimant (*adversarius*) did and said the same. This claiming of a thing as property by laying the hand upon it was in jure

manum conserere, a phrase as old as the Twelve Tables.¹ The praetor then said, "*Mittite ambo hominem*," and the claimants obeyed. Then he who had made the first vindicatio thus addressed his opponent: "*Postulo anne dicas qua ex causa vindicaveris*." The opponent replied: "*Jus peregi sicut vindictam imposui*." Then he who had made the first vindicatio proceeded to that part of the process called the *sacramentum*, which was in the form of a wager as to the right: he said, "*Quando tu injuria vindicavisti D aris sacramento te provooco*." The opponent replied by giving the similitur: "*Similiter ego te*." The rest of the process was the same as in the case of an actio in personam. But in the case of a vindicatio the praetor declared the vindiciae in favour of one of the parties, that is, in the mean time he established one of the parties as possessor, and compelled him to give security to his opponent for the thing in dispute and the mesne profits, or, as it was technically expressed, "*jubebat praedes adversario dare litis et vindiciarum*." The praetor also took security from both for the amount of the *sacramentum*; for the party who failed paid the amount of the *sacramentum* as a penalty (*poena nomine*), which penalty belonged to the state (*in publicum cedebat*).

The *poena* of the *sacramentum* was quingenaria, that is, quingenti asses in cases when the property in dispute was of the value of a thousand asses and upward; and in cases of smaller value it was fifty asses. This was a provision of the Twelve Tables; but if a man's freedom (*libertas*) was in issue, the *poena* was only fifty asses.

If the property claimed was a piece of land, the claimants appeared in jure, and challenged each other to go on the land in the presence of witnesses (*superstites*), when each made his claim. In the time of the Twelve Tables, says Gellius,² the magistratus who presided in the court accompanied the parties to the land in order to perfect the process in jure; but this mode of procedure, which might possibly do in very early times, must have become inconvenient. Accordingly, it became the practice for one of the claimants to go through the form of ejecting the other, which was called the *vis civilis*.⁴ The claimants took with them a clod of earth in jus where the process was completed. In course of time it became the practice to bring into court a clod of earth or a bit of a column, as a sign of the thing; and even in the case of movable objects, a part was often brought into court to represent the whole, and the vindicatio was made as if the whole thing was there. It seems that the process might also be begun by the parties performing the ceremony of the deductio on the ground before they came in jus, where, however, they performed the fiction of going to the premises and returning. The change in the form of procedure led to the phrase "*ex jure manum conserere*," which is explained thus: one party called the other out of the court (*ex jure*) "*ad consecrandam manum in rem de qua agebatur*."

When the *legis actiones* fell into disuse, the process of the vindicatio was altered, and became that of the sponsio. The term sponsio is best explained by giving the substance of a passage in Gaius.⁶ In the case of an actio in rem, a man might proceed either per formulam petitoriam, in which the intention of the plaintiff was that a certain thing was his property, or he might proceed per sponsionem, which did not contain such an intention. The defendant was challenged to a sponsio in such terms as these: "*Si homo quo de agitur ex jure Quiritium meus est sceleritios XXV. nummos dare spondes?*"

1 (Cato, R. R., 5, 142).—2. (xi, 1, and i, 8).—3. (xii, 1).—4. (c. 143).—5. (Plin., H. N., xviii, 69, § 3).—6. (Fest., s. v. Vinalia).—7. (Fest., s. v. Calpar).—8. (Varro, De Ling. Lat., v, p. 55, &c., Bip.).—9. (Plin., H. N., xviii, 69, § 4).—10. (Varro, l. c.—De Re Rust., i, 1.—Macrob., Sat., i, 4.—Ovid, Fast., i, 897, &c.).—11. (s. v. Rustica Vinalia).—12. (Fast., iv, 663, &c.—Compare Aurel. Vict., De Orig. Gent. Rom., 15).—13. (Gaius, iv, 5).—14. (Gaius, iv, 3).—15. (Gaius, iv, 31).—16. (Gaius, iv, 12).

1. (Gell., xx, 10).—2. (Festus, s. v.—Cic., Pro Murena, 12).—3. (xx, 10).—4. (Compare Gellius, xx, 10.—Cic., Pro Caelina, 1).—5. (Gell., xx, 10).—6. (iv, 91, &c.).

The intentio in the formula was, that if the slave belonged to the plaintiff, the sum of money contained in the sponsio ought to be paid to the plaintiff (*sponsiois summam actori dari debere*). The sponsio evidently took its name from the verb *spondeo*. If the plaintiff proved the slave to be his property, he was entitled to a judgment. Yet the sum of money was not paid, though it was the object of the intentio; for, says Gaius, "it is not penal, but præjudicial, and the sponsio is introduced merely as a means of trying the right to the property, and this explains why the defendant has no restitutio." The sponsio was said to be "*pro præde litis et vindictarum*," because it took the place of the prædium, which, when the legis actiones were in use, was given "*pro lite et vindictis*," that is, "*pro re et fructibus*" by the possessor to the plaintiff. (*Vid. PRÆJUDICIUM, PRÆS.*)

This sponsio præjudicialis was merely a technical mode of converting an actio in rem into an actio in personam, and we must suppose that there was some good reason for the practice. It might be conjectured that it was introduced in order to obviate the trouble and difficulties attendant on the old process of the vindicatio.

From the expression of Gaius, it appears that there was also a sponsio penal, that is, both the defendant made a sponsio and the plaintiff made a restitutio. Thus, in the case of "*certa pecunia credita*," the defendant's sponsio was made at the risk of losing the sum if he could not sustain his denial of the plaintiff's claim, and the plaintiff's restitutio was made at the like risk if he could not support his claim. The pœna of the sponsio and restitutio belonged to the successful party.¹ There was also a penal sponsio in the case of interdicts² and pecunia constituta. In the case of certa pecunia the sponsio was to the amount of one third of the sum demanded, which was called *legitima pars*.³ In the case of constituta pecunia the sponsio was to the amount of one half.⁴ These stipulations were fixed by law; in other cases they were fixed by the Edict.

These sponsiones were introduced probably partly with a view to check litigation, and partly with a view to give compensation to the party who ultimately obtained a verdict; for otherwise there do not appear in the Roman law to be any direct provisions as to the costs of suits. Thus Gaius⁵ enumerates four modes in which the actoris calumnia is checked: the calumniæ iudicium, contrarium iudicium, iurjurandum, and the restitutio. The restitutio, he says, "is allowed in certain cases; and, as in the contrarium iudicium, the plaintiff has in all cases judgment against him if he cannot sustain his case, and it matters not whether or not he knows that his claim was not good, so in all cases the plaintiff (that is, if he cannot sustain his case) is condemned in the penalty of the restitutio."

As to the form of the sponsio, the passage of Gaius already referred to is an example; and there is another in the oration of Cicero, *Pro Publ. Quintio*.⁶ The use of the word *si* or *ni* in the sponsio would depend on the fact which was affirmed, or, rather, on the mode of affirmation and the party affirming. Cicero⁷ alludes to the use of these words (*sive, nive*). Brissonius⁸ has collected instances of them.

The other mode of procedure in the case of vindicatio, that was in use after the legis actiones fell into disuse, was per formulam petitoriam, in which the plaintiff (*actor*) claimed the thing as his property (*intendit rem suam esse*). In this form of proceeding there was the stipulatio called *iudicatum*

solvi, by which the defendant engaged to obey the decree of the iudex.¹ This formula was adapted also to the cases of prætorian ownership and the actio publiciana.² In cases which were brought before the centumviri, it was the practice, at least in the imperial period, to come first before the prætor urbanus or peregrinus, in order that the matter might be put in the old form of the sacramentum.³

An hereditas was sued for like any other thing, either by the sacramentum, so long as it was in use, or the sponsio, or the petitoria formula.⁴

VINDICTÆ. (*Vid. VINDICATIO.*)

VINDICTA. (*Vid. MANUMISSIO, VINDICATIO.*)

VINDICTA. A class of actions in the Roman law have reference to vindicta as their object, which is thus expressed: *ad ultionem pertinet, in sola vindicta constitutum est, vindictam continet*.⁵ Some of these actions had for their object simply compensation, as the actio doli. Others had for their object to give the complainant something more (*pœna*) than the amount of his injury, as in the *furti actio*, and sometimes in addition to this compensation also, as in the *vi bonorum raptorum actio*. A third class of actions had for its immediate object money or property, but this was not the ultimate object, as in the cases already mentioned, but merely a means: the real object was vindicta. This vindicta consists in the re-establishment of a right which has been violated in the person of the complainant, in which case the individual discharges the office which the state discharges generally in matters of crime. Those actions of which vindicta is the object are distinguished from other actions by forming exceptions to the general rules as to the legal capacity of those who may institute them, such as a *filiusfamilias*, and one who has sustained a *capitis diminutio*.

The following are actions of this kind: 1. *Actio injuriarum*. When a *filiusfamilias* was injured, a wrong was done both to him and to his father. The injury done to the son is the only one that belongs to the head of vindicta. The father generally brought the action, for he could acquire through his son all rights of action. But the son could bring an action in his own name, with the permission of the prætor, if the father was absent, or was in any way prevented from bringing the action, and in some cases if the father refused to bring the action. The pecuniary damages which were the immediate object of the action belonged to the father, so that the son appeared in the double capacity of suing in his own name in respect of the vindicta, and as the representative of his father in respect of the damages. If the son was emancipated, the right of action passed to him, and was not destroyed by the *capitis diminutio*.

2. *Actio sepulchri violati*, which could be brought by the children of the deceased, even if they refused the hereditas, or by the heredes. The object was vindicta, which was effected by giving the plaintiff damages to the amount of the wrong (*quantum ob eam rem æquum videbitur, &c.*).⁶ The action was consequently in bonum et æquum concepta, and the right was not affected by a *capitis diminutio*. If those who had a right to bring the action neglected to do so, any person might bring the action; but in that case they were limited to 100 aurei by the Edict.

3. *Actio de effusis*. When a free person was injured by anything being poured or thrown from a house, he had an actio in bonum et æquum concepta, the ultimate object of which was vindicta.

4. An action for mischief done to a man by any

1. (Gaius, iv., 13.)—2. (Gaius, iv., 141, 165, &c.)—3. (Cic., *Pro Rosc. Com.*, 4, 5.)—4. (Gaius, iv., 171.)—5. (iv., 174.)—6. (8, 27.)—7. (*Pro Cecina*, 23.)—8. (*De Formulæ*, &c., v., 7, p. 348.)

1. (Gaius, iv., 91.)—2. (Gaius, iv., 34, 36.)—3. (Gaius, iv., 31, 95.—Gell., xx., 10.)—4. (Walter, *Gesch. des Röm. Rechts.*)—5. (Dig. 47, tit. 12, s. 6, 10; 29, tit. 2, s. 20, § 5.)—6. (Dig. 47, tit. 12, s. 3.)

dangerous animal belonging to another, when it happened through the want of proper caution on the part of the owner.¹

5. *Interdictum quod vi aut clam*. This is a plaint which could be instituted by a *filiusfamilias* in his own name, because the object was *vindicta*. The ground of this capacity of a *filiusfamilias* was an injury done to him personally by a person who acted in opposition to his remonstrance. If, for instance, the son inhabited a house belonging to his father or one hired from a stranger, and was disturbed in his enjoyment by some act of his neighbour, the *filiusfamilias* might have an action for the amount of the damage, but the pecuniary satisfaction would belong to the father, as in the case of the *actio injuriarum*. But the action was not in *bonum et æquum concepta*, since it had a definite object, which was either the restoration of things to their former condition, which might be immediately for the benefit of the *filiusfamilias*, or to ascertain the value of the wrong done (*quod interest*).

6. The action against a *libertus* in respect of an *in jus vocatio*. (*Vid. PATRONUS*.) If the *libertus* had proceeded against the son of his patron, and the father was absent, the son could institute the suit himself, as in the case of the *actio injuriarum*.

7. *Querela inofficiosi*. (*Vid. TESTAMENT*.)

8. *Actiones populares*, which are actions in which the plaintiff claims a sum of money, but not as a private individual: he comes forward as a kind of representative of the state. If the act complained of be such as affects the interests of individuals as such, they can bring an action in preference to any other person, and the action is not purely popular: to this class belong such actions as the *actio sepulchri violati*. But if there are no persons who are individually interested in the matter complained of, or none such bring an action, any person (*unus ex populo*) may bring the action, as the procurator of the state, and he is not bound to give the security which an ordinary procurator must give. A *filiusfamilias* can bring such action. By virtue of the *litis contestatio*, the action becomes the same as if it were founded on an obligation, and this right of action, as well as the money which may arise from it, is acquired by the *filiusfamilias* for his father. These actions being for fixed sums of money, are not in *bonum et æquum conceptæ*.

With the *populares actiones* may be classed, as belonging to the same kind, the *interdicta publica* or *popularia*, and that *novi operis nuntiatio* which is for the protection of *publicum jus*; with this distinction, that the proceedings have not for their object the recovery of a sum of money. But in the general capacity of all persons to bring such actions, independent of the usual rules as to legal capacity, all these modes of proceeding agree.²

VINEA, in its literal signification, is a bower formed of the branches of vines, and, from the protection which such a leafy roof affords, the name was applied by the Romans to a roof under which the besiegers of a town protected themselves against darts, stones, fire, and the like, which were thrown by the besieged upon the assailants. The description which Vegetius³ gives of such a machine perfectly agrees with what we know of it from the incidental mention by other writers. The whole machine formed a roof, resting upon posts eight feet in height. The roof itself was generally sixteen feet long and seven broad. The wooden frame was in most cases light, so that it could be carried by the soldiers; sometimes, however, when the purpose which it was to serve required great strength, it was heavy, and then the whole fabric probably was

moved by wheels attached to the posts. The roof was formed of planks and wickerwork, and the uppermost layer or layers consisted of raw hides or wet cloth, as a protection against fire, by which the besieged frequently destroyed the vineæ.¹ The sides of a vinea were likewise protected by wickerwork. Such machines were constructed in a safe place at some distance from the besieged town, and then carried or wheeled (*agere*) close to its walls. Here several of them were frequently joined together, so that a great number of soldiers might be employed under them. When vineæ had taken their place close to the walls, the soldiers began their operations, either by undermining the walls, and thus opening a breach, or by employing the battering-ram (*aries*²). In the time of Vegetius, the soldiers used to call these machines *causæ*.³

VINUM (*olvoç*). The general term for the fermented juice of the grape.

The native country of the vine was long a vexatæ quæstio among botanists, but, although many points still remain open for debate, it seems now to be generally acknowledged that it is indigenous throughout the whole of that vast tract which stretches southward from the woody mountains of Mazanderân on the Caspian to the shores of the Persian Gulf and the Indian Sea, and eastward through Khorasan and Cabul to the base of the Himalaya—the region to which history and philology alike point as the cradle of the human race. Hence, when we consider the extreme facility of the process in its most simple form, we need little wonder that the art of making wine should have been discovered at a very remote epoch.

In the earliest of profane writers, the cultivation of the grape is represented as familiar to the Heroic Greeks, some of his most beautiful and vivid pictures of rural life being closely connected with the toils of the vineyard. It is worth remarking, that the only wine upon whose excellence Homer dilates in a tone approaching to hyperbole is represented as having been produced on the coast of Thrace, the region from which poetry and civilization spread into Hellas, and the scene of several of the more remarkable exploits of Bacchus. Hence we might infer that the Pelasgians introduced the culture of the vine when they wandered westward across the Hellespont, and that, in like manner, it was conveyed to the valley of the Po, when, at a subsequent period, they made their way round the head of the Adriatic. It seems certain, from various legends, that wine was both rare and costly in the earlier ages of Italian and Roman history. Thus a tradition preserved by Varro⁴ told that, when Mezentius agreed to aid the Rutulians, he stipulated that the produce of the Latian vineyards should be his recompense. Romulus is said to have used milk only in his offerings to the gods;⁵ Numa, to check extravagance, prohibited the sprinkling of wine upon the funeral pyre, and, to stimulate the energies of the rustic population, he ordained that it should be held impious to offer a libation to the gods of wine which had flowed from an unpruned stock. So scarce was it at a much later period, that Papirius the dictator, when about to join battle with the Samnites, vowed to Jupiter a small cupful (*vini pocillum*) if he should gain the victory. That wine was racked off into amphoræ, and stored up in regular cellars as early as the era of the Gracchi, Pliny considers proved by the existence in his own day of the *Vinum Opimianum*, described hereafter. But even then no specific appellation was given to the produce of different localities, and

1. (Dig. 21, tit. 1, § 40-43.)—2. (Savigny, *System des heut. Rechts*, II., 121.)—3. (De Re Mil., iv., 15.)

1. (Liv., ii., 17.—Id., v., 7.—Id., xxi., 61.)—2. (Liv., xxi., 7, 8.)—3. (Lipsius, *Poliorect.*, i., dial. 7.)—4. (ap. Plin., H. N. xiv., 14.)—5. (Plin., l. c.)

the jar was marked with the name of the consul alone. For many years after this, foreign wines were considered far superior to native growths; and so precious were the Greek vintages esteemed in the times of Marius and Sulla, that a single draught only was offered to the guests at a banquet. The rapidity with which luxury spread in this matter is well illustrated by the saying of M. Varro, that Lucullus, when a boy, never saw an entertainment in his father's house, however splendid, at which Greek wine was handed round more than once, but when, in manhood, he returned from his Asiatic conquests, he bestowed on the people a largess of more than a hundred thousand cadi. Four different kinds of wine are said to have been presented for the first time at the feast given by Julius Cæsar in his third consulship (B.C. 46), these being Falernian, Chian, Lesbian, and Mamertine, and not until after this date were the merits of the numerous varieties, foreign and domestic, accurately known and fully appreciated. But during the reign of Augustus and his immediate successors the study of wines became a passion, and the most scrupulous care was bestowed upon every process connected with their production and preservation.¹ Pliny calculates that the number of wines in the whole world deserving to be accounted of high quality (*nobilia*) amounted to eighty, of which his own country could claim two thirds;² and in another passage³ he asserts that 195 distinct kinds might be reckoned up, and that, if all the varieties of these were to be included in the computation, the sum would be almost doubled.⁴

The process followed in wine-making was essentially the same among both the Greeks and the Romans. After the grapes had been gathered, they were first trodden with the feet, and afterward submitted to the action of the press. This part of the process of wine-making is described in the article *TORCULUM*.

The sweet, unfermented juice of the grape was termed *γλεύκος* by the Greeks and *mustum* by the Romans, the latter word being properly an adjective signifying *new* or *fresh*. Of this there were several kinds, distinguished according to the manner in which each was originally obtained and subsequently treated. That which flowed from the clusters, in consequence merely of their pressure upon each other before any force was applied, was known as *πρόχυμα*⁵ or *protorum*,⁶ and was reserved for manufacturing a particular species of rich wine described by Pliny,⁷ to which the inhabitants of Mytilene gave the name of *πρόδρομος* or *πρότροπος*.⁸ That which was obtained next, before the grapes had been fully trodden, was the *mustum livivum*, and was considered best for keeping.⁹ After the grapes had been fully trodden and pressed, the mass was taken out, the edges of the husks cut, and the whole again subjected to the press; the result was the *mustum tortivum* or *circumsitum*,¹⁰ which was set apart and used for inferior purposes.

A portion of the must was used at once, being drunk fresh after it had been clarified with vinegar.¹¹ When it was desired to preserve a quantity in the sweet state, an amphora was taken and coated with pitch within and without; it was filled with *mustum livivum*, and corked so as to be perfectly air-tight. It was then immersed in a tank of cold, fresh water, or buried in wet sand, and allowed to remain for six weeks or two months. The contents, after this process, were found to remain unchanged for a

year, and hence the name *αἰ γλεύκος*, i. e., *sempet mustum*.¹ A considerable quantity of must from the best and oldest vines was inspissated by boiling, being then distinguished by the Greeks under the general names of *ἐψημα* or *γλύσις*,² while the Latin writers have various terms, according to the extent to which the evaporation was carried. Thus, when the must was reduced to two thirds of its original volume, it became *carenum* (Pallad. Octobr., tit. xviii.); when one half had evaporated, *defrutum*,³ when two thirds, *sapa* (known also by the Greek names *siraum* and *hepsema*); but these words are frequently interchanged.⁴ Similar preparations are at the present time called in Italy *musto cotto* and *sapa*, and in France *sabe*. The process was carried on in large caldrons of lead (*vasa defrutaria*), iron or bronze being supposed to communicate a disagreeable flavour, over a slow fire of chips, on a night when there was no moon,⁵ the scum being carefully removed with leaves,⁶ and the liquid constantly stirred to prevent it from burning.⁷ These grape-jellies, for they were nothing else, were used extensively for giving body to poor wines and making them keep, and entered as ingredients into many drinks, such as the *burrancia potio*, so called from its red colour, which was formed by mixing *sapa* with milk,⁸ and others described hereafter.

The whole of the mustum not employed for some of the above purposes was conveyed from the *lacus* to the *cella vinaria* (*οἰνοθήκη*, *πιθῶν*), an apartment on the ground floor or a little below the surface, placed in such a situation as to secure a moderate and equable temperature, and at a distance from dunghills or any objects emitting a strong odour.¹¹ Here were the *dolia* (*πίθοι*), otherwise called *seria* or *cupæ*, long, bell-mouthed vessels of earthenware (hooped tubs of wood being employed in cold climates only¹²), very carefully formed of the best clay and lined with a coating of pitch (*πισσωθέντα*, *picata*), the operation (*πίσσωσις*, *picatio*) being usually performed while they were hot from the furnace. They were usually sunk (*depressa*, *defossa*, *demersa*) one half or two thirds in the ground; to the former depth if the wine to be contained was likely to prove strong, to the latter if weak; and attention was paid that they should repose upon a dry bed. They were, moreover, sprinkled with sea-water, fumigated with aromatic plants, and rubbed with their ashes, all rank smelling substances, such as rotten leather, garlic, cheese, and the like, being removed, lest they should impart a taint to the wine.¹³ In these *dolia* the process of fermentation took place. They were not filled quite full, in order that the scum only might boil over, and this was also cleared off at regular intervals by skimming, and carried to a distance. The fermentation usually lasted for about nine days, and as soon as it had subsided, and the *mustum* had become *vinum*, the *dolia* were closely covered, the upper portion of their interior surface as well as the lids (*opercula doliorum*) having been previously well rubbed over with a compound of defrutum, saffron, old pitch, mastic, and fir-cones.¹⁴ The *opercula* were taken off about once every thirty-six days, and oftener in hot weather, in order to cool and give air to the contents, to add any preparation that might be required to preserve

R., 107.—Varro, i., 65.—Colum., xii., 25, 30.)

them sound, and to remove any impurities that might be thrown up. Particular attention was paid to the peculiar light scum, the *ἀνθος οἴνου* (*flos vini*), which frequently appeared on the surface after a certain time, since it was supposed to afford indications by its colour and consistence of the quality of the wine. If red (*πορφύρεον*), broad, and soft, it was a sign that the wine was sound; if glutinous, it was a bad symptom; if black or yellow, it denoted want of body; if white, it was a proof that the wine would keep well (*μόνιμον*). Each time that the opercula were replaced, they were well rubbed with fir-cones.¹ (*Vid. THYRSUS.*)

The commoner sorts of wine were drunk direct from the dolium, and hence draught wine was called *vinum doliare* or *vinum de cupa*,² but the finer kinds, such as were yielded by choice localities, and possessed sufficient body to bear keeping, were drawn off (*diffundere, μεταγγίζειν*) into *amphoræ* or *lagenæ*, many fanciful precautions being observed in transferring them from the larger to the smaller vessel.³ These *amphoræ* were made of earthenware, and in later times occasionally of glass; they were stopped tight by a plug of wood or cork (*correx, suber*), which was rendered impervious to air by being smeared over with pitch, clay, or gypsum. On the outside the title of the wine was painted, the date of the vintage being marked by the names of the consuls then in office, or when the jars were of glass, little tickets (*pillaciæ, tesserae*) were suspended from them indicating these particulars.⁴ The *amphoræ* were then stored up in repositories (*apothecæ, s. horrea, tabulata*), completely distinct from the *cella vinaria*, and usually placed in the upper story of the house (whence *descende, testa, de-riperæ horreo*), for a reason explained afterward.

It is manifest that wines prepared and bottled, if we may use the phrase, in the manner described above, must have contained a great quantity of dregs and sediment, and it became absolutely necessary to separate these before it was drunk. This was sometimes effected by fining with yolks of eggs, those of pigeons being considered most appropriate by the fastidious,¹⁰ or with the whites whipped up with salt,¹¹ but more commonly by simply straining through small cup-like utensils of silver or bronze, perforated with numerous small holes, and distinguished by the various names *ὑλαστῆρ, τρύγοιτος, ἡβμός, colum vinarium*.¹² (*Vid. COLUM.*) Occasionally a piece of linen cloth (*σάκκος, saccus*) was placed over the *τρύγοιτος* or *colum*,¹³ and the wine (*σάκκιος, saccatus*) filtered through.¹⁴ The use of the *saccus* was considered objectionable for all delicate wines, since it was believed to injure,¹⁵ if not entirely to destroy their flavour, and in every instance to diminish the strength of the liquor. For this reason it was employed by the dissipated, in order that they might be able to swallow a greater quantity without becoming intoxicated.¹⁶ The double purpose of cooling and weakening was effectually accomplished by placing ice or snow in the filter, which under such circumstances became a *colum nivarium*¹⁷ or *saccus nivarius*.¹⁸

The wine procured from the *mustum tortivum*, which was always kept by itself, must have been thin and poor enough, but a still inferior beverage was made by pouring water upon the husks and stalks after they had been fully pressed, allowing

them to soak, pressing again, and fermenting the liquor thus obtained. This, which was given to the labourers in winter instead of wine, was the *θάμνα* or *δευτέριος* of the Greeks, the *lora* or *vinum operarium* of the Romans, and, according to Varro,¹ was, along with *sapa*, *defrutum*, and *passum*, the drink of elderly women.² The Greeks added the water in the proportion of one third of the must previously drawn off, and then boiled down the mixture until one third had evaporated; the Italians added the water in the proportion of one tenth of the must, and threw in the skimmings of the *defrutum* and the dregs of the *lacus*. Another drink of the same character was the *fecatum* from wine-lees, and we hear also of *vinum praliganeum* given to the vintagers, which appears to have been manufactured from inferior and half-ripe fruit gathered before the regular period.³ We find an analogy to the above processes in the manufacture of cider, the best being obtained from the first squeezing of the apples, and the worst from the pulp and skins macerated in water.

In all the best wines hitherto described, the grapes are supposed to have been gathered as soon as they were fully ripe, and fermentation to have run its full course. But a great variety of sweet wines were manufactured by checking the fermentation, or by partially drying the grapes, or by converting them completely into raisins. The *γλυκός οἶνος* of the Geoponic writers⁴ belongs to the first class. Must obtained in the ordinary manner was thrown into the *dolia*, which remained open for three days only, and were then partially covered for two more; a small aperture was left until the seventh day, when they were luted up. If the wine was wished to be still sweeter, the *dolia* were left open for five days, and then at once closed. The free admission of air being necessary for brisk fermentation, and this usually continuing for nine days, it is evident that it would proceed weakly and imperfectly under the above circumstances. For the *vinum dulce* of Columella,⁵ the grapes were to be dried in the sun for three days after they were gathered, and trodden on the fourth during the full fervour of the midday heat. The *mustum licivum* alone was to be used, and after the fermentation was finished, an ounce of well-kneaded iris-root was added to each 50 sextarii; the wine was racked off from the lees, and was found to be sweet, sound, and wholesome.⁶ For the *vinum diachylum*, more luscious still, the grapes were exposed to the sun for seven days upon hurdles.⁷

Lastly, *passum* or *raisin-wine* was made from grapes dried in the sun until they had lost half their weight; or they were plunged into boiling oil, which produced a similar effect; or the bunches, after they were ripe, were allowed to hang for some weeks upon the vine, the stalks being twisted, or an incision made into the pith of the bearing shoot, so as to put a stop to vegetation. The stalks and stones were removed, the raisins were steeped in must or good wine, and then trodden or subjected to the gentle action of the press. The quantity of juice which flowed forth was measured, and an equal quantity of water added to the pulpy residuum, which was again pressed, and the product employed for an inferior *passum* called *secundarium*, an expression exactly analogous to the *δευτέριος* mentioned above. The *passum* of Crete was most prized,⁸ and next in rank were those of Cilicia, Africa, Italy, and the neighbouring provinces. The kinds known as *Psythium* and *Melampsythium* possessed the pe-

cular flavour of the grape, and not that of wine; the *Scybillites* from Galatia and the *Haluntium* from Sicily, in like manner, tasted like must. The grapes most suitable for passum were those which ripened early, especially the varieties *Apiana* (called by the Greeks *Sticha*), *Scirpula*, and *Psithia*.¹

The Greeks recognised three colours in wines: red (*μέλας*), white, i. e., pale straw-colour (*λευκός*), and brown or amber-coloured (*κυβρός*).² Pliny distinguishes four: *albus*, answering to *λευκός*, *fulvus* to *κυβρός*, while *μέλας* is subdivided into *sanguineus* and *niger*, the former being doubtless applied to bright, glowing wines, like Tent and Burgundy, while the *niger* or *ater*³ would resemble Port. In the ordinary Greek authors the epithet *ἐρυθρός* is as common as *μέλας*, and will represent the *sanguineus*.

We have seen that wine intended for keeping was racked off from the dolia into amphoræ. When it was necessary, in the first instance, to transport it from one place to another, or when carried by travellers on a journey, it was contained in bags made of goatskin (*ἄσχοι, utres*), well pitched over, so as to make the seams perfectly tight. The cut below, from a bronze found at Herculaneum,⁴ exhibits a Silenus astride upon one of them. When the

quantity was large, a number of hides were sewed together, and the leathern tun thus constructed carried from place to place in a cart, as shown in the illustration on page 54.⁵

As the process of wine-making among the ancients was based upon no fixed principles, and for the most part conducted in a most unscientific manner, it was found necessary, except in the case of the finest varieties, to have recourse to various devices for preventing or correcting acidity, heightening the flavour, and increasing the durability of the second growths. This subject was reduced to a regular system by the Greeks: Pliny mentions four authors who had written formal treatises, and the authors of the Geoponic collection, together with Cato, Varro, and Columella, supply a multitude of precepts upon the same topic. The object in view was accomplished sometimes by merely mixing different kinds of wine together, but more frequently by throwing into the dolia or amphoræ various condiments or seasonings (*ἀρτύσεις, medicamina, conditurae*). When two wines were mixed together, those

were selected which possessed opposite good qualities and defects.¹

The principal substances employed as *conditurae* were, 1. sea-water; 2. turpentine, either pure or in the form of pitch (*pix*), tar (*pix liquida*), or resin (*resina*); 3. lime, in the form of gypsum, burned marble, or calcined shells; 4. inspissated must; 5. aromatic herbs, spices, and gums; and these were used either singly, or cooked up into a great variety of complicated confections.

We have already seen that it was customary to line the interior of both the dolia and the amphoræ with a coating of pitch; but, besides this, it was common to add this substance, or resin in powder, to the must during the fermentation, from a conviction that it not only rendered the wine more full bodied, but also communicated an agreeable bouquet together with a certain degree of raciness or piquancy.² Wine of this sort, however, when new (*novitium resinatum*), was accounted unwholesome, and apt to induce headache and giddiness. From this circumstance it was denominated *crapula*, and was itself found to be serviceable in checking the fermentation of the must when too violent.

It must be remembered, that when the vinous fermentation is not well regulated, it is apt to be renewed, in which case a fresh chemical change takes place, and the wine is converted into vinegar (*ὄξος, acetum*), and this acid, again, if exposed to the air, loses its properties, and becomes perfectly insipid, in which form it was called *rappa* by the Romans, who used the word figuratively for a worthless blockhead.

Now the great majority of inferior wines, being thin and watery, and containing little alcohol, are constantly liable to undergo these changes, and hence the disposition to acescence was closely watched, and combated as far as possible. With this view those substances were thrown into the dolia which it was known would neutralize any acid which might be formed, such as vegetable ashes which contain an alkali, gypsum, and pure lime, besides which we find a long list of articles, which must be regarded as preventives rather than correctives, such as the various preparations of turpentine already noticed, almonds, raisins steeped in must, parched salt, goats'-milk, cedar-cones, gall-nuts, blazing pine-torches, or red-hot irons quenched in the liquid, and a multitude of others.³ But, in addition to these, which are all harmless, we find some traces of the use of the highly-poisonous salts of lead for the same purpose,⁴ a practice which produced the most fatal consequences in the Middle Ages, and was prohibited by a series of the most stringent enactments.⁵

Defrutum also was employed to a great extent; but, being itself liable to turn sour, it was not used until its soundness had been tested by keeping it for a year. It was then introduced, either in its simple state, in the proportion of a sextarius to the amphora, that is, of 1 to 48, or it was combined with a great variety of aromatics, according to a prescription furnished by Columella.⁶ In this receipt, and others of the same kind, the various herbs were intended to give additional efficacy to the nourishing powers of the defrutum, and great pains were taken to prevent them from affecting the taste of the wine. But from a very early period it was customary to flavour wine highly by a large admixture of perfumes, plants, and spices. We find a spiced drink (*ἐξ ἀρωμάτων κατασκευαζόμενος*) noticed under the name of *τρίψμα* by Athenæus and the writers of the

new comedy,¹ and for the whole class Pliny has the general term *aromatiles*.²

There was another and very numerous family of wines, entitled *olvoi ὕψευοί*, into which drugs were introduced to produce medicinal effects. Such were *vinum marrubii* (horehound) for coughs; the *scillites* (squill-wine), to assist digestion, promote expectoration, and act as a gentle tonic; *absinthites* (wine of wormwood), corresponding to the modern *vermouth*; and, above all, the *myrtilites* (myrtleberry-wine), which possessed innumerable virtues.³

Pliny, under the head of *vina fictitia*, includes not only the *olvoi ὕψευοί*, but a vast number of others, bearing a strong analogy to our British home-made wines, such as cowslip, ginger, elderberry, and the like; and as we manufacture Champagne out of gooseberries, so the Italians had their imitations of the costly vintages of the most favoured Asiatic isles. These *vina fictitia* were, as may be imagined, almost countless, every variety of fruit, flower, vegetable, shrub, and perfume being put in requisition: figs, cornels, medlars, roses, asparagus, parsley, radishes, laurels, junipers, cassia, cinnamon, saffron, nard, malobathrum, afford but a small sample. It must be remarked that there was one material difference between the method followed by the Greeks and that adopted by the Romans in cooking these potions. The former included the drug, or whatever it might be, in a bag, which was suspended in a jar of wine, and allowed to remain as long as was thought necessary; the latter mixed the flavouring ingredient with the sweet must, and fermented them together, thus obtaining a much more powerful extract; and this is the plan pursued for British wines, except that we are obliged to substitute sugar and water for grape-juice.⁴

But not only were spices, fragrant roots, leaves, and gums steeped in wine or incorporated during fermentation, but even the precious perfumed essential oils (*unguenta*) were mixed with it before it was drunk. The Greeks were exceedingly partial to this kind of drink.⁵ We also learn from Elian⁶ that it was named *μυρρίνις*, which seems to be the same with the *μυρρίνης* of Poseidippus,⁷ the *μυρρίνη* of Hesychius, the *μυρρίνης* of Pollux,⁸ and the *murhina* of Plautus.⁹ The Romans were not slow to follow the example set them, valuing bitterness so highly, says Pliny,¹⁰ that they were resolved to enjoy costly perfumes with two senses, and hence the expressions "*Johata sitis*" in Martial,¹¹ and "*perfusa mero spumant unguenta Fulerno*" in Juvenal.¹²

In a more primitive age we detect the same fondness for the admixture of something extraneous. Hecamede, when preparing a draught for Nestor, fills his cup with Pramnian wine, over which she grates goat-milk cheese, and sprinkles the whole with flour,¹³ the latter being a common addition at a much later epoch.¹⁴ So, also, the draught administered by Circe consisted of wine, cheese, and honey; and, according to Theophrastus,¹⁵ the wine drunk in the prytaneum of the Thasians was rendered delicious by their throwing into the jar which contained it a cake of wheaten flour kneaded up with honey.¹⁶

This leads us on to notice the most generally popular of all these compound beverages, the *οἶνον ἐλὶ* of the Greeks, the *mulsum* of the Romans. This was of two kinds; in the one honey was mixed

with wine, in the other with must. The former was said to have been invented by the legendary hero Aristæus, the first cultivator of bees,¹ and was considered most perfect and palatable when made of some old, rough (*austerum*) wine, such as Massic or Falernian (although Horace objects to the latter for this purpose²), and new Attic honey.³ The proportions, as stated in the Geoponic collection were four, by measure, of wine to one of honey and various spices and perfumes, such as myrrh, cassia, costum, malobathrum, nard, and pepper, might be added. The second kind, the *σνόμελον* of Isidorus,⁴ according to the Greek authorities,⁵ was made of must evaporated to one half of its original bulk, Attic honey being added in the proportion of one to ten. This, therefore, was merely a very rich fruit sirup in no way allied to wine. The virtues of *mulsum* are detailed by Pliny;⁶ it was considered the most appropriate draught upon an empty stomach, and was therefore swallowed immediately before the regular business of a repast began,⁷ and hence the whet (*gustatio*) coming before the cup of *mulsum* was called the *promulsis*.⁸ We infer from Plautus⁹ that *mulsum* was given at a triumph by the emperor to his soldiers.

Mulsum (sc. *vinum*) or *οἶνον ἐλὶ* is perfectly distinct from *mulga* (sc. *aqua*). The latter, or *mead*, being made of honey and water mixed and fermented, is the *μέλικρατον* or *ὕδρον ἐλὶ* of the Greeks,¹⁰ although Pollux confounds¹¹ *μέλικρατον* with *οἶνον ἐλὶ*. Again, *ὕδρον ἐλὶ*¹² or *hydrumelum*¹³ was cider; *ὀξύμελι*¹⁴ was a compound of vinegar, honey, salt, and pure water, boiled together and kept for a long time; *ροδοῦ ἐλὶ* was a more confection of expressed juice of rose-leaves and honey.¹⁵

The ancients considered old wine not only more grateful to the palate, but also more wholesome and invigorating;¹⁶ and, curiously enough, Pliny seems to suppose that it grew more strong and fiery by age, in consequence of the dissipation of the watery particles.¹⁷ Generally speaking, the Greek wines do not seem to have required a long time to ripen. Nestor, in the *Odyssey*, indeed, drinks wine ten years old,¹⁸ and wine kept for sixteen years is incidentally mentioned by Athenæus;¹⁹ but the connoisseurs under the Empire pronounced that all transmarine wines arrived at a moderate degree of maturity (*ad vetustatem mediam*) in six or seven.²⁰ Many of the Italian varieties, however, as we shall see below, required to be kept for twenty or twenty-five years before they were drinkable (which is now considered ample for our strongest Ports), and even the humble growths of Sabinnum were stored up for from four to fifteen.²¹ Hence it became a matter of importance to hasten, if possible, the natural process. This was attempted in various ways, sometimes by elaborate condiments,²² sometimes by sinking vessels containing the must in the sea, by which an artificial mellowness was induced (*πραῶν vetustas*), and the wine, in consequence, termed *thalassites*²³; but more usually by the application of heat.²⁴ Thus it was customary to expose the amphoræ for some years to the full fervour of the sun's rays, or to construct the *apotheca* in such a manner as to be exposed to the hot air and smoke

of the bath furnaces,¹ and hence the name *fumaria* applied to such apartments, and the phrases *fumosos, fumum bibere, fuligine testæ* in reference to the wines.² If the operation was not conducted with care, and the amphoræ not stoppered down perfectly tight, a disagreeable effect would be produced on the contents; and it is in consequence of such carelessness that Martial pours forth his maledictions on the *fumaria* of Marseilles.³

The year B.C. 121 is said to have been a season singularly favourable to all the productions of the earth; from the great heat of the autumn, the wine was of an unprecedented quality, and remained long celebrated as the *vinum Opimianum*, from L. Opimius, the consul of that year, who slew Caius Gracchus. A great quantity had been treasured up, and sedulously preserved, so that samples were still in existence in the days of the elder Pliny, nearly two hundred years afterward. It was reduced, he says, to the consistence of rough honey, and, like other very old wines, so strong, and harsh, and bitter as to be undrinkable until largely diluted with water. Such wines, however, he adds, were useful for flavouring others when mixed in small quantities.

Our most direct information with regard to the price of common wine in Italy is derived from Columella,⁴ who reckons that the lowest market price of the most ordinary quality was 300 sesterces for 40 urnæ, that is, 15 sesterces for the amphora, or 6*d.* a gallon nearly. At a much earlier date, the triumph of L. Metellus during the first Punic war (B.C. 250), wine was sold at the rate of 8 asses the amphora;⁵ and in the year B.C. 89, the censors P. Licinius Crassus and L. Julius Caesar issued a proclamation that no one should sell Greek and Aminean wine at so high a rate as 8 asses the amphora; but this was probably intended as a prohibition to their being sold at all, in order to check the taste then beginning to display itself for foreign luxuries, for we find that at the same time they positively forbade the use of exotic unguents.⁶

The price of native wine at Athens was four drachmas for the metretes, that is, about 4*d.* the gallon, when necessities were dear, and Böckh considers that we may assume one half of this sum as the average of cheaper times. In fact, we find, in an agreement in Demosthenes,⁷ 300 casks (*κεράμια*) of Mendæan wine, which we know was used at the most sumptuous Macedonian entertainments,⁸ valued at 600 drachmas, which gives two drachmas for the metretes, or little more than 2*d.* a gallon; but still more astonishing is the marvellous cheapness of Lusitanian wine, of which more than ten gallons were sold for 3*d.* On the other hand, high prices were given freely for the varieties held in esteem, since as early as the time of Socrates a metretes of Chian sold for a mina.⁹

With respect to the way in which wine was drunk, and the customs observed by the Greeks and Romans at their drinking entertainments, the reader is referred to the article *SYMPOSIUM*.

It now remains for us to name the most esteemed wines, and to point out their localities; but our limits will allow us to enumerate none but the most celebrated. As far as those of Greece are concerned, our information is scanty, since in the older writers we find but a small number defined by specific appellations, the general term *oinos* usually standing alone without any distinguishing epithet. The wine of most early celebrity was that which

the minister of Apollo, Maron, who dwelt upon the skirts of Thracian Ismarus, gave to Ulysses. It was red (*έρρυθρόν*) and honey-sweet (*μελιηδέα*), so precious that it was unknown to all in the mansion save the wife of the priest and one trusty house-keeper; so strong that a single cup was mingled with twenty of water; so fragrant that even when thus diluted it diffused a divine and most tempting perfume.¹ Pliny² asserts that wine endowed with similar noble properties was produced in the same region in his own day. Homer mentions also, more than once,³ *Pramnian wine* (*οἶνος Πραμνεῖος*), an epithet which is variously interpreted by certain different writers.⁴ In after times a wine bearing the same name was produced in the island of Icaria, around the hill village of Latorea in the vicinity of Ephesus, in the neighbourhood of Symrna near the shrine of Cybele, and in Lesbos.⁵ The *Pramnian* of Icaria is characterized by Eparchides as dry (*σκληρός*), harsh (*ἀσθηρός*), astringent, and remarkably strong; qualities which, according to Aristophanes, rendered it particularly unpalatable to the Athenians.⁶

But the wines of greatest renown during the brilliant period of Grecian history and after the Roman conquest were grown in the islands of Thasos, Lesbos, Chios, and Cos, and in a few favoured spots on the opposite coast of Asia,⁷ such as the slopes of Mount Tmolus, the ridge which separates the valley of the Hermus from that of the Cayster,⁸ Mount Messogis, which divides the tributaries of the Cayster from those of the Meander,⁹ the volcanic region of the Catacecaumene,¹⁰ which still retains its fame,¹¹ the environs of Ephesus,¹² of Cnidus,¹³ of Miletus,¹⁴ and of Clazomenæ.¹⁵ Among these the first place seems to have been by general consent conceded to the *Chian*, of which the most delicious varieties were brought from the heights of Arisium, in the central parts,¹⁶ and from the promontory of Phænæ, at the southern extremity of the island.¹⁷ The *Thasian* and *Lesbian* occupied the second place, and the *Coan* disputed the palm with them.¹⁸ In Lesbos the most highly prized vineyards were around Mytilene¹⁹ and Methymna.²⁰ Pliny,²¹ who gives the preference over all others to the *Clazomenian*, says that the Lesbian had naturally a taste of salt water, while the epithet "innocens," applied by Horace, seems to point out that it was light and wholesome.

It may here be observed that there is no foundation whatever for the remark that the finest Greek wines, especially the products of the islands in the Ægean and Ionian seas, belonged, for the most part, to the luscious sweet class. The very reverse is proved by the epithets *ἀσθηρός, σκληρός, λεπτός*, and the like, applied to a great number, while *γλυκύς* and *γλυκάζων* are designations comparatively rare, except in the vague language of poetry. "*Vinum omne dulce minus odoratum*," says Pliny,²² and the ancients appear to have been fully sensible that sweet wines could not be swallowed either with pleasure or safety except in small quantities. The mistake has arisen from not perceiving that the expressions *οἶνος γλυκύς* and *οἶνος ἥδύς* are by no means necessarily synonymous. The former signifies wine *positively sweet*, the latter wine agreeable

to the taste from the absence of acidity, in most cases indicating nothing more than sound wine.

It is well known that all the most noble Italian wines, with a very few exceptions, were derived from Latium and Campania, and, for the most part, grew within a short distance of the sea. "The whole of these places," says Strabo,¹ when describing this coast, "yield excellent wine; among the most celebrated are the Cæcuban, the Fundanian, the Setinian, and so, also, are the Falernian, the Alban, and the Statinian." But the classification adopted by Pliny² will prove our best guide, and this we shall follow to a certain extent.

In the first rank, then, we must place the *Setinum*, which fairly deserves the title of *imperial*, since it was the chosen beverage of Augustus and most of his courtiers. It grew upon the hills of Setia, above Forum Appii, looking down upon the Pomptine marshes (*Pentula Pomptinas quæ spectat Setia campus*).³ Before the age of Augustus, the *Cæcubum* was the most prized of all. It grew in the poplar swamps bordering on the Gulf of Amyclæ, close to Fundi.⁴ In the time of Pliny its reputation was entirely gone, partly in consequence of the carelessness of the cultivators, and partly from its proper soil, originally a very limited space, having been cut up by the canal of Nero, extending from Baiæ to Ostia. Galen⁵ represents it as generous, full-bodied, and heady, not arriving at maturity until it had been kept for many years.⁶

The second rank was occupied by the *Falernum*, of which the *Faustianum* was the most choice variety, having gained its character from the care and skill exercised in the cultivation of the vines; but when Pliny wrote, it was beginning to fall in public estimation, in consequence of the growers being more solicitous about quantity than quality, just as was the case with Madeira a few years ago. The *Falernus ager*, concerning the precise limits of which there have been many controversies, commenced at the Pons Campanus, on the left hand of those journeying towards the Urbana Colonia of Sulla, the *Faustianus ager* at a village about six miles from Sinuessa, so that the whole district in question may be regarded as stretching from the Massic hills to the river Volturnus. Falernian became fit for drinking in ten years, and might be used until twenty years old, but when kept longer gave headaches, and proved injurious to the nervous system. Pliny distinguishes three kinds, the rough (*austerum*), the sweet (*dulce*), and the thin (*tenue*). Galen⁷ two only, the rough (*αυστηρόν*) and the sweetish (*γλυκάζων*). When the south wind prevailed during the season of the vintage, the wine was sweetish and darker in colour (*μελάντερος*), but if the grapes were gathered during weather of a different description, it was rough, and tawny or amber-coloured (*κίττός*). The ordinary appearance of Falernian, which has been made a theme of considerable discussion, seems to be determined by a passage in Pliny,⁸ in which we are informed that the finest amber was named *Falerna*. Others arranged the varieties differently: that which grew upon the hilltops they called *Cavicum*; that on the middle slopes, *Faustianum*; that on the plain, *Falernum*.⁹

In the third rank was the *Albanum*, from the Mons Albanus (*Mons Juleus*), of various kinds, very sweet (*prædulce*), sweetish (*γλυκάζων*), rough,¹¹

and sharp (*ὀμφακίς*), it was invigorating (*περίεργον*), and in perfection after being kept for fifteen years.¹ Here, too, we place the *Surrentinum*, from the promontory forming the southern horn of the Bay of Naples, which was not drinkable until it had been kept for five-and-twenty years; for, being destitute of richness (*ἀλιπής*), and very dry (*ψαφάρος*), it required a long time to ripen, but was strongly recommended to convalescents, on account of its thinness and wholesomeness. Galen, however, was of opinion that it agreed with those only who were accustomed to use it constantly; Tiberius was wont to say that the physicians had conspired to dignify what was only *generous vinegar*; while his successor Caligula styled it *nobilis nappa*.² Of equal reputation were the *Massicum*, from the hills which formed the boundary between Latium and Campania, although somewhat harsh, as would seem from the precautions recommended by the epicure in Horace,³ and the *Gauranum*, from the ridge above Baiæ and Puteoli, produced in small quantity, but of very high quality, full bodied (*εὐτρονός*), and thick (*παχύς*).⁴ In the same class are to be included the *Calenum* from Cales, and the *Fundanum* from Fundi. Both had formerly held a higher place; "but vineyards," moralizes Pliny, "as well as states, have their periods of rise, of glory, and of fall." The *Calenum* was light (*κοῦφος*), and better for the stomach than Falernian; the *Fundanum* was full bodied (*εὐτρονός*) and nourishing, but apt to attack both stomach and head, therefore little sought after at banquets.⁵ This list is closed by the *Veliterninum*, *Privernatinum*, and *Signinum*, from Velitra, Privernum, and Signia, towns on the Volscian hills; the first was a sound wine, but had this peculiarity, that it always tasted as if mixed with some foreign substance; the second was thin and pleasant; the last was looked upon only in the light of a medicine, valuable for its astringent qualities.⁶ We may safely bring in one more, the *Formianum*, from the Gulf of Caieta (*Laestrygonia Bacchus in amphora*), associated by Horace with the Cæcuban, Falernian, and Calenian,⁷ and compared by Galen⁸ to the Privernatinum and Rheginum, but richer (*λιπαρώτερος*), and ripening quickly.

The fourth rank contained the *Mamertinum*, from the neighbourhood of Messina, first brought into fashion by Julius Cæsar. The finest, called *Potalanum* (*Πωταλινόν*), from the fields nearest to the mainland, was sound (*ῥόδύς*), light, and, at the same time, not without body. The *Tauromenitanum* was frequently substituted fraudulently for the Mamertinum, which it resembled.¹¹

Of the wines in Southern Gaul, that of *Belerræ* alone bore a high character. The rest were looked upon with suspicion, in consequence of the notorious frauds of the dealers in the province, who carried on the business of adulteration to a great extent, and did not scruple to have recourse to noxious drugs. Among other things, it was known that they purchased aloes to heighten the flavour and improve the colour of their merchandise, and conducted the process of artificial ripening so unskillfully as to impart a taste of smoke, which called forth, as we have seen above, the malediction of Martial on the fumaria of Marseilles.¹²

The produce of the Balearic Isles was compared

to the first growths of Italy, and the same praise was shared by the vineyards of *Tarraco* and *Lauron*, while those of the *Laletani* were not so much famed for the quality as for the abundance of their supply.¹

Returning to the East, several districts of Pontus, Paphlagonia, and Bithynia, Lamspacus on the Hellespont, Telmessus in Caria, Cyprus, Tripolis, Berytus, and Tyre, all claimed distinction, and, above all, the *Chalybonium*, originally from Beræa, but afterward grown in the neighbourhood of Damascus also, was the chosen and only drink of the Great King,² to which we may join the *Babylonium*, called nectar by Chæreus,³ and the *Búblinos* from Phœnicia, which found many admirers.⁴ The last is spoken of elsewhere as Thracian, or Grecian, or Sicilian, which may have arisen from the same grape having been disseminated through these countries.⁵

Passing on, in the last place, to Egypt, where, according to Hellanicus, the vine was first discovered, the *Mareoticum*, from near Alexandria, demands our attention. It is highly extolled by Athenæus, being white, sweet, fragrant, light (*λεπτός*), circulating quickly through the frame, and not flying to the head; but superior even to this was the *Taniticum*, so named from a long, narrow, sandy ridge (*τανία*) near the western extremity of the Delta; it was aromatic, slightly astringent, and of an oily consistency, which disappeared when it was mixed with water: besides these, we hear of the *Sebennyticum*, and the wine of Antylla, a town not far from Alexandria. Advancing up the valley, the wine of the Thebais, and especially of Coptos, was so thin and easily thrown off that it could be given without injury to fever patients; and ascending through Nubia to the confluence of the Nile with the Astapus, we reach *Meerö*, whose wine has been immortalized by Lucan.⁶ Martial appears to have held them all very cheap, since he pronounces the vinegar of Egypt better than its wine.⁷

We read of several wines which received their designation, not from the region to which they belonged, but from the particular kind of grape from which they were made, or from some circumstance connected with their history or qualities. Names belonging to the former class were, in all likelihood, bestowed before the most favoured districts were generally known, and before the effects produced upon the vine by change of soil and climate had been accurately observed and studied. After these matters were better understood, habit and mercantile usage would tend to perpetuate the ancient appellation. Thus, down to a late period, we hear of the *Amineum* (*Ἀμινάτος οἶνος*), from the *Aminea Vitis*, which held the first place among vines, and embraced many varieties, carefully discriminated and cultivated according to different methods.⁸ It was of Grecian origin, having been conveyed by a Thesalian tribe to Italy (a story which would seem to refer to some Pelasgian migration), and reared chiefly in Campania around Naples, and in the Falernus ager. Its characteristic excellence was the great body and consequent durability of its wine (*Firmissima vina*⁹). So, in like manner, the *ψιδιος οἶνος*,¹⁰ from the *ψιδία ἄμπελος*,¹¹ which Virgil tells us¹² was particularly suitable for *passum*, and the *καρνιας* (smoke-wine) of Plato the comic poet,¹³ pre-

pared in greatest perfection near Beneventum, from the *κάμπιος ἄμπελος*, so named in consequence of the clusters being neither white nor black, but of an intermediate dusky or smoky hue.¹

On the other hand, the *Σαπρία*, on whose divine fragrance Hermippus descants in such glowing language,² is simply some rich wine of great age, "toothless, and sere, and wondrous old" (*δδόντας οὐκ ἔχω, ῥήη σαπρὸς . . . γέρον γε δαμονίως*).³ The origin of the title *ἰνθοσμία* is somewhat more doubtful: some will have it to denote wine from a sweet-smelling spot;⁴ others more reasonably refer it to the "bouquet" of the wine itself;⁵ according to Phanias of Eresus, in one passage, it was a compound formed by adding one part of seawater to fifty of must, although in another place he seems to say that it was wine obtained from grapes gathered before they were ripe, in which case it might resemble Champagne.⁶

Those who desire more minute details upon this very extensive subject may consult the Geoponic Collection, books iii. to viii. inclusive; the whole of the 14th book of Pliny's Natural History, together with the first thirty chapters of the 23d; the 12th book of Columella, with the commentary of Schneider and others; the 2d book of Virgil's Georgics, with the remarks of Heyne, Voss, and the old grammarians; Galen, i., 9, and xii., 4; Pol-lux, vi., et seq.; Athenæus, lib. i. and lib. x.; besides which, there are a multitude of passages in other parts of the above authors, in Cato, Varro, and in the classics generally, which bear more or less upon these topics.

Of modern writers we may notice particularly, Prosper Rendella, *Tractatus de Vine, Vindemia et Vitis*, Venet., 1629.—Galeatius Landrinus, *Quæstio de Mixtione Vini et Aquæ*, Ferrar., 1593.—Andreas Baccius, *De Naturali Vinorum Historia*, &c., Rom., 1596.—*De Conviviis Antiquorum*, &c., Gronov. Thes. Græc. Antiq.—Sir Edward Barry, *Observations on the Wines of the Ancients*, Lond., 1775.—Henderson, *History of Ancient and Modern Wines*, Lond., 1824. Some of the most important facts are presented in a condensed form in Becker's *Gallies*, vol. ii., p. 163-176, and p. 238-241, and *Chari-kles*, i., 456, seq.

VIOCURI. (*Vid.* QUATUORVIRI VIALES.)

*VIOLA (*ῥοή*), the Violet. (*Vid.* ION.)

VIRGA, dim. VIRGULA (*βάβδος*), a Rod or Wand. This was in many cases the emblem of a certain rank or office; being carried, for example, by the Sali (*vid.* ANCILE), by a judge or civil officer (see woodcut, p. 61), a herald (*vid.* CADUCEUS), and by the *trichinarcha* (*vid.* TRICLINUM), or any other person who had to exercise authority over slaves.⁸ The use of the rod (*βάβδις*) in the punishment of Roman citizens was abolished by the *lex Porcia* (p. 585). In the fasces a number of rods were bound together.

A rod was used to thrash the smaller kinds of grain, such as cummin.¹⁰ (*Vid.* FLAGRUM.)

The wand was also the common instrument of magical display, as in the hand of Circe¹¹ and of Minerva.¹² To do anything *virgula divina* was to do it by magic.¹³ The stripes of cloth were called *virgæ*.¹⁴ (*Vid.* PALLIUM, p. 718; TELA, p. 955.)

VIRGINES VESTALES. (*Vid.* **VESTALES VIRGINES.**)

VIRIDARIUM. (*Vid.* **HORTUS**, p. 511.)

VIS. Leges were passed at Rome for the purpose of preventing acts of violence. The *lex Plotia* or *Plautia* was enacted against those who occupied public places and carried arms.¹ The *lex* proposed by the consul Q. Catulus on this subject, with the assistance of *Plotius tribunus*, appears to be the *lex Plotia*.² There was a *lex Julia* of the dictator Cæsar on this subject, which imposed the penalty of exile.³ Two *Julia* leges were passed as to this matter in the time of Augustus, which were respectively entitled *De Vi Publica* and *De Vi Privata*.⁴ The *lex De Vi Publica* did not apply, as the title might seem to import, exclusively to acts against the public peace, and it is not possible to describe it very accurately except by enumerating its chief provisions. The collecting of arms (*arma, tela*) in a house (*domus*) or in a villa (*agrove in villa*), except for the purpose of hunting, or going a journey or a voyage, was in itself a violation of the *lex*. The signification of the word *tela* in this *lex* was very extensive. The punishment for the violation of this *lex* was *aquæ et ignis interdictio*, except in the case of attacking and plundering houses or villas with an armed band, in which case the punishment was death; and the penalty was the same for carrying off a woman, married or unmarried. The cases enumerated in the Digest as falling within the penalties of the *lex Julia De Vi Privata* are cases where the act was of less atrocity; for instance, if a man got a number of men together for a riot, which ended in the beating of a person, but not in his death, he came within the penalties of the *lex De Vi Privata*. It was also a case of *vis privata* when persons combined to prevent another being brought before the prætor. The *senatus consultum Volusianum* extended the penalties of the *lex* to those who maintained another in his suit with the view of sharing any advantage that might result from it. The penalties of this *lex* were the loss of a third part of the offender's property; and he was also declared to be incapable of being a senator or decurio, or a *judez*: by a *senatus consultum*, the name of which is not given, he was incapacitated from enjoying any honour, *quasi infamis*.

VIS ET VIS ARMATA. There was an *interdict De Vi et Vi Armata*, which applied to the case of a man who was forcibly ejected from the possession of a piece of ground or edifice (*qui vi dejectus est*). The object of the *interdict* was to restore the party ejected to possession.⁵ (*Vid.* **INTERDICTUM**.)

VISCERATIO. (*Vid.* **FUNUS**, p. 462.)

***VISCUM** (ἰσός), the Mistletoe. (*Vid.* **IXOS**.)

VITIS. (*Vid.* **CENTURIO**.)

***VITIS** (ἄμπελος), the Vine. "According to Sprengel, the ἄμπελος ἀγρία of Dioscorides is the *Taurus communis*; the λευκή, the *Bryonia dioica*; and the μίλαινα, the *Bryonia alba*. In this account of them he copies from Dodonæus. Stackhouse marks the first as the *Vaccinium Vitis Idæa*; but Schneider doubts whether either of the plants referred to by Sprengel and Stackhouse apply to the description of it given by Theophrastus. Dierbach marks the ἀγρία as being either the *Bryonia dioica* or *Cretica*. The ἄμπελος οἰνοπόρος is the *Vitis vinifera*, L." (*Vid.* **VINUM**, at the commencement of the article.)⁶

VITRUM (ὑάλος), Glass. A singular amount of ignorance and skepticism long prevailed with regard to the knowledge possessed by the ancients in

the art of glass-making. Some asserted that it was to be regarded as exclusively a modern invention, while others, unable altogether to resist the mass of evidence to the contrary, contented themselves with believing that the substance was known only in its coarsest and rudest form. It is now clearly demonstrated to have been in common use at a very remote epoch. Various specimens still in existence prove that the manufacture had in some branches reached a point of perfection to which recent skill has not yet been able to attain; and, although we may not feel disposed to go so far as Winckelmann,¹ who contends that it was used more generally, and for a greater variety of purposes, in the old world than among ourselves, yet, when we examine the numerous collections arranged in all great public museums, we must feel convinced that it was employed as an ordinary material for all manner of domestic utensils by the Egyptians, Greeks, and Romans.

We find the process of glass-blowing distinctly represented in the paintings of Beni Hassan, which, if any faith can be reposed in the interpretation of hieroglyphics according to the Phonetic system, were executed during the reign of Osirtasen the First, the contemporary of Joseph, and his immediate successors, while a glass bead has been found at Thebes bearing the name of a monarch who lived 3300 years ago, about the time of the Jewish Exodus. Vases also, wine-bottles, drinking-cups, bugles, and a multitude of other objects, have been discovered in sepulchres and attached to mummies both in Upper and Lower Egypt; and, although in most cases no precise date can be affixed to these relics, many of them are referred by the most competent judges to a very early period.²

A story has been preserved by Pliny³ that glass was first discovered accidentally by some merchants, who, having landed on the Syrian coast at the mouth of the river Belus, and being unable to find stones to support their cooking-pots, fetched for this purpose from their ship some of the lumps of nitre which composed the cargo. This being fused by the heat of the fire, united with the sand upon which it rested, and formed a stream of vitrified matter. No conclusion can be drawn from this tale, even if true, in consequence of its vagueness; but it originated in the fact recorded by Strabo⁴ and Josephus,⁵ that the sand of the district in question was esteemed peculiarly suitable for glass-making, and exported in great quantities to the workshops of Sidon and Alexandria, long the most famous in the ancient world. (See Hamberger and Michaelis on the Glass of the Hebrews and Phœnicians, *Commentar. Soc. Gott.*, tom. iv.—Heeren, *Ideen*, I., ii., p. 94.) Alexandria sustained its reputation for many centuries; Rome derived a great portion of its supplies from this source, and as late as the reign of Aurelius we find the manufacture still flourishing.⁶

There is some difficulty in deciding by what Greek author glass is first mentioned, because the term ὑάλος, like the Hebrew word used in the book of Job,⁷ and translated in the LXX. by ὑάλος, unquestionably denotes not only artificial glass, but rock-crystal, or, indeed, any transparent stone or stone-like substance.⁸ Thus the ὑέλκος of Herodotus,⁹ in which the Ethiopians encased the bodies of their dead, cannot be glass, although understood in this sense by Ctesias and Diodorus,¹⁰ for we are ex-

1. (i., c. 2, § 20).—2. (Wilkinson, *Anc. Egyptians*, vol. iii., p. 88, &c.).—3. (II. N., xxxvi., 65.).—4. (xvi., p. 758.).—5. (B. J., ii., 9.).—6. (Cic., *Pro Rabir. pressly told that it was dug in abundance out of the earth; and hence commentators have conjectured that rock-crystal, or rock-salt, or amber, or Oriental alabaster, or some bituminous or gummy product might be indicated. But when the same historian, in his account of sacred crocodiles,¹ states that they were decorated with earrings made of melted stone (*ἀρτήματά τε λίθινα χυτὰ καὶ χρύσεια ἐς τὰ ὦτα ἐνθέντες*), we may safely conclude that he intends to describe some vitreous ornament for which he knew no appropriate name. The *σφραγὶς ὑαλίνῃ* and *σφραγίδε ὑαλίνα* of an Athenian inscription referred to B.C. 398,² together with the passage in Aristophanes,³ where the envoy boasts that he had been drinking with the great king "*ἐξ ὑαλίνων ἐκπομάτων*," decide nothing, especially since in another comedy⁴ Strepsiades describes a *ὑαλος*, or burning-glass, as a transparent stone sold in the shops of apothecaries, and we know that any solid diaphanous substance ground into the form of a lens would produce the effect. Setting aside the two problems with regard to glass, attributed to Aristotle, as confessedly spurious, we at length find a satisfactory testimony in the works of his pupil and successor Theophrastus, who notices the circumstance alluded to above of the fitness of the sand at the mouth of the river Belus for the fabrication of glass.

Among the Latin writers Lucretius appears to be the first in whom the word *vitrum* occurs;⁵ but it must have been well known to his countrymen long before, for Cicero names it, along with paper and linen, as a common article of merchandise brought from Egypt.⁶ Scaurus, in his ædileship (B.C. 58), made a display of it such as was never witnessed even in after-times; for the *scena* of his gorgeous theatre was divided into three tiers, of which the under portion was of marble, the upper of gilded wood, and the middle compartment of glass.⁷ In the poets of the Augustan age it is constantly introduced, both directly and in similes, and in such terms as to prove that it was an object with which every one must be familiar.⁸ Strabo declares that in his day a small drinking-cup of glass might be purchased at Rome for half an as;⁹ and so common was it in the time of Juvenal and Martial, that old men and women made a livelihood by trucking sulphur matches for broken fragments.¹⁰ When Pliny wrote, manufactories had been established not only in Italy, but in Spain and Gaul also, and glass drinking-cups had entirely superseded those of gold and silver;¹¹ and in the reign of Alexander Severus we find *vitrearii* ranked along with curriers, coachmakers, goldsmiths, silversmiths, and other ordinary artificers whom the emperor taxed to raise money for his thermæ.¹²

The numerous specimens transmitted to us prove that the ancients were well acquainted with the art of imparting a great variety of colours to their glass; they were probably less successful in their attempts to render it perfectly pure and free from all colour, since we are told by Pliny that it was considered most valuable in this state. It was wrought according to the different methods now practised, being fashioned into the required shape by the blowpipe, *cut*, as we term it, although *ground* (*teritur*) is a more accurate phrase, upon a wheel, and engraved with a sharp tool like silver ("*aliud latu figuratur, aliud torno teritur, aliud argenti modo*

cælatur"). Doubts have been expressed touching the accuracy of the last part of this statement; but, since we have the most positive evidence that the diamond (*adamas*) was employed by engravers of gems,² and might therefore have been applied with still greater facility to scratching the surface of glass, there is no necessity for supposing that Pliny was not himself aware of what he meant to say, nor for twisting his words into meanings which they cannot legitimately assume, especially since hieroglyphics and various other devices are now to be seen on Egyptian vases and trinkets which have been engraved by some such process.³ The *diatreta* of Martial⁴ were glass cups cut or engraved according to one or other of the above methods. The process was difficult, and accidents occurred so frequently⁶ that the jurists found it necessary to define accurately the circumstances under which the workman became liable for the value of the vessel destroyed.⁶ The art of etching upon glass, now so common, was entirely unknown, since it depends upon the properties of fluoric acid, a chemical discovery of the last century.

We may now briefly enumerate the chief uses to which glass was applied.

1. Bottles, vases, cups, and cinerary urns. A great number of these may be seen in the British Museum and all the principal Continental cabinets, but especially in the Museo Borbonico at Naples, which contains the spoils of Herculaneum and Pompeii, and includes upward of 2400 specimens of ancient glass. These sufficiently prove the taste, ingenuity, and consummate skill lavished upon such labours; many which have been shaped by the blowpipe only are remarkable for their graceful form and brilliant colours, while others are of the most delicate and complicated workmanship. A very remarkable object belonging to the last class, the property of the Trivulsi family, is described in the notes to Winckelmann,⁷ and figured here. It is

a glass cup contained within a sort of network also of glass, to which it is attached by a series of short and very fine glass props placed at equal distances from each other. Round the rim are several letters connected with the cup in the same manner as the network, and forming the words *BIBE VIVAS MULTOS ANNOS*. The characters of the inscription are green, the network is blue, the cup itself resembles opal, shades of red, white, yellow, and blue predominating in turn, according to the angle at which the light falls upon it. It was at first believed that this effect was the result of long interment beneath the ground; but it is much more likely to have been produced by the artist, for its corre-

1. (ii., 69.)—2. (Böckh, Corp. Inscript., n. 150, § 50.)—3. (Achara, 74.)—4. (Nub., 737.)—5. (iv., 604; vi., 991.)—6. (Pro Rab. Post., 14.)—7. (Plin., H. N., xxxvi., 34, § 7.)—8. 1. (Plin., H. N., xxxvi., 66.)—2. (Plin., H. N., xxxvii., 15.—Solin., 52.—Isidor., xvi., 13, 3.)—3. (Wilkinson, vol. iii., p. 105.)—4. (xii., 70.)—5. (Mart., xiv., 115.)—6. (Dig. 9, tit. 2, s. 27, § 29.)—7. (i., c. 2, § 24.)

sponds precisely to the account given of two precious cups presented by an Egyptian priest to the Emperor Adrian, and characterized as *calices allascentes versicolore*.¹ Neither the letters nor the network have been soldered to the cup, but the whole has been cut out of a solid mass after the manner of a cameo, the marks of the wheel being still visible on the little props, which are more or less angular, according as the instrument was able to reach them completely or not. But the great triumph of ancient genius in this department is the celebrated Portland Vase, formerly known as the Barberini Vase, which is now in the British Museum. It was found about three hundred years ago, at a short distance from Rome, in a marble coffin, within a sepulchral vault, pronounced, upon very imperfect evidence, to have been the tomb of Alexander Severus. The extreme beauty of this urn led Montfaucon and other antiquaries to mistake it for a real sardonyx. Upon more accurate examination, it was ascertained to be composed of dark blue glass, of a very rich tint, on the surface of which are delineated in relief several minute and elaborately wrought figures of opaque white enamel. It has been determined by persons of the greatest practical experience, that these figures must have been moulded separately, and afterward fixed to the blue surface by a partial fusion; but the union has been effected with such extraordinary care and dexterity, that no trace of the junction can be observed, nor have the most delicate lines received the slightest injury. With such samples before us, we need not wonder that in the time of Nero a pair of moderate-sized glass cups with handles (*piroti*) sometimes cost fifty pounds (*H.S. sex milibus*).² For a full description of the Portland Vase, see the eighth volume of the *Archæologia*.

2. Glass pastes presenting fac-similes either in relief or intaglio of engraved precious stones. In this way have been preserved exact copies of many beautiful gems, of which the originals no longer exist, as may be seen from the catalogues of Stosch, of Tassie, of the Orleans collection, and from similar publications. These were in demand for the rings of such persons as were not wealthy enough to purchase real stones, as we perceive from the phrase "*vitreis gemmis ex vulgi annulis*."³ Large medallions also of this kind are still preserved, and bas-reliefs of considerable magnitude.⁴

3. Closely allied to the preceding were imitations of coloured precious stones, such as the carbuncle, the sapphire, the amethyst, and, above all, the emerald. These counterfeits were executed with such fidelity, that detection was extremely difficult, and great profits were realized by dishonest dealers, who entrapped the unwary.⁵ That such frauds were practised even upon the most exalted in station, is seen from the anecdote given by Trebellius Pollio of the whimsical vengeance taken by Gallienus⁶ on a rogue who had cheated him in this way, and collections are to be seen at Rome of pieces of coloured glass which were evidently once worn as jewels, from which they cannot be distinguished by the eye.⁷

4. One very elegant application of glass deserves to be particularly noticed. A number of fine stalks of glass of different colours were placed vertically, and arranged in such a manner as to depict upon the upper surface some figure or pattern, upon the principle of a minute mosaic. The filaments thus

combined were then subjected to such a degree of heat as would suffice to soften without melting them, and were thus cemented together into a solid mass. It is evident that the picture brought out upon the upper surface would extend down through the whole of the little columns thus formed, and hence, if it was cut into thin slices at right angles to the direction of the fibres, each of these sections would upon both sides represent the design, which would thus be multiplied to an extent in proportion to the total length of the glass threads. Two beautiful fragments, evidently constructed in this way, are accurately commented upon by Winckelmann,¹ and another, recently brought from Egypt, is shown on the frontispiece to the third volume of Wilkinson's work. Many mosaic pavements and pictures (*opus musivum*) belong to this head, since the cubes were frequently composed of opaque glass as well as marble; but these have been already discussed in p. 715 of this work.

5. Thick sheets of glass of various colours appear to have been laid down for paving floors, and to have been attached as a lining to the walls and ceilings of apartments in dwelling-houses, just as scagliuola is frequently employed in Italy, and occasionally in our own country also. Rooms fitted up in this way were called *vitrea camera*, and the panels *vitrea quadratura*. Such was the kind of decoration introduced by Scaurus for the scene of his theatre, not columns nor pillars of glass, as some, nor bas-reliefs, as others have imagined.²

6. The question whether glass windows were known to the ancients has, after much discussion, been set at rest by the excavation at Pompeii; for not only have many fragments of flat glass been disinterred from time to time, but in the tepidarium of the public baths a bronze lattice came to light, with some of the panes still inserted in the frame, so as to determine at once not only their existence, but the mode in which they were secured and arranged.³ (*Vid. HOUSE, ROMAN, p. 521.*)

7. From the time that pure glass became known, it must have been remarked that, when darkened upon one side, it possessed the property of reflecting images. We are certain that an attempt was made by the Sidonians to make looking-glasses,⁴ and equally certain that it must have failed; for the use of metallic mirrors, which are more costly in the first instance, which require constant care, and attain but imperfectly the end desired, was universal under the Empire. Respecting ancient mirrors, see *SPECULUM*.

8. A strange story with regard to an alleged invention of malleable glass is found in Petronius,⁵ is told still more circumstantially by Dion Cassius,⁶ and is alluded to by Pliny,⁷ with an expression of doubt, however, as to its truth. An artist appeared before Tiberius with a cup of glass. This he dashed violently upon the ground. When taken up it was neither broken nor cracked, but dented like a piece of metal. The man then produced a mallet, and hammered it back into its original shape. The emperor inquired whether any one was acquainted with the secret, and was answered in the negative, upon which the order was given that he should be instantly beheaded, lest the precious metals might lose their value, should such a composition become generally known.

VITTA, or plural VITTÆ, a riband or fillet, is to be considered, I. As an ordinary portion of female

dress. II. As a decoration of sacred persons and sacred things.

I. When considered as an ordinary portion of female dress, it was simply a band encircling the head, and serving to confine the tresses (*crinales vittæ*), the ends, when long (*longa tenia vittæ*), hanging down behind.¹ It was worn (1.) by maidens;² (2.) by married women also, the vitta assumed on the nuptial day being of a different form from that used by virgins.³

The vitta was *not* worn by libertinæ even of fair character,⁴ much less by meretrices; hence it was looked upon as an *insigne pudoris*, and, together with the *stola* and *instita*, served to point out at first sight the freeborn matron.⁵

The colour was probably a matter of choice; white and purple are both mentioned.⁶ One of those represented in the cuts below is ornamented with embroidery, and they were in some cases set with pearls (*vittæ margaritarum*).⁷

The following woodcuts represent back and front views of the heads of statues from Herculaneum, on which we perceive the vitta.⁸

II. When employed for sacred purposes, it was usually twisted round the infula (*vid. INFULA*), and held together the loose flocks of wool.⁹ Under this form it was employed as an ornament for (1.) priests, and those who offered sacrifice.¹⁰ (2.) Priestesses, especially those of Vesta, and hence *vittata sacerdos* for a vestal, *κατ' ἐξόχην*.¹¹ (3.) Prophets and poets, who may be regarded as priests, and in this case the vittæ were frequently intertwined with chaplets of olive or laurel.¹² (4.) Statues of deities.¹³ (5.) Victims decked for sacrifice.¹⁴ (6.) Altars.¹⁵ (7.) Temples.¹⁶ (8.) The *κεκρίτα* of suppliants.¹⁷

The sacred vittæ, as well as the infulæ, were made of wool, and hence the epithets *lanæa*¹⁸ and *mollis*.¹⁹ They were white (*nivea*²⁰), or purple (*punica*²¹), or azure (*cærulea*), when wreathed round an altar to the manes.²²

Vitta is also used in the general sense of a string for tying up garlands,²³ and *vittæ lorea* for the leathern straps or braces by which a machine was worked.²⁴

*ULMUS (*πελέα*), the Elm, or *Ulmus campestris*, L. Few trees have enjoyed more of poetical ce-

lebrity than the elm. It was chosen particularly for the training of vines, and the marriage of the vine with the elm forms a favourite figure in the strains of the Roman bards.

ULNA. (*Vid. PES*, p. 762.)

*ULVA, a term applied generally by the Latin writers to all aquatic plants, and synonymous, therefore, with *Alga*. According to some, however, the term *alga* was employed to designate marine aquatic plants, and *ulva* those growing in fresh water. This distinction will not hold good, however, in all cases.

UMBELLA. (*Vid. UMBRACULUM*.)

UMBILICUS. (*Vid. LIBER*.)

UMBO. (*Vid. CLYPEUS*; *TOGA*, p. 986.)

UMBRA'CULUM, UMBELLA (*σκιάδειον*, *σκιάδιον*, *σκιαδίσκη*), a Parasol, was used by Greek and Roman ladies as a protection against the sun. They seem not to have been carried generally by the ladies themselves, but by female slaves, who held them over their mistresses. The daughters of the aliens (*μέτοικοι*) at Athens had to carry parasols after the Athenian maidens at the Panathenæa, as is mentioned under *HYDRIAPHORIA*, p. 523. The parasols of the ancients seem to have been exactly like our own parasols or umbrellas in form, and could be shut up and opened like ours.¹ They are often represented in paintings on ancient vases: the annexed woodcut is taken from Millin's *Peintures de Vases Antiques*, vol. i., pl. 70. The female is clothed in a long chiton or diploidion (*vid. TUNICA*, 1023), and has a small himation, which seems to have fallen off her shoulders.

It was considered a mark of effeminacy for men to make use of parasols.² The Roman ladies used them in the amphitheatre to defend themselves from the sun or some passing shower,³ when the wind or other circumstances did not allow the velarium to be extended. (*Vid. AMPHITHEATRUM*, p. 52.) To hold a parasol over a lady was one of the common attentions of lovers,⁴ and it seems to have been very common to give parasols as presents.⁵ Instead of parasols, the Greek women, in later times, wore a kind of straw hat or bonnet, called *θαλία*.⁶ The Romans also wore a hat with a broad brim (*petasus*) as a protection against the sun.⁷ See Paciaudi, *de Umbella gestatione*, Rom., 1752.—Beccher, *Charikles*, ii., p. 73.

UNCIA (*ὄγκια, οὐγκία, οὐγγία*), the twelfth part of the As or LIBRA, is derived by Varro from *unus*, as being the unit of the divisions of the as.¹

Its value as a weight was 433·666 grains, or $\frac{1}{12}$ of an ounce, and 105·36 grains avoirdupois. (*Vid. LIBRA.*) It was subdivided into

	Oz.	Gr.
2 Semuncia, each	= $\frac{1}{2}$	107·46
3 Duellæ "	= $\frac{1}{3}$	35·12
4 Siciliæ "	=	108·416
6 Sextulæ "	=	72·277
24 Scrupula "	=	18·069
144 Siliquæ "	=	3·011

In connecting the Roman system of weights and money with the Greek, another division of the uncia was used. When the drachma was introduced into the Roman system as equivalent to the denarius of 96 to the pound (*vid. DENARIUS, DRACHMA*), the uncia contained 8 drachmæ, the drachma 3 scrupula, the scrupulum 2 oboli (since 6 oboli made up the drachma), and the obolos 3 siliquæ (*κερτία*). Therefore the uncia was divided into

8 drachmæ, each	= 54·208 grs.
24 scrupula "	= 18·069 "
48 oboli "	= 9·034 "
144 siliquæ "	= 3·011 "

In this division we have the origin of the modern Italian system, in which the pound is divided into 12 ounces, the ounce into three drams, the dram into three scruples, and the scruple into 6 carats. In each of these systems 1728 *κερτία*, siliquæ, or carats make up the pound.

The uncial system was adopted by the Greeks of Sicily, who called their obol *λίτρα* (the Roman *libra*), and divided it into 12 parts, each of which they called *ὄγκια* or *οὐγκία* (the Roman *uncia*). (*Vid. LIBRA.*) In this system the *ὄγκια* was reckoned equal to the *χαλκοῦς*.

Müller considers that the Greeks of Sicily, and also the Romans themselves, obtained the uncial system from the Etruscans.²

The Romans applied the uncial division to all kinds of magnitude. (*Vid. AS.*) In length the uncia was the twelfth of a foot, whence the word *inch* (*vid. PES*); in area, the twelfth of a jugerum (*vid. JUGERUM*); in content, the twelfth of a sextarius (*vid. SEXTARIUS, CYATHUS, XESTES*); in time, the twelfth of an hour. (*Vid. AS, sub fin.*)³

UNCIA, a Roman copper coin, the twelfth of the As.

UNCIARIUM FŒNUS. (*Vid. INTEREST OF MONEY, p. 547.*)

UNCTORES. (*Vid. BATHS, p. 148.*)

UNCTUARIUM. (*Vid. BATHS, p. 148.*)

UNGUENTA, ointments, oils, or salves. The application of unguenta, in connexion with the bathing and athletic contests of the ancients, is stated under *BATHS* and *ATHLETÆ*, &c. But, although their original object was simply to preserve the health and elasticity of the human frame, they were in later times used as articles of luxury. They were then not only employed to impart to the body or hair a particular colour, but also to give to them the most beautiful fragrance possible; they were, moreover, not merely applied after a bath, but at any time, to render one's appearance or presence more pleasant than usual. In short, they were used then as oils and pomatums are at present.

The numerous kinds of oils, soaps, pomatums, and other perfumes with which the ancients were acquainted is quite astonishing. We know several kinds of soaps which they used, though, as it ap-

pears, more for the purpose of painting the hair than for cleaning it.¹ For the same purpose they also used certain herbs.²

Among the various and costly oils which were partly used for the skin and partly for the hair, the following may be mentioned as examples: mende-sium, megalesium, metopium, amaracinum, Cyprinum, susinum, nardinum, spicatum, iasminum, rosaceum, and crocus oil, which was considered the most costly.³ In addition to these oils, the ancients also used various kinds of powder as perfumes, which, by a general name, are called *diapasmata*. To what extent the luxury of using fragrant oils and the like was carried on, may be inferred from Seneca,⁴ who says that people anointed themselves twice or even three times a day, in order that the delicious fragrance might never diminish. At Rome, however, these luxuries did not become very general till towards the end of the Republic,⁵ while the Greeks appear to have been familiar with them from early times. The wealthy Greeks and Romans carried their ointments and perfumes with them, especially when they bathed, in small boxes of costly materials and beautiful workmanship, which were called *narthecia*.⁶ The traffic which was carried on in these ointments and perfumes in several towns of Greece and southern Italy was very considerable. The persons engaged in manufacturing them were called by the Romans *unguentarii*,⁷ or, as they frequently were women, *unguentaria*,⁸ and the art of manufacturing them *unguentaria*. In the wealthy and effeminate city of Capua there was one great street called the Seplesia, which consisted entirely of shops, in which ointments and perfumes were sold.

A few words are necessary on the custom of the ancients in painting their faces. In Greece this practice appears to have been very common among the ladies, though men also had sometimes recourse to it, as, for example, Demetrius Phalereus.⁹ But, as regards the women, it appears that their retired mode of living, and their sitting mostly in their own apartments, deprived them of a great part of their natural freshness and beauty, for which, of course, they were anxious to make up by artificial means.¹⁰ This mode of embellishing themselves was probably applied only on certain occasions, such as when they went out, or wished to appear more charming.¹¹ The colours used for this purpose were white (*ψιμύθιον, crura*) and red (*ἰχθυόσα or ἄγχουσα, παιδέ-ρος, συκκίμιον, or ῥόκος*).¹² The eyebrows were frequently painted black (*μέλαν, ἄσβολος, or στίμμις*).¹³ The manner in which this operation of painting was performed, is still seen in some ancient works of art representing ladies in the act of painting themselves. Sometimes they are seen painting themselves with a brush, and sometimes with their fingers.¹⁴

The Romans, towards the end of the Republic and under the Empire, were no less fond of painting themselves than the Greeks.¹⁵ The red colour was at Rome, as in many parts of Greece, prepared from a kind of moss which the Romans called *fucus* (the *rocella* of Linnæus), and from which afterward all

kinds of paint were called *fucus*. Another general term for paint is *creta*. For embellishing and cleaning the complexion, the Greeks as well as the Romans used a substance called *æspum* (*vid.* the comment on Suidas, s. v. *Ολοση*), which was prepared of the wool taken from those parts of the body of a sheep in which it perspired most. Another remedy, often applied for similar purposes, consisted of powdered excrementa of the Egyptian crocodiles.¹

Respecting the subjects here mentioned, and everything connected with the toilet of the ancients, see Böttiger, *Sabina oder Morgensenen in Putzzimmer einer reichen Römerin*, Leipzig., 1806, 2 vols.

UNGUENTARI. (*Vid.* UNGUENTA.)

UNIVERSITAS. This word denotes the whole of anything as contrasted with its component parts. It signifies either a number of persons as a whole, or a number of things, or a number of rights. In the case of a number of things viewed as a universitas, it is indifferent whether the parts are corporally united or not; or whether the corporeal union, if it exists, is natural or not.

A single person only can properly be viewed as the subject of rights and duties; but the notion of legal capacity may, by a fiction, be extended to a number of persons, who are considered as a single person for legal purposes, and may, accordingly, be called juristical persons, or persons existing merely by virtue of legal fiction. Thus the "hereditas" is said by the Roman jurists "*personæ vice fungī*," like a municipium, decuria, and societas: the bonorum possessor is "*in loco heredis*;" and as he is a fictitious heres, so a juristical person is a fictitious person. As persons, however, so constituted, such juristical persons have legal capacities, as individuals have; but their legal capacities are limited to property as their object. It is true that the Romans often considered other persons as a collective unity: thus they speak of the collegium of the consuls (*vid.* COLLEGIUM), and of the tribuni plebis. In like manner, they say that the duumviri of a municipium are to be viewed as one person.² But these fictitious unities have only reference to jus publicum, and they have no necessary connexion with juristical persons, the essential character of which is the capacity to have and acquire property. Juristical persons could be subjects of ownership, jura in re, obligations, and hereditas; they could own slaves, and have the patronatus; but all the relations of familia, as the patria potestas and others of a like kind, were foreign to the notion. But, though the capacity to have property is the distinguishing characteristic of juristical persons viewed with relation to jus privatum, the objects for which the property is had and applied may be any, and the capacity to have property implies a purpose for which it is had, which is often much more important than this mere capacity. But the purposes for which juristical persons have property are quite distinct from their capacity to have it. This will appear from all or any of the examples hereinafter given.

The following are juristical persons: 1. Civitas. 2. Municipis: this term is more common than municipium, and comprehends both citizens of a municipium and a colony; it is also used when the object is to express the municipium as a whole, opposed to the individual members of it. 3. Respublica. In the republican period, when used without an adjunct, Respublica expressed Rome, but in the old jurists it signifies a civitas dependant on Rome. 4. Respublica civitatis or municipii. 5. Commune, communitas. Besides the civitates, component parts of the civitates are also juristical persons: 1. Curiae or decuriones: the word decuriones often denotes the individuals composing the body of dec-

curiones as opposed to the civitas (municipes), which appears from a passage in the Digest,¹ where it is stated that an action for dolus will not lie against the municipes, for a fictitious person cannot be guilty of dolus, but such action will lie against the individual decuriones who administer the affairs of the municipes. Sometimes the word curia is used as equivalent to civitas, and sometimes the decuriones are spoken of as a juristical person, which has property as such. 2. Vici; which have no political self-existence, but are attached to some respublica, yet they are juristical persons, can hold property, and maintain suits. 3. Fora, conciliabula, castella. These were places between civitates and vici as to extent and importance; they belonged to a respublica, but had the rights of juristical persons: they are not mentioned in the legislation of Justinian, but the names occur in the Tablet of Heraclea, in the lex Galliae Cisalpinæ, and in Paulus.² In the latter period of the Empire, provinces were viewed as juristical persons.

In the writings of the agrimensores, communities, and particularly colonies (*coloni*), are designated by the appropriate name of publicæ personæ, and property is spoken of as belonging to the coloni, that is, the colonia, coloni being used here in the same sense in which municipes was used, as above explained.

Other juristical persons were: 1. Religious bodies, as collegia of priests and of the vestal virgins, which could hold property and take by testament. 2. Associations of official persons, such as those who were employed in administration: the body of scribæ became one of the most numerous and important, as they were employed in all branches of administration; the general name was scribæ, a term which includes the particular names of librarii, fiscales, and others; they were divided into subdivisions called decuriæ, a term which, even under the Republic and also under the Empire, denoted the corporations of scribe; the individual members were called decuriati, and subsequently decuriales; the decuriati had great privileges in Rome, and subsequently in Constantinople.³ 3. Associations for trade and commerce, as fabri pistoris, navicularii, the individuals of which had a common profession, on which the notion of their union was founded, but each man worked on his own account. Associations properly included under societas, as corporations for effecting a common object (*vid.* SOCIETAS): such associations could be dissolved by the notice of any member, and were actually dissolved by the death of a single member. Some of these associations, such as those for working mines, salinæ, and farming the portoria, were corporate bodies, and retained the name of societas. 4. Associations, called sodalitates, sodalitia, collegia sodalitia, which resembled modern clubs. In their origin they were friendly associations for feasting together; in course of time many of them became political associations, but from this we must not conclude that their true nature really varied; they were associations not included in any other class that has been enumerated, but they differed in their character according to the times. In periods of commotion they became the central points of political factions, and new associations, it may be reasonably supposed, would be formed expressly for political purposes. Sometimes the public places were crowded by the sodalitia and decuriati,⁴ and the senate was at last compelled to propose a lex which should subject to the penalties of vis those who

1. (4, tit. 3, c. 15.)—2. (S. R., 4, tit. 6, s. 2.)—3. (Cic. in Verr. iii., 79.—Id. ad Quint. Fratr., ii., 3.—Tacit., Ann., xiii., 27.—Suet., Aug., 57.—Id., Claud., 1.)—4. (Cic. ad Quint. Fratr., ii., 3.)

would not disperse: This was followed by a general dissolution of collegia according to Asconius (*in Cornelianam*), but the dissolution only extended to mischievous associations, as may be safely inferred from the nature of the case, and even the words of Asconius, if carefully examined, are not inconsistent with this conclusion. In the Digest¹ we find the rule that no collegium could be formed without the permission of a *senatus consultum* or the *Cæsar*; and persons who associated unlawfully were guilty of an *extraordinarium crimen*. The rule of law means that no union of persons could become a juristical person without the consent of the proper authority; and this is quite distinct from the other provision contained in the same rule, which punished associations of persons who acted as corporations, for this part of the rule relates only to such associations as were dangerous, or of an undefined character.

There were also in the imperial period the *collegia tenuiorum*, or associations of poorer people; but they were allowed to meet only once a month, and they paid monthly contributions.² A man could only belong to one of them. Slaves could belong to such a collegium, with the permission of their masters.

Communities of cities and towns have a kind of natural or necessary existence; and other bodies, called corporations, have been fashioned by a kind of analogy to them, and, like them, can have property, and be represented like them by an agent, wherein consists the essence of a juristical person. Some of these corporations, like communities of cities and towns, were of a permanent character, as colleges of priests, *decuriæ*, and companies of artisans; others had a temporary character, as *societates* and *sodalitates*. All these corporations are designated by the name either of *collegium* or *corpus*, between which there is no legal distinction, for it appears that one corporation was called a *collegium* and another a *corpus*, as it might happen; but both of these terms denote a corporation, as above explained, as opposed to a *civitas* or *res publica*. The members of such corporations were *collegæ* and *sodales*, which is a more general and an older term than *sodalitas*. Altogether they were called *collegiati* and *corporati*: the members of particular kinds of corporations were *decuriati*, *decuriales*, *socii*. The common name which includes all corporations and *civitates* is *universitas*, as opposed to which any individual is *singularis persona*.

The notion of individual property as a unity is founded on the notion of the unity of the owner. But this notion of unity, when once established, may, for certain purposes, be arbitrarily assumed, and, accordingly, it is applied to the case of *peculium*, *dos*, and *hereditas*, and modern writers have designated these as cases of a *universitas juris*. The name *universitas* has led many to suppose that the three cases above mentioned have all the same incidents, whereas each has its peculiar character, because the term *universitas* means any whole as opposed to its parts. The name *universitas juris* does not occur in the Roman law. The nature of universal succession is explained under *Successio*.

The term *universitas* was adopted in the middle ages to denote certain great schools, but not *as* schools: the term denoted these places as corporations, that is, as associations of individuals. The adjunct which would express the kind of persons associated would depend on circumstances: thus, in Bologna, the expression *universitas scholarium* was in common use; in Paris, *universitas magistrorum*. The school, as such, was called *schola*, and, from the thirteenth century, most commonly

studium; and if it was a distinguished school, it was called *studium generale*. The first occasion on which the term *universitas* was applied to a great school is said to be in a decretal of Innocent III., of the beginning of the thirteenth century, addressed *Scholaribus Parisiensibus*.

VOCATIO IN JUS. (*Vid. Actio*, p. 18.)

VOCONIA LEX was enacted on the proposal of Q. Voconius Saxa, a *tribunus plebis*. In the "*De Senectute*" of Cicero, Cato the elder is introduced as saying that he spoke in favour of the lex when he was sixty-five years of age, and in the consulship of Cæpio and Philippus (B.C. 169). Gellius also speaks of the oration in which Cato recommended this lex.¹

One provision of the lex was, that no person who should be included in the census, after the census of that year (*post eos censores*; the censors of that year were A. Posthumus and Q. Fulvius), should make any female (*virginem neve mulierem*) his heres.² Cicero does not state that the lex fixed the census at any sum; but it appears from Gaius³ and from Dion Cassius⁴ that a woman could not be made heres by any person who was rated in the census at 100,000 sesterces (*centum milia aris*), though she could take the *hereditas per fideicommissum*. The lex allowed no exceptions even in favour of an only daughter.⁵ The lex only applied to testaments, and therefore a daughter or other female could inherit *ab intestato* to any amount. The vestal virgins could make women their heredes in all cases, which was the only exception to the provisions of the lex.⁶

If the terms of the lex are correctly reported by Cicero, a person who was not *census* might make a woman his heres, whatever was the amount of his property, and so Cicero understands the lex.⁷ Still there is a difficulty about the meaning of *census*. If it is taken to mean that a person whose property was above 100,000, and who was not included in the census, could dispose of his property as he pleased by testament, the purpose of the lex would be frustrated; and farther, "the not being included in the census" (*neque census esset*) seems rather vague. Still, according to the terms of the lex, any person who had ever been included in the census would be affected by this legal incapacity. Sometimes it is assumed that the last census is meant. The Edict extended the rule of the Voconia lex to the *bonorum possessio*.⁸

Another provision of the lex forbade a person who was *census* to give more in amount in the form of a legacy, or a *donatio mortis causa*, to any person than the heres or heredes should take. This provision secured something to the heres or heredes, but still the provision was ineffectual, and the object of this lex was only accomplished by the lex *Falcidia*. (*Vid. Legatum*.) Gaius,⁹ in quoting this provision of the lex, does not mention the condition of being *census*, but this is stated by Cicero.¹⁰

Some writers suppose that this lex also contained a provision by which a testator was forbidden to give a woman more than half of his property by way of legacy; and it appears from Cicero that the lex applied to legacies (*de mulierum legatis et heredi-*

1. (Cic., *Pro Balbo*, 8.—Cato Major, 5.—Gell., vi., 13; xvii., 6.)—2. (Cic., *in Verr.*, i., 41, 42.)—3. (ii., 274.)—4. (vi., 10.)—5. (Augustin., *De Civit. Dei*, iii., 21.)—6. (Cic., *De Rep.*, iii., 10.—Gell., i., 12.)—7. (*in Verr.*, i., 41.)—8. (Dig. 37, tit. 1 s. 12.)—9. (ii., 226.)—10. (*in Verr.*, i., 43.)

1 (47, tit. 22, s. 1, 2, 3).—2. (Dig. 47, tit. 22 s. 1, 3.)

tribus¹). Quintilian² states that by the lex (Voconia) a woman could not take by testament more than half of a person's property; but Quintilian says nothing of the provisions of this lex, which incapacitated women altogether from taking under a will in certain cases, and in the passage referred to he is speaking of two women being made *heredes* of a property in equal shares. The dispute between the cognati and the two women turned on the words of the lex, "*n iiceat mulieri plusquam dimidiam partem bonorum suorum relinquere*," the cognati contending that the lex did not allow the whole property to be thus given to two women in equal shares, though it was admitted that if half of the property had been given to one woman, there would have been no ground for dispute. It is quite consistent that the lex might have allowed a woman to take half of a man's property in certain cases, and in others to take none, though the object of the lex, which was to prevent large properties from coming into women's hands, would have been better secured by other provisions than those of the lex as they are known to us; for it appears from Quintilian that a woman might take by will one half of as many properties as there were testators. It might be conjectured that the clause of the lex which forbade a woman being made *heres* signified sole *heres*, and then the clause which forbade her taking more than half would be fitly framed to prevent an evasion of the law by making a woman *heres ex decedente*, for instance, and giving the rest to another person. And this conjecture derives some support from the provision which prevented the giving nearly all the property in legacies to the detriment of the *heres*; which provision, however, it must be observed, does not apply to women only, so far as we can conclude from the words of Gaius.³ The case of Fadia, mentioned by Cicero,⁴ shows that there was a provision in the lex by which, in certain cases at least, a woman might take something; and it also shows that the lex prevented a man from making even his own daughter *sole heres*.

According to Gaius and Pliny,⁵ the provisions of the Voconia lex were in force at the time when they were writing, though Gellius⁶ speaks of them as being either obsolete or repealed. The provisions of the lex Julia et Papia Poppæa may have repealed some of the clauses of the Voconia lex.

The subject of the Voconia lex is one of considerable difficulty, owing to the imperfect statements that remain of its contents and provisions, which were probably numerous. The chief modern authorities on the matter are referred to by Rein;⁷ but the writer has not had the opportunity of consulting any of them.

VOLONES is synonymous with *voluntarii* (from *volo*), and might hence be applied to all those who volunteered to serve in the Roman armies without there being any obligation to do so. But it was applied more especially to slaves, when, in times of need, they offered or were allowed to fight in the Roman armies. Thus when, during the second Punic war, after the battle of Cannæ, there was not a sufficient number of freemen to complete the army, about 8000 young and able-bodied slaves offered to serve. Their proposal was accepted; they received armour at the public expense, and as they distinguished themselves, they were honoured with the franchise.⁸ In after times the name *volones* was retained whenever slaves chose or were allowed to take up arms in defence of their masters,

which they were the more willing to do, as they were generally rewarded with the franchise.¹

VOMITORIA. (*Vid. AMPHITHEATRUM*, p. 43.)

*VULPES (*ἀλώπηξ*), the Fox, or *Canis Vulpes*, L. It is also called *κερδός* by Oppian and by Aristophanes, in a metaphorical sense.²

URAGUS. (*Vid. ARMY, ROMAN*, p. 104.)

URNA, an urn, a Roman measure of capacity for fluids, equal to half an AMPHORA.³ This use of the term was probably founded upon its more general application to denote a vessel for holding water, or any other substance, either fluid or solid.⁴

An urn was used to receive the names of the judges (*judices*), in order that the prætor might draw out of it a sufficient number to determine causes;⁵ also to receive the ashes of the dead. (*Vid. FUNUS*, p. 460, 461.) For this purpose urns were made of marble, porphyry, baked clay, bronze, or glass, of all forms and sizes, some quite simple, and others sculptured in bas-relief, or ornamented in an endless variety of ways.

USTRINA, USTRINUM. (*Vid. BUSTUM; FUNUS*, p. 460.)

USUCAPIO. The history of usucapio is an important fact in the history of Roman jurisprudence.

Gaius⁶ states that there was originally in Rome only one kind of ownership: a person was either owner of a thing *ex jure Quiritium*, or he was not owner at all. But afterward ownership was divided, so that one man might be owner *ex jure Quiritium*, and another might have the same thing in *bonis*, that is, have the right to the exclusive enjoyment of it. He then goes on to give an instance of the mode in which the divided ownership might arise, by reference to the transfer of a *res mancipi*: if such a thing was transferred by bare tradition, and there was neither *mancipatio* nor in *jure cessio*, the new owner only acquired the natural ownership, as some would call it, or only had it in *bonis*, and the original owner retained the Quiritarian ownership until the purchaser acquired the Quiritarian ownership by usucapio (*possidendo usucapiat*); for when the usucapio was completed, the effect was the same as if the thing had been originally *mancipated* or transferred by the in *jure cessio*. Gaius adds, "in the case of movable things, the usucapio is completed in a year, but in the case of a fundus or ædes, two years are required; and so it is provided by the Twelve Tables."

In this passage he is evidently speaking of *res mancipi* only, and of them only when transferred to the purchaser by the owner without the forms of *mancipatio* or in *jure cessio*. From this, then, it might be safely concluded that the Twelve Tables provided a remedy for defective modes of conveyance of *res mancipi* from the owner; and this is all that could be concluded from this passage. But a passage which immediately follows shows that this was all that the Twelve Tables did; for Gaius⁷ proceeds to say, "But (*ceterum*) there may be usucapio even in the case of those things which have come to us by tradition from a person who was not the owner, whether they are *res mancipi* or not, provided we have received them *bona fide*, believing that he who delivered (*qui tradiderit*) them to us was the owner. And this rule of law seems to have been established, in order that the ownership of things might not be long in uncertainty, seeing

that one or two years would be quite sufficient for the owner to look after his property, that being the time allowed to the possessor for usucapio."

The reason for limiting the owner to one or two years has little reason in it, and possibly no historical truth; but it is clear from this passage that this application of the rule of usucapio was formed from analogy to the rule of the Twelve Tables, and that it was not contained in them. The limitation of the time of usucapio is clearly due to the Twelve Tables, and the time applied only to purchases of res mancipi from the owner when the legal forms of conveyance had been neglected. But the origin of usucapio was probably still more remote.

When Gaius states that there was originally only one kind of ownership at Rome, and that afterward ownership was divided, he immediately shows how this arose by taking the case of a res mancipi. This division of ownership rested on the division of things into res mancipi and res nec mancipi, a distinction that had reference to nothing else than the mode of transferring the property of them. Things were merely called res mancipi because the ownership of them could not be transferred without mancipation. Things were res nec mancipi, the alienation of which could be effected without mancipation. There could be no division of things into mancipi and nec mancipi except by determining what things should be res mancipi. Res nec mancipi are determined negatively: they are all things that are not res mancipi: but the negative determination presupposes the positive; therefore res mancipi were determined before res nec mancipi could be determined; and before the res mancipi were determined, there was no distinction of things into res mancipi and res nec mancipi. But this distinction, as such, only affected the condition of those things to which it had a direct application: consequently, all other things remained as they were before. The conclusion, then, is certain, that the res mancipi, as a class of things, were anterior, in order of time, to the class of res nec mancipi, which comprehended all things except res mancipi. Until then, the class of res mancipi was established, all property at Rome could be alienated by bare tradition, as res nec mancipi could be alienated by tradition after the class of res mancipi was constituted.

The time when the class of res mancipi was formed is not known; but it is most consistent with all that we know to suppose that it existed before the Twelve Tables. If we consider the forms of mancipation (*vid.* Mancipatio), we cannot believe that they arose in any other way than by positive enactment. As soon as the forms of mancipation and of the *in jure cessio* (which, from its character, must be posterior to mancipation) were established, it followed that mere tradition of a thing to a purchaser and payment of the purchase-money could not transfer the ownership of a res mancipi. The transfer gave the purchaser merely a possessio, and the original owner retained the property. In course of time, the purchaser obtained the *publiciana actio*, and from this time it might be said that a double ownership existed in the same thing.

The introduction of mancipation, which gave rise to the double ownership, was also followed by the introduction of usucapio. The bona fide possessor of a res mancipi which had not been transferred by mancipation, had no legal defence against the owner who claimed the thing. But he had the exceptio doli, and subsequently the exceptio rei venditæ et traditæ, by which he could protect himself against the owner; and as possessor simply, he had the protection of the interdict against third persons. He had the full enjoyment of the thing, and he could transfer the possessio, but he could do no act with

respect to it for which Quiritarian ownership was necessary; consequently, he could not alienate it by mancipation or in *jure cessio*, and it was a necessary consequence that he could not dispose of it by testament in the same way in which Quiritarian ownership was disposed of by testament. The necessity for such a rule as that of usucapio "as evident, but it could arise in no other way than by positive enactment, for its effect was to be the same as that of mancipation. The Twelve Tables fixed the term of usucapio, but we do not know whether they fixed or merely confirmed the rule of law as to usucapio.

It is a mistake to suppose that tradition or delivery was a part of mancipation as such. Mancipation was merely a form of transferring ownership which was fixed by law, and the characteristic of which was publicity: a delivery of the thing would of course generally follow, but it was no part of the transfer of ownership. Land (*prædia*), for instance, could be mancipated without delivery (*in absentia mancipari solent*¹). In the case of movable things, it was necessary that they should be present, not for the purpose of delivery, but that the thing mancipated might be identified. The essential to the transfer of ownership in all ages and in all countries is the consent of two persons who have legal capacity to consent, the seller and the buyer. All the rest is form that may be varied infinitely: this consent is the substance. Yet tradition as a form of transfer was undoubtedly the old Roman form, and consent alone was not sufficient; and it may be admitted that consent alone was never sufficient for the transfer of ownership without affecting the principle laid down that consent alone is essential in the transfer of ownership. This apparent incongruity is ingeniously and sufficiently explained in the following manner: "Tradition owes its origin to a time when men could not sufficiently separate in their minds physical ownership, or the dominion over a thing, from legal ownership. As a man can only call a bird in the air or a wild animal in the forest his own when he has caught it, so men thought that tradition must be added to contract in order to enable a man to claim the thing as his own."²

Besides the case of property there might be usucapio in the case of servitudes, marriage, and hereditas. But as servitudes *prædiorum rusticorum* could only be the objects of mancipation, and as being parts of ownership could only be established by the same form by which ownership of res mancipi was transferred, so, according to the old law, these servitudes alone could be the object of usucapio; and, as it is contended by Engelbach, only in the case of *aqueductus*, *haustus*, *iter*, and *actus*. But as the ownership of res mancipi could be acquired by bare tradition followed by usucapio, so these servitudes could be established by contract, and could be fully acquired by usucapio. In the later Roman law, when the form of mancipation was replaced by mere tradition, servitudes could be established *per pacta et stipulationes* only. In the case of a marriage *coemptio*, the form of mancipation was used, and the effect was, that the woman came into the hand of her husband, and became part of his familia. The marriage *usu* could not of itself effect this, but if the woman lived with her husband a year, she passed into his familia by usucapio (*rebus annua possessione usucapiebatur*): and, accordingly, it was provided by the laws of the Twelve Tables, that if she did not wish thus to come into her husband's hand, she must in every year absent herself from him for three nights in order to interrupt the *usus*.³ Thus

1. (Ulp., Frag., 29, tit. 6.—Gaius, i., 121.)—2. (Engelbach, Ueber die Usucapion, &c., p. 60.)—3. (Gaius, i., 110.)

usucapio added to usus produced the effect of coemptio. In the case of the hereditas, when the testator had the testamenti factio, and had disposed of his property without observing the forms of mancipatio and nuncupatio, the person whom he had named his heres could only obtain the legal ownership of the hereditas by usucapio. In all these cases, then, the old law as to usucapio was this: when the positive law had required the forms of mancipatio, in order that a certain end should be effected, usucapio supplied the defect, by converting a mere possessio (subsequently called in bonis) into dominium ex jure Quiritium. Usucapio, then, was not originally a mode of acquisition, but it was a mode by which a defect in the mode of acquisition was supplied, and this defect was supplied by the use of the thing, or the exercise of the right. The end of usucapio was to combine the beneficial with the Quiritarian ownership of a thing. Accordingly, the original name for usucapio was usus auctoritas, the auctoritas of usus, or that which gives to usus its efficacy and completeness, a sense of auctoritas which is common in the Roman law. (*Vid. AUCTORITAS, TUTELA.*) But usus alone never signifies usucapio; and consistently with this, in those cases where there could be no usucapio, the Roman writers speak of usus only. Possessio is the usus of a piece of ground as opposed to the ownership of it; and the term usus was applied to the enjoyment of land on which a man either had not the ownership, or of which he could not have the ownership, as the ager publicus. In the later law, as it is known to us in the Pandect, usucapio was a mode of acquiring ownership: the term usus auctoritas was replaced by the phrase usu capere, and in the place of usucapio sometimes the phrase "*possessione or longe possessione capere*" occurs; but possessio alone never is used for usucapio.

It appears from a passage of Gaius already quoted, that in his time usucapio was a regular mode of acquisition, which was applicable to things which had come to a man by tradition from one who was not the owner, and was applicable both to res Mancipi and nec Mancipi, if the possessor possessed them bona fide, that is, if he believed that he received them from the owner. There were, however, some exceptions to this rule: a man could never acquire the ownership of a stolen thing by usucapio, for the Twelve Tables prevented it, and the lex Julia et Plautia prevented usucapio in the case of a thing vi possessa. The meaning of the law was not that the thief or the robber could not acquire the ownership by usucapio, for the mala fides in which their possession originated was an obstacle to the usucapio; but no person who bona fide bought the thing that was stolen or vi possessa, could acquire the ownership by usucapio.¹ According to other authorities, the rule as to a stolen thing was established by the lex Atinia. Provincial lands were also not objects of usucapio.

If a woman was in the tutela of her agnati, her res Mancipi could not be the objects of usucapio, unless they had been received from her by traditio with the auctoritas of her tutor; and this was a provision of the Twelve Tables. The legal incapacity of the woman to transfer ownership by mancipatio must be the origin of this rule. The hereditas of a woman who was in tutela legitima could not be an object of usucapio, as Cicero explains to Atticus (*de tutela legitima nihil usucapi posse*²). The foundation of this rule, according to some, was the legal incapacity of a woman who was in the tutela of her agnati, to make a will. (*Vid. TESTAMENTUM*; but see the article TUTELA.)

In order to acquire by usucapio, a person must

have the capacity to acquire by mancipatio: consequently, all persons were excluded from acquiring by usucapio who had not the commercium. The passage quoted by Cicero¹ from the Twelve Tables, "*adversum hostem (i. e., peregrinum) aeterna auctoritas*," is alleged in support of this rule of law; that is, a peregrinus may have the use of a res Mancipi which has been transferred by traditio, but he can never acquire anything more by usucapio.

Things could not be objects of usucapio which were not objects of commercium. Accordingly, all res divini juris, such as temples and lands dedicated to the gods, and res communes, could not be objects of usucapio. The limits or bounds by which the Romanus ager was marked out were consequently not objects of usucapio, as to which there was a provision in the Twelve Tables³ ("*Quoniam usucapionem intra quinque pedes esse noluerunt*"). The quinque pedes are the limites linearii, the breadth of which was fixed at five feet by a lex Mamilia. The approach to a sepulchre was also not an object of usucapio.⁴

In the time of Gaius,⁴ a man might take possession of another person's land, provided he used no force (*vis*), the possession of which was vacant either from the carelessness of the owner, or because the owner had died without a successor (*vid. Successio*), or had been long absent; and if he transferred the field to a bona fide purchaser, the purchaser could acquire the ownership by usucapio, even though the seller knew that the field was not his own. This rule was established against the opinion of those who contended that a fundus could be furtivus or an object of theft. But a man might in some cases acquire by usucapio the ownership of a thing which he knew to be not his own: as if a man had possession of a thing belonging to the hereditas, of which the heres had never acquired the possession, provided it was a thing that could be an object of usucapio. This species of possessio and usucapio was called pro herede, and even things immovable (*qua solo continentur*) could be thus acquired by one year's usucapio. The reason was this: the Twelve Tables declared that the ownership of res soli could be acquired by usucapio in two years, and all other things in one year: now, as the hereditas was not a res soli, it must be included in the "other things," and it was farther determined that the several things which made up the hereditas must follow the rule as to the hereditas; and though the rule as to the hereditas was changed, it continued as to all the things comprised in it. The reason of the rule as to this "*improba possessio et usucapio*," says Gaius, was that the heres might be induced the sooner to take possession of the hereditas, and that there might be somebody to discharge the sacra, which in ancient times (*illis temporibus*) were very strictly observed, and also that there might be somebody against whom the creditors might make their demands. This kind of possessio and usucapio was called *lucrative*. In the time of Gaius it had ceased to exist, for a senatus consultum of Hadrian's time enabled the heres to recover that which had been acquired by usucapio, just as if there had been no usucapio; but in the case of a heres necessarius, the old rule still remained.⁵

Gaius mentions a mode of acquisition under the name of *usuceptio*. If a man mancipated a thing to a friend, or transferred it by the *in jure cessio*, simply in order that the thing might be in his friend's safe keeping (*fiducia causa; quod tutius nostrae rei apud eum esset*), he had always a capacity for recovering it. In order to recover immediately the

1. (*Gaius*, ii., 45.)—2. (*ad Att.*, i, 15.)

Quiritarian ownership of the thing remanipatio was necessary; but if the thing was transferred to him by traditio, the remanipatio was completed by usucapio, or, as it is here called, by usureceptio: for usureceptio differs in no respect from usucapio, except that the person who acquires the Quiritarian ownership by usus, in the one case acquires (*capit*), in the other reacquires (*recipit*) the thing. In the case of a pignoratium thing, the debtor's capacity to recover by usureceptio was the same as in the case of fiducia, as soon as he had paid his debt to the creditor: and even if he had not paid the money, and had obtained possession of the thing neither by hiring it from the creditor nor precario, he had a lucrativa usucapio, which was a usureceptio, and was probably formed from analogy to the lucrativa usucapio pro herede.

Servitudes prædiorum rusticorum were established, at least according to the old law, by mancipatio; the right to the servitudes could only be properly extinguished by a remanipatio. If the servitus was extinguished by mere agreement, there must be a usureceptio on the part of the owner of the servient tenement, in order to complete its legal release from the servitus. In order that the possession of the libertas of the servient land might be enjoyed uninterruptedly for two years, there must be for the same time a total abstinence from all exercise of the right on the part of him who had the servitus. Subsequently it was considered sufficient if the person entitled to the servitus did not exercise his right for two years.

When usucapio was established as a means of giving the Quiritarian ownership to him who had acquired a thing in bonis, the form of mancipatio must have gradually lost its importance, and usucapio came to be viewed as a mode of acquisition. Accordingly, it has been already observed, it became applicable to all cases of bona fide possession, whether the thing was a res mancipi or not. Formerly, if a will had been made in due form, except as to mancipation and nuncupation, the heres acquired the hereditas by usucapio; but with the introduction of the prætorian testament (*vid. Testamentum*) and the bonorum possessio, the bonorum possessor obtained the right to actiones fictitiæ or utiles in all cases where the deceased had a right of action, and he acquired by usucapio the Quiritarian ownership of the several things which were included in the hereditas. In course of time, it came to be considered by the jurists as a rule of law that there could be no usucapio of an hereditas.¹ In like manner, in the case of servitudes established by contract, the introduction of the actio publiciana rendered the doctrine of usucapio unnecessary, and a Scribonia lex is mentioned which repealed all usucapio of servitudes.² But this lex only applied to the establishment of servitudes; it did not affect that usucapio by which the freedom of a servient piece of land was effected. It became a maxim of law: *servitudes prædiorum rusticorum non utendo amittuntur*, which, viewed with respect to the servient land, was a usureceptio. In this sense "*usurpata recipitur*" seems to be used in a passage of Paulus.³ "*Usurpari*" is commonly used in the sense of "*uti*," and in this passage of Paulus "*usurpata recipitur*" seems equivalent to "*usu recipitur*," though this is not the meaning that has usually been given to this passage.

In the case of marriage, also, usucapio fell into disuse, as we learn from Gaius.⁴

But in other respects usucapio subsisted. He who had acquired a res mancipi by tradition, had now a prætorian ownership, and he had a right of

action in respect of this ownership, which was analogous to the rei vindicatio. But usucapio was still necessary to give him Quiritarian ownership and its consequent advantages. The distinction between res mancipi and nec mancipi existed, and, as a consequence, the testamentum per æs et libram subsisted at the same time with the prætorian testament.

When, finally, all distinction was abolished between res mancipi and nec mancipi, and the ownership of all things could be acquired by traditio and occupatio, that kind of usucapio ceased by which a thing in bonis became a man's ex jure Quiritium. All usucapio was now the same, and its general definition became "*adfectio domini per continuationem possessionis temporis lege definiti*."¹ From this time the terms usucapio and longi temporis præscriptio were used indifferently, as some writers suppose, though on this point there is not uniformity of opinion.

(Engelbach, *Ueber die Usucapion zur Zeit der Zwölf Tafeln*, Marburg, 1828. — Mühlenbruch, *Doctrin. Pandect.*, § 261, &c. — *Ueber die Usucapio, pro herede* von Arndts, *Rhein. Mus. für Jurisprudenz*, ii., 125.)

USURÆ. (*Vid. Interest of Money*, p. 546.)

USURPATIO. One sense of this word is "*usucapionis interruptio*."² Appius Claudius, not the decemvir, but he who made the Appia Via, and brought the Aqua Claudia to Rome, wrote a book *De Usurpationibus*, which was not extant in the time of Pomponius.³ In some cases "*usurpatio*" means the preservation of a right by the exercise of it, as "*jus usurpatum*," in the case of a servitus aquæ ducendæ; and this nearly agrees with that sense of usurpare which is equivalent to *uti*. (*Vid. Usucapio*.)

USUS. (*Vid. Marriage, Roman*, p. 623.)

USUS. (*Vid. Ususfructus*.)

USUSFRUCTUS and USUS were personal servitudes.⁴ Ususfructus is defined to be "*jus alienis rebus utendi fruendi salva rerum substantia*."⁵ Accordingly, ususfructus comprehended the "*jus utendi*," and the "*jus fruendi*." Usus comprehended only the "*jus utendi*." The complete distinction between ususfructus and usus will only appear from a statement of what each is.

A ususfructus was the right to the enjoyment of a thing by one person, while the ownership belonged to another. It could be established by testament, as when the heres was required to give to another the ususfructus of a thing; and it could also be established by contract between the owner of a thing and him who contracted for the ususfructus. He who had the ususfructus was ususfructuarius or fructuarius, and the object of the ususfructus was res fructuaria.

There might be ususfructus both in prædia rustica and urbana, in slaves, beasts of burden, and other things.

If the ususfructus of a thing was bequeathed to a person, all the "*fructus*" of the thing belonged to the fructuarius during the time of his enjoyment. Consequently, if the ususfructus of a piece of land was given to him, he was entitled to collect and have for his own all the fructus that were already on the land, and all that were produced on it during the time of his enjoyment; but as he only acquired the ownership of the fructus by collecting them, he was not entitled to fructus which existed on the land at the time when his right ended, and which he had not collected.

He was bound not to injure the land, and he was bound to cultivate it properly. As to quarries and

1. (Gaius, ii., 54.)—2. (Dig. 41, tit. 3, s. 4, § 29.)—3. (S. R., i., tit. 17, s. 2.)—4. (i., 111.)

1. (Dig. 41, tit. 3, s. 2; "De Usurpationibus et Usucapionibus.")—2. (Dig. 41, tit. 3, s. 2.)—3. (Dig. 1, tit. 2, s. 36.)—4. (Dig. 8, tit. 1, s. 1.)—5. (Dig. 7, tit. 1, s. 1.)

mines, he could work them for his benefit, if he worked them properly (*quasi bonus paterfamilias*). If, after the bequest of the usufructus, minerals were found on the land, he could work them. He could be compelled to plant new trees in the place of those which died, and generally to keep the land in good condition. If the usufructus was of aedes, the fructuarius was entitled to all the rents and profits which he received during the time of his enjoyment. He could be compelled to keep a house in repair, but it seems to be doubtful how far he was bound to rebuild the house if it fell down from decay: at any rate, he was liable for all moderate and reasonable expenses which were necessary for the maintenance of the property.

The fructuarius could not alienate the right to the usufructus, though he might give to another the usus of his right; and he might surrender the right to the usufructus to the owner of the thing. He could not subject the thing to servitudes; nor could the owner do this, even with the consent of the fructuarius. The fructuarius could make such changes or alterations in the thing as would improve it, but not such as would in any way deteriorate the thing. Consequently, he had greater power over cultivated land than over houses or pleasure-grounds, for a part of the value of houses or pleasure-grounds, and things of the like kind, consists in opinion, and must be measured by the rank, wealth, and peculiar disposition of the owner.

The fructuarius could maintain or defend his rights by action and by interdicts. On the completion of the time of the usufructus, the thing was to be restored to the owner, who could generally require securities from the fructuarius both for the proper use of the thing and for its restoration in due time. This security was in some cases dispensed with by positive enactments, and in other cases by agreement; but it could not be dispensed with by testament.

Originally there could be no usufructus in things unless they were things corporeal, and such as could be restored entire when the time of usufructus had expired. But by a senatus consultum of uncertain date there might be quasi usufructus of things which were consumed in the use, and in this case the fructuarius in fact became the owner of the things, but was bound to give security that he would either restore as much in quantity and value as he had received, or the value of the things in money. It is generally supposed that this senatus consultum was passed in the time of Augustus, and a passage of Cicero¹ is alleged to show that it did not exist in the time of Cicero: "*Non debet ea mulier, cui vir bonorum suorum usumfructum legavit, cellis vinariis et oleariis plenis relictis, putare id ad se pertinere. Usus enim non abusus legatur.*" The only difficulty is in the words "*id ad se pertinere*," which are usually translated "these things (the cellae vinariae, &c.) are not objects of usufructus," from which it is inferred that there was at that time no usufructus in things which were consumed in the use. But if this is the sense, the words which follow, "for the usus, not the abusus (power to consume), is the object of the legacy," have no clear meaning. These words simply signify that a usus is given, not an abusus; but this does not prove that an abusus could not be given. Puchta shows that the phrase "*res pertinet ad usufructuarium*," which exactly corresponds to the phrase in Cicero, does not mean "that the thing is an object of usufructus," but that "it does not belong to the fructuarius." In the Digest² the question is, whether the young child of a female slave belongs to the fructuarius (*an partus ad fructuarium*

pertineat), and it is answered in the negative, with the following explanation: "*nec usumfructum in co fructuarium habebit.*" The passage of Cicero, therefore, will mean, that wine and oil in the testator's possession are not given to her by a bequest of the usufructus of his property, for it is usus, that is, the enjoyment of the property, which is given, and not "*abusus*," or the power to consume things. In other words, the testator gives the woman a usufructus in all his property, that is, a right to gather the fruits; but he does not give the wine and oil, which are fruits already gathered, to the woman to be her property, as if she had gathered them during her usufructus. Puchta contends that "*abusus*" does not necessarily signify that there could be "*abusus*" only in the case of things "*quae usu consumuntur*:" he says that in the place of wine and oil Cicero might have given the young of animals, as an example, without altering his expression. If this interpretation is correct, Puchta contends that the senatus consultum as to quasi usufructus is older than the time of Cicero. But, in truth, the senatus consultum does not apply to the case under consideration, which is simply this, whether a gift of usufructus is a gift of the fructus that are already gathered; and Cicero says that it is not, for it is usus which is given, that is, usufructus, or the right of gathering the fruits, and not abusus, which implies the right to the unlimited enjoyment of a thing. If abusus had been given, the woman's power over all the property of the testator, including the wine and oil, would have been unlimited; but as abusus was not given, and as usufructus implies the gathering of the fruits by the fructuarius, the enjoyment of the fruits already gathered could not belong to her. The argument of Cicero, then, proves nothing as to the existence of a quasi usufructus in his time; so far as his argument goes, the quasi usufructus might have then existed or might not have existed. The interpretation of Puchta is correct, but his conclusion is not certain. In addition to this, it does not appear that senatus consulta were made on such matters as those relating to the law of property before the imperial period.

Usus is defined¹ by the negation of "*frui*:" "*usus relictus est, uti potest, frui vero non potest.*" The title of the Digest above referred to is "*De Usu et habitatione*," and the instances given under that title mainly refer to the use of a house or part of a house. Accordingly, the usus of a house might be bequeathed without the fructus;² it has been already explained what is the extent of the meaning of usufructus of a house. The usus of a thing implies the power of using it either for necessary purposes or purposes of pleasure. The man who was entitled to the usus could not give the thing to another to use, though a man who had the usus of a house could allow another to lodge with him. A man who had the usus of an estate could take wood for daily use, and could enjoy the orchard, the fruit, flowers, and water, provided he used them in moderation, or, as it is expressed, "*non usque ad compendium, sed ad usum scilicet non abusus.*" If the usus of cattle (*pecus*) was left, the usufructus was entitled to a moderate allowance of milk. If the usus of a herd of oxen was bequeathed to a man, he could use the oxen for ploughing, and for all purposes for which oxen are adapted. If the usus was of things which were consumed in the use, then the usus was the same as usufructus.³ Usus was in its nature indivisible, and, accordingly, a part of a usus could not be given as a legacy, though persons might have the fructus of a thing in common.⁴ As to his duties, the usufructus was in most respects like

1. (Tod., 3.)—2. (Tit. 1, s. 68.)

VULCANALIA, a festival celebrated at Rome in honour of Vulcan, on the 23d of August (*X. Calend. Sept.*), with games in the Circus Flaminius, where the god had a temple.² The sacrifice on this occasion consisted of fishes, which the people threw into the fire.³ It was also customary on this day to commence working by candlelight, which was probably considered as an auspicious beginning of the use of fire, as the day was sacred to the god of this element.⁴

VULGAR'ES. (*Vid. SERVUS*, ROMAN, p. 887.)

UXOR. (*Vid. MARRIAGE*, ROMAN, p. 623.)

UXORIUM or ÆS UXORIUM was a tax paid by persons who lived as bachelors.⁵ It was first imposed by the censors M. Furius Camillus and M. Postumius, B.C. 403,⁶ but whether it continued to be levied we do not know. Subsequent censors seem not unfrequently to have used endeavours to induce bachelors to marry; the orations of the censors Metellus Macedonicus (B.C. 131) and Metellus Numidicus (B.C. 102) on the subject were extant in the time of the Empire. Some extracts from the speech of the latter are given by Aulus Gellius,⁷ and Augustus read the speech of the former in the senate as applicable to the state of things in his time.⁸ Various penalties were imposed by Augustus upon those who lived in a state of celibacy, respecting which see JULIA LEX ET PAPIA POPPÆA, p. 556.

X. Z.

*XANTHE (ξανθη), a kind of Hæmatite, or Blood-stone, of a pale yellowish colour, containing iron ore.⁹

*XANTHION (ξανθιον), a plant, lesser Burdock, or *Xanthium strumarium*.¹⁰

*XANTHOBALANUS (ξανθοβάλανος). According to Adams, "Some have taken this for the Nutmeg, but this opinion is refuted by Clusius. Sprengel inclines to refer it to the nut of the *Semicarpum anacardium*."¹¹

XENAGOI (ξενάγοι). The Spartans, as being the head of that Peloponnesian and Dorian league which was formed to secure the independence of the Greek states, had the sole command of the confederate troops in time of war, ordered the quotas which each state was to furnish, and appointed officers of their own to command them. Such officers were called ξενάγοι. The generals whom the allies sent with their troops were subordinate to these Spartan ξενάγοι, though they attended the council of war as representatives of their respective countries.¹² After the peace of Antalcidas, the league was still more firmly established, though Argos refused to join it; and the Spartans were rigorous in exacting the required military service,

demanding levies by the σκντάλη, and sending out ξενάγοι to collect them.¹

The word ξενάγος may be applied to any leader of a band of foreigners or mercenaries. It is also used to signify one who shows hospitality to strangers, or who conducts them about the town to see what is to be seen there, like the Latin *perductor*.²

XENELASIA (ξενηλασία). The Lacedæmonians appear in very early times, before the legislation of Lycurgus, to have been averse to intercourse with foreigners (ξένοιαι ἀπρόσμηκτοι³). This disposition was encouraged by the lawgiver, who made an ordinance forbidding strangers to reside at Sparta, without special permission, and empowering the magistrate to expel from the city any stranger who misconducted himself, or set an example injurious to public morals. Such jurisdiction was exercised by the ephori. Thucydides⁴ makes Pericles reproach the Lacedæmonians with this practice, as if its object were to exclude foreigners from sharing in the benefits of their institutions. The intention of Lycurgus, more probably, was to preserve the national character of his countrymen, and prevent their being corrupted by foreign manners and vices (as Xenophon says), ὥπως μὴ ῥαδιουργίας οἱ πολῖται ἀπὸ τῶν ξένων ἐπιπίλαιντο.⁵ With the same view the Spartans were themselves forbidden to go abroad without leave of the magistrate. Both these rules, as well as the feelings of the people on the subject, were much relaxed in later times, when foreign rule and supremacy became the object of Spartan ambition. Even at an earlier period we find that the Spartans knew how to observe the laws of hospitality upon fit and proper occasions, such as public festivals, the reception of ambassadors, &c.⁶ They worshipped a Ζεὺς ξένιος and Ἀθανᾶ ξενία.⁷ The connexion, called by the Greeks προξενία, was cultivated at Sparta both by the state and by individuals, of which their connexion with the Pisistratidæ is an example, and also that of a Spartan family with the family of Alcibiades.⁸ (*Vid. HOSPITIUM*.) Many illustrious men are reported to have resided at Sparta with honour, as Terpander, Thægnis, and others.⁹ Xenophon was highly esteemed by the nation, and made Spartan πρόξενος. (See farther on the subject of the ξενηλασία, Thucyd., i. 144, with Gæller's notes.—Aristoph., *Aves*, 1013.—Harpocr., s. v. Καὶ γὰρ τὸ μὴ δένειν.)

ΞΕΝΙΑΣ ΓΡΑΦΗ (ξενίας γραφή). This was a prosecution at Athens for unlawfully usurping the rights of citizenship. As no man could be an Athenian citizen except by birth or creation (γένει or παῖσει), if one, having neither of those titles, assumed to act as a citizen, either by taking part in the popular assembly, or by serving any office, judicial or magisterial, or by attending certain festivals, or doing any other act which none but a citizen was privileged to do, he was liable to a γραφή ξενίας, which any citizen might institute against him.¹⁰ Or he might be proceeded against by εἰσαγγελία.¹¹ If condemned, his property and person were forfeited to the state, and he was forthwith to be sold for a slave.¹² The judgment, however, was arrested if he brought a δίκη ψευδομαρτυριῶν against the witnesses who had procured his conviction, and convicted them of giving false testimony. During such proceeding he was kept in safe custody to abide the event. (*Vid. MARTYRIA*.) When a

person tried on this charge was acquitted by means of fraudulent collusion with the prosecutor or witnesses, or by any species of bribery, he was liable to be indicted afresh by a *γραφὴ δωροξενίας*, the proceedings in which, and the penalty, were the same as in the *γραφὴ ξενίας*. The jurisdiction in these matters belonged, in the time of Demosthenes, to the *thesmothetæ*, but anciently, at least in the time of Lysias, to the *nautodica*.¹

In order to prevent fraudulent enrolment in the register of the *δῆμοι*, or *ληξιαρχικὸν γράμματειον*, which was important evidence of citizenship, the *δημόται* themselves were at liberty to revise their register, and expunge the names of those who had been improperly admitted. From their decision there was an appeal to a court of justice, upon which the question to be tried was much the same as in the *γραφὴ ξενίας*, and the appellant, if he obtained a verdict, was restored to the register; but if judgment was given against him, he was sold for a slave. (*Vid. DEMUS.*)² For an example of this see the speech of Demosthenes against Eubulides.

XENICON (*ξενικόν*). At an early period there was no such thing as a standing army or mercenary force in the Greek republics. The former would have excited jealousy lest it should oppress the people, as the chosen band did at Argos,³ and for the latter there was rarely any occasion. The citizens of every state formed a national militia for the defence of their country, and were bound to serve for a certain period at their own expense, the higher classes usually serving in the cavalry or heavy-armed infantry, the lower classes as light-armed troops. Foreigners were rarely employed; the Carians, Cretans, and Arcadians, who served as mercenaries,⁴ are an exception to the general rule. In the Persian war we find a small number of Arcadians offering to serve under Xerxes;⁵ and they seem to have used themselves to such employment down to a much later period.⁶ The practice of maintaining a standing force was introduced by the tyrants, who kept guards and soldiers in their pay (*δοροφόροι, μισθοφόροι*) to prevent insurrections of the people, and preserve their influence abroad. As it was unsafe to trust arms in the hands of their own subjects, they usually employed foreigners.⁷ Hence, and because citizen soldiers used to fight without pay, *ξένοι* came to signify mercenaries.⁸ We must distinguish, however, between those who fought as auxiliaries, whether for pay or otherwise, under commission from their own country, and those who did not. The former were *ἐπικούροι*, not *ξένοι*.⁹ The terms *ξένοι* and *ξενικόν* implied that the troops were independent of, or severed from their own country.

The first Grecian people who commenced the employment of mercenaries on a large scale were the Athenians. While the tribute which they received from the allies placed a considerable revenue at their disposal, the wars which their ambition led them into compelled them to maintain a large force, naval and military, which their own population was unable to supply. Hence they swelled their armies with foreigners. Thucydides makes the Corinthian ambassador at Sparta say, *ὡνητὴ ἡ Ἀθηναίων δύναμις*.¹⁰ They perceived, also, the advantage of em-

ploying men of different nations in that service, for which, from habit, they were best qualified; as, for instance, Cretan archers and slingers, Thracian peltastæ.¹ At the same time, the practice of paying the citizens was introduced: a measure of Pericles, which was, indeed, both just and unavoidable (for no man was bound by law, or could be expected to maintain himself for a long campaign), but which tended to efface the distinction between the native soldier and the foreigner.² Other Greek nations soon imitated the Athenians,³ and the appetite for pay was greatly promoted by the distribution of Persian money among the belligerents.⁴ At the close of the Peloponnesian war, large numbers of men who had been accustomed to live by war were thrown out of employment; many were in exile, or discontented with the state of things at home; all such persons were eager to engage in a foreign service. Hence there arose in Greece a body of men who made arms their profession, and cared little on which side they fought, provided there were a suitable prospect of gaining distinction or emolument. Canon engaged mercenaries with Persian money. Agesilaus encouraged the practice, and the Spartans allowed the members of their confederacy to furnish money instead of men for the same purpose.⁵ The Greeks who followed Cyrus in his expedition against Artaxerxes were mercenaries.⁶ So were the famous peltastæ of Chabrias and Iphicrates.⁷ The Phocians, under Philomelus, Onomarchus, and Phayllus, carried on the sacred war by the aid of mercenaries, paid out of the treasures of the Delphian temple.⁸ But higher pay and richer plunder were in general to be found in Asia, where the disturbed state of the empire created continual occasions for the service of Greek auxiliaries, whose superior discipline and courage were felt and acknowledged by the Barbarians. Even the Spartans sent their king Agesilaus into Egypt for the sake of obtaining Persian gold. Afterward we find a large body of Greeks serving under Darius against Alexander. It is proper here to notice the evil consequences that resulted from this employment of mercenaries, especially to Athens, which employed them more than any other Greek state. It might be expected that the facility of hiring trained soldiers, whose experience gave them great advantages, would lead to the disuse of military service by the citizens. Such was the case. The Athenian citizens stayed at home, and became enervated and corrupted by the love of ease and pleasure; while the conduct of wars, carried on for their benefit, was intrusted to men over whom they had little control. Even the general, though commonly an Athenian, was compelled frequently to comply with the humours, or follow the example of his troops. To conciliate them, or to pay them their arrears, he might be driven to commit acts of plunder and outrage upon the friends and allies of Athens, which thus found enemies where she least expected. It was not unusual for the generals to engage in enterprises foreign to the purposes for which they were sent out, and unconnected with the interests of their country, whose resources they wasted, while they sought their own advantage. The expeditions of Chabrias and Iphicrates to Egypt are examples of this. But the most signal example is the conduct of the adventurer Charidemus. Upon all these matters we may refer the reader more particularly to Demosthenes, whose comments upon the disastrous policy

pursued by his countrymen were no less just than they were wise and statesmanlike.¹

ΞΕΝΟΣ, ΞΕΝΙΑ (ξένος, ξενία). (Vid. HOSPIRUM, p. 512.)

XESTES (ξέστης), a Greek measure of capacity, both fluid and solid, which contained 12 cyathi or 2 cotylæ, and was equal to $\frac{1}{8}$ of the χοῦς, $\frac{1}{4}$ of the Roman amphora or quadrantal, and $\frac{1}{2}$ of the Greek amphora or metretres; or, viewing it as a dry measure, it was half the χœnix and $\frac{1}{6}$ of the medimnus. It contained .9911 of a pint English.

At this point the Roman and Attic systems of measures coincide; for, though the ξέστης appears to have varied in different states of Greece, there is no doubt that the Attic ξέστης was identical, both in name and in value, with the Roman sextarius. Also, the Attic χοῦς was equal to the Roman congius, for the ξέστης was the sixth of the former, and the sextarius the sixth of the latter. (Vid. CHOUS, CONGIUS, SEXTARIUS.) Farther, the Attic metretres or amphora contained 12 χοῦς, and the Roman amphora contained 8 congii; giving for the ratio of the former to the latter 3 : 2, or $1\frac{1}{2}$: to 1. Again, the Attic medimnus was the double of the Roman amphora, and was to the metretres in the ratio of 4 : 3; and the Roman modius was the sixth of the Attic medimnus, and the third of the Roman amphora. Hence the two systems are connected by the numbers 2 and 3 and their multiples.

How and when did this relation arise? It cannot be accidental, nor can we suppose that the Greek system was modelled upon the Roman, since the former existed long before the Roman conquest of Greece. We must therefore suppose that the Roman system was in some way adapted to the Greek. It is a remarkable circumstance, that the uncial system of division which characterized the Roman weights and measures (vid. AS, UNCTA) is not found in the genuine Roman measures of capacity (for the use of the cyathus as the uncia of the sextarius appears to have originated with the Greek physicians in later times); and this is the more remarkable, as it is adopted in the Greek system: the Greek amphora being divided into 12 χοῦς, and the Roman into 8 congii instead of 12. In the Roman foot, again, besides the uncial division, we have the division into 4 palmi and 16 digiti, which seems clearly to have been borrowed from the Greek division into 4 παλαῖσται and 16 δάκτυλοι. (Vid. PES.) It seems, therefore, highly probable that the Greek system of measures had a considerable influence on that of the Romans.

To find the origin of this connexion, we must look from the measures to the weights, for both systems were undoubtedly founded on weight. The Roman amphora or quadrantal contained 80 pounds (whether of wine or water does not matter here), and the congius 10 pounds. Also the Attic talent was reckoned equal to 80 Roman pounds, and contained 60 minæ. Therefore the Attic mina had to the Roman pound the ratio of 80 : 60, or 4 : 3.

Now if we look at the subject historically, we find all the principal features of the Roman system in existence as early as the time of Servius Tullius. We must therefore seek for the introduction of the Greek element before that time. At that early period Athens does not appear to have had any considerable commercial intercourse with Italy, but other Grecian states had, through the colonies of Magna Græcia. The Phocæans, at a very early period, had a traffic with the Tyrrhenians; the Æginetans had a colony in Umbria; and Corinth and her colonies were in intercourse with the people of

central Italy, besides the traces of Corinthian influence upon Rome, which are preserved in the legend of the Tarquinii. It is therefore to the Æginetico-Corinthian system of weights and measures that we must look for the origin of Grecian influence on the Roman system. Now the Æginetan pound, which was half of the Æginetan mina, had to the Roman pound the ratio of 10 : 2; and, since the Æginetan mina was to the Attic (most probably, vid. TALENTUM) as 5 : 3, we get from the comparison of these ratios the Attic mina to the Roman pound as 4 : 3, as above.

The above view of the relation between the Greek and Roman system of measures of capacity is that of Böckh, who discusses the subject more fully in his *Metrolologische Untersuchungen*, xi., § 10.

*XIPHIAS (ξίφις), the Swordfish, or *Xiphias gladius*, L. It would also appear to be the *gladius* of Pliny and Isidorus.¹

*XIPHION (ξίφιον), the *Gladiolus communis*, or Corn-flag.²

XIPH'OS (ξίφος). (Vid. GLADIUS.)

XO'ANON (ξόανον). (Vid. STATUARY, p. 913.)

*XYRIS (ξύρις), the *Iris fatidissima*, or Stinking Gladwyn. It is most probably the ξύρις of Theophrastus.³

XYSTARCHUS. (Vid. GYMNASIUM, p. 483.)

XYSTUS. (Vid. GYMNASIUM, p. 482; HORTUS, p. 511.)

Z

ZAC'OROI (ζάκοροι) is the name by which, in Greece, those persons were designated whose duty it was to guard a temple and to keep it clean. Notwithstanding this menial service, their partook of the priestly character, and are sometimes even called priests.⁴ In many cases they were women, as Timo in Herodotus;⁵ but men are also mentioned as ζάκοροι. The priestess Timo is called by Herodotus ἱποζάκορος, from which it is clear that, in some places, several of these priests must have been attached to one and the same temple, and that they differed among themselves in rank. A class of servants of the same kind were the νεωκόροι, or temple-sweepers.⁶ Subsequently, however, the menial services connected with this office were left to slaves, and the persons called νεωκόροι became priestly officers of high rank, who had the supreme superintendence of temples, their treasures, and the sacred rites observed in them.⁷ We learn from inscriptions that in some towns the νεωκόροι formed a collegium, which was headed by the eldest among them. When the νεωκόροι had thus risen to the rank of high priestly officers, magistrates and persons of distinction, and even emperors, were anxious to be invested with the office, and, in the time of the emperors, whole nations and cities assumed the title of νεωκόροι, as we learn from numerous coins and inscriptions, and thus became the especial guardians of particular temples.⁸

*ZEIA (Zeia), a kind of grain, described by Aëtius and Avicenna as intermediate between wheat and barley. "In short," says Adams, "almost all the authorities agree that it is the *Triticum Spelta*, or Spelt. The *τίση* of Theophrastus, and the *δλωρα* of Homer, as well as the *far* and *adoreum* of the Romans, were in all probability merely varieties of Spelt."⁹

ZETE'TAI (*ζητηται*), *Inquisitors*, were extraordinary officers appointed by the Athenians to discover the authors of some crime against the state, and bring them to justice. Public advocates, *συνήγοροι* or *κατήγοροι*, were sometimes directed to assist them in this duty. Frequently the court of Areopagus performed the office of inquisitors for the state, and, indeed, it was the duty of every magistrate to assist in procuring information against offenders.¹ *Ζητηται* were more frequently appointed to search for confiscated property, the goods of condemned criminals and state debtors; to receive and give information against any persons who concealed or assisted in concealing them, and to deliver an inventory of all such goods (*ἀπογράφειν*) to the proper authorities. The delinquent was then prosecuted, either before the *σύνδικοι*, or, it might be, before the *ζητηται* themselves, if their commission extended to the holding of an *ἡγεμονία δικαστηρίου*. Any person, however, who thought himself entitled to the goods which were the subject of such information, or to any part of them, might prefer a complaint against the inquisitor or informer, and petition to have the goods, or the part to which he was entitled, or their proceeds, restored to him. This proceeding was called *ἐπισκεπτήμα*. (*Vid.* *ΣΥΝΔΙΚΟΙ*, *ΠΑΡΑΚΑΤΑΒΟΛΗ*.) Inquisitors were also called *Μαστήρες*. On one particular occasion a set of commissioners, called *συλλογεῖς*, were appointed to discover the property of the oligarchs, who were concerned in overturning the democracy.²

ZEUGITAE (*zeugitai*). (*Vid.* *CENSUS*, p. 229.)

***ZINGIBERIS** (*ζιγγίβερις*), *Anomum Zingiber*, or Ginger.

ZONA, *dim.* **ZONULA**, also called **CINGULUM** (*ζώνη*, *ζώνη*, *ζωστήρ*³), a Girdle or Zone, worn about the loins by both sexes. As in the case of some other articles of dress, the distinction between the male and female girdle was denoted by the use of a diminutive, *ζώνη* or *ζωστήρ* being more properly a man's, *ζώνιον* a woman's girdle.⁴ The finer kinds of girdles were made by netting, whence the manufacturer of them was called *ζωνοπλόκος*.⁵

The chief use of this article of dress was to hold up the tunic (*ζώνυσθαι*⁶), which was more especially requisite to be done when persons were at work, on a journey, or engaged in hunting. Hence we see the loins girded in the woodcuts of the boatman at p. 426, of the shipbuilders at p. 62, 112, of the goatherd at p. 754, of the hunters at p. 836, and of Diana at p. 245. The *ζώνη* or *ζωστήρ* is also represented in many ancient statues and pictures of men in armour, as worn round the cuirass. Among the Romans the magister equitum wore a girdle of red leather, embroidered with needlework, and having its two extremities joined by a very splendid and elaborate gold buckle. (*Vid.* *FIBULA*).⁷ The girdle mentioned by Homer⁸ seems to have been a constituent part of the cuirass, serving to fasten it by means of a buckle, and also affording an additional protection to the body, and having a short kind of petticoat attached to it, as is shown in the figure of the Greek warrior in p. 597. In consequence of the use of the girdle in fastening on the armour, *ζώνυσθαι* or *ζώσασθαι* meant to *arm one's self*,⁹ and from this circumstance Athene was worshipped under the character *Ζωστήρια*.¹⁰ The woodcut at p. 15 shows that the ancient cuirass did not descend low

enough to secure that part of the body which was covered by the ornamental kilt or petticoat. To supply this defect was the design of the *mitra* (*μίτρα*), a brazen belt, lined probably on the inside with leather and stuffed with wool, which was worn next to the body,¹ so as to cover the lower part of the abdomen. The annexed woodcut shows the outside and inside of the bronze plate of a *mitra* one foot long, which was obtained by Brøndsted² in the island of Eubœa, and is now preserved in the Royal Library at Paris. We observe at one end two holes for fastening the strap, which went behind the body, and at the other end a hook, fitted probably to a ring, which was attached to the strap. A portion of a similar bronze plate is engraved by Caylus³

Men used their girdles to hold money instead of a purse.⁴ The wallet (*vid.* *PERA*) was fastened to the girdle, and still more frequently the fold of the tunic, formed by tucking it up, and called *sinus*, was used as a pocket to carry whatever was necessary.

As the girdle was worn to hold up the garments for the sake of business or of work requiring despatch, so it was loosened, and the tunic was allowed to fall down to the feet, to indicate the opposite condition, and more especially in preparing to perform a sacrifice (*veste recincta*⁵) or funeral rites (*discincti*,⁶ *incincti*⁷).

A girdle was worn by young women even when their tunic was not girt up, and removed on the day of marriage, and therefore called *ζώνη παρθενική*,⁸ *παρθένον μίτρη*⁹). The Flora in the museum at

Naples (see the preceding woodcut) shows the appearance of the girdle as worn by young women.

A horse's girth, used to fasten on the saddle (vid. ΕΦΗΠΡΙΣΜ), was called by the same names, and was sometimes made of rich materials, and embroidered in the most elaborate manner.¹ These terms, *zona* and *cingulum*, were also used to signify the five zones as understood by geographers and astronomers.²

*ZOOPHYTA (ζωόφυτα). "Aristotle," says Adams, "ranks the *Urtica* or *Medusa* and sponges among those things which partake in part of the

nature of animals and in part of plants. The term therefore corresponds to the *Zoophyta* of modern naturalists."¹

*ZYGÆNA (ζύγαϊνα), the *Squalus Zygaena*, L., or Balance Fish. It is a very large fish, and was placed among the *Cetacea* by Galen, Oribasius, Paulus Aegineta, and other ancient writers.²

*ZYGIA (ζυγία), a plant, most probably the *Carpinus betulus*, or Hornbeam, as Stackhouse suggests.³

*ZYTHUS (ζύθος). (Vid. CEREVISIA.)
